radio doorphone

Why equip yourself with a radio doorphone?

The doorphone is an essential part of your homes security. It allows you to identify visitors regardless of where you are in your property.

Thanks to our new radio transmission protocol Optwin, the radio doorphone is quickly and easily installed. It is the ideal retrofit solution for property renovation and extensions.

Friendly handset

Very easy to use, the handset is designed with simplicity and elegance in mind. It can be mounted on the wall or placed on a horizontal surface. The navigation is simple and intuitive on its large LCD screen.

Stay connected and secure in your home

The doorphone helps to simplify your daily life. It allows you to communicate with your visitors and provide access to your property from a distance. Furthermore, the Hager doorphone offers you some additional functions:

- Identify each individual access point with a specific ringtone
- Identify the opened state of the access point*
- Handsfree operation
- Communicate between several handsets

**Requires position contact CP500*

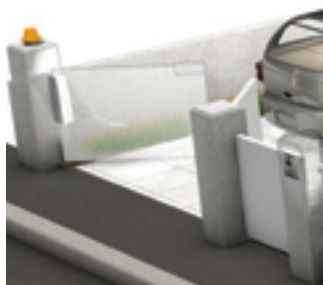

Welcome your visitors

The brushed metallic outdoor call station is placed on the gate post or beside the entrance door. Its slender and compact look means it can be surface mounted without embedding the unit into a wall.

Its metal cover offers protection against damage. There are versions available with one or two call buttons. The gate can be opened with an access code or with a transponder tag.

Controlling other applications

Not only does the Hager doorphone allow you to control access to your property but it will enable control of external lighting and garage doors with additional receivers.

Advantages of the Hager radio doorphone

1

Simple installation

Suitable for most configurations, the Hager radio doorphone is particularly simple to install and commission thanks to its wireless radio technology. It is no longer necessary to dig cable trenches or drill walls for additional cabling.

3

Autonomous system

The outdoor call unit is powered by alkaline batteries or a 12/24 V AC or 12/30 V DC adaptor:

- 3 year battery life for the outdoor call unit
- 15 days battery life if the handset is removed from the charge station

2

Digital communication

The new Optwin radio protocol developed by Hager uses two high speed frequencies for quality digital communication. Optwin technology ensures reliable transmission and digital audio quality up to 400meters in line of sight (between handset and the outdoor call unit).

optwin®

4

Support

- A 3-year extended guarantee upon return of the guarantee certificate.
- Dedicated technical support helpline: 0870 607 6677.

Simple and timeless radio doorphone

Complete reliability with a simple yet elegant design

The doorphone is an essential part of your homes security. It allows you to identify visitors regardless of where you are in your property.

Thanks to our new radio transmission protocol Optwin, the radio doorphone is quickly and easily installed. It is the ideal retrofit solution for property renovation and extensions.

The plus:

Simple installation

Suitable for most configurations, the Hager radio doorphone is particularly simple to install and commission thanks to its wireless radio technology. It is no longer necessary to dig cable trenches or drill walls for additional cabling.

2

Digital communication

The new Optwin radio protocol developed by Hager uses two high speed frequencies for quality digital communication. Optwin technology ensures reliable transmission and digital audio quality up to 400meters in line of sight (between handset and the outdoor call unit).
