Circuit Protection
Systems for Domestic
Household Premises

AFDDs MANDATED

The use of Arc Fault Detection Devices is mandated for single-phase AC final circuits supplying socket-outlets (with a rated current up to 32A) in certain types of premises i.e.

- In Higher Risk Residential Buildings (HRRB)
- In Houses in Multiple Occupation (HMO)
- In Purpose-Built Student Accommodation
- In Care Homes

The use of AFDDs is also recommended in all other types of premises for single-phase AC final circuits supplying socket outlets rated up to 32A.

AFDDs shall be placed at the origin of the circuit to be protected i.e. in the consumer unit or distribution board.

See BS 7671 (including Amendment 2) for full details

#75

Arc faults can cause fires. Wylex AFDDs detect & disconnect arc faults to prevent fires.

#46

3 products in a single module. Our AFDD also does the job of an MCB and an RCD.

#14

Cutting edge Siemens technology inside.

ULTIMATE PROTECTION USING STANDARD PRODUCTS

- MCB sized AFDDs
- Fits regular consumer units
- Standard installation process
- Uses 1 consumer unit way
- Ring circuit compatible
- Radial circuit compatible
- Detects serial arc faults
- Detects parallel arc faults
- Integral Type A 30mA RCBO
- With double pole switching
- Self tests every 15 hours
- Status indicators (fault find assistant)
- BS EN 62606
- Retrofit compatible
- Protects against fires caused by arc faults

#71

Single module miniature AFDDs, protect ring circuits, radial circuits, spurs and leads too.

#47

Switched neutral as standard for complete protection.

#42

Our AFDD combines with our miniature RCBO for the highest level of protection.

SPDs IN ALL INSTALLATIONS

Transient overvoltage protection devices (SPDs) are now required in all electrical installations however, in some cases the owner of the installations can opt out and accept all risks and consequential losses from such over-voltages.

Transient overvoltage protection must be provided where the consequence of overvoltage can cause.

- Serious injury to, or loss of, human life
- The failure of a safety service, as defined in Part 2 of BS7671
- Significant financial or data loss

Transient overvoltage protection is required in all other cases too unless the owner of the installations declares it is not required and accepts all risks and consequences.

See BS 7671 (including Amendment 2) for full details.

#34 Overvoltage protection. We've been doing it for years.

#27 Overvoltage protection for household appliances and personal devices.

#93 Single module SPD Problem Solved

Any Red Replace
Uc 275 VAC (50/60 Hz)
T2

ULTIMATE PROTECTION USING STANDARD PRODUCTS

- MCB sized SPDs
- Fits regular consumer units
- Direct busbar connection
- Standard installation process
- Uses 1 consumer unit way
- 100A rated
- No back up MCB required
- Type 2 surge protection
- Health status indicator
- Remote signal facility
- Replace cartridge indicator
- BS EN 61643 -11
- Retrofit compatible
- Protects appliances and electronic devices

#34 Overvoltage protection. We've been doing it for years.

#63 Surge Protection - safeguarding your data and productivity.

#93 Single module SPD Problem Solved

U_c 275 VAC (50/60 Hz)

T2

RCBOs & AVOIDING UNWANTED TRIPPING

Where additional protection is required (by use of a 30mA device) designers should consider the use of RCBOs for individual final circuits (in residential premises) to reduce the risk of unwanted tripping. Other considerations include:

Any earth leakage currents that occur during normal operation of equipment should not cause unwanted tripping.

To avoid unwanted tripping by protective conductor currents such currents should be less than 30% of 30mA (9mA).

Every installation must be divided into sufficient number of final circuits in order to avoid danger and minimize inconvenience in the event of a fault, and avoid hazards from the failure of a single circuit such as a lighting circuit.

See BS 7671 (including Amendment 2) for full details.

#15

Excellent power continuity for reduced callout costs.

#19

MCB sized RCBO for maximum working space.

#31

Single module miniature RCBOs, smaller, safer and switched neutral at no extra cost.

ULTIMATE PROTECTION USING STANDARD PRODUCTS

- MCB sized RCBOs
- Fits regular consumer units
- Maximises wiring space
- No miss terminal design
- Guaranteed busbar alignment
- Avoids unwanted tripping
- Type A 30mA Device
- Two pole switching device
- IR Test compatible (off position)
- Total isolation of faults
- Safer working environment
- B & C Curve variants
- 6A to 40A
- Fully compliant to IEC 61009-1
- Retro fit compatible

#40

Rated up to
40 amps to
cover heavy load
appliances.

#47

Switched neutral
as standard for
complete protection.

#58

Total isolation
for a safer working
environment.

GOOD REASONS TO CHOOSE WYLEX

(THERE'S NO END OF THEM)

Our UK based R&D teams design products from scratch and look after each stage of design and performance validation.

As part of the Siemens family Wylex reaps the benefits of being in a global manufacturing network.

With a UKAS accredited, ASTA recognised test laboratory (RTL), Wylex customers can have full confidence in Wylex products.

Offering you the largest range of domestic circuit protection products in the UK, and a custom-built product service.

Single module miniature AFDD/RCBO provides the highest levels of protection for the installation and its users, miniature AFDDs fit regular consumer units in new & existing installations*

Single module miniature RCBOs switch the neutral and totally isolate faulty circuits. Miniature RCBOs are quicker and easier to install and test saving time and money.

#31

Smaller, safer and switched neutral at no extra cost.

#95

We provide product solutions that help you comply with the wiring regulations.

#71

Single module miniature AFDDs, protect ring circuits, radial circuits, spurs and leads too.

#14

Cutting edge Siemens technology inside.

#93

Single module SPD Problem Solved

U_n 275 VAC (50/60 Hz)

T2

Single module Type 2 SPDs are 100A rated, need no MCB back up, connect directly to the busbar and protect valuable appliances and electronic equipment as well as the overall fixed installation.

Wylex Devices are designed with a no miss terminal arrangement to ensure that busbar connections are not misaligned. Secure connections with Siemens technology.

* Busbar check required, see page 50 busbar compatibility table

NM12DSPVHI	12 Way unit with dual supply isolators & 16A SP MCB

HIGH INTEGRITY DUAL SUPPLY PV CONSUMER UNIT

NM12DSPVHI	12 Way unit with dual supply isolators & 16A SP MCB
-------------------	-----------------------------------------------------

- Double Pole MCB options available on request
- Compatible with single module AFDDs, RCBOs, SPDs & MCBs
- All PV meters supplied are MID B&D Certified, design & functionality may be upgraded to versions shown in catalogue

Consumer unit accessories pages 26 & 27

Consumer unit accessories pages 26 & 27

NM Split Load PV Consumer Units

NM13DSMPVSL

SPLIT LOAD DUAL SUPPLY PV CONSUMER UNIT WITH MID CERTIFIED GENERATION METER - TYPE A RCD

CAT REF.	DESCRIPTION
NM12DSRCBMPVSL	12 Way unit with dual supply isolators & 16A DP RCBO
NM13DSMPVSL	13 Way unit with dual supply isolators & 16A SP MCB

- Double Pole MCB options available on request
- All PV meters supplied are MID B&D Certified, design & functionality may be upgraded to versions shown in catalogue

Combination PV Isolator Units

PV Isolators

NHDSMS

COMBINATION DC & AC PV ISOLATOR

Two isolators DC & AC in a single enclosure that allows the installer to save time by comparison to other methods that utilise two separate enclosures. Class II construction.

CAT REF.	DESCRIPTION
NHDSMS	Dual Isolator
NHDS106B16	Dual Isolator with SP 16A MCB

- Available with or without local circuit protection devices (MCB, RCD or RCBO)
- Compact combined DC & AC Isolator in one enclosure
- Speeds up installation
- Securable in the Off position
- Robust metal enclosure with Knockout cable entries

When circuit protection devices are provided at the inverter output, the installer must ensure that the characteristics of the protective device are suitable for the fault levels at that point in the circuit and will meet required disconnection times

PV supplies (DC & AC) must be arranged so that the converter can be isolated from both supplies for maintenance

NHTPSD32

AC ISOLATOR

AC Isolator in an all insulated IP65 enclosure with rotary door interlock and padlock locking Off facility.

CAT REF.	DESCRIPTION
NHTPSD16	16A 230V AC 3 Pole
NHTPSD25	25A 230V AC 3 Pole
NHDSREC4	100A 230V AC Dual supply Rec switch

DC ISOLATOR

DC Isolator in an all insulated enclosure with rotary handle and padlock locking Off facility.

CAT REF.	DESCRIPTION
NHDC406006P	40A 600V 6 Pole

Type B RCD Unit

PV Mid Meter Units

NSPE-5580

PV-DC TYPE B RCD IN ENCLOSURE

CAT REF.	DESCRIPTION
NSPE-5579	16A 30mA DP RCD
NSPE-5580	40A 30mA DP RCD
NSPE-5581	40A 300mA DP RCD

Type B RCDs may be required for Electric Vehicle chargers as well as some Solar PV installations

NHSPMTRA

NHSPMTRD

MID METERS IN ENCLOSURE

MID B&D certified meters c/w an IP40 insulated enclosure.

CAT REF.	DESCRIPTION
NHSPMTRA	1 Mod MID Meter (Analogue)
NHSPMTRD	1 Mod MID Meter (Digital)

Note: Surge Protection devices are available on request

For PV Installation Requirements see page 46.

All PV meters supplied are MID B&D Certified, design & functionality may be upgraded to versions shown in catalogue

FLUSH MOUNTING KITS FOR NM

CAT REF	PRODUCT
NM07FLA	7 module flush kit assembly
NM10FLA	10 module flush kit assembly
NM13FLA	13 module flush kit assembly
NM16FLA	16 module flush kit assembly
NM21FLA	21 module flush kit assembly
NM26DFLA	26 module flush kit assembly
NM32DFLA	32 module flush kit assembly
NM42DFLA	42 module flush kit assembly

For flush fitting of surface mounting NM units only
Not suitable for meter cabinet units

NM CONSUMER UNIT PATTRESSES

CAT REF	LEFT/RIGHT	ENCLOSURE	
TOP/BOTTOM	CABLE ENTRY	WIDTH	DEPTH
MNSPE-6462/BNR	MNSPE6668/7NR	7 Module	16mm
MNSPE-6462/CNR	MNSPE6668/10NR	10 Module	16mm
MNSPE-6462/DNR	MNSPE6668/13NR	13 Module	16mm
MNSPE-6462/ENR	MNSPE6668/16NR	16 Module	16mm
MNSPE-6462/FNR	MNSPE6668/21NR	21 Module	16mm

For use with NM consumer units. Allows surface cable entry through rear knockouts and automatically maintains enclosure IP rating to comply with BS7671 and BSEN61439-3

- Cable entry slot may be positioned top / bottom or left / right

Not suitable for Duplex or meter cabinet units

NH UPGRADE / REPLACEMENT COVER

CAT REF	PRODUCT
NH7/MCLA255G	7 module cover assembly
NH10/MCLA255G	10 module cover assembly
NH13/MCLA255G	13 module cover assembly
NH16/MCLA255G	16 module cover assembly
NH21/MCLA255G	21 module cover assembly

For use on upgrading existing NH metal units only (replacing cover, plastic visor and hinges). Colour Grey RAL 7035

NM REPLACEMENT METAL COVER AND VISOR ASSEMBLY

CAT REF	PRODUCT
NM7/CCLA	7 module metal cover and curved visor assembly
NM10/CCLA	10 module metal cover and curved visor assembly
NM13/CCLA	13 module metal cover and curved visor assembly
NM16/CCLA	16 module metal cover and curved visor assembly
NM21/CCLA	21 module metal cover and curvedvisor assembly

TIME DELAYED (S TYPE) RCCB AND ENCLOSURE

ULTIMATE PROTECTION USING STANDARD PRODUCTS

AFDDs Mandated

The use of Arc Fault detection devices is mandated (in Amendment 2 to BS 7671) for single-phase AC final circuits supplying socket-outlets (with a rated current up to 32A) in certain types of premises i.e.

- In Higher Risk Residential Buildings (HRRB)
- In Houses in Multiple Occupation (HMO)
- In Purpose-Built Student Accommodation
- In Care Homes

The use of AFDDs is also recommended in all other types of premises for single-phase AC final circuits supplying socket outlets with a rated up to 32A

Types of Arc Fault:

SERIAL ARCING FAULTS: Are caused by a poorly made connection or a damaged / broken conductor. Miniature circuit breakers and residual current protective devices will not detect these electrical faults.

PARALLEL ARCING FAULTS BETWEEN CONDUCTORS: Are caused by electric arcs resulting from damage to the insulation which permits minimum contact between the two live conductors. AFD technology is extremely sensitive and will disconnect a parallel arcing fault where the arcing values may be much lower than the current levels needed for the shutdown conditions of an MCB or Fuse.

PARALLEL ARCING FAULTS BETWEEN PHASE OR NEUTRAL/PROTECTIVE CONDUCTOR: AFD technology will detect arcing faults against the protective conductor and provide adequate fire protection where no RCD is used. However by integrating the AFD technology with 30mA Miniature RCBOs this will ensure they reliably detect and shut down this type of arc fault, and provide additional protection against electric shock.

ACTUAL SIZE

#46

3 products in a single module. Our AFDD also does the job of an MCB and an RCD.

#35

71% of electrical professionals agree AFDDs can help prevent electrical fires.

#75

Arc faults can cause fires. Wylex AFDDs detect & disconnect arc faults to prevent fires.

ULTIMATE PROTECTION USING STANDARD PRODUCTS

RCBOs Avoid Unwanted Tripping

Amendment 2 of BS 7671 states that where additional protection is required (by use of a 30mA device) designers should consider the use of RCBOs for individual final circuits to reduce the risk of unwanted tripping in residential premises, other considerations include:

Any earth leakage currents that occur during normal operation of equipment should not cause unwanted tripping.

To avoid unwanted tripping by protective conductor currents such currents should be less than 30% of 30mA (9mA).

Every installation must be divided into sufficient final circuits in order to avoid danger and minimize inconvenience in the event of a fault, and avoid hazards from the failure of a single circuit such as a lighting circuit.

Wylex miniature RCBOs bring higher levels of safety to an electrical installation and its users by including switched neutral as standard which also brings cost savings by reducing installation and testing times.

ULTIMATE PROTECTION USING STANDARD PRODUCTS

SPDs in all Installations

Transient overvoltage protection devices (SPDs) are now required in all electrical installations however, in some cases the owner of the installations can opt out and accept all risks and consequential losses from such over-voltages.

Transient overvoltage protection must be provided where the consequence of overvoltage can cause

- Serious injury to, or loss of, human life
- The failure of a safety service, as defined in Part 2 in BS 7671
- Significant financial or data loss

Transient overvoltage protection is required in all other cases too unless the owner of the installation declares it is not required and accepts all risks and consequences

See BS 7671 (including Amendment 2) for full details

Type 2 Miniature SPD

Type 1 Lightning SPD

SURGE PROTECTION DEVICE

CAT REF	DESCRIPTION
NMT2SPD3W/1	Single Module Type 2 SPD

REPLACEMENT PLUG-IN CARTRIDGE

CAT REF	DESCRIPTION
NMT2SPD/P	Replacement Plug-in Cartridge for NMT2SPD3W/1

- Suitable for all Single Phase 3 Wire Systems TN-C-S, TN-S and TT
- Combined Metal Oxide Varistor (L1 & N) and Gas Discharge Tube (N & E)
- Clear Indication of device status
- Fitted with remote signalling contact
- Suitable for use in Main Switch, Split Load & Hi-Integrity consumer unit configurations
- Not suitable for Dual RCD configurations

Alternative SPD products are available for Dual RCD consumer unit installations. Please contact Wylex technical for further assistance.

TN-S / TT / TN-C-S
Single Phase Supply -
Separate Protective Earth &
Neutral

Type 2 Surge Arresters provide protection against overvoltage originating from switching and the secondary effects of lightning strikes. These devices will discharge current having an 8/20µs waveform and provide a low voltage protection level of ≤1.3kV (U_p) for sensitive electronic equipment exceeding the requirements for category II equipment identified within table 44.3 (BS7671).

Surge and lightning arresters have a lifespan directly related to the number and magnitude of their operations.

All Wylex devices provide visual life status indication.

The plug in unit must be removed during installation insulation resistance testing.

3 CONDUCTOR SYSTEM; L, N, PE

LIST NO.	DESCRIPTION
NHSPD4123T1	2 mod DIN mounting SPD with remote indication contact

TN-S / TT / TN-C-S
Single Phase Supply -
Separate Protective Earth &
Neutral

Type 1 Lightning Arresters are installed at an electrical installations intake position in conjunction with an external Lightning Protection System. These devices have a high impulse current withstand (10/350µs) associated with direct lightning strikes.

Surge and lightning arresters have a lifespan directly related to the number and magnitude of their operations.

All Wylex devices provide visual life status indication.

The plug in unit must be removed during installation insulation resistance testing.

Type 1+2 SPD

Replacement SPD Plugs

NHSPD4421T12

3 CONDUCTOR SYSTEM; L, N, PE

LIST NO.	DESCRIPTION
NHSPD4421T12	4 mod DIN mounting SPD with remote indication contact

TN-S / TT / TN-C-S
Single Phase Supply -
Separate Protective Earth &
Neutral

Type 1+2 Surge Arresters combine the benefits of both type 1 and type 2 having both high impulse current withstand (10/350µs) associated with direct lightning strikes and a low voltage protection level of ≤1.5kV (Up) exceeding the requirements for category II equipment identified within table 44.3 (BS7671).

Surge and lightning arresters have a lifespan directly related to the number and magnitude of their operations.

All Wylex devices provide visual life status indication.

The plug in unit must be removed during installation insulation resistance testing.

NHSPD4880T2	T2 N-PE GDT plug 20kA (12.5kA) NHSPD4621T2 NHSPD4641T2

Surge and lightning arresters have a lifespan directly related to the number and magnitude of their operations.

All Wylex devices provide visual life status indication.

The plug in unit must be removed during installation insulation resistance testing.

LIFELINE RCCB RANGE

Residual Current Circuit Breakers are protective devices that help installers meet the requirements of BS 7671 IET Wiring Regulations which prescribes the circumstances under which RCD protection/additional protection is necessary.

The minimum RCD protection standard for Wylex is TYPE A and this can only be used for general purpose and will trip if up to 6mA residual pulsating DC current is present.

The wiring regulations include requirements for protection against unwanted tripping of RCDs from PE Currents for example, and requires every installation to be divided into sub circuits as necessary to avoid loss of power to healthy circuits. The best way to achieve this is to avoid protecting groups of circuits on one RCD.

#17 RCBOs. More installers use ours than any others.

#3 The widest range of domestic circuit protection in the UK.

#95 We provide product solutions that help you comply with the wiring regulations.

DOMESTIC SWITCH FUSE

Wylex Domestic Switch Fuse units are fully enclosed in non combustibile material to meet the requirements of BS 7671 IET Wiring Regulations 421.1.201 for consumer units and similar switchgear for use in domestic household premises.

Designed for stand alone applications or for conversion projects where a large building is being converted to several apartments these domestic switch fuse units are available in 60, 80 or 100A ratings and supplied complete with fuse.

All units have been designed and tested by Wylex engineers in the UK and fully meet the relevant product standards and requirements of the IET Wiring Regulations.

#3 The widest range of domestic circuit protection in the UK.

REC ISOLATORS

Wylex REC Isolators are installed between the meter and the consumer unit. Many meter operators install these switches as a convenient device to complete their meter installation process.

The meter tails connections can be secured behind the sealed split cover and the isolator put into the off position.

This provides a secure and convenient method for the electrical contractor to connect the consumer unit tails to the supply.

Many electrical contractors, local authorities and housing associations have standardised the installation of these REC Isolators when a consumer unit is changed. This makes provision for future works to be carried out quicker and safer than before.

#3 The widest range of domestic circuit protection in the UK.

Type A devices

CUSTOM BUILT

To meet the ever changing requirements and demands of the modern electrical installation, Wylex offers a service to the electrical installer for catalogued ranges of products - Consumer Units and Distribution Boards to be modified and assembled to customer specification and meet specific needs.

The levels of adaptation may vary from the basic pre-population and assembly of outgoing protective devices MCBs, RCBOs into the units with personalised labelling, to the complete customisation and wiring of additional accessory devices within a unit:- for example meters, energy monitors, control switching equipment:- contactors, relays and timers, and over voltage surge protection devices plus almost any other DIN rail mounted piece of electrical accessory equipment that is available.

This Custom Built service can save time on site, reduce labour costs, and help achieve early completion & ultimately save money for the installer of these units.

NM High Integrity consumer unit, factory configured with SPD (over-voltage protection) and customer specified MCBs

#7 We don't just know consumer units. We invented them.

#20 You ask, we build. With a custom fabrication facility we're experts in build to order.

#3 The widest range of domestic circuit protection in the UK.

Ultimate Protection using Standard Products

CONSUMER UNIT ENCLOSURES, BARRIERS, FIXINGS & COMPONENTS

- 421.1.201** Consumer units must have enclosures manufactured from non-combustible materials & comply with BS EN 61439-3.
- 416.2.1** Live parts must be inside enclosures and suitable provisions must be made to prevent contact with live parts.
- 416.2.2** Installed consumer units must achieve IP4X on the top elevation of the enclosure.
- 416.2.3** Barriers must be secured in place with sufficient stability and durability to achieve and maintain appropriate levels of protection from live parts.
- 522.8.5** Every cable must be installed so that there is no undue stress or strain on the conductors & terminations. Meter tails require appropriate clips/fixings.
- 536.4.203** Only manufacturer approved parts can be used in low voltage assemblies i.e. consumer units. Mixing brands without approvals will invalidate guarantees.

PROTECTION AGAINST OVERVOLTAGE IN ALL INSTALLATIONS

- 443.4.1** Transient overvoltage protection is required in all electrical installations, however, in some cases the owner can opt out and accept all risks & consequential losses from such over-voltages.

PROTECTION AGAINST HAZARDS & DANGER CAUSED BY UNWANTED TRIPPING OF RCDs

- 531.3.2** The use of RCBOs shall be considered for each circuit in residential dwellings.
- Devices shall be selected and installed so as to limit the risk of unwanted tripping. Dividing the installation into individual circuits- each one using a 30mA RCBO will maintain power continuity to healthy circuits.
- Any earth leakage currents that occur during normal operation of equipment should not cause unwanted tripping.
- PE current (leakage current not due to a fault) is no more than 30% of 30mA.
- 314.1 (iv)** Every installation shall be divided into the necessary number of circuits to reduce the possibility of unwanted tripping of RCDs from PE current (not due to a fault).
 - 314.1 (i)** Every installation shall be divided into the necessary number of circuits to avoid danger and inconvenience in the event of a fault.
 - 314.1 (iii)** Every installation shall be divided into circuits as necessary to take account of hazards that may arise from the failure of a single circuit such as a lighting circuit.
 - 560.7.1** Circuits of safety services, e.g. Smoke & Heat Alarm systems, CO detection, etc. shall be independent of other circuits.

SAFE ISOLATION - SWITCHES AND PROTECTIVE DEVICES

- 462.1.201** A mains switch intended to be operated by ordinary persons (e.g. in domestic household premises) must switch both live conductors (L&N) of a single phase supply.
- 462.2** A means of isolation shall be provided for each circuit, for all live conductors (except where the neutral is reliably connected to earth by a low resistance and required disconnection times can be met).
- 422.3.13** Every circuit requires a means of isolation from all live supply conductors. Common isolation of a group of circuits may be provided if service conditions allow.
- 531.1.1** Devices for protection against electric shock must be suitable for isolation as required in Chapter 46 & Section 537.
- 514.1.1** A suitable means of identification shall be provided for the identification & purpose of each item of switchgear.

PROTECTION AGAINST FIRE CAUSED BY ELECTRICAL EQUIPMENT

- 421.1.7** AFDDs are mandatory for circuits serving socket outlets in certain buildings i.e. Higher Risk Residential Buildings, Homes in Multiple Occupation, Purpose Built Student Accommodation & Care Homes.
- AFDDs are also recommended for circuits serving socket outlets in all other types of building.
- 532.6** AFDDs should be installed at the origin of each final (230Vac) circuit that is being protected i.e. in the consumer unit or distribution board.

ADDITIONAL PROTECTION BY 30mA RCBO/RCD PROTECTING USERS OF ELECTRICAL INSTALLATIONS

- 415.1.1** RCDs (including RCBOs) with a residual operating current of no more than 30mA are prescribed for provision of additional protection.
- 411.3.4** Additional protection by use of a 30mA device is required for all luminaire circuits in domestic household premises.
- 411.3.3** Additional protection by use of a 30mA device is required for all socket outlets up to & including 32A rating.
- 411.3.3** Additional protection by use of a 30mA device is required for all mobile equipment (for use outdoors) up to & including 32A rating.
- 522.6.202** Cables concealed in walls or partitions as less than 50mm depth and without earthed mechanical protection (e.g. conduit), must be protected by 30mA device.
- 522.6.203** Cables buried in walls or partitions (which include metallic parts in their construction) must be provided with additional protection by 30mA device, or be installed in earthed metallic carrier systems that also provide mechanical protection.
- 701.411.3.3** Additional protection by use of a 30mA device, is required for all circuits serving or passing through a location with a fixed bath or shower.

Busbar Compatibility

Wylex Busbar and Device Compatibility Chart		Range	MCB	RCBO	AFDD
Pre 2018	Fixed - Balcony Connection 	NH NM	NHX	NHXS	n/a

IEC PUBLICATION (60479) CURVES WITH WYLEX RCD CHARACTERISTICS SUPERIMPOSED

TIME/CURRENT ZONES OF EFFECT OF AC CURRENT (15–100Hz) ON PERSONS

Zone Physiological effects

- 1 Usually no reaction effects (no danger).
- 2 Usually no harmful physiological effects (usually no effects).
- 3 Usually no organic damage to be expected. Likelihood of muscular contraction and difficulty of breathing, reversible disturbances of formation and conduction of impulses in the heart, and transient cardiac arrest without ventricular fibrillation increases with current magnitude and time.
- 4 In addition to the effects of zone 3, probability of ventricular fibrillation increased up to 5% (Curve C2), up to 50% (Curve C3) and above 50% beyond Curve C3. Increasing with magnitude and time, pathophysiological effects such as cardiac arrest, breathing arrest and heavy burns may occur.

18TH EDITION SELECTION OF RCDs (RCCBS)

A number of different RCDs are available due to their behaviour when the presence of Direct Current components and frequencies that may exist on the electrical installation. The appropriate RCD may be selected from the following:

Type AC

RCDs for which tripping is ensured for residual sinusoidal alternating currents, whether suddenly applied or smoothly increasing.

If it is known that the load contains no DC components then Type AC RCDs may be used only to serve fixed equipment.

Type A

RCDs for which tripping is ensured for residual sinusoidal alternating currents and pulsating direct residual currents, whether suddenly applied or smoothly increasing. Tripping is achieved for residual pulsating DC superimposed on a smooth DC current up to 6mA.

For general purpose, only Type A RCDs may be used.

Type F

RCDs having all the protective elements of a Type A RCD but additionally suitable for detecting residual currents from mixed frequencies of up to 1kHz. Tripping is achieved for residual pulsating DC superimposed on a smooth DC current up to 10mA.

Type B

RCDs that will detect both the residual current waveforms of a Type F and residual smooth DC currents.

In addition, within the BS7671 wiring regulations, Part 7 - Section 722 includes specific requirements for Electric Vehicles - Type A or B maybe required and Section 712 Solar Photovoltaic (PV) power systems Type B may be required.

OPERATION

The RCD employs the current balance principle which involves the supply conductors to the load (phase and neutral) being wound onto a common transformer core to form the primary windings. Under healthy circuit conditions, the current in the phase conductor is equal to the current in the neutral, and the vector sum of the current is zero.

In the event of an earth fault, an amount of current will flow to earth, creating an out of balance situation in the transformer assembly.

This out of balance is detected by the secondary winding of the transformer and at a pre-determined level of out of balance will activate the trip mechanism.

Single phase and neutral or three phase and neutral units (suitable for 3 or 4 wire systems) are available, the latter being suitable for balanced or unbalanced 3 phase loads.

The RCD trip mechanism will operate at a residual current of between 50–100% of its rating tripping current (sensitivity).

TRANSIENT EARTH LEAKAGE (PE) CURRENTS

All Wylex residual current devices incorporate a high level of immunity to tripping when subjected to transient earth leakage currents.

Such transients can occur when there is a significant level of capacitance to earth as can result from cable capacitance (particularly MICC) or RF filter networks. Wylex RCDs are therefore less susceptible to nuisance tripping due to transient earth leakage currents.

To help to avoid unwanted tripping of RCDs from PE currents leaking through the protective conductor during normal (non-fault) operating conditions, BS7671 wiring regulation 531.3.2 (ii) states the accumulated leakage current should be less than 30% of the RCD rating e.g. for a 30mA device this should be no more than 9mA. Designers should also take into consideration (i) Subdivision of circuits with individual associated RCDs and shall be selected in such a way that any earth leakage (PE) current likely to occur will not cause unwanted tripping of the RCD. See also Section 314.

RESIDUAL TRIPPING CURRENTS

10mA - Used in special applications where additional protection against contact is essential due to the nature of the installation.

30mA - Tripping current designated by the IEE Wiring Regulations to provide additional protection.

100mA - Suitable for use where protection is provided to guard against firehazard, etc, rather than to provide additional protection to personnel, and where the earthing requirements need supplementing by RCD protection.

100mA time delay - Suitable for use when total RCD protection is required to supplement the system earthing and where local 30mA RCDs are used to give additional protection. The time delay RCD will discriminate with the 30mA RCD.

300mA - For use in large installations where plant and equipment protection are the main considerations and high levels of earth leakage are experienced.

If using RCDs in series, discrimination can only be achieved by using Type S devices in series with Types A or AC.

Footnote BS7671 AM2 -

Type AC RCDs should only be used to serve fixed equipment of a type that does not contain any electronic components.

See Regulation 531.3.3

MID approval

Under the Electricity Act 1989 all electricity meters used for billing purposes must be approved. The approval for these meters is obtained by conforming to the European Measuring Instruments Directive (MID) 2004/22/EC (replacing OFGEM approval). This directive covers a number of different Instruments that are used to measure products or services for reselling. Therefore not only does it apply to Electrical Meters but you may see MID approval on a range of items such as the charge meter in a taxi, beer and wine glasses (the volume measurement line) in a Public House or on the petrol pumps when you are filling up your vehicle.

Who should be using MID certified meters?

By Law, anyone who is taking a meter reading that is then used for billing purposes and for which they subsequently receive a payment from the user for the electricity consumed.

Some typical examples:

- A Retail shopping centre owner wants to measure the individual consumption of all the store owners in his shopping mall and send them separate invoices for the electricity that each has used to run their business.
- A Landlord who wants to measure the electricity used by tenants renting apartments in his building and then send them a bill for the electricity they have used.
- A caravan/mobile home Leisure Park wants to measure the consumption of its customers and charge them an exact amount for the electricity used at the end of their rental period.

All of these examples must have the electricity consumption reading taken from a certified MID approved meter. The MID certification validates that the meter is manufactured using quality components, assures the meter is accurate for electricity billing purposes and that it maintains this accuracy over time for consistent readings.

Standard Meters - Non MID approved

If a meter is being used purely for a "check meter reading" and not being used to resell or charge for electricity consumed, then a standard meter that is reasonably accurate may be used to measure energy used at that point in time. For example, a check meter reading is required to meet L2 Building Regulations and Chartered Institution of Building Services Engineers TM39 guide to Building Energy Metering. The reading taken is used as a 'check point' to help reduce energy consumption.

Single Phase and Three Phase Measuring Devices

Direct Connected kW Meters - No external current transformers required. Standard reading or MID calibrated options. All meters have pulsed output for Building Management Systems. (BMS)

General Characteristics

Housing Width	2 modules DIN	4 modules DIN
Mounting	35mm DIN rail	35mm DIN rail

Although every effort has been made to ensure accuracy in the compilation of the technical detail within this publication, specifications and performance data are constantly changing. Users should always consult the installations instructions, IET wiring regulations and all other relevant documents, and not solely rely on information in this catalogue.

Publication No. WY2576f 11/2022

#46

3 products in a single module. Our AFDD also does the job of an MCB and an RCD.

#95

We provide product solutions that help you comply with the wiring regulations.

#14

Cutting edge Siemens technology inside.

#26

We have the widest range for installers and specifiers.

#13

Consumer units in all shapes and sizes.
