WHY CHOOSE ANYTHING LESS?

GOOD REASONS TO CHOOSE WYLEX

(THERE'S NO END OF THEM)

UK Based development teams design distribution board products from scratch and look after every stage of the design and performance validation process.

As part of the Siemens family Wylex benefits from the Siemens global manufacturing network by sourcing circuit protection devices 'in house' meaning you can be sure of the quality and the performance of the product.

The Wylex test laboratory in Manchester is accredited by the United Kingdom Accreditation Service (UKAS). This ensures everyone from specifiers, purchasers and users can have complete confidence in the standards of goods and in the provision of services at every stage of the supply chain.

With an extensive range of commercial circuit protection products made in the UK, for the UK, finding the right product for your needs from the catalogue should be easy.

Wylex offers specifiers & installers a comprehensive range of commercial and industrial circuit protection products with three phase MCB distribution boards.

Devices, including surge protection devices, contactors, timers, meters and switch disconnectors alongside MCBs, RCBOs and AFDDs complete the range.

NH DISTRIBUTION BOARDS & DEVICES

Regulation 411.3.3

Now requires all socket outlets (to a max rating of 32A) to be protected by a 30mA device in every installation where the socket outlets are used by ordinary persons, disabled persons or children. No exceptions are permitted.

Wylex MCB distribution boards accept 10kA 30mA single pole RCBOs or 6kA 30mA RCBOs with switched neutral.

Regulation 421.1.7

Now states AFDDs must be installed to protect circuits serving socket outlets (up to max rating 32A) in High Risk Residential Buildings, Houses in Multiple Occupation, Purpose Built Student Accommodation, and in Care Homes.

Wylex 125A MCB distribution boards accept 6kA Miniature AFDDs (with integral Type A RCBO) .

AFDDs are also recommended for circuits serving socket outlets up to 32A in all other types of buildings too.

Regulation 443.4.1

Now states that transient overvoltage protection must be provided where the consequence of overvoltage can cause serious injury to, or loss of, human life, the failure of a safety service, significant financial or data loss. No exceptions are permitted in these cases.

Transient overvoltage is also required in all other cases too. Unless the owner of the installation declares its not required and losses are tolerable and they accept the risks and consequences.

Type 2 Surge Arresters provide protection against overvoltage originating from switching and the secondary effects of lightning strikes. These devices will discharge current having an 8/20µs waveform and provide a low voltage protection level of ≤1.3kV (Up) for sensitive electronic equipment exceeding the requirements for category II equipment identified within table 44.3 (BS7671).

Surge and lightning arresters have a lifespan directly related to the number and magnitude of their operations.

All Wylex devices provide visual life status indication.

The plug in unit must be removed during installation insulation resistance testing.
