

WYLEX MINIATURE RCBOs WITH SWITCHED NEUTRAL AS STANDARD

Wylex miniature RCBOs bring higher levels of safety to an electrical installation and its users because they include switched neutral as standard and bring cost savings by reducing installation and testing times.

Safer installations means safer homes

Wylex Miniature RCBOs with switched neutral built in as standard will fully isolate a faulty or damaged circuit by disconnecting live and neutral conductors.

Using Wylex Miniature RCBOs will guarantee that healthy circuits remain in service and that only a faulty circuit is switched off. This avoids danger and prevents inconvenience in the event of a fault (as required by regulation 314.1)*.

Miniature RCBOs take up less space in the consumer unit because they are the same size as a MCB and so provide more wiring space for the installer, making the installation process easier and quicker.

Wylex RCBOs go one step further, they have switched neutral built in as standard, live and neutral conductors do not have to be disconnected for insulation resistance testing. This saves time and money, particularly for responsible landlords who regularly test installations during occupancy voids.
