SWIFTS®
CABLE TRAY
PRODUCT TECHNICAL GUIDE

legrand®

Global strength built on local knowledge

Legrand is the global specialist in electrical and digital building infrastructures. Innovation is the driving force behind its development. With an increasing investment in research and development (circa 5% of sales) and more than 4,000 active patents, the Legrand Group is focused on maintaining a high rate of new product launches that present innovative solutions to the market.

CORPORATE SOCIAL RESPONSIBILITY

Legrand's 2014-2018 CSR roadmap is a natural extension to the governance and sustainable development approach in which the company has been engaged for many years. The CSR roadmap firmly reasserts Legrand's commitment to sustainable development.

Legrand
the cable management expert

Complete cable management solutions

Using its global strength and market leading position, Legrand has developed a complete range of cable management solutions, including:

- **Swifts cable ladder**
- **Swifts cable tray**
- **Salamandre distribution trunking and lighting trunking**
- **Cablofil steel wire cable tray**
- **Floor systems**
- **Perimeter systems**

Specification data for engineering software systems

As part of its ongoing commitment to customer support, Legrand's cable management ranges have been integrated into a number of plant design modelling systems.

Find out more about Legrand's 3D modelling capabilities at: www.legrand3d.co.uk

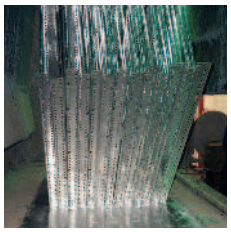
Swifts cable tray... Quality assured UK manufacturing

Swifts cable tray and ladder ranges have been designed and manufactured in Scarborough (UK) since the 1960's. Our inhouse galvanising facility and strict quality control guidelines ensure that every product is finished to the highest possible standard.

Legrand Electric holds ISO 9001 : 2008 Quality Assessment Registrations from Bureau Veritas.

All of Legrand's UK manufacturing sites are accredited to ISO 14001 : 2004 Environmental Management System.



Support from design to installation

With in-depth knowledge and experience, our expert cable management team provides customers with support and advice for any installation... including bespoke solutions (specials) from our in-house design team that can cope with the most demanding requirements for the most challenging projects.

Reg no. 10042065

Introducing Swiftclip

The fast-fit alternative to traditional nuts and bolts, providing a quicker and easier way to connect length to length, length to fitting and for securing to supports.

See page 6 to find out more...

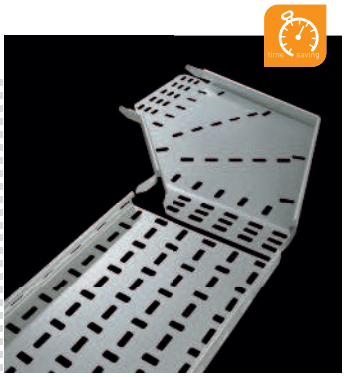
Swifts® cable tray
the quick fit choice

The distinctive slot pattern on Swifts cable tray provides installers with total flexibility. Available in four types, this strong, durable system has been designed with fast-fit features that make it quick and easy to install, both inside and outside.

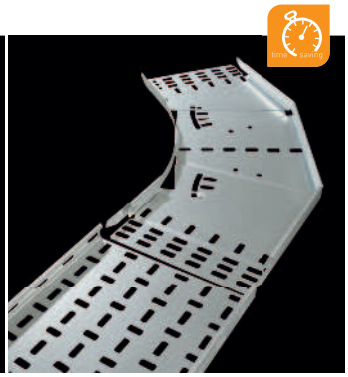
Product ranges			
SS - LIGHT DUTY Tray depth: 12 mm (for 50 - 225 mm widths) 18 mm (for 300 mm width) Finishes: G (hot dip galvanised) PG (pre-galvanised) S (stainless steel)	MRF - MEDIUM DUTY Tray depth: 25 mm Finishes: G (hot dip galvanised) D (deep galvanised) PG (pre-galvanised) S (stainless steel) E (powder coated)	SRF - HEAVY DUTY Tray depth: 50 mm Finishes: G (hot dip galvanised) D (deep galvanised) PG (pre-galvanised) S (stainless steel) E (powder coated)	XRF - EXTRA HEAVY DUTY Tray depth: 80 mm Finishes: G (hot dip galvanised) D (deep galvanised) S (stainless steel)

Fit faster. Save money.

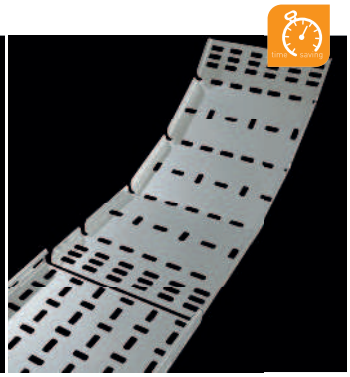
As with all Legrand cable management systems, Swifts cable tray is a complete system with a range of accessories – all packed with innovative features that lower the total cost of your installation. From an integral coupler system on all fittings to unique, adjustable bends and risers, as well as the new Swiftclip (p. 6) and the universal bracket (p. 8), it's all designed to provide a strong, long-lasting solution while saving you money as well as time.



Flat bends are available in 30, 45, 60 and 90°. All fittings have integral base couplers and side lugs that hold the fitting in place making it easier to assemble.



Adjustable flat bends allow the installer to adjust the tray to any angle from 30° to 90°. A number of predetermined fixing locations allow the fitting to be fixed at 7.5° increments.



Adjustable risers slide inside the cable tray and can be adjusted to almost any length or any angle up to 90°.

Easi-clip for fast connection of MRF and SRF tray to channel.

Swifts® cable tray just got faster ...with Swiftclip

Swifts cable tray is packed with time-saving design features that make it quicker and easier to get the job done

Swiftgrip

A heavy duty option for connecting MRF and SRF lengths of all sizes. Swiftgrip is robust, durable and provides a fast-fit alternative to nuts and bolts.

See page 18 to find out more...

Now, Legrand has applied its innovative thinking and heritage in cable management to make it even faster.

Introducing Swiftclip: the new, fast-fit alternative to conventional nuts and bolts that seamlessly connects lengths and fittings, making light work of any installation.

4 TIMES FASTER TO FIT

Independent tests by BSRIA confirm that Swiftclip is at least four times faster to fit than standard nuts and bolts*. With just two clips per joint, it not only saves on the number of components needed, but also saves on time, meaning a reduced total installed cost.

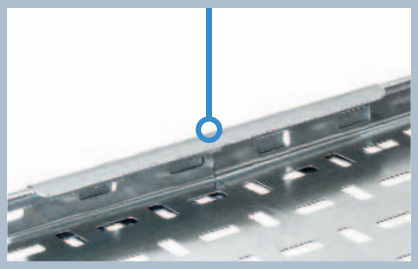
STRONGER, FASTER, FITTER

Swiftclip isn't just built for speed. It also offers uncompromised strength that meets the requirements of British Standards.

*When fitting length to length or length to fitting. Full report available on request from Legrand.

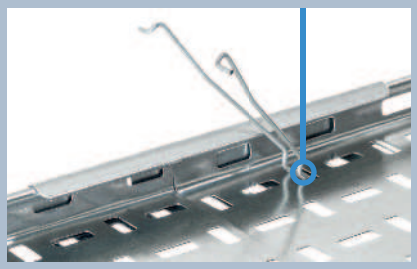
READY...

Locate coupler across underside of tray joint



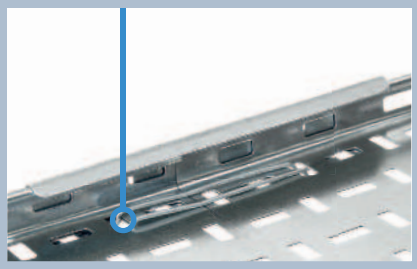
SET...

Insert joggled head of the Swiftclip through both tray and coupler slots



GO.

Pass each Swiftclip leg through the tray and coupler and you're done



COMPATIBLE WITH EXISTING SYSTEM

Designed to integrate with the existing Swifts cable tray system, Swiftclip can be used with medium (MRF) and heavy duty (SRF) in 50 to 300mm widths. The entire system offers excellent earth continuity without the use of additional components.

GALVANISED OPTIONS

Available to suit external and internal applications, Swiftclip ensures your Swifts installation will stand the test of time.

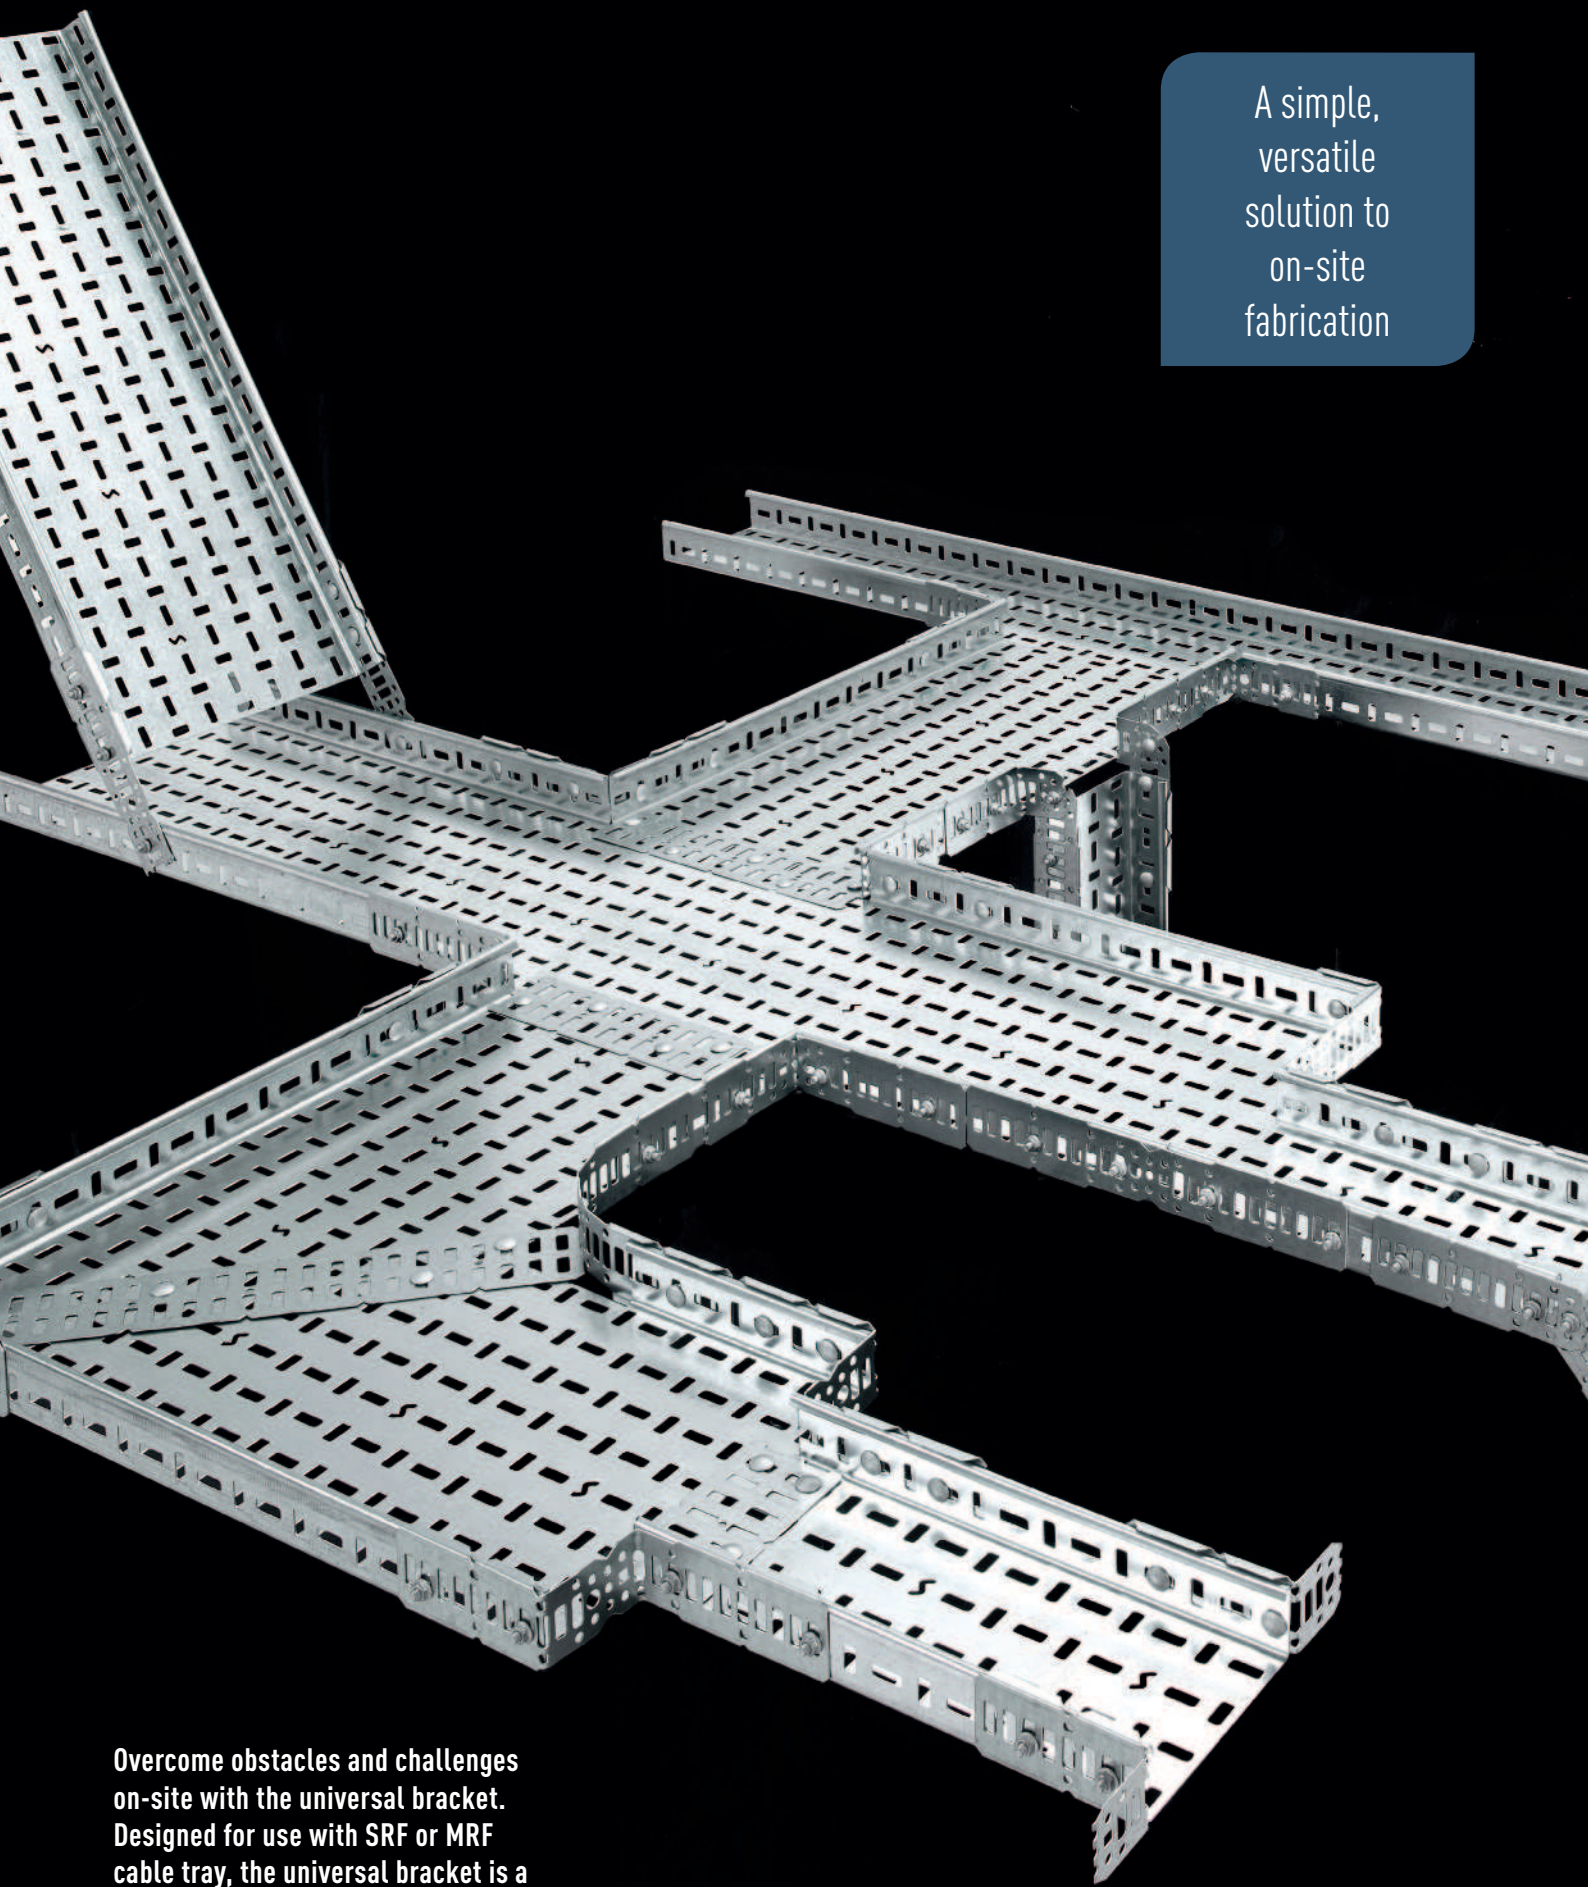
CUTS TOTAL INSTALLED COST

Packed with fast-fit features, the savings in time and effort of installing Swifts, as well as its durable design reducing the need for maintenance, vastly cut the total installed cost of the system.

NO TOOLS NEEDED

With the new Swiftclip, lengths and fittings of Swifts cable tray can be fitted without the use of specialist tools – making it even faster, safer and easier to fit.

A simple, versatile solution to on-site fabrication

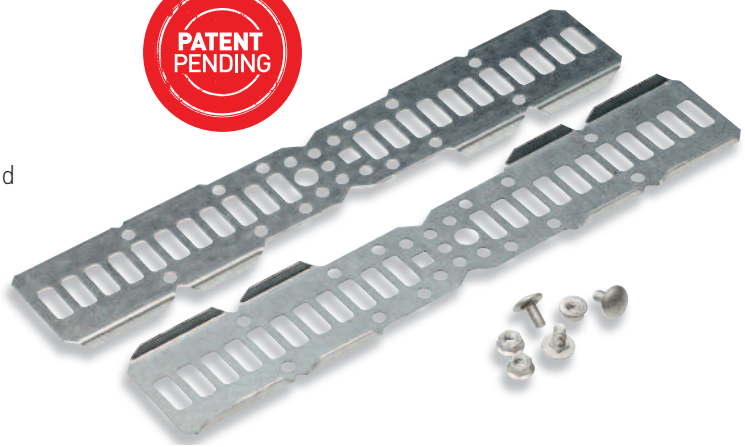


Overcome obstacles and challenges on-site with the universal bracket. Designed for use with SRF or MRF cable tray, the universal bracket is a must-have for any toolkit. This simple, innovative addition to the range offers true versatility when faced with demanding site conditions.

Swifts® cable tray

One innovative bracket... endless configurations

PATENT PENDING

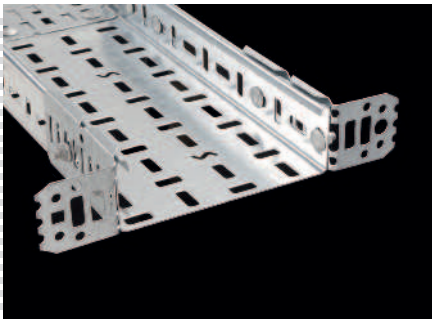


The universal bracket can be hand folded, bent, split or hinged to offer a multitude of functions. The unique design provides the flexibility to cope with demanding on-site requirements.

Supplied with 'quick bolt fasteners' and driver tool.

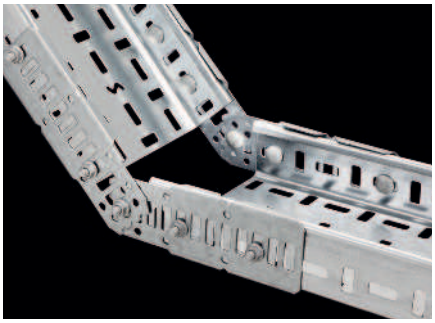
Use in conjunction with the universal fishplate to add additional support and cable protection.

FLANGE ASSEMBLY



Snap and fold bracket to create a flange

INTERNAL RISER

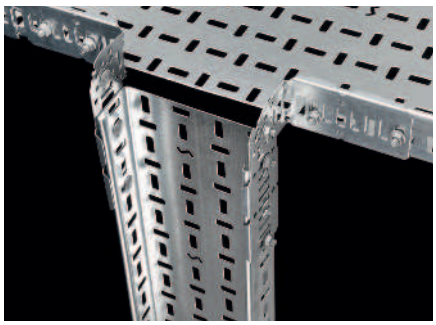


Snap and hinge bracket to create internal or external risers from -90 to +90 degrees

FLAT BEND

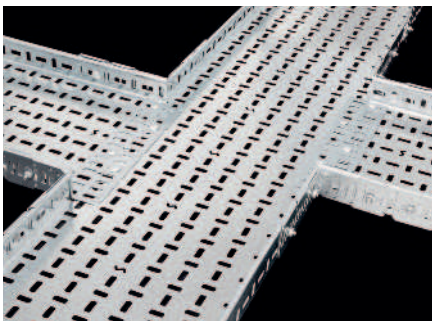
Fold or bend bracket to desired angle. For wider installations add a fishplate for additional support

SIDE DROPOUT



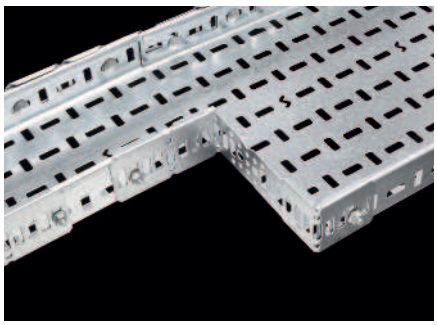
Create specialist functions such as side dropouts by folding and hinging brackets

OFFSET FOURWAY



Fold or bend 2 pairs of brackets to form specialist offset fourways

HANDED REDUCER



Create left, right or straight reducers by simply bending the bracket to suit the application

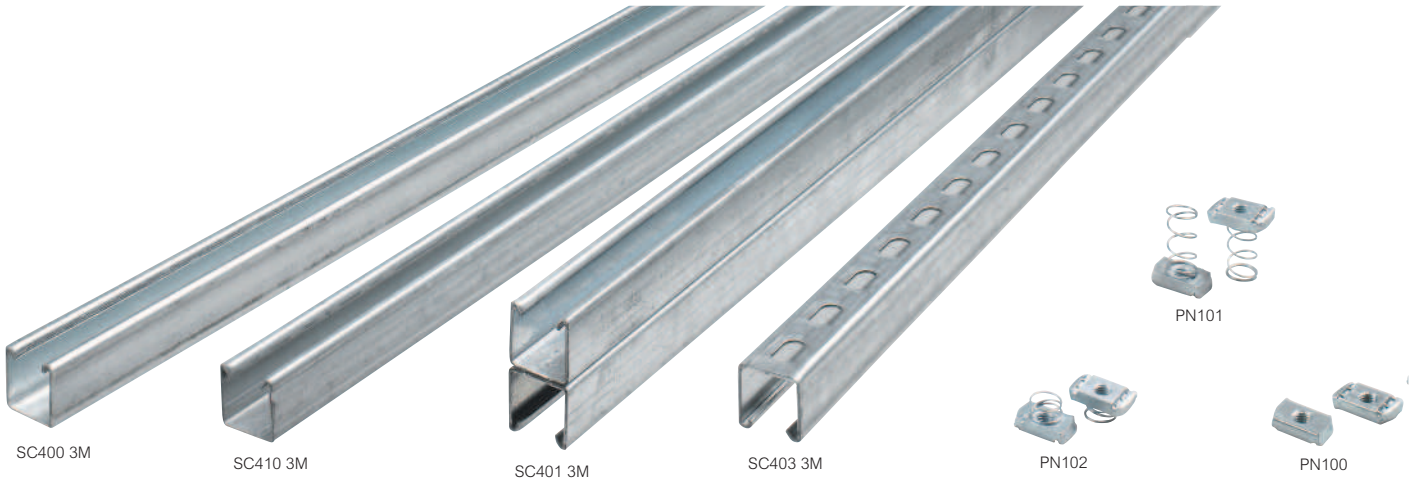
Swiftrack channel support system

channels and channel nuts



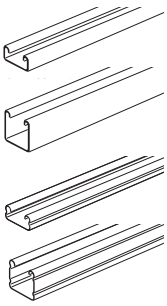
Typical applications **p. 138-139**
Dimensions and technical information **p. 106-107**
Design notes **p. 118**

Channel and brackets are manufactured to BS 6946 – specifications for metal channel cable support systems for electrical installations and calculations for loading are in accordance with BS 5950 : Part 5 1998 structural use of steelwork in buildings, code of practice for cold formed thin gauge sections

Single channels - plain

The standard finish for channel is pre-galvanised mild steel to BS EN 10346
For other finishes add the appropriate suffix
G = hot dip galvanised after manufacture to BS EN ISO 1461
S = stainless steel to BS EN 10088 2 grade 1·4404 (equivalent to S316L31)
Channels SC210 and SC410 are not available in S finish
Examples :
SC200 3M G for hot dip galvanised
SC400 3M S for stainless steel
For technical information, **p. 106**

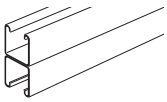
Pack	Cat. Nos.	
		Standard channel
1	SC200 3M	41 x 21 mm, 3 m length
1	SC200 6M	41 x 21 mm, 6 m length
1	SC400 3M	41 x 41 mm, 3 m length
1	SC400 6M	41 x 41 mm, 6 m length
		Light gauge channel
1	SC210 3M	41 x 21 mm, 3 m length
1	SC410 3M	41 x 41 mm, 3 m length



Back-to-back channel

For technical information **p. 107**

Pack	Cat. Nos.	
1	SC401 3M	41 x 83 mm, 3 m length
1	SC401 6M	41 x 83 mm, 6 m length

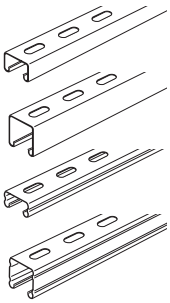


Other fasteners and finishes available to special order
Contact us on +44 (0) 345 605 4333

Single channels - slotted

For technical information, **p. 106**

Pack	Cat. Nos.	
		Standard channel
1	SC203 3M	41 x 21 mm, 3 m length
1	SC203 6M	41 x 21 mm, 6 m length
1	SC403 3M	41 x 41 mm, 3 m length
1	SC403 6M	41 x 41 mm, 6 m length
		Light gauge channel
1	SC213 3M	41 x 21 mm, 3 m length
1	SC413 3M	41 x 41 mm, 3 m length



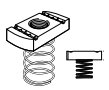
Channel nuts

For use with all channel
M12 channel nuts should always be used for maximum load conditions

The standard finish for all nuts is zinc plated to BS 3382 : Part 2
For stainless steel, add the suffix S
Example : PN101S
For hot dip galvanised, add the suffix G
Example : PN101G

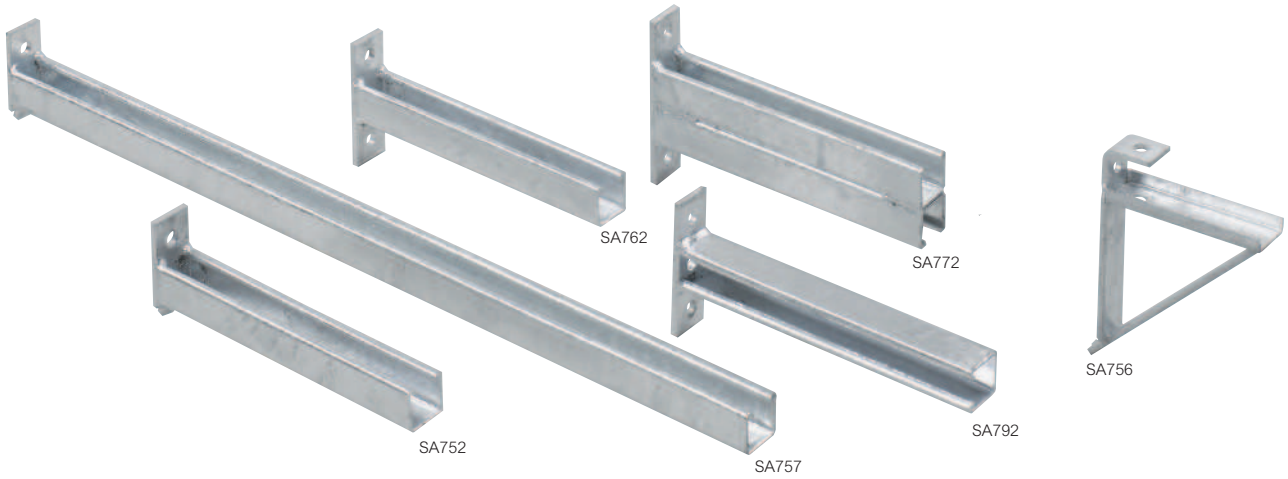
Fasteners :
Use hexagon head setscrews, **p. 32**
For technical information, **p. 107**

Pack	Cat. Nos.	
		Long springs
		For use with 41 mm deep channel
100	PN061	M6
100	PN081	M8
100	PN101	M10
100	PN121	M12
		Short springs
		For use with 21 mm deep channel
100	PN062	M6
100	PN082	M8
100	PN102	M10
100	PN122	M12
		No springs
		For use on all channel depths
100	PN060	M6
100	PN080	M8
100	PN100	M10
100	PN120	M12



Swiftrack channel support system

cantilever arms



Dimensions and technical information **p. 108-109**

Pack	Cat. Nos.	Cantilever arms
		In addition to the cantilever arms listed, there are many other specialist support brackets for use with cable tray These are detailed in the relevant sections in this catalogue
		Cantilever arms Requires only one bolt for quick fixing and is used with open face at the top For technical information, **p. 108**
1	SA750	150 mm
1	SA751	225 mm
1	SA752	300 mm
1	SA753	450 mm
1	SA754	600 mm
1	SA755	750 mm
1	SA757	900 mm
		Cantilever arms, universal Two bolt fixing. Can be used with open face at the top or bottom For technical information, **p. 108**
1	SA760	150 mm
1	SA761	225 mm
1	SA762	300 mm
1	SA763	450 mm
1	SA764	600 mm
1	SA765	750 mm
1	SA766	900 mm
		Cantilever arms, side Two bolt fixing. Can be used with open face on the left or right For technical information, **p. 108**
1	SA790	150 mm
1	SA791	225 mm
1	SA792	300 mm
1	SA793	450 mm
1	SA794	600 mm
1	SA795	750 mm
1	SA796	900 mm

Non-standard cantilever arms available to special order
Contact us on +44 (0) 345 605 4333

Pack	Cat. Nos.	Cantilever arms (continued)
		Cantilever arms, double channel Two bolt fixing with extra support Open face top and bottom For technical information, **p. 108**
1	SA770	150 mm
1	SA771	225 mm
1	SA772	300 mm
1	SA773	450 mm
1	SA774	600 mm
1	SA775	750 mm
1	SA776	900 mm
		Cantilever arm bracket
1	SA756	Used to provide extra support to a horizontal run of channel For technical information, **p. 109**
		Cantilever arms Used to support horizontal runs of tray on to a vertical length of channel For technical information, **p. 94-95**

Loading graphs

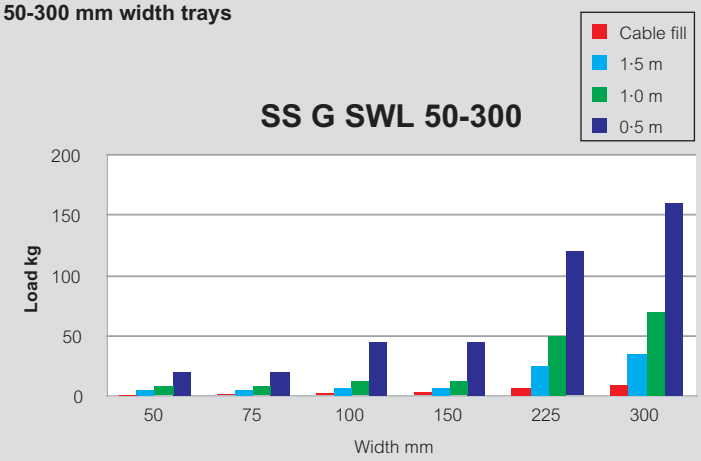
Load tests carried out to BS EN 61537 and shown in kg/m

Cable fill figure is the maximum physical load of cables that can be fitted into tray and is based on 1700 kg/m³ as detailed in the BEAMA "Best Practice guide to cable ladder and cable tray systems"

The loads shown on all graphs are the safe recommended maximum loads that can be applied and must include wind, snow and any other external forces in addition to the cable load

The graph shows the maximum load for tray installed at a support spacing within its recommended range

50-300 mm width trays



Finishes and standards

Standard stocked finish :

G Hot dip galvanised after manufacture to BS EN ISO 1461 : 2009

PG Pre-galvanised steel to BS EN 10346 : 2009 grade DX51D

Additional finishes :

S Stainless steel to BS EN 10088 – 2 grade 1·4404 (equivalent to 316L31)

Sheared steel (particularly stainless steel) does have relatively sharp edges and protective gloves must be worn during handling

All dimensions (mm) are nominal

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), PG (pre-galvanised steel), S (stainless steel)

Fishplates : see p. 105

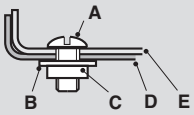
Coupling detail

All SS straight lengths have one end joggled to allow jointing without a separate coupler, see illustration
Slide joggled end of length 1 inside length 2 before fastening

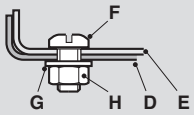
Note
Quantity of bed fasteners
50 - 225 mm = 4, 300 mm = 6

Fasteners (not included)

For G and PG finish



For S finish



A	M6 x 12 roofing bolt
B	Roofing washer
C	M6 square nut
D	Straight length
E	Straight length
F	M6 x 12 panhead screw
G	M6 form A washer
H	M6 hexagon nut

Fastener finishes
For flat bends with G and PG finishes, fasteners are galvanised or zinc plated. For flat bends with S finish, fasteners are stainless steel

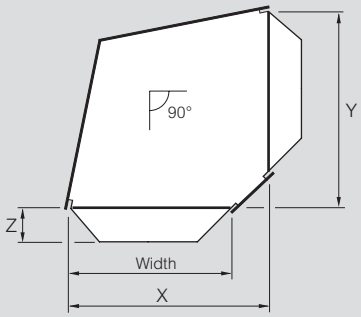
Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), PG (pre-galvanised steel), S (stainless steel)

All dimensions (mm) are nominal

90° flat bends – dimensions and weights

Cat. No. SSB W F



Cat. Nos.	Width	X	Y	Z	Weight (kg)

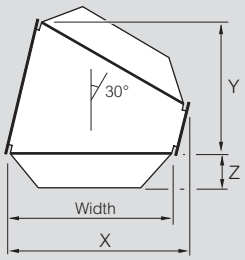
Cat. No. SSB W 30 F



Cat. Nos.	Width	X	Y	Z	Weight (kg)
SSB 50 30 F	50	57	50	32	0·1
SSB 75 30 F	75	82	63	32	0·1
SSB 100 30 F	100	107	75	32	0·1
SSB 150 30 F	150	157	100	32	0·2
SSB 225 30 F	225	229	138	57	0·4
SSB 300 30 F	300	307	175	57	0·7

All dimensions (mm) are nominal

Dimensions and weights – flat bends 90°, 60°, 45° and 30°

Dimensions

X = Length of fitting from each end (excluding integral coupler)
Y = Length of fitting from each end (excluding integral coupler)
Z = End extension of integral coupler

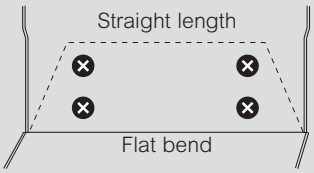
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96

Assembly – flat bends 90°, 60°, 45° and 30°

Coupling detail

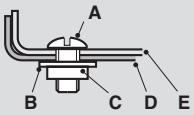


Note

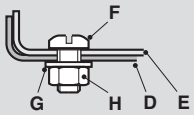
Quantity of bed fasteners
50 - 225 mm = 4, 300 mm = 6

Fasteners (not included)

For G and PG finish



For S finish



A	M6 x 12 roofing bolt
B	Roofing washer
C	M6 square nut
D	Fitting
E	Straight length
F	M6 x 12 panhead screw
G	M6 form A washer
H	M6 hexagon nut

Fastener finishes

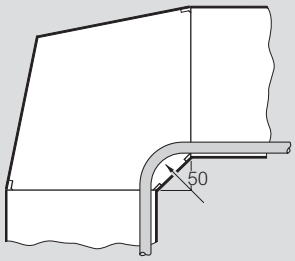
For flat bends with G and PG finishes, fasteners are galvanised or zinc plated. For flat bends with S finish, fasteners are stainless steel

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), PG (pre-galvanised steel), S (stainless steel)

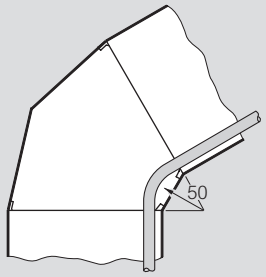
Assembly – flat bends 90°, 60°, 45° and 30° (continued)

Minimum bend radius for cables – flat bends 90°



Minimum cable radius = 50 mm

Minimum bend radius for cables – flat bends 60°, 45° and 30°



Minimum cable radius = 50 mm

All dimensions (mm) are nominal

90° inside and outside risers – dimensions and weights

D	Fitting
E	Straight length
F	M6 x 12 panhead screw
G	M6 form A washer
H	M6 hexagon nut

Fastener finishes

For risers with G finish, fasteners are galvanised or zinc plated
For risers with S finish, fasteners are stainless steel

All dimensions (mm) are nominal

Swifts® SS light duty fittings

adjustable risers

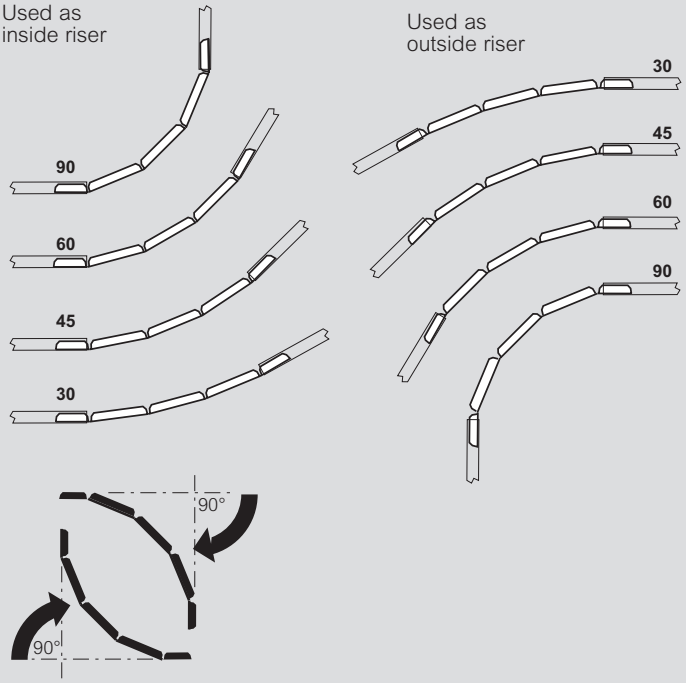
12 or 18

Dimensions and weights

Adjustable risers can be used as an inside or outside riser for any angle up to 90°
Minimum radius = 200 mm
Maximum radius = 300 mm
Overall length when flat = 554 mm

Dimensions

Cat. No. SSAR W F



Cat. Nos.	Width	Weight (kg)
SSAR 50 F	50	0·4
SSAR 75 F	75	0·6
SSAR 100 F	100	0·8
SSAR 150 F	150	1·0
SSAR 225 F	225	1·5
SSAR 300 F	300	2·0

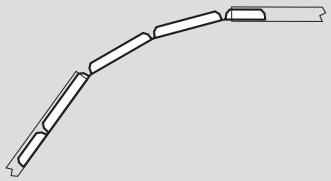
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96

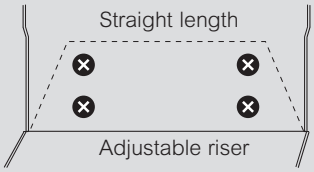
Key : Replace the letter shown in red with your choice from the following options :
F = Finish : G (hot dip galvanised after manufacture), PG (pre-galvanised steel), S (stainless steel)

Assembly

As many riser segments as necessary may be inserted into the end of the straight length, thus avoiding the need for cutting



Coupling detail



Note

Quantity of bed fasteners
50 - 225 mm wide tray = 4
300 mm wide tray = 6

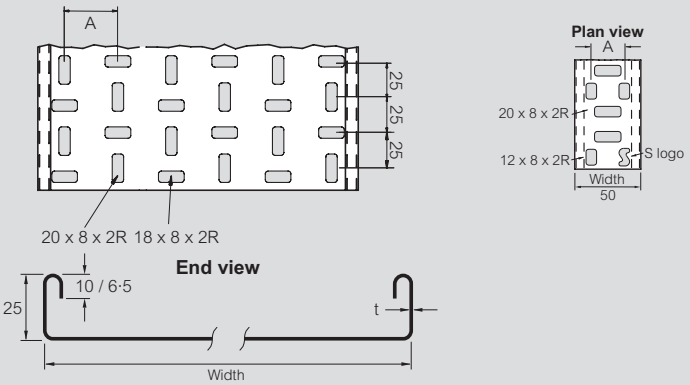
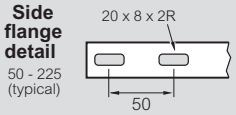
For cable load capacity see loading graphs opposite

Dimensions

Standard length 3 m



Width (mm)	A (mm)
50	25·00
75	37·50
100	31·75
150 to 900	37·50



R = radius

Gauges and weights

The gauge 't' for each cable tray width and finish can vary by product and range

Non-standard gauges and finishes are available to special order, contact us on +44 (0) 345 605 4333

Cat. Nos.	Width (mm)	Weight (kg)	Gauge t (mm) G	PG
MRFL 50 F	50	2·0	0·7	0·7
MRFL 75 F	75	2·6	0·7	0·7
MRFL 100 F	100	3·0	0·8	0·7
MRFL 150 F	150	3·9	0·8	0·8
MRFL 225 F	225	6·8	1·0	0·8
MRFL 300 F	300	9·2	1·2	1·0
MRFL 450 F	450	16·5	1·2	1·2
MRFL 600 F	600	21·6	1·2	1·2
MRFL 750 F	750	33·7	1·5	1·4
MRFL 900 F	900	39·7	1·5	1·4

All weights given are in kilograms (kg) and are for a 3 m straight length in hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Sheared steel (particularly stainless steel) does have relatively sharp edges and protective gloves must be worn during handling

Loading graphs

Load tests carried out to BS EN 61537 and shown in kg/m

Cable fill figure is the maximum physical load of cables that can be fitted into tray and is based on 1700 kg/m³ as detailed in the BEAMA "Best Practice guide to cable ladder and cable tray systems"

The loads shown on all graphs are the safe recommended maximum loads that can be applied and must include wind, snow and any other external forces in addition to the cable load

The graphs show the maximum load for tray installed at a support spacing within its recommended range

50-300 mm width trays

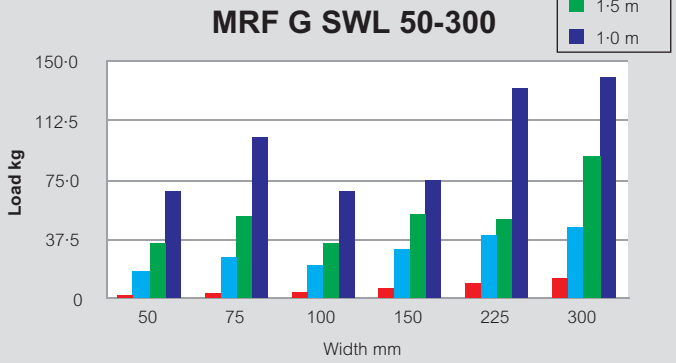


Table shown with results up to 300 mm wide obtained using the Swiftclip

450-900 mm width trays

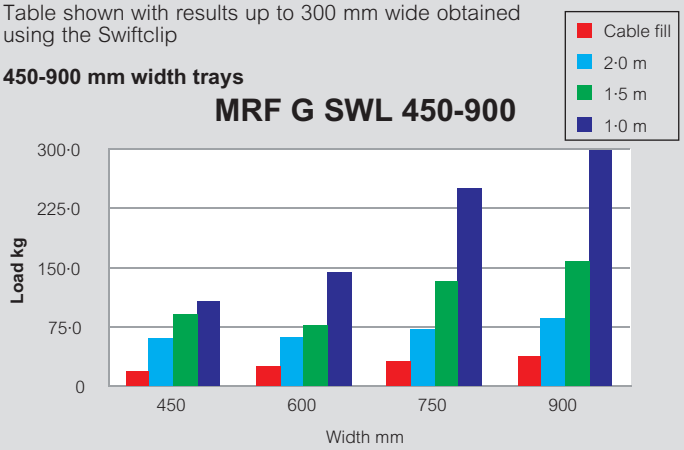

Table shown with results of 450 mm wide and above using Swiftgrips and UF fishplates

For lengths 450 mm wide and greater, the addition of fishplate Cat. No. WF F across the underside of the length-to-length joint provides added strength and increases the safe working load, **p. 105**

Finishes and standards

Standard stocked finish :

G Hot dip galvanised after manufacture to BS EN ISO 1461
PG Pre-galvanised steel to BS EN 10346 : 2009 grade DX51D

Additional finishes :

D Deep galvanised high silicon steel made from BS EN 10025-5 : 2004 Grade S355JOWP
S Stainless steel to BS EN 10088 – 2 grade 1·4404 (equivalent to 316L31)
E Powder coated (black RAL 9005)

Note

50 mm wide not available in deep galvanised (D) finish

All dimensions (mm) are nominal

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

→ Coupler sets and fixing options : see p. 47-50

→ Fishplates : see p. 105

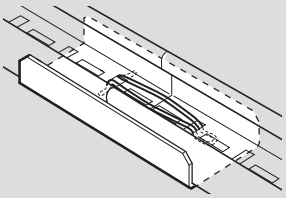
Swifts® MRF straight length to straight length coupling

standard couplers and Swiftclip / Swiftgrip

■ Standard couplers and Swiftclip / Swiftgrip

Couplers are required for joining together MRF straight lengths
MRFC standard couplers are supplied in pairs. MRFC 50 standard coupler is supplied singly
2 x Swiftclips are required for each coupling and are used with tray widths up to and including 300 mm. For 450 mm to 900 mm tray, use Swiftgrip (2 per coupling)
1 x Swiftclip is required for 50 mm tray and MRFC 50 couplers
Swiftclip and Swiftgrip are supplied in packs of 10
As an alternative coupling method, use standard couplers and quick bolt fasteners (Cat. No. QBF) and a tool, see **p. 48**, or standard couplers and fasteners, see **p. 48-49**

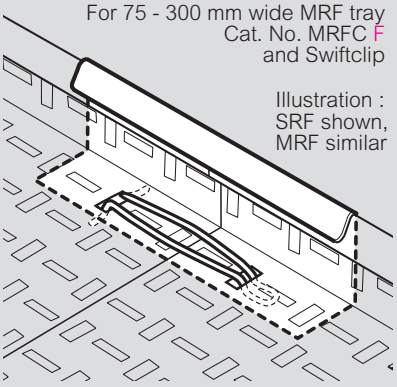
■ Installation using Swiftclip - 50 mm to 300 mm wide tray



For 50 mm wide MRF tray
Cat. No. MRFC 50 F and Swiftclip

For 75 - 300 mm wide MRF tray
Cat. No. MRFC F and Swiftclip

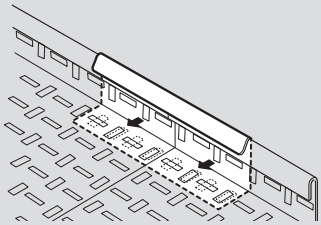
Illustration : SRF shown, MRF similar



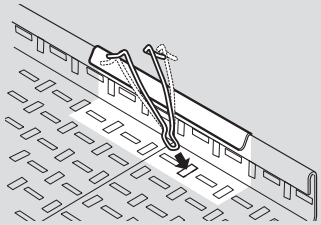
Standard couplers		Swiftclip	
Cat. Nos.	Tray range	Cat. Nos.	Finish
MRFC 50 F[1]	MRF	SCLPG	PG
MRFC F[2]	MRF	SCLG	G

1 : MRFC 50 for 50 mm wide tray only
2 : MRFC for 75-900 mm wide tray only

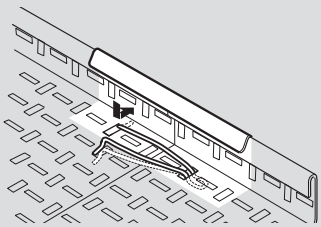
■ Assembly using Swiftclip



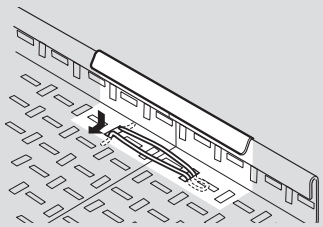
1. Locate coupler across underside of tray joint



2. Insert joggled head of clip where tray and coupler align



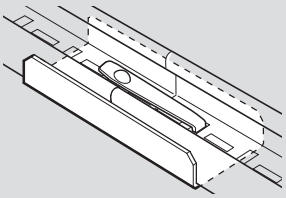
3. Clip leg nearest tray wall into slot on other tray bed



4. The second leg is pushed towards the wall of the tray and pushed home into the same slot

Repeat process on the other side of the tray, fitting the clip in the opposite direction
Ensure:
1. Head and feet of clip are clamping through tray and coupler
2. Clip should span across the joint

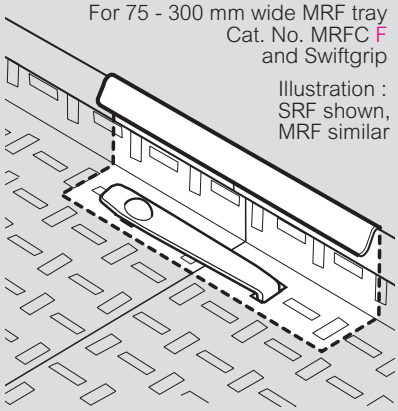
■ Installation using Swiftgrip



For 50 mm wide MRF tray
Cat. No. MRFC 50 F and Swiftgrip

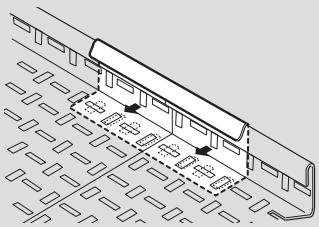
For 75 - 300 mm wide MRF tray
Cat. No. MRFC F and Swiftgrip

Illustration : SRF shown, MRF similar

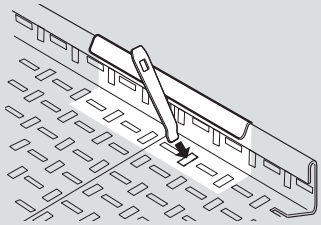


Swiftgrip Cat. No.	For tray finishes
SGR	PG and G

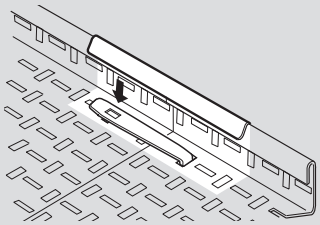
■ Assembly using Swiftgrip



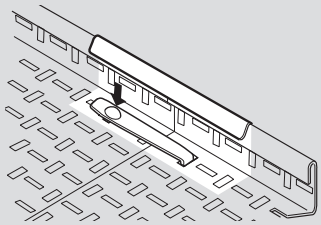
1. Locate coupler across underside of tray joint



2. Insert joggled head of grip where tray and coupler align



3. Lie length of grip flat against tray bed



4. Insert QBF into top of Swiftgrip and secure bolt underneath

Repeat process on the other side of the tray, fitting the grip in the opposite direction
Ensure:
1. Head and bolt of grip are clamping through tray and coupler
2. Grip should span across the joint

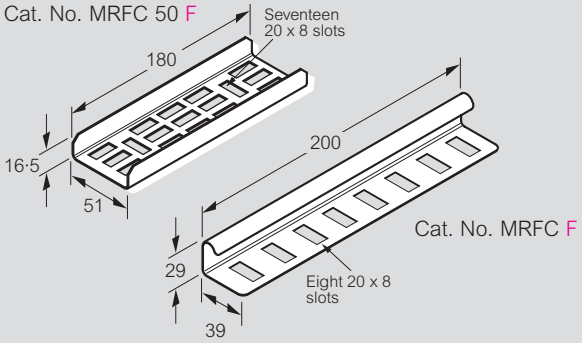
All dimensions (mm) are nominal

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated)

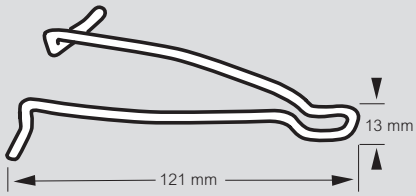
■ Dimensions and weights

Couplers - MRFC 50 (for 50 mm wide tray) / MRFC (for 75 mm to 900 mm wide tray)



Cat. Nos.	Weight (kg)
MRFC 50 F	0·2 single
MRFC F	0·4 pair

Swiftclip (for 50 mm to 300 mm wide tray)



Cat. Nos.	Pack

Cat. No.	Pack
SGR	10

Weights
All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

All dimensions (mm) are nominal

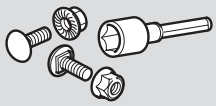
Key : Replace the letter shown in red with your choice from the following options :
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated)

All dimensions (mm) are nominal

→ Straight lengths : see p. 46

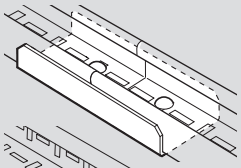
■ Standard couplers and quick bolt fasteners

Compared with conventional nuts and bolts, quick bolt fasteners are a stronger, faster, easier and safer method of joining together tray
Square-shafted quick bolts lock firmly into position before fixing. The nuts, which have integral washers and a serrated edge to reduce slip and improve earthing, can then be easily tightened using a power tool
Supplied in packs containing 100 quick bolt fasteners and a FREE power tool attachment

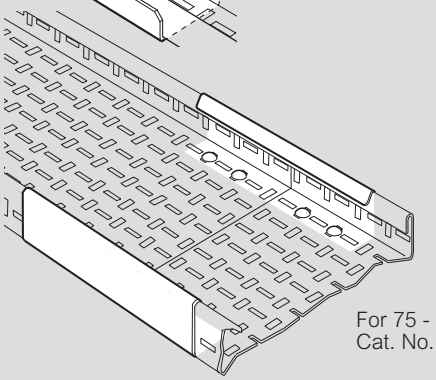


■ Installation

Typical installation as per standard couplers, replacing nuts, bolts and washers with quick bolt fasteners



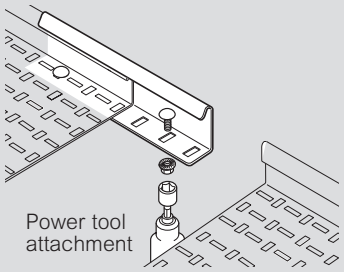
For 50 mm wide MRF tray
Cat. No. MRFC 50 F



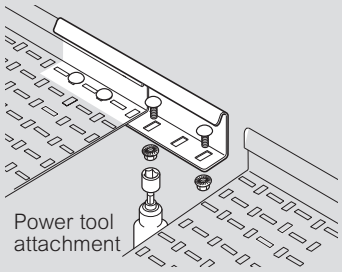
For 75 - 900 mm wide MRF tray
Cat. No. MRFC F

■ Assembly

Bring together two lengths and fit a coupler on the outside of adjacent flanges at both sides of the tray joint
Locate the coupler and insert bolts through aligning slots in each tray bed and coupler as shown and secure with nuts

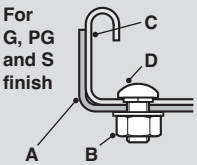


Tray widths up to 225 mm
Two quick bolt fasteners per coupler



Tray widths 300 mm and above
Four quick bolt fasteners per coupler

Quick bolt fasteners			
Cat. Nos.	Pack	Size (mm)	Finish
QBF	100	M6 x 12	Dacromet
QBFS	100	M6 x 12	Stainless steel



A Coupler
B M6 flange nut
C Straight length
D M6 coach bolt

For coupler dimensions see above left

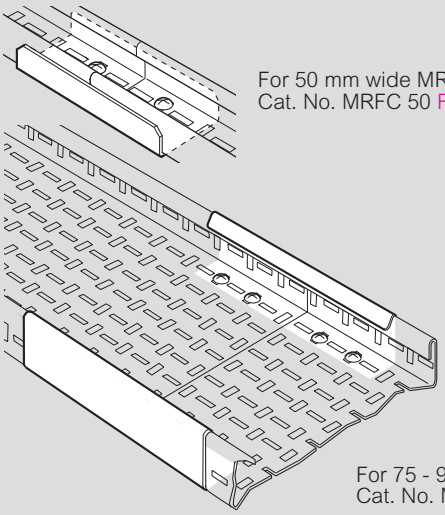
Swifts® MRF straight length to straight length coupling

standard couplers and standard fasteners

Standard couplers and standard fasteners

Couplers are required for joining together MRF straight lengths or cut lengths of tray
MRFC standard couplers are supplied in pairs
MRFC 50 standard coupler is supplied singly
Supplied without fasteners – use M6 nuts, bolts and washers (see opposite)

Installation (typical)



For 50 mm wide MRF tray
Cat. No. MRFC 50 F

For 75 - 900 mm wide MRF tray
Cat. No. MRFC F

Illustration : SRF shown, MRF similar

Standard couplers	
Cat. Nos.	**Tray range**
MRFC 50 F(1)	MRF
MRFC F (2)	MRF

(1) MRFC 50 for 50 mm wide tray only
(2) MRFC for 75-900 mm wide tray only

Assembly

For 50 mm wide MRF tray

Bring together two lengths and locate the coupler across the underside of the tray joint as shown

Insert two roofing bolts through aligning slots in each tray bed and into the coupler (four bolts per coupler) and secure with roofing washers and nuts

For 75 - 900 mm wide MRF tray

Bring together two lengths and fit a coupler on the outside of adjacent flanges at both sides of the tray joint

Locate the coupler as shown and insert two roofing bolts through aligning slots in each tray bed and coupler (four bolts per coupler), and secure with roofing washers and nuts

H	M6 x 12 pan head screw

Fastener finishes

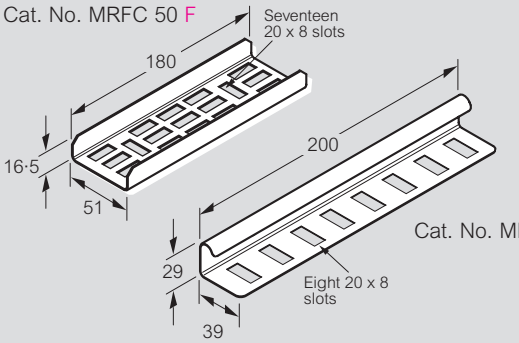
For lengths and fittings with G, D and PG finishes fasteners are galvanised or zinc plated. For trays and fittings with S finish, fasteners are corrosion resistant stainless Grade A470
For lengths and fittings with E finish the choice of material for fasteners will depend on the installation environment – contact us on +44 (0) 345 605 4333

Note

For quick bolt fasteners, see **p. 48**

Dimensions and weights

Cat. No. MRFC 50 F



Cat. No. MRFC F

Cat. Nos.	Weight (kg)
MRFC 50 F	0·2 single
MRFC F	0·4 pair

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Pre-galvanised (PG) x 0·96

All dimensions (mm) are nominal

Straight lengths : see p. 46

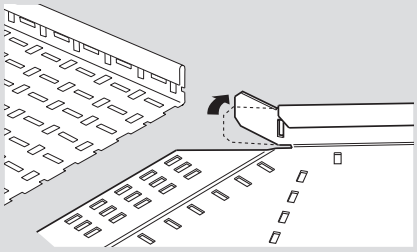
Swifts® MRF straight length to fitting coupling

using Swiftclip or fasteners

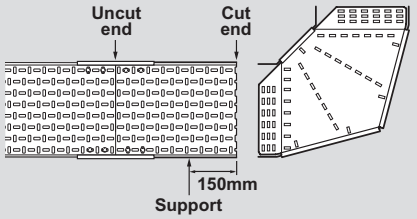
Straight length to fitting coupling using Swiftclip – 50 mm to 300 mm wide tray

Cable tray fittings must be properly supported. The ideal location for supports is shown in step 2, i.e. 150 mm from the fitting to length joint. For further details see Design Notes, Recommended Support Locations, **p. 132**

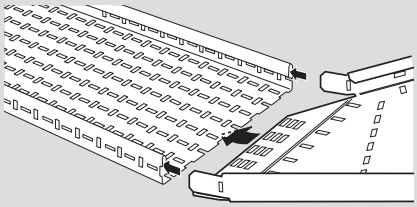
1
Where necessary re-align the fitting flange tabs from their transit position to their installation position



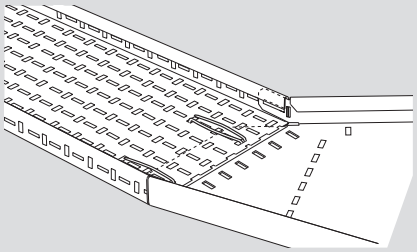
2
When a straight length of cable tray has to be cut back to accept a fitting, always fit the uncut end to the adjacent straight length; the cut end should be connected to the fitting



3
Offer the fitting at an angle to the straight length and locate, ensuring that the joggled fishplate fits under the tray bed and the flange tabs slide inside the length flanges



4
Insert joggled head of clip through slots in the tray bed into aligning slots in the fitting fishplate, then clip legs into slot on tray bed



5
Ensure head of clip is clamping through tray and fitting

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated)

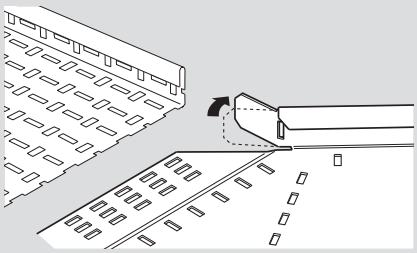
All dimensions (mm) are nominal

→ Straight lengths : see p. 46

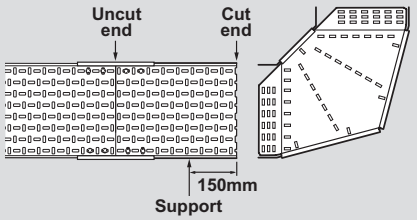
Straight length to fitting coupling using fasteners

Cable tray fittings must be properly supported. The ideal location for supports is shown in step 2, i.e. 150 mm from the fitting to length joint. For further details see Design Notes, Recommended Support Locations, **p. 132**

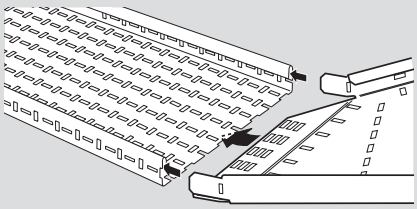
1
Where necessary re-align the fitting flange tabs from their transit position to their installation position



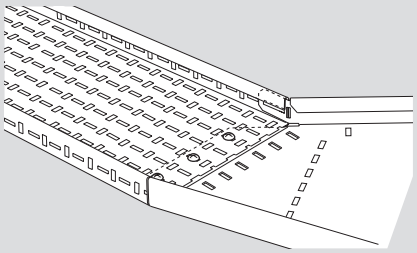
2
When a straight length of cable tray has to be cut back to accept a fitting, always fit the uncut end to the adjacent straight length; the cut end should be connected to the fitting



3
Offer the fitting at an angle to the straight length and locate, ensuring that the joggled fishplate fits under the tray bed and the flange tabs slide inside the length flanges



4
Insert roofing bolts or QBF through slots in the tray bed in to aligning slots in the fitting fishplate and secure with roofing washers and nuts



Note

Fasteners stated are for D, G and PG finishes
For lengths and fittings with S finish use fasteners listed below

Fasteners

Minimum number of fasteners per joint (not included) :
Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

Roofing bolts

For G and PG finish

Fastener finish

For lengths and fittings with G, D and PG finishes, fasteners are galvanised or zinc plated. For trays and fittings with S finish, fasteners are corrosion resistant stainless Grade A470
For lengths and fittings with E finish, the choice of material for fasteners will depend on the installation environment - contact us on +44 (0) 345 605 4333

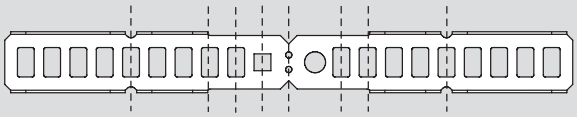
Swifts® MRF medium duty fittings

universal bracket and fishplate

Universal bracket

The universal bracket can be easily folded at one or more of the 8 predetermined points. By overfolding a couple of times, the bracket can be split, for example on the centre line to make a hinged coupler or in between the outer flanges if the length of the bracket needs to be reduced
The square hole is provided to locate the shoulder of the quick bolt fastener – this side should be facing inwards towards the tray to avoid snagging cables
The pitch between each fold point is designed to match up with the Swifts range of MRF cable tray systems
By using different configurations the bracket can be folded to create numerous functions on-site, examples of which are shown below
For MRF 300mm to 900 mm straight lengths, fixing holes must be drilled into the side wall of the tray

Cat. No. MRFUB F



Universal fishplate

Fishplates are designed for extra strength when joining cable tray beds and can also help to protect cables from cut edges
The universal fishplate can be overfolded and split at 75 mm centres when working with narrow trays
Supplied singly without fasteners

Also consider the versatile adjustable bend for widths 50 mm - 300 mm, **p. 54-55**

Note

50 mm wide not available in D finish

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

MRF adjustable bends : see p. 54-55

Dimensions and weights – flat bends 90°, 60°, 45° and 30°

Dimensions

X = Length of fitting from each end (excluding integral coupler)
Y = Length of fitting from each end (excluding integral coupler)
Z = End extension of integral coupler

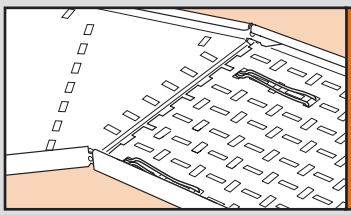
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

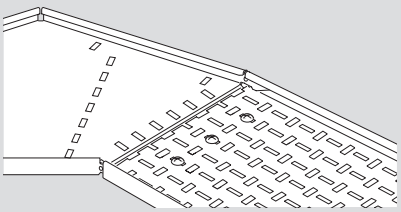
Assembly using Swiftclip – flat bends 90°, 60°, 45° and 30°



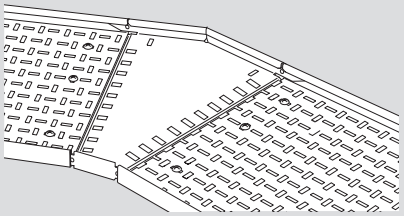
For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 50

Assembly using fasteners – flat bends 90°, 60°, 45° and 30°

Coupling detail – 90°



Coupling detail – 60°, 45° and 30°



Flat bend to straight length coupling

Flat bends have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each flat bend to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 50**. Fasteners are not included

Minimum number of fasteners per joint :

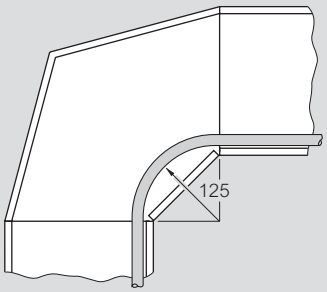
Widths up to 225	= 2
Widths 300 to 600	= 3
Widths 750 and 900	= 4

Fastener finishes

For flat bends with G, D and PG finishes, fasteners are galvanised or zinc plated. For flat bends with S finish, fasteners are stainless steel For flat bends with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

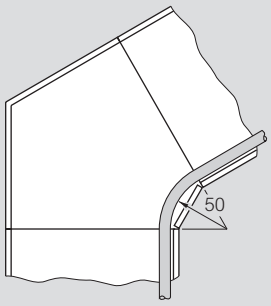
All dimensions (mm) are nominal

Minimum bend radius for cables – flat bends 90°



Minimum cable radius = 125 mm

Minimum bend radius for cables – flat bends 60°, 45° and 30°



Minimum cable radius = 125 mm

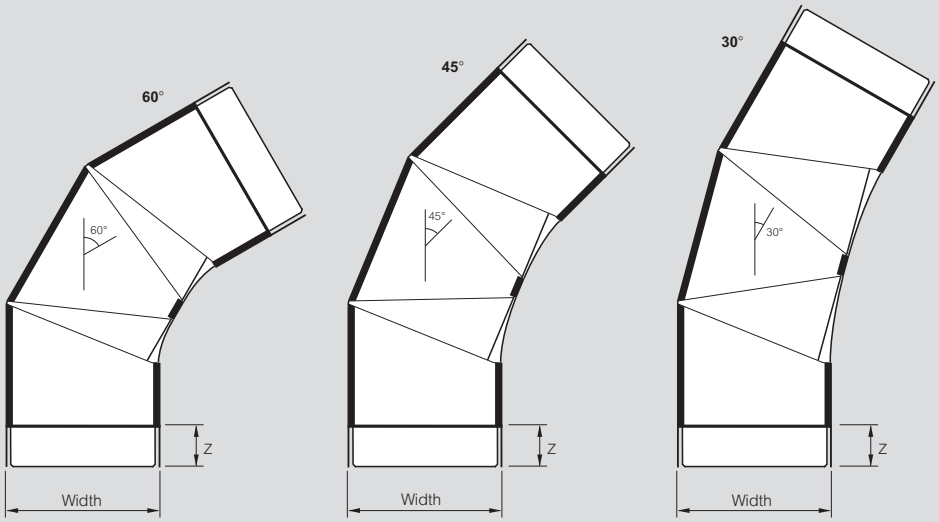
Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

MRF adjustable bends : see p. 54-55

Dimensions and weights

Cat. No. MRFAB W F



Cat. Nos.	Width	Z	Weight (kg)
MRFAB 50 F	50	55	0·3
MRFAB 75 F	75	55	0·5
MRFAB 100 F	100	55	0·6
MRFAB 150 F	150	55	1·0
MRFAB 225 F	225	55	1·9
MRFAB 300 F	300	55	3·0

For widths 450-900 mm use 60°, 45° and 30° flat bends, **p. 52-53**

For widths 300 mm and below use adjustable flat bends for all angles up to 90°. Fixed angle flat bends are also available, **p. 52-53**

Note

50 mm wide not available in D finish

Dimensions

Z = End extension of integral coupler

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

All dimensions (mm) are nominal

MRF flat bends : see p. 52-53

Assembly

Adjusting bend to any angle between 30° and 90°

Adjustable flat bends can be adjusted to any angle between 30° and 90°, refer to the diagram opposite

Insert fasteners through both slots **X** in the outer sections of the bed and the associated slots **Z** in the centre section of the bed. Adjust the bendable sections equally until the required angle is formed

Setting bend to specific angles

Adjustable flat bends can be set to specific fixed angles or they can be adjusted to any angle between 30° and 90° in increments of 7·5°

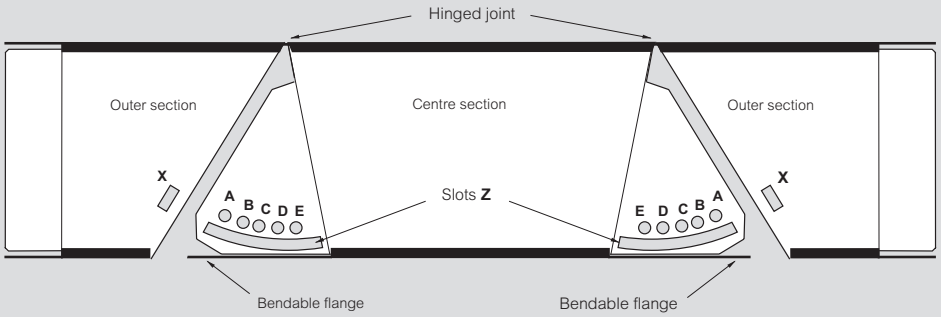
Note

When setting the adjustable flat bend to the required angle, ensure that the bendable inner flanges on the centre section engage in the return flanges on the outer sections

Angle (°)	Fastener holes
30	A + A
37·5	A + B
45	B + B
52·5	B + C
60	C + C
67·5	C + D
75	D + D
82·5	D + E
90	E + E

Refer to the table and the diagram below

Insert fasteners through both slots **X** in the outer sections of the bend and the appropriate holes (**A** to **E**) in the centre section of the bed (2 x M6 fasteners included)



Assembly (continued)

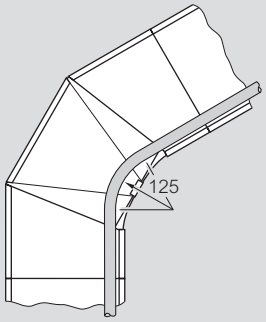
Fastener finishes

For adjustable flat bends with G, D and PG finishes, fasteners are galvanised or zinc plated

For adjustable flat bends with S finish, fasteners are stainless steel

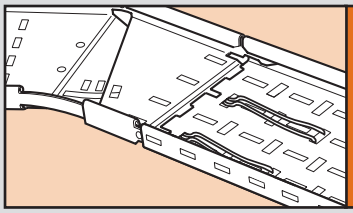
For adjustable flat bends with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

Minimum bend radius for cables



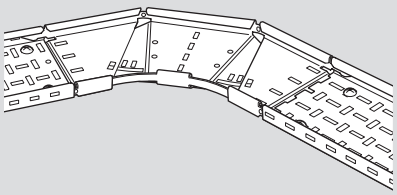
For details on how to set adjustable flat bends to angles, see below and opposite

Assembly using Swiftclip – adjustable flat bends



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 50

Assembly using fasteners – adjustable flat bends



Adjustable flat bend to straight length coupling

Adjustable flat bends have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each adjustable flat bend to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), see **p. 50**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225 = 2
Width 300 = 3

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

All dimensions (mm) are nominal

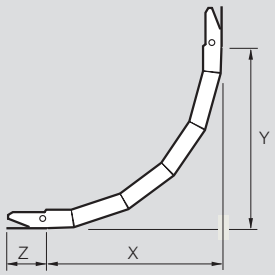
MRF flat bends : see p. 52-53

90° inside and outside risers – dimensions and weights

Dimensions

Cat. No. MRFIR W F

Inside riser



Cat. No. MRFOR W F

Cat. Nos. given in the table are for inside risers. For outside risers substitute MRFOR for MRFIR. All fixed risers radius = 260 mm

Note: 50 mm wide not available in D finish

Dimensions

X = Length of fitting from each end (excluding integral coupler)
Y = Length of fitting from each end (excluding integral coupler)
Z = End extension of inte

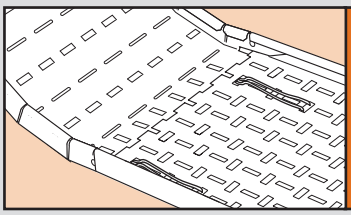
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

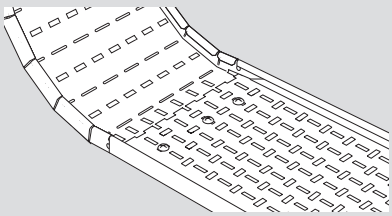
Assembly using Swiftclip – inside and outside risers



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 50

Assembly using fasteners – inside and outside risers

Coupling detail



Riser to straight length coupling

Risers have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each riser to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), see **p. 50**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

Fastener finishes

For risers with G, D and PG finishes, fasteners are galvanised or zinc plated

For risers with S finish, fasteners are stainless steel

For risers with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

All dimensions (mm) are nominal

MRF adjustable risers : see p. 57

Swifts® MRF medium duty fittings

adjustable risers

Dimensions and weights

The adjustable riser can be used as an inside or outside riser for any angle up to 90°
Minimum radius = 200 mm
Maximum radius = 300 mm
Overall length when flat = 554 mm

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Dimensions and weights (continued)

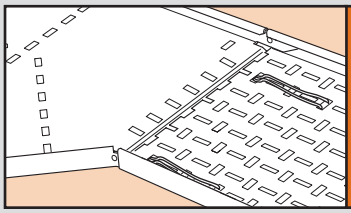
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

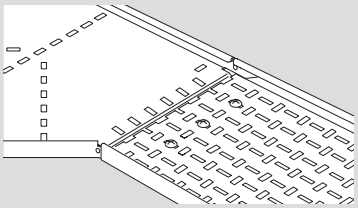
Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

Assembly using Swiftclip – unequal tees



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 50

Assembly using fasteners – unequal tees



Unequal tee to straight length coupling

Unequal tees have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each unequal tee to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 50**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225	= 2
Widths 300 to 600	= 3
Widths 750 and 900	= 4

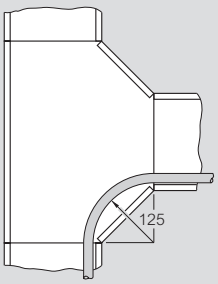
Fastener finishes

For unequal tees with G, D and PG finishes, fasteners are galvanised or zinc plated

For unequal tees with S finish, fasteners are stainless steel

For unequal tees with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

Minimum bend radius for cables



Minimum cable radius = 125 mm

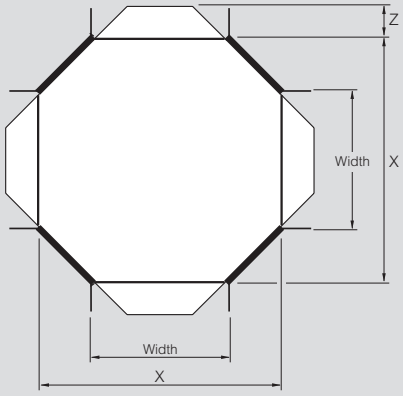
All dimensions (mm) are nominal

MRF equal tees : see p. 59

Dimensions and weights

Dimensions

Cat. No. MRFX W F



X = Length of fitting from each end (excluding integral coupler)
Z = End extension of integral coupler

Cat. Nos.	Width	X	Z	Weight (kg)

Note

50 mm wide not available in D finish

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

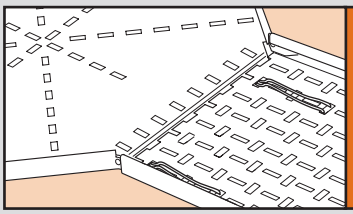
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Key : Replace the letter shown in red with your choice from the following options :

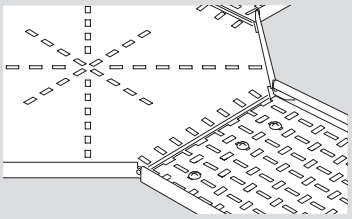
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Assembly using Swiftclip – 4 way crosspieces



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 50

Assembly using fasteners – 4 way crosspieces



4 way crosspiece to straight length coupling

Crosspieces have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each crosspiece to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 50**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

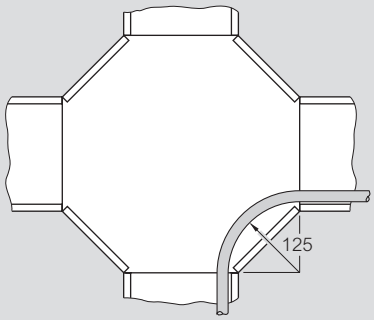
Fastener finishes

For crosspieces with G, D and PG finishes, fasteners are galvanised or zinc plated

For crosspieces with S finish, fasteners are stainless steel

For crosspieces with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

Minimum bend radius for cables



Minimum cable radius = 125 mm

All dimensions (mm) are nominal

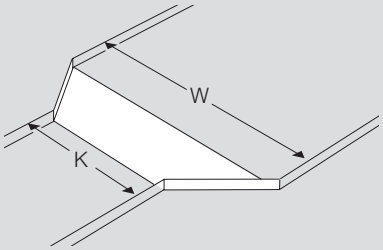
	600	MRFR 900 600 F	300	55	55	5·9
	750	MRFR 900 750 F	100	55	55	6·2

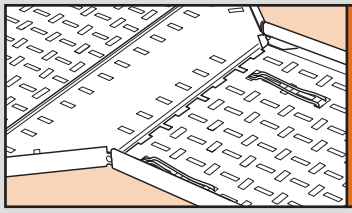


To create the Cat No., add the main run width (W), the reduced run width (K) and the finish (F)
Example :
For a hot dip galvanised reducer reducing from 300 mm to 150 mm : MRFR 300 150 G

Weights
All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

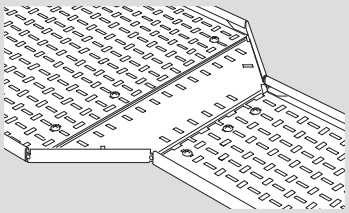
Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

Assembly using Swiftclip – straight reducers



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 50

Assembly using fasteners – straight reducers



Reducer to straight length coupling
Reducers have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling
Each reducer to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 50**. Fasteners are not included
Minimum number of fasteners per joint :

Widths up to 225	= 2
Widths 300 to 600	= 3
Widths 750 and 900	= 4

Fastener finishes
For reducers with G, D and PG finishes, fasteners are galvanised or zinc plated
For reducers with S finish, fasteners are stainless steel
For reducers with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

All dimensions (mm) are nominal

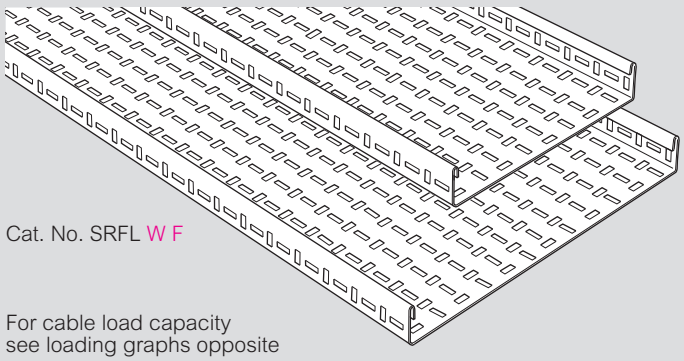
Key : Replace the letter shown in red with your choice from the following options :
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Swifts® SRF heavy duty return flange

straight lengths

50

Dimensions and weights

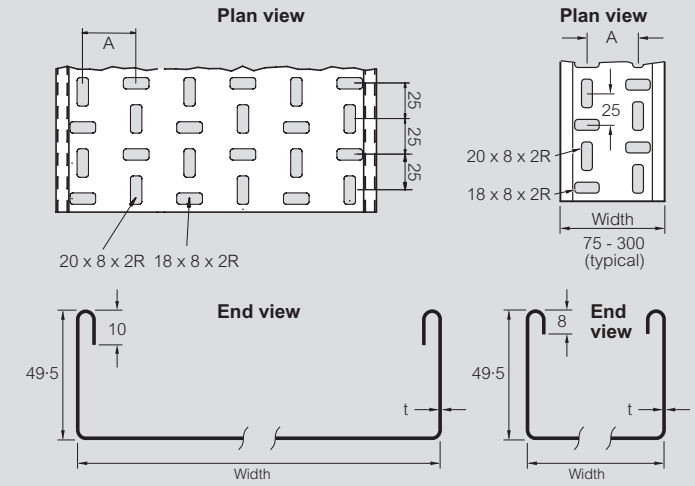


Cat. No. SRFL W F

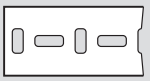
For cable load capacity see loading graphs opposite

Dimensions

Standard length 3 m



Width (mm)	A (mm)
75	37·50
100	31·75
150 to 900	37·50



Side flange detail

R = radius

Gauges and weights

The gauge 't' for each cable tray width and finish can vary by product and range

Non-standard gauges and finishes are available to special order, contact us on +44 (0) 345 605 4333

Cat. Nos.	Width (mm)	Weight (kg)	Gauge t (mm) G	PG
SRFL 75 F	75	4·2	0·9	0·9
SRFL 100 F	100	4·4	0·9	0·9
SRFL 150 F	150	6·0	0·9	0·9
SRFL 225 F	225	8·9	1·2	1·2
SRFL 300 F	300	10·8	1·2	1·2
SRFL 450 F	450	17·8	1·2	1·2
SRFL 600 F	600	22·9	1·5	1·4
SRFL 750 F	750	35·9	2·0	2·0
SRFL 900 F	900	42·0	2·0	2·0

All weights given are in kilograms (kg) and are for a 3 m straight length in hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Sheared steel (particularly stainless steel) does have relatively sharp edges and protective gloves must be worn during handling

Loading graphs

Load tests carried out to BS EN 61537 and shown in kg/m

Cable fill figure is the maximum physical load of cables that can be fitted into tray and is based on 1700 kg/m³ as detailed in the BEAMA "Best Practice guide to cable ladder and cable tray systems"

The loads shown on all graphs are the safe recommended maximum loads that can be applied and must include wind, snow and any other external forces in addition to the cable load

The graphs show the maximum load for tray installed at a support spacing within its recommended range

75-300 mm width trays

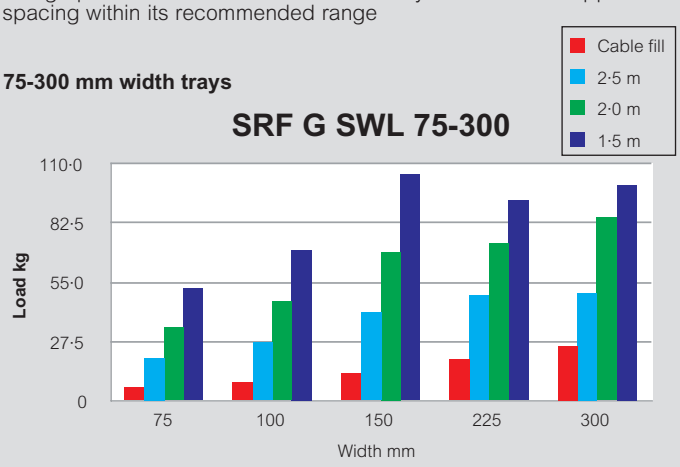


Table shown with results up to 300 mm wide obtained using the Swiftclip

450-900 mm width trays

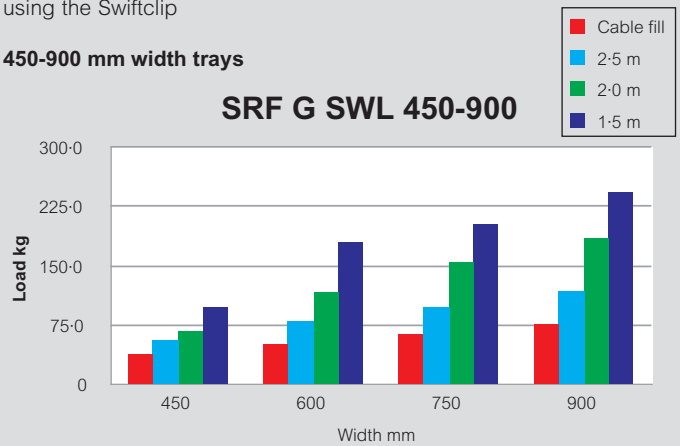

Table shown with results of 450 mm wide and above using Swiftgrips and UF fishplates

For lengths 450 mm wide and greater, the addition of fishplate Cat. No. WF F across the underside of the length-to-length joint provides added strength and increases the safe working load, **p. 105**

Finishes and standards

Standard stocked finish :

G Hot dip galvanised after manufacture to BS EN ISO 1461
PG Pre-galvanised steel to BS EN 10346 : 2009 grade DX51D

Additional finishes :

D Deep galvanised high silicon steel made from BS EN 10025-5 : 2004 Grade S355JOWP
S Stainless steel to BS EN 10088 – 2 grade 1·4404 (equivalent to 316L31)
E Powder coated black RAL 9005

All dimensions (mm) are nominal

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

→ Coupler sets and fixing options : see p. 65-68

→ Fishplates : see p. 105

Swifts® SRF straight length to straight length coupling

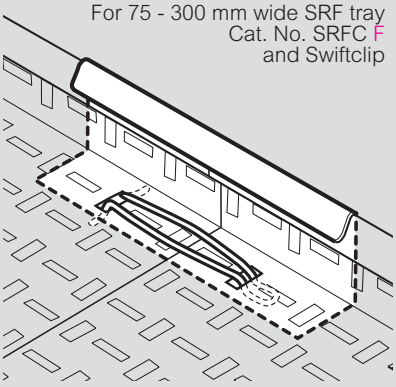
standard couplers and Swiftclip / Swiftgrip

■ Standard couplers and Swiftclip / Swiftgrip

Couplers are required for joining together SRF straight lengths
SRFC standard couplers are supplied in pairs.
2 x Swiftclips are required for each coupling and are used with tray widths up to and including 300 mm. For 450 mm to 900 mm tray, use Swiftgrip (2 per coupling)
Swiftclip and Swiftgrip are supplied in packs of 10
As an alternative coupling method, use standard couplers and quick bolt fasteners (Cat. No. QBF) and a tool, see **p. 66**, or standard couplers and fasteners, see **p. 66-67**

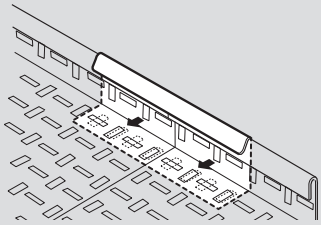
■ Installation using Swiftclip - 75 mm to 300 mm wide tray

For 75 - 300 mm wide SRF tray
Cat. No. SRFC F
and Swiftclip

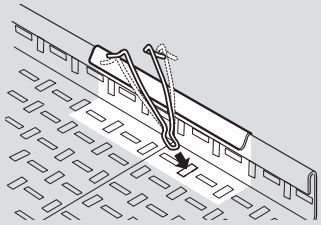


Standard couplers		Swiftclip	
Cat. No.	Tray range	Cat. Nos.	Finish
SRFC F	SRF	SCLPG	PG
		SCLG	G

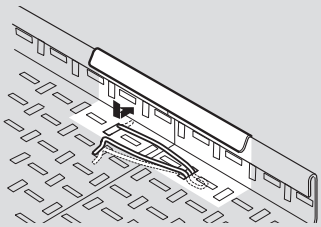
■ Assembly using Swiftclip



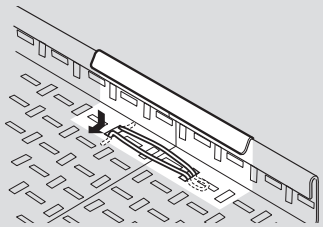
1. Locate coupler across underside of tray joint



2. Insert joggled head of clip where tray and coupler align



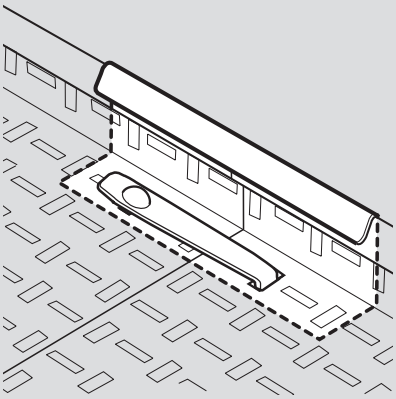
3. Clip leg nearest tray wall into slot on other tray bed



4. The second leg is pushed towards the wall of the tray and pushed home into the same slot

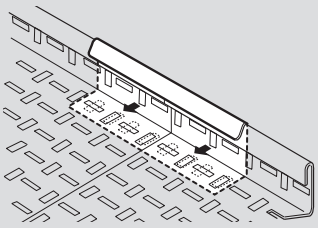
Repeat process on the other side of the tray, fitting the clip in the opposite direction
Ensure:
1. Head and feet of clip are clamping through tray and coupler
2. Clip should span across the joint

■ Installation using Swiftgrip

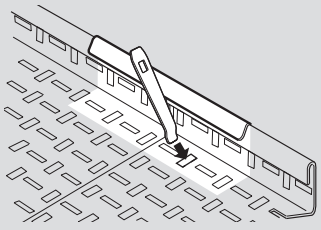


Swiftgrip Cat. No.	For tray finishes
SGR	PG and G

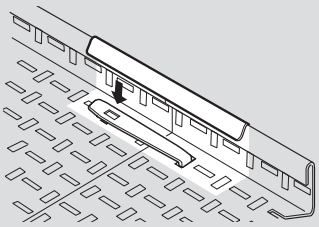
■ Assembly using Swiftgrip



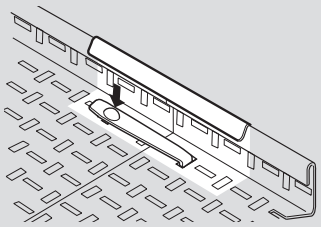
1. Locate coupler across underside of tray joint



2. Insert joggled head of grip where tray and coupler align



3. Lie length of grip flat against tray bed



4. Insert QBF into top of Swiftgrip and secure bolt underneath

Repeat process on the other side of the tray, fitting the grip in the opposite direction
Ensure:
1. Head and bolt of grip are clamping through tray and coupler
2. Grip should span across the joint

All dimensions (mm) are nominal

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated)

Swifts® SRF straight length to straight length coupling

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated)

All dimensions (mm) are nominal

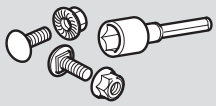
→ Straight lengths : see p. 64

■ Standard couplers and quick bolt fasteners

Compared with conventional nuts and bolts, quick bolt fasteners are a stronger, faster, easier and safer method of joining together tray

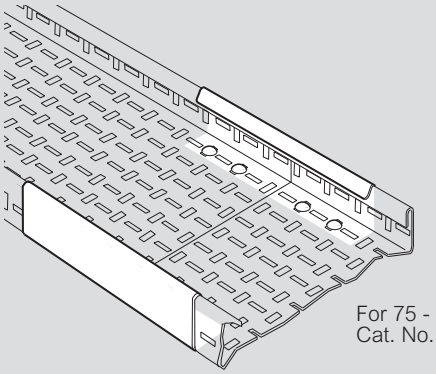
Square-shafted quick bolts lock firmly into position before fixing. The nuts, which have integral washers and a serrated edge to reduce slip and improve earthing, can then be easily tightened using a power tool

Supplied in packs containing 100 quick bolt fasteners and a FREE power tool attachment



■ Installation

Typical installation as per standard couplers, replacing nuts, bolts and washers with quick bolt fasteners

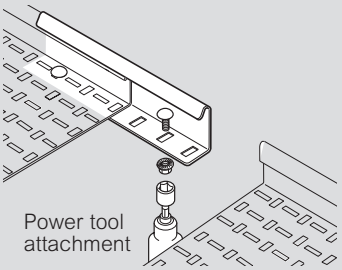


For 75 - 900 mm wide SRF tray
Cat. No. SRFC F

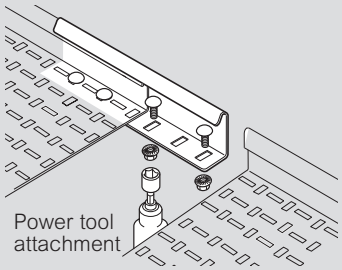
■ Assembly

Bring together two lengths and fit a coupler on the outside of adjacent flanges at both sides of the tray joint

Locate the coupler and insert bolts through aligning slots in each tray bed and coupler as shown and secure with nuts



Tray widths up to 225 mm
Two quick bolt fasteners per coupler

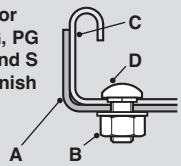


Tray widths 300 mm and above
Four quick bolt fasteners per coupler

Quick bolt fasteners

Cat. Nos.	Pack	Size (mm)	Finish
QBF	100	M6 x 12	Dacromet
QBFS	100	M6 x 12	Stainless steel

For G, PG and S finish



A Coupler
B M6 flange nut
C Straight length
D M6 coach bolt

For coupler dimensions see above left

Swifts® SRF straight length to straight length coupling

standard couplers and standard fasteners

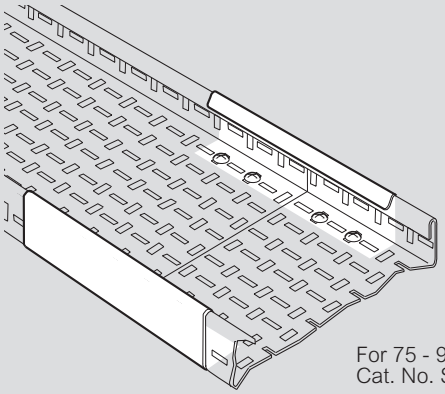
Standard couplers and standard fasteners

Couplers are required for joining together SRF straight lengths or cut lengths of tray

SRFC standard couplers are supplied in pairs

Supplied without fasteners – use M6 nuts, bolts and washers (see opposite)

Installation (typical)



For 75 - 900 mm wide SRF tray
Cat. No. SRFC F

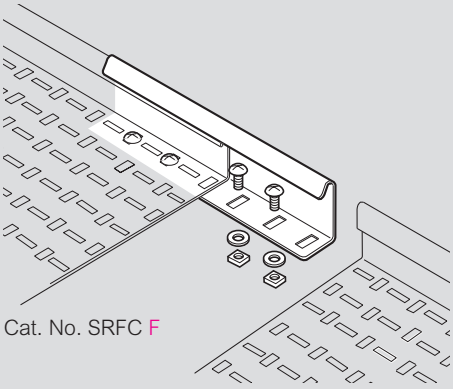
Cat. Nos.	Tray range
SRFC F	SRF

Assembly

For 75 - 900 mm wide SRF tray

Bring together two lengths and fit a coupler on the outside of adjacent flanges at both sides of the tray joint

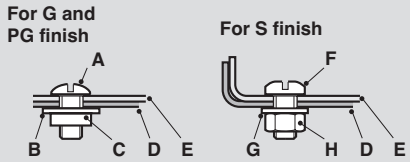
Locate the coupler as shown and insert two roofing bolts through aligning slots in each tray bed and coupler (four bolts per coupler), and secure with roofing washers and nuts



Cat. No. SRFC F

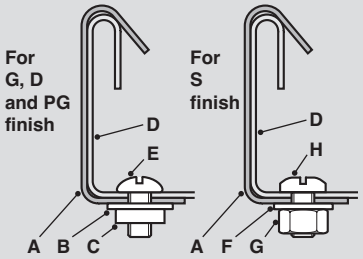
Assembly (continued)

Roofing bolts



A M6 x 12 roofing bolt
B Roofing washer
C M6 square nut
D Fitting
E Straight length
F M6 x 12 pan head screw
G M6 form A washer
H M6 hexagon nut

Fasteners



A Coupler
B Roofing washer
C M6 square nut
D Straight length
E M6 x 12 roofing bolt
F M6 form A washer
G M6 hexagon nut
H M6 x 12 pan head screw

Fastener finish

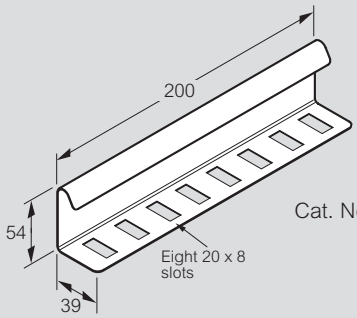
For lengths and fittings with G, D and PG finishes, fasteners are galvanised or zinc plated. For trays and fittings with S finish, fasteners are corrosion resistant stainless Grade A470

For lengths and fittings with E finish, the choice of material for fasteners will depend on the installation environment - contact us on +44 (0) 345 605 4333

Note

For quick bolt fasteners, see **p. 66**

Dimensions and weights



Cat. No. SRFC F

Cat. Nos.	Weight (kg)
SRFC F	0·4 pair

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Pre-galvanised (PG) x 0·96

All dimensions (mm) are nominal

Straight lengths : see p. 64

Swifts® SRF straight length to fitting coupling

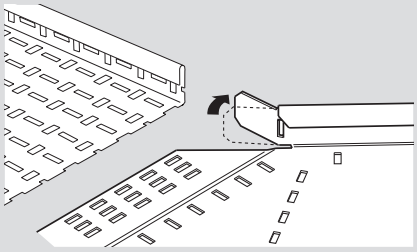
using Swiftclip or fasteners

50

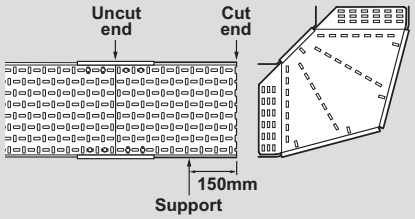
Straight length to fitting coupling using Swiftclip – 75 mm to 300 mm wide tray

Cable tray fittings must be properly supported. The ideal location for supports is shown in step 2, i.e. 150 mm from the fitting to length joint. For further details see Design Notes, Recommended Support Locations, **p. 132**

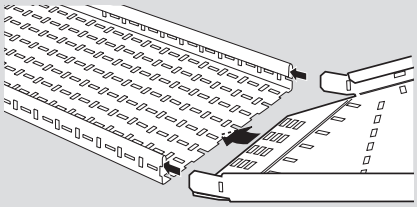
1
Where necessary re-align the fitting flange tabs from their transit position to their installation position



2
When a straight length of cable tray has to be cut back to accept a fitting, always fit the uncut end to the adjacent straight length; the cut end should be connected to the fitting

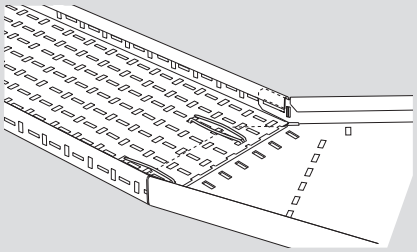


3
Offer the fitting at an angle to the straight length and locate, ensuring that the joggled fishplate fits under the tray bed and the flange tabs slide inside the length flanges



4
Insert joggled head of clip through slots in the tray bed into aligning slots in the fitting fishplate, then clip legs into slot on tray bed

5
Ensure head of clip is clamping through tray and fitting



Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated)

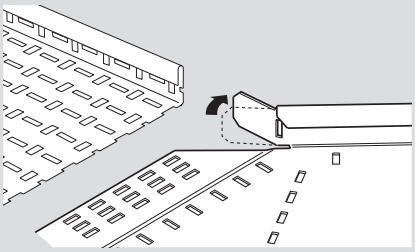
All dimensions (mm) are nominal

→ Straight lengths : see p. 64

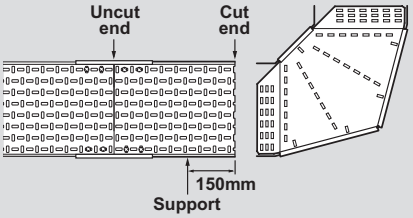
Straight length to fitting coupling using fasteners

Cable tray fittings must be properly supported. The ideal location for supports is shown in step 2, i.e. 150 mm from the fitting to length joint. For further details see Design Notes, Recommended Support Locations, **p. 132**

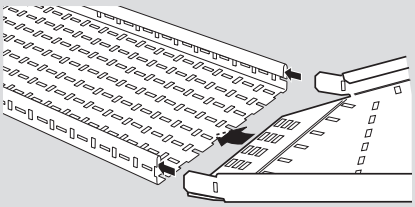
1
Where necessary re-align the fitting flange tabs from their transit position to their installation position



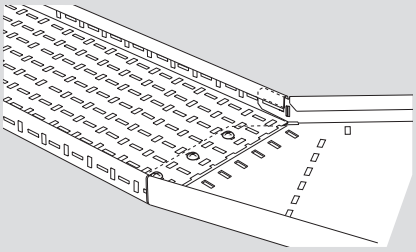
2
When a straight length of cable tray has to be cut back to accept a fitting, always fit the uncut end to the adjacent straight length; the cut end should be connected to the fitting



3
Offer the fitting at an angle to the straight length and locate, ensuring that the joggled fishplate fits under the tray bed and the flange tabs slide inside the length flanges



4
Insert roofing bolts or QBF through slots in the tray bed in to aligning slots in the fitting fishplate and secure with roofing washers and nuts



Note

Fasteners stated are for D, G and PG finishes
For lengths and fittings with S finish use fasteners listed below

Fasteners

Minimum number of fasteners per joint (not included) :
Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

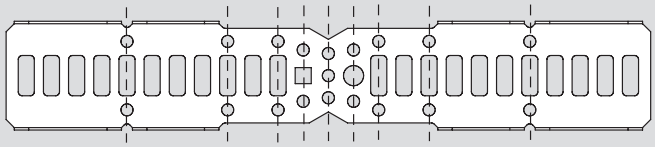
Swifts® SRF heavy duty fittings

universal bracket and fishplate

Universal bracket

The universal bracket can be easily folded at one or more of the 9 predetermined points. By overfolding a couple of times, the bracket can be split, for example on the centre line to make a hinged coupler or in between the outer flanges if the length of the bracket needs to be reduced
The square hole is provided to locate the shoulder of the quick bolt fastener – this side should be facing inwards towards the tray to avoid snagging cables
The pitch between each fold point is designed to match up with the Swifts range of SRF cable tray systems
By using different configurations the bracket can be folded to create numerous functions on-site, examples of which are shown below

Cat. No. SRFUB F



Universal fishplate

Fishplates are designed for extra strength when joining cable tray beds and can also help to protect cables from cut edges
The universal fishplate can be overfolded and split at 75 mm centres when working with narrow trays
Supplied singly without fasteners

Cat. No. UF 450 F

Dimensions and weights – flat bends 90°, 60°, 45° and 30°

Dimensions

X = Length of fitting from each end (excluding integral coupler)

Y = Length of fitting from each end (excluding integral coupler)

Z = End extension of integral coupler

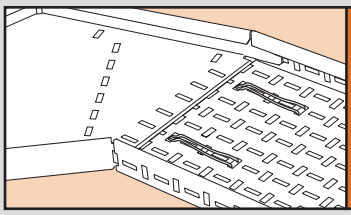
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

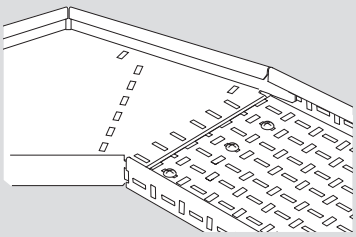
Assembly using Swiftclip – flat bends 90°, 60°, 45° and 30°



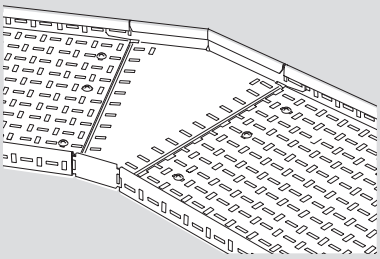
For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – flat bends 90°, 60°, 45° and 30°

Coupling detail – 90°



Coupling detail – 60°, 45° and 30°



Flat bend to straight length coupling

Flat bends have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each flat bend to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225	= 2
Widths 300 to 600	= 3
Widths 750 and 900	= 4

Fastener finishes

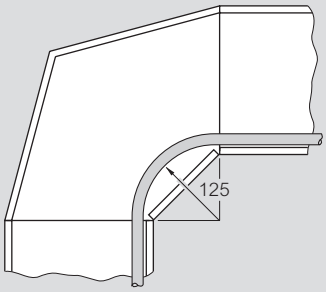
For flat bends with G, D and PG finishes, fasteners are galvanised or zinc plated. For flat bends with S finish, fasteners are stainless steel For flat bends with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

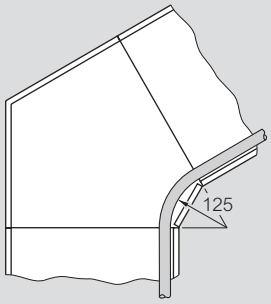
Assembly – flat bends 90°, 60°, 45° and 30° (continued)

Minimum bend radius for cables – flat bends 90°



Minimum cable radius = 125 mm

Minimum bend radius for cables – flat bends 60°, 45° and 30°



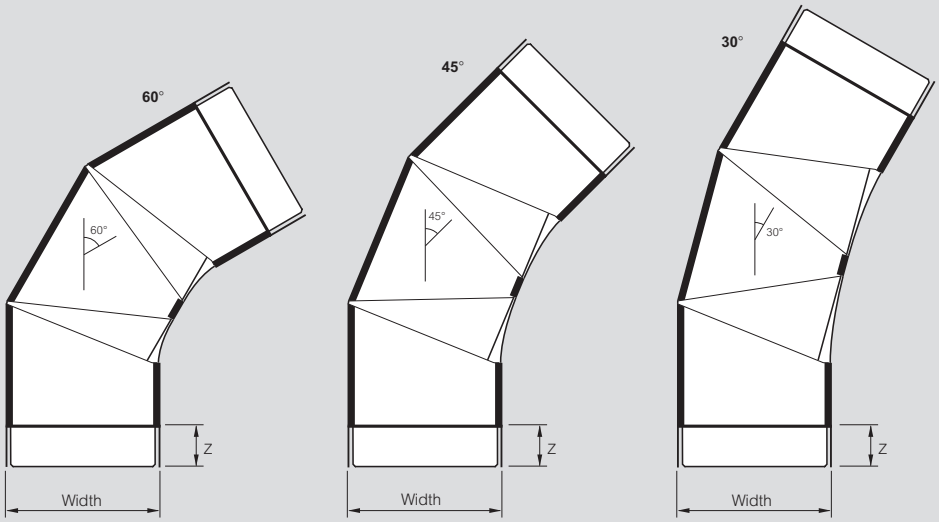
Minimum cable radius = 125 mm

All dimensions (mm) are nominal

SRF adjustable bends : see p. 72-73

Dimensions and weights

Cat. No. SRFAB W F



Cat. Nos.	Width	Z	Weight (kg)
SRFAB 75 F	75	55	0·6
SRFAB 100 F	100	55	0·8
SRFAB 150 F	150	55	1·2
SRFAB 225 F	225	55	2·1
SRFAB 300 F	300	55	4·1

For widths 450-900 mm use 60°, 45° and 30° flat bends, **p. 70-71**
For widths 300 mm and below use adjustable flat bends for all angles up to 90°. Fixed angled flat bends are also available, **p. 70-71**

Dimensions

Z = End extension of integral coupler

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

All dimensions (mm) are nominal

SRF flat bends : see p. 70-71

Assembly

Adjusting bend to any angle between 30° and 90°

Adjustable flat bends can be adjusted to any angle between 30° and 90°, refer to the diagram opposite

Insert fasteners through both slots **X** in the outer sections of the bed and the associated slots **Z** in the centre section of the bed. Adjust the bendable sections equally until the required angle is formed

Fasteners can also be inserted through the inner flanges when the slots in the fixed outer section flange and the bendable centre section flange align

Setting bend to specific angles

Adjustable flat bends can be set to specific fixed angles or they can be adjusted to any angle between 30° and 90° in increments of 7·5°

Note

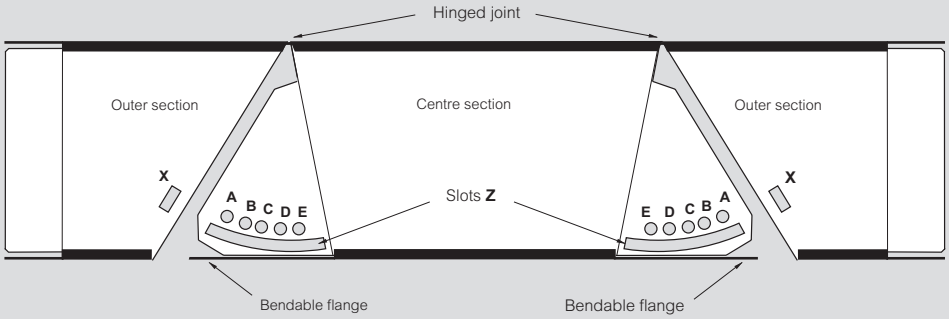
When setting the adjustable flat bend to the required angle, ensure that the bendable inner flanges on the centre section engage in the return flanges on the outer sections

Angle (°)	Fastener holes
30	A + A
37·5	A + B
45	B + B
52·5	B + C
60	C + C
67·5	C + D
75	D + D
82·5	D + E
90	E + E

Refer to the table and the diagram below

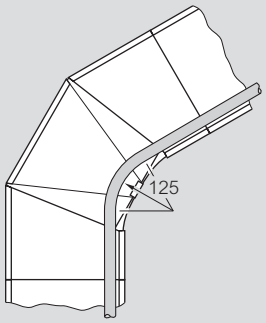
Insert fastenings through both slots **X** in the outer sections of the bend and the appropriate holes (**A** to **E**) in the centre section of the bed (2 x M6 fastenings included)

Fasteners can also be inserted through the inner flanges when the slots in the fixed outer section flange and the bendable centre section flange align



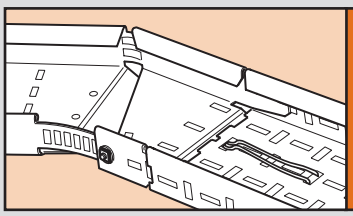
Assembly (continued)

Minimum bend radius for cables



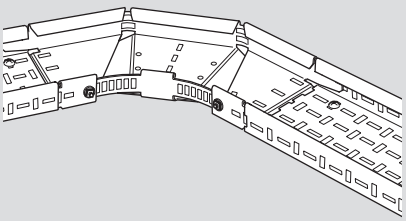
For details on how to set adjustable flat bends to angles, see opposite

Assembly using Swiftclip – adjustable flat bends



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – adjustable flat bends



Adjustable flat bend to straight length coupling

Flat bends have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each flat bend to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225 = 2
Width 300 = 3

Fastener finishes

For adjustable flat bends with G, D and PG finishes, fasteners are galvanised or zinc plated

For adjustable flat bends with S finish, fasteners are stainless steel

For adjustable flat bends with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

All dimensions (mm) are nominal

Cat. Nos. given in the table are for inside risers. For outside risers substitute SRFOR for SRFIR. All fixed risers radius = 260 mm

Dimensions

X = Length of fitting from each end (excluding integral coupler)
Y = Length of fitting from each end (excluding integral coupler)
Z = End extension of integral coupler

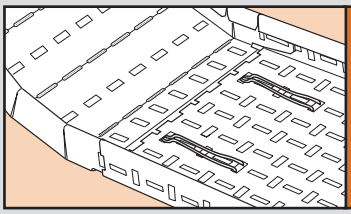
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

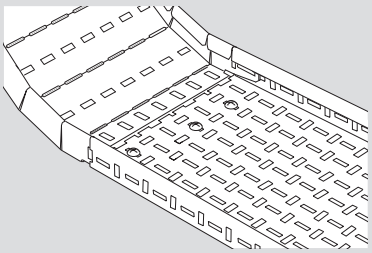
Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Assembly using Swiftclip – inside and outside risers



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – inside and outside risers



Riser to straight length coupling

Risers have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each riser to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

Fastener finishes

For risers with G, D and PG finishes, fasteners are galvanised or zinc plated

For risers with S finish, fasteners are stainless steel

For risers with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

All dimensions (mm) are nominal

SRF adjustable risers : see p. 75

Swifts® SRF heavy duty fittings

adjustable risers

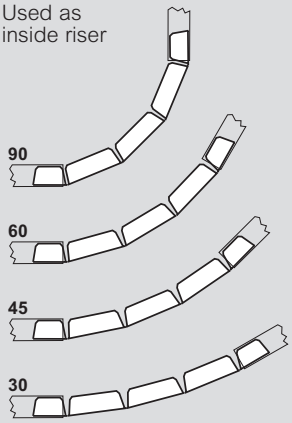
Dimensions and weights

The adjustable riser can be used as an inside or outside riser for any angle up to 90°
Minimum radius = 200 mm
Maximum radius = 300 mm
Overall length when flat = 554 mm

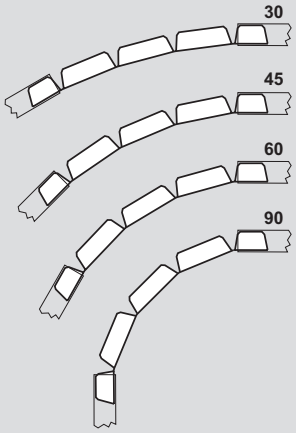
Dimensions

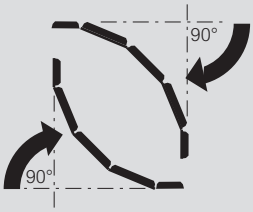
Cat. No. SRFAR W F

Used as inside riser



Used as outside riser





Cat. Nos.	Width (W)	Weight (kg)
SRFAR 75 F	75	0·7
SRFAR 100 F	100	0·8
SRFAR 150 F	150	1·1
SRFAR 225 F	225	1·8
SRFAR 300 F	300	2·4
SRFAR 450 F	450	3·4
SRFAR 600 F	600	4·4
SRFAR 750 F	750	5·5
SRFAR 900 F	900	6·5

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

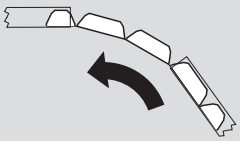
Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Key : Replace the letter shown in red with your choice from the following options :

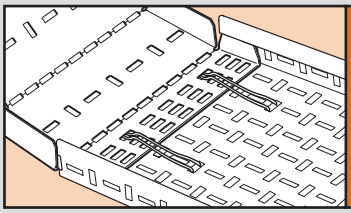
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Assembly

As many riser segments as necessary may be inserted into the end of the straight length, thus avoiding the need for cutting

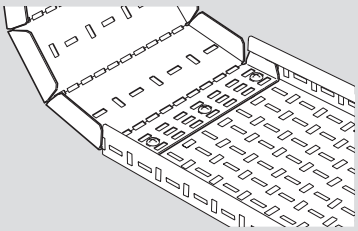


Assembly using Swiftclip – adjustable risers



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – adjustable risers



Adjustable riser to straight length coupling

Adjustable risers fit into straight lengths whether they have been cut to length or not, without the need for further drilling
Each riser to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included
Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

Fastener finishes

For adjustable riser with G, D and PG finishes, fasteners are galvanised or zinc plated
For adjustable riser with S finish, fasteners are stainless steel
For adjustable riser with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

All dimensions (mm) are nominal

SRF inside and outside risers : see p. 74

Swifts® SRF heavy duty fittings

extra long adjustable risers

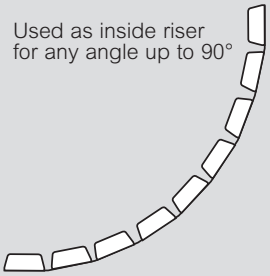
50

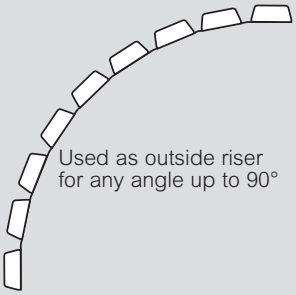
Dimensions and weights

The extra long adjustable riser can be used as an inside or outside riser for any angle up to 90°
Minimum radius = 200 mm
Maximum radius = 650 mm
Overall length when flat = 1 087 mm

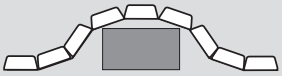
Dimensions

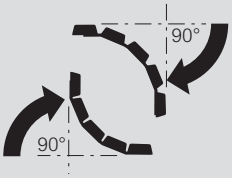
Cat. No. SRFAXR W F





Used to avoid obstacles on site





Cat. Nos.	Width (W)	Weight (kg)

SRFAXR 450 F	450	6·8
SRFAXR 600 F	600	8·8
SRFAXR 750 F	750	10·8
SRFAXR 900 F	900	12·9

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

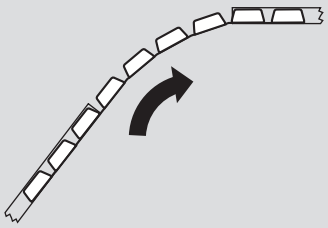
Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Key : Replace the letter shown in red with your choice from the following options :

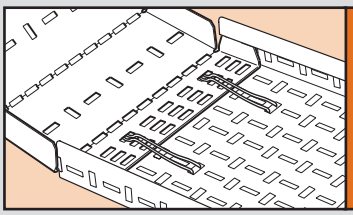
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Assembly

As many riser segments as necessary may be inserted into the end of the straight length, thus avoiding the need for cutting

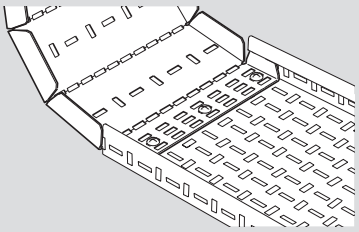


Assembly using Swiftclip – extra long adjustable risers



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – extra long adjustable risers



Extra long adjustable riser to straight length coupling

Extra long adjustable risers fit into straight lengths whether they have been cut to length or not, without the need for further drilling
Each riser to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included
Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

Fastener finishes

For adjustable risers with G, D and PG finishes, fasteners are galvanised or zinc plated
For adjustable risers with S finish, fasteners are stainless steel
For adjustable risers with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Dimensions and weights (continued)

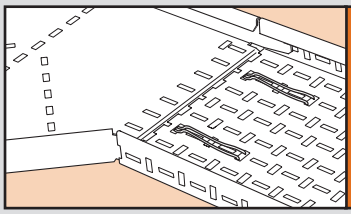
Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

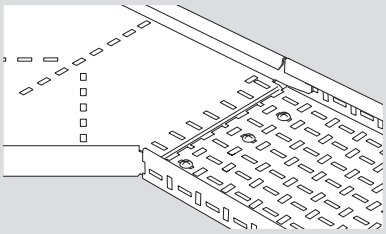
Deep galvanised	(D)	x 1·06
Stainless steel	(S)	x 0·94
Pre-galvanised	(PG)	x 0·96
Powder coated	(E)	x 0·97

Assembly using Swiftclip – unequal tees



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – unequal tees



Unequal tee to straight length coupling

Unequal tees have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each unequal tee to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225	= 2
Widths 300 to 600	= 3
Widths 750 and 900	= 4

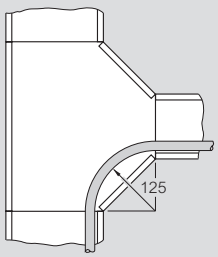
Fastener finishes

For unequal tees with G, D and PG finishes, fasteners are galvanised or zinc plated

For unequal tees with S finish, fasteners are stainless steel

For unequal tees with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

Minimum bend radius for cables



Minimum cable radius = 125 mm

All dimensions (mm) are nominal

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

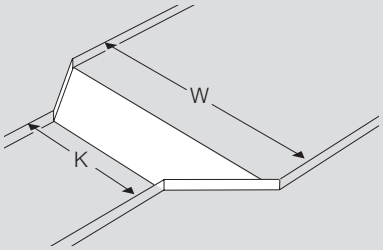
Dimensions and weights (continued)



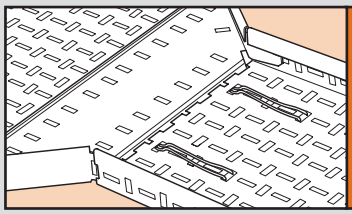
To create the Cat. No. add the main run width (W), the reduced run width (K) and the finish (F)
Example :
For a hot dip galvanised reducer reducing from 300 mm to 150 mm : SRFR 300 150 G

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

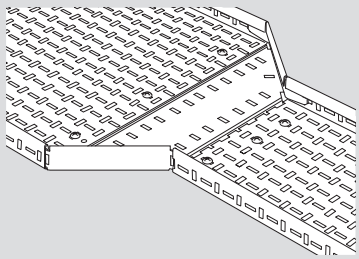
Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Assembly using Swiftclip – straight reducers



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – straight reducers



Reducer to straight length coupling

Reducers have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling
Each reducer to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included
Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

Fastener finishes

For reducers with G, D and PG finishes, fasteners are galvanised or zinc plated
For reducers with S finish, fasteners are stainless steel
For reducers with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

All dimensions (mm) are nominal

Swifts® SRF heavy duty fittings

SRFMRFR 750 F	750	150	55	55	1·4
SRFMRFR 900 F	900	150	55	55	2·2

Dimensions

X = Length of fitting from each end (excluding integral coupler)
Z_1 = End extension of integral coupler
Z_2 = End extension of integral coupler

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

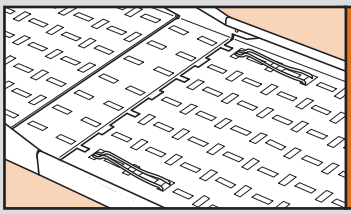
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

Key : Replace the letter shown in red with your choice from the following options :

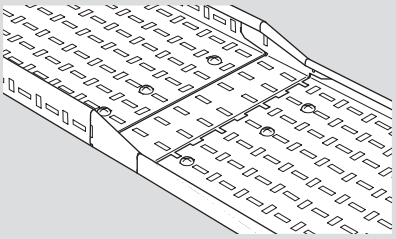
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Assembly using Swiftclip – SRF to MRF straight reducers



For fast fit connections of fittings and lengths (up to 300 mm wide) use Swiftclip, see p. 68

Assembly using fasteners – SRF to MRF straight reducers



Straight reducer to straight length coupling

Reducers have integral coupers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each reducer to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers or quick bolt fasteners (Cat. No. QBF), **p. 68**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4

Fastener finishes

For reducers with G, D and PG finishes, fasteners are galvanised or zinc plated

For reducers with S finish, fasteners are stainless steel

For reducers with E finish, the choice of material for fasteners will depend on the installation environment. For further information, contact us on +44 (0) 345 605 4333

All dimensions (mm) are nominal

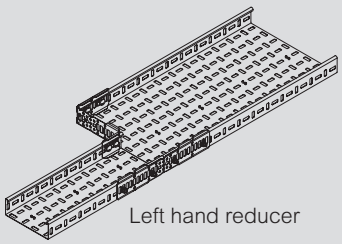
MRF straight lengths : see p. 46

SRF straight lengths : see p. 64

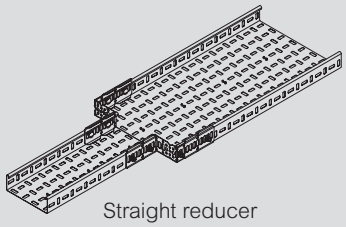
Swifts® SRF heavy duty fittings
handed reducers

■ On-site fabrication of fittings

For on-site fabrication of fittings, including left or right handed reducers, use universal brackets and fishplates, see p. 85
Left and right handed reducers are not currently available as a standard factory fabricated fitting



Left hand reducer



Straight reducer

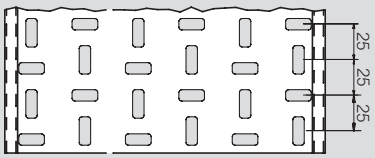
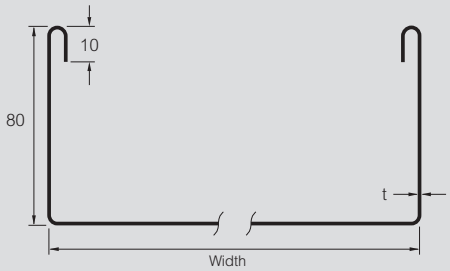
For cable load capacity see loading graphs opposite

Dimensions

Standard length 3 m





Gauges and weights

The gauge 't' for each cable tray width and finish varies by product and range

Non-standard gauges and finishes are available to special order, contact us on +44 (0) 345 605 4333

Cat. Nos.	Width (mm)	Weight (kg)	Gauge t (mm) G finish only
XRFL 100 F	100	9·0	1·2
XRFL 150 F	150	10·2	1·2
XRFL 225 F	225	13·0	1·2
XRFL 300 F	300	15·3	1·5
XRFL 450 F	450	26·4	1·5
XRFL 600 F	600	32·5	2·0

All weights given are in kilograms (kg) and are for a 3 m straight length in hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), S (stainless steel)

Loading graphs

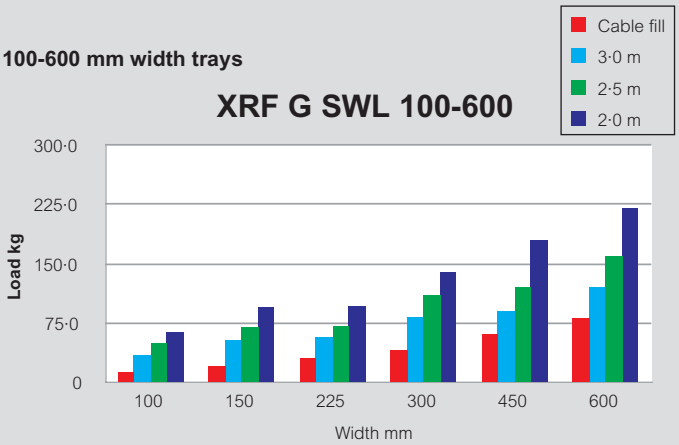
Load tests carried out to BS EN 61537 and shown in kg/m

Cable fill figure is the maximum physical load of cables that can be fitted into tray and is based on 1700kg/m³ as detailed in the BEAMA "Best Practice guide to cable ladder and cable tray systems"

The loads shown on all graphs are the safe recommended maximum loads that can be applied and must include wind, snow and any other external forces in addition to the cable load

The graph shows the maximum load for tray installed at a support spacing within its recommended range

100-600 mm width trays



On XRF lengths the graph shows the maximum safe working load when a fishplate is fitted across the underside of each length-to-length joint. Typical cable loads which are normally 50% of the maximum would not require a fishplate

Finishes and standards

Standard stocked finish :

G Hot dip galvanised after manufacture to BS EN ISO 1461

Additional finishes :

D Deep galvanised high silicon steel made from BS EN 10025-5 : 2004 Grade S355JOWP

S Stainless steel to BS EN 10088 – 2 grade 1·4404 (equivalent to 316L31)

Sheared steel (particularly stainless steel) does have relatively sharp edges and protective gloves must be worn during handling

All dimensions (mm) are nominal

Coupler sets : see p. 85

Fishplates : see p. 105

Swifts® cable tray couplers and fasteners

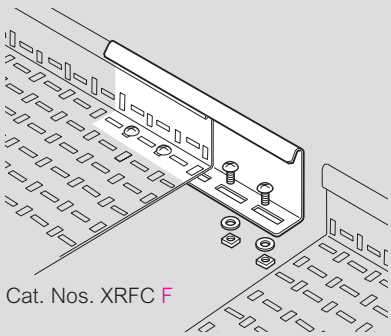
XRF straight length to straight length couplers and straight length to fitting coupling

Standard couplers

Couplers are required for joining together XRF straight lengths or cut lengths of tray
XRFC standard couplers are supplied in pairs
Supplied without fasteners – use M6 nuts, bolts and washers (see opposite)

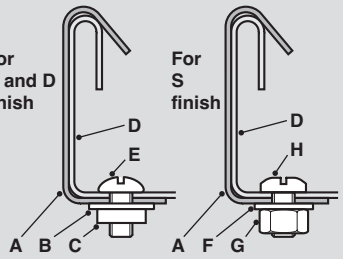
Assembly

Bring together two lengths and fit a coupler on the outside of adjacent flanges at both sides of the tray joint
Locate the coupler as shown and insert two roofing bolts through aligning slots in each tray bed and coupler (four bolts per coupler), and secure with roofing washers and nuts



Cat. Nos. XRFC F

Fasteners

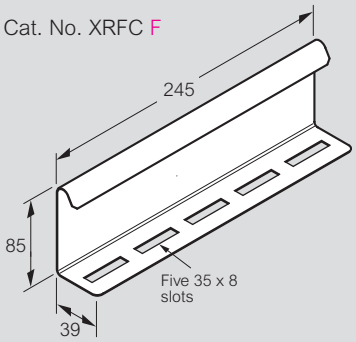


A	Coupler
B	Roofing washer
C	M6 square nut
D	Straight length
E	M6 x 12 roofing bolt
F	M6 form A washer
G	M6 hexagon nut
H	M6 x 12 pan head screw

Fastener finishes
For lengths and fittings with G and D finishes fasteners are galvanised or zinc plated. For trays and fittings with S finish, fasteners are corrosion resistant stainless Grade A470

Dimensions and weights

Cat. No. XRFC F



Cat. Nos.	Weight (kg)
XRFC F	0·9 pair

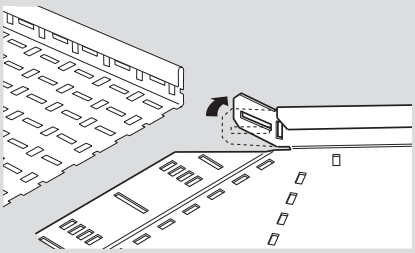
Weights
All weights given are in kilograms (kg) and are for hot dip galvanised G finish
To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :
Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94

Key : Replace the letter shown in red with your choice from the following options :
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), S (stainless steel)

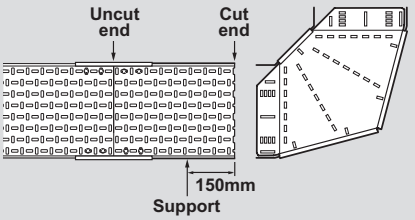
Straight length to fitting coupling

Cable tray fittings must be properly supported. The ideal location for supports is shown in step 2, i.e. 150 mm from the fitting to length joint. For further details see Design Notes, Recommended Support Locations, **p. 132**

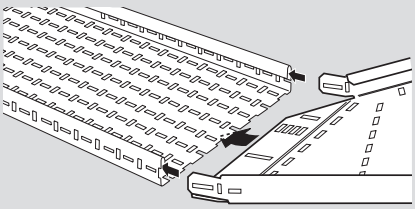
1
Where necessary re-align the fitting flange tabs from their transit position to their installation position



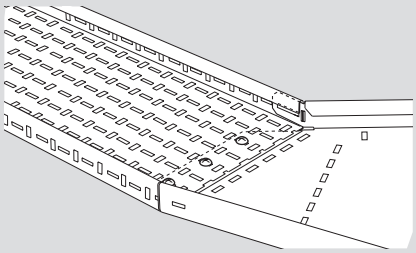
2
When a straight length of cable tray has to be cut back to accept a fitting, always fit the uncut end to the adjacent straight length; the cut end should be connected to the fitting



3
Offer the fitting at an angle to the straight length and locate, ensuring that the joggled fishplate fits under the tray bed and the flange tabs slide inside the length flanges

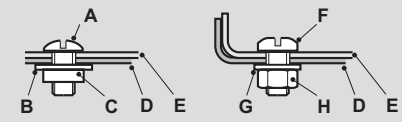


4
Insert roofing bolts through slots in the tray bed in to aligning slots in the fitting fishplate and secure with roofing washers and nuts



Note
Fasteners stated are for D and G finishes
For lengths and fittings with S finish use fasteners listed below

Fasteners
Minimum number of fasteners per joint (not included) :
Widths up to 225 = 2
Widths 300 to 600 = 3
Widths 750 and 900 = 4



A	M6 x 12 roofing bolt
B	Roofing washer
C	M6 square nut
D	Fitting
E	Straight length
F	M6 x 12 pan head screw
G	M6 form A washer
H	M6 hexagon nut

Fastener finish
For lengths and fittings with G and D finishes, fasteners are galvanised or zinc plated. For trays and fittings with S finish, fasteners are corrosion resistant stainless Grade A470

All dimensions (mm) are nominal

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), S (stainless steel)

Assembly

Coupling detail

Unequal tee to straight length coupling

Unequal tees have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each unequal tee to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers, **p. 85**. Fasteners are not included

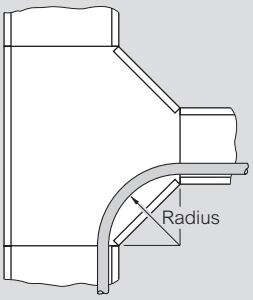
Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3

Fastener finishes

For unequal tees with G and D finishes, fasteners are galvanised or zinc plated. For unequal tees with S finish, fasteners are stainless steel

Minimum bend radius for cables



Width (mm)	Radius (mm)
100 to 300	180
450 and 600	240

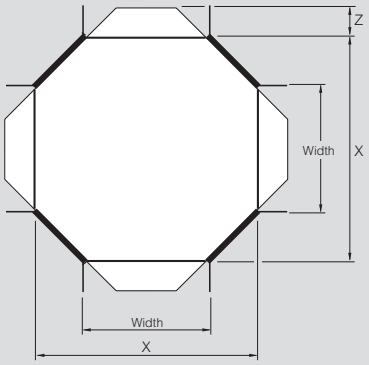
All dimensions (mm) are nominal

XRF equal tees : see p. 90

Dimensions and weights

Dimensions

Cat. No. XRFX W F



X = Length of fitting from each end (excluding integral coupler)
Z = End extension of integral coupler

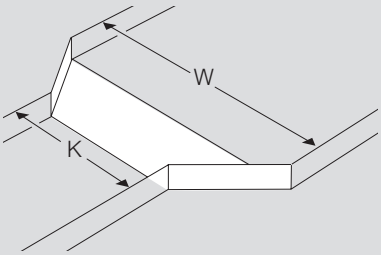
	450	**XRFR 600 450 F**	100	55	55	2·3

To create the Cat. No., add the main run width (W), the reduced run width (K) and the finish (F)

Example :

For a hot dip galvanised reducer reducing from 300 mm to 150 mm : XRFR 300 150 G



Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

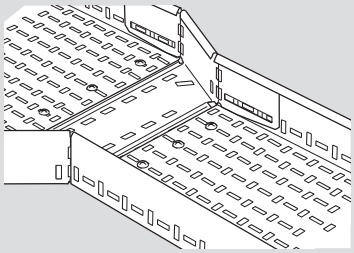
Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), S (stainless steel)

Assembly

Coupling detail



Reducers to straight length coupling

Reducers have integral couplers which fit into straight lengths whether they have been cut to length or not, without the need for further drilling

Each reducer to length joint is secured with M6 x 12 bolts (roofing or pan head), nuts and washers, **p. 85**. Fasteners are not included

Minimum number of fasteners per joint :

Widths up to 225 = 2
Widths 300 to 600 = 3

Fastener finishes

For straight reducers with G and D finishes, fasteners are galvanised or zinc plated. For straight reducers with S finish, fasteners are stainless steel

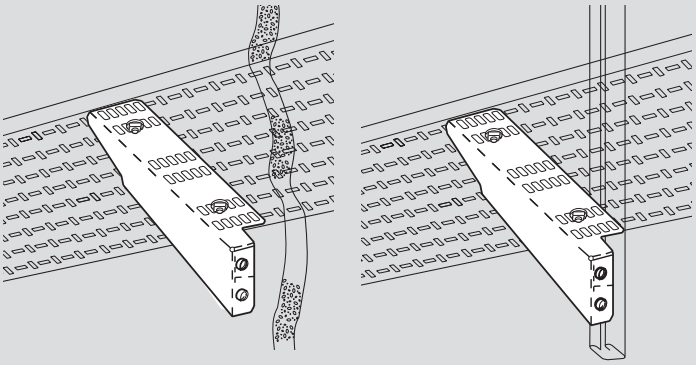
All dimensions (mm) are nominal

Swifts® cable tray supports

cantilever arms

Cantilever arms enable horizontal runs of cable tray to be mounted to vertical steel, concrete or masonry surfaces or to Swiftrack channel
They are available in ten sizes to accommodate all tray widths
Cantilever arms are of fabricated construction with a bottom flange on arms 225 mm wide and above for extra strength
Supplied singly without fasteners

Installation (typical)



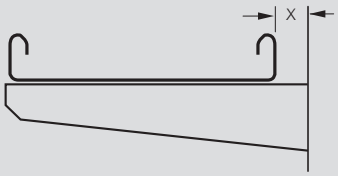
Assembly

Tray to cantilever arm using fasteners

All cantilever arms have slots in the top flange for fixing tray
Fit two fasteners for trays up to 300 mm wide
Fit three fasteners for trays 450 mm wide and above

Tray to cantilever arm using Swiftclip

Tray can be secured to LCA cantilever arms by using Swiftclip on MRF and SRF ranges up to 300 mm wide
Fit one clip for 50 mm wide
Fit two clips for 75 to 300 mm wide trays
Clips should be fitted towards sides of tray in alternate directions
See **p. 50** for further details



Note

If covers are fitted the clearance to the vertical support face must be approximately 40 mm (x), however for access to fit cover clips a larger clearance may be required when the vertical support is a solid face

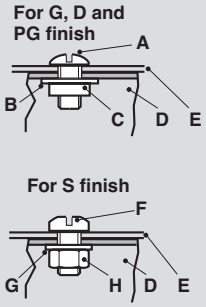
Cantilever arm to vertical support

All cantilever arms have two 11 mm Ø holes for M10 fasteners (not included)
Cat. Nos. LCA 50 to LCA 150 may be fitted using the top fixing hole only
When fixing to Swiftrack channel use grade 8.8 setscrews, form A flat washers and channel nuts
Fix using upper hole location. Lower hole has bendable tab to stop rotation if required
When fitting LCA 100 to LCA 300 cantilever arms to Swiftrack each fixing point should be fitted with Cat. No. SB506/10 square washer see **p. 111** to prevent distortion

Key : Replace the letter shown in red with your choice from the following options :
F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Assembly (continued)

Fasteners (not included)



A	M6 x 12 roofing bolt
B	Roofing washer
C	M6 square nut
D	Cantilever arm
E	Straight length
F	M6 x 12 panhead screw
G	M6 form A washer
H	M6 hexagon nut

Fastener finishes

For straight lengths with G, D and PG finishes, fasteners are galvanised or zinc plated. For straight lengths with S finish, fasteners are stainless steel
For straight lengths with E finish, the choice of material for fasteners will depend on the installation environment. For further information contact us on +44 (0) 345 605 4333

Swifts® cable tray supports

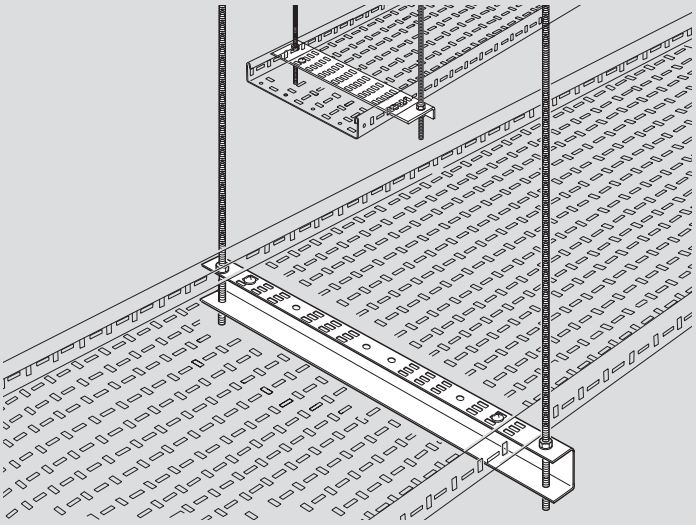
trapeze hangers

Trapeze hangers are suitable for use with all cable tray ranges. They enable all widths of tray to be supported from overhead threaded rods hung from ceiling brackets, Swiftrack support system or from beam clamps attached to joists or steel beams

Light duty trapeze hangers are supplied singly without fasteners

Installation (typical)



Assembly

Trapeze hanger to threaded rod

There are three alternative methods of fixing trapeze hangers to threaded rods as shown below. All three methods are applicable to trapeze hangers for 600 - 900mm widths, but only type B applies to narrower trapeze hangers. The recommended safe working load for each width and method of fixing is given in the table

XRFDV F	55	3·2	2·9	3·6	3·7	3·2

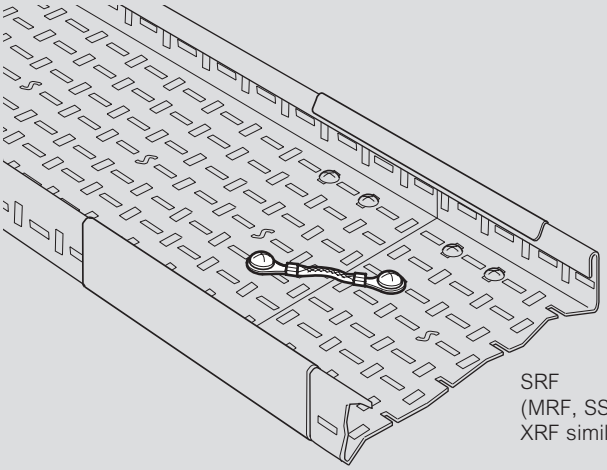
All dimensions (mm) are nominal

Straight lengths : see p. 36, 46, 64, 84

When fixing tray, a supplementary bonding conductor for equipotential earthing may be required in certain cases and conditions
This will depend on the type of cables used, the environment and fault current on the cables. A flexible earth continuity connector is available for this purpose and is designed to fit onto all types of tray
Earth continuity connectors are supplied in bagged quantities of 20 without fasteners
Use M6 x 12 mm roofing nuts and bolts
Copper braid and copper lugs both in electrotinned finish
Length between centres : 93 mm. Conductor area : 4 mm^2
Electro tinned copper finish

Installation (typical)

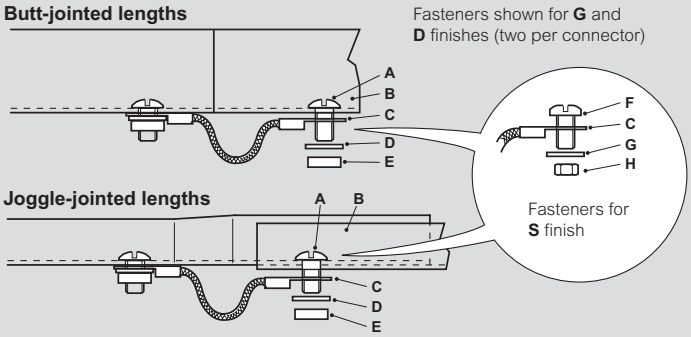
Cat. No. PTFEB



SRF
(MRF, SS,
XRF similar)

Assembly

Fasteners not included

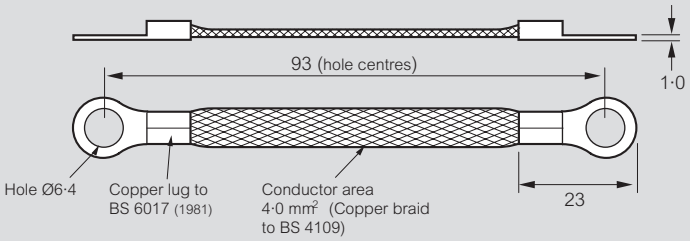


A	M6 x 12 roofing bolt
B	Tray side flange
C	Earth continuity connector
D	M6 roofing washer
E	M6 roofing nut
F	M6 x 12 pan head screw
G	M6 form A washer
H	M6 hex nut

Fastener finish

For E finish tray fasteners, contact us on +44 (0) 345 605 4333

Dimensions and weights



All dimensions (mm) are nominal

Straight lengths : see p. 36, 46, 64, 84

Swifts® cable tray ancillary items

covers for straight lengths

Tray covers can be installed either close to the tray side flanges (closed covers) or raised above the flanges providing an air gap (ventilated covers)

Covers up to 450 mm wide have a flat top surface and are simply butt-jointed together. Covers 600 mm wide and above have dimples formed in the top surface to increase their rigidity, and are overlapped and bolted together. Each wide straight cover has an overlap tongue formed at one end to make joining simple

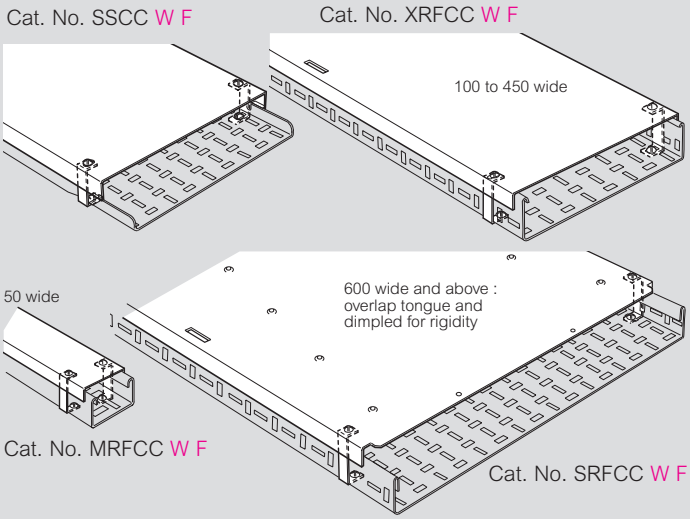
Covers for MRF, SRF, XRF and SS straight lengths are 3 m long with six cover clips and associated fasteners

Installation (typical)

Closed cover installations

Supplied singly with fasteners and brackets. Covers 600 mm and above are overlap jointed and dimpled for rigidity

SS light duty tray closed cover is only available in width 300 mm



Straight ventilated cover installations

Supplied singly with fasteners. 3 m lengths

Covers 600 mm and above are overlap jointed and dimpled for rigidity

SS ventilated covers are only available in widths 75 mm and above

		Tray range SS	MRF	SRF	XRF
Cat. Nos.	Closed covers	SSCCWF	MRFCCWF	SRFCCWF	XRFCCWF
	Ventilated covers	SSCVWF	MRFCVWF	SRFCVWF	XRFCVWF

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Assembly

Before fitting the covers ensure a clearance of 10 mm between the tray and the vertical support face

Closed and ventilated covers

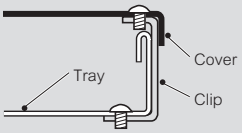
Fit the correct size cover clips to the tray in the positions shown below

Covers with slots

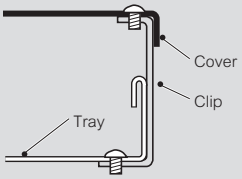
Place the cover on to the clips with the slots in the cover aligned with the tapped holes in the clips and secure with the fasteners supplied

Covers without slots

Place the cover on to the clips and mark the positions of the fixing holes. Remove the cover and drill the holes. Refit the cover and secure with the fasteners supplied

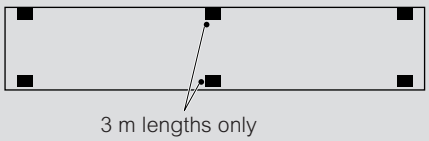


Closed cover



Ventilated cover

Cover clip positions



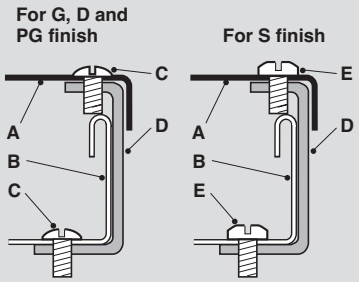
3 m lengths only

Most tray covers have slots in the top surface which determine the positions of the cover clips

For SS 50 to 150 wide covers which do not have slots, holes must be drilled in the covers on site after the clips have been fitted to the tray

Fasteners for cover clips (included)

Overlap joint (2 fasteners per joint on widths 600 and above)



A Cover
B Tray
C M6 x 12 roofing bolt
D Cover clip (closed or ventilated)
E M6 x 12 panhead screw

Fastener finishes

For covers with G, D and PG finishes, fasteners are galvanised or zinc coated, except for retaining nut which is 'Dacromet' coated. For covers with S finish, fasteners are stainless steel, except for retaining nut which is 'Xylan' coated. For covers with E finish, the choice of material for fasteners will depend on the installation environment. For further information contact us on +44 (0) 345 605 4333

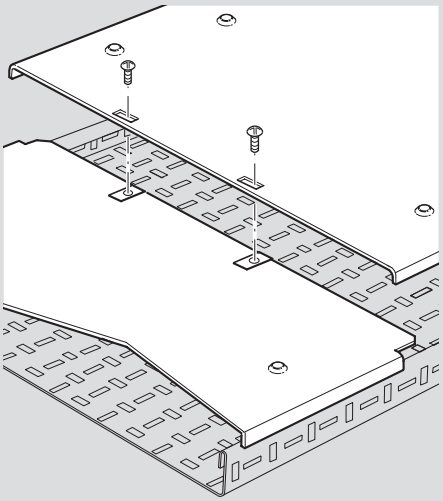
All dimensions (mm) are nominal

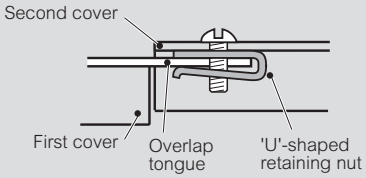
Assembly (continued)

Joining covers

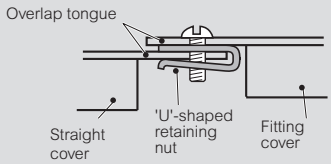
For covers 600 mm wide and above with overlap joints fit the first cover as above. Fit U-shaped retaining nuts over the holes in the overlap tongue. Fit the second cover in the same way as the first, ensuring that the straight (butt) end overlaps the tongue on the first cover

Insert fasteners through the slots in the end of the second cover into the U-shaped retaining nuts on the tongue of the first cover and secure





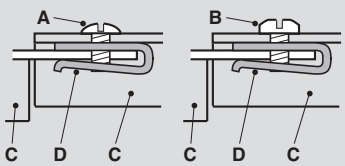
When a fitting cover has an overlap tongue, it should be fitted on top of the tongue on the straight cover. Fit U-shaped retaining nuts over the holes in the straight cover tongue. Insert fasteners through the holes in the fitting cover tongue into the U-shaped retaining nuts and secure



Fasteners for cover overlap joints (included)

Overlap joint (2 fasteners per joint on widths 600 and above)

For G, D and PG finish | **For S finish**



A M6 x 12 roofing bolt
B M6 x 12 panhead screw
C Straight length cover
D U-shaped retaining nut

Fastener finishes

For covers with G, D and PG finishes, fasteners are galvanised or zinc coated, except for retaining nut which is 'Dacromet' coated. For covers with S finish, fasteners are stainless steel, except for retaining nut which is 'Xylan' coated. For covers with E finish, the choice of material for fasteners will depend on the installation environment. For further information contact us on +44 (0) 345 605 4333

Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Nom. Weight : 1·0 kg per 20 clips

Weights

All weights given are in kilograms (kg) and are for hot dip galvanised G finish

To obtain the appropriate component weight in other finishes, multiply the given weight by the following factors :

Deep galvanised (D) x 1·06
Stainless steel (S) x 0·94
Pre-galvanised (PG) x 0·96
Powder coated (E) x 0·97

All dimensions (mm) are nominal

Swifts® cable tray ancillary items

covers for fittings

Covers are supplied to fit the fittings of all cable tray ranges with the exception of MRF and SRF adjustable bends and adjustable risers They can be installed either close to the fitting side flanges (closed cover) or, for all tray ranges except XRF, raised above the flanges providing an air gap (ventilated cover)

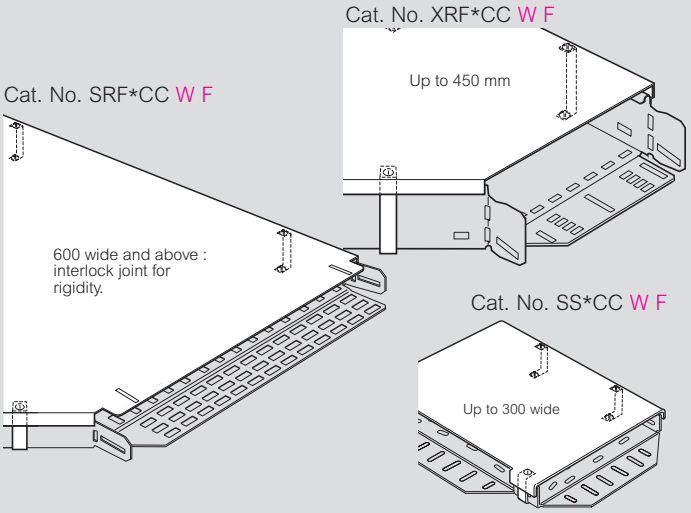
Covers for fittings up to 450 mm wide are simply butt-joined to straight length covers. To increase the rigidity of fitting covers of 600 mm width and above, they are joined to straight covers by being overlapped and bolted together. To make this simple, fitting covers have extended overlap tongues with long slots at all joints which are 600 mm wide or greater

Installation (typical)

Closed cover installations

Supplied singly with fasteners and brackets. Covers 600 mm and above are overlap jointed and dimpled for rigidity

SS light duty tray closed cover is only available in 300 mm width



Ventilated cover installations

		Tray range	
		SS	MRF

	Ventilated covers	SS*CV W F	MRF*CV W F
		SRF	XRF
Cat. Nos.	Closed covers	SRF*CC W F	XRF*CC W F
	Ventilated covers	SRF*CV W F	XRF*CV W F

The Cat. Nos. should be completed with the inclusion of the fitting reference where indicated (*)

Example :

A closed cover for an SRF equal tee 300 mm hot dip galvanised – SRFTCC 300 G width

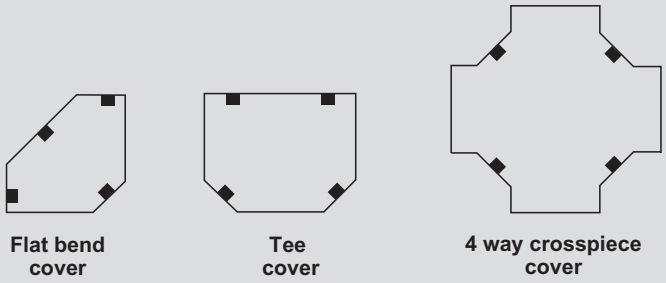
Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

Assembly

Cover clip positions

Fitting covers are supplied with slots for the cover clip fasteners pre-drilled in the appropriate positions

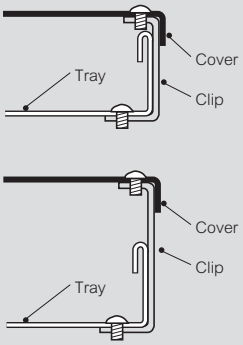


Flat bend cover | **Tee cover** | **4 way crosspiece cover**

Reducer cover | **Riser cover**

For cover clip dimensions and weights, **p. 102**

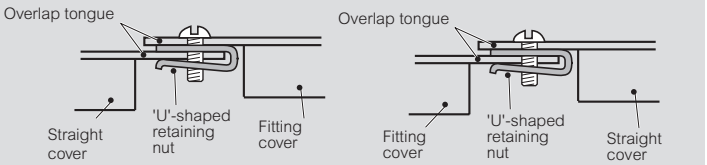
Closed and ventilated cover assembly



To fit covers either as closed or ventilated, place the cover in position over the fitting and mark the position of the cover clip slots in the cover on to the fitting

Remove the cover and fit the appropriate cover clips in the marked positions on the fitting

Fit the cover over the cover clips. Insert fasteners through the covers into the tapped holes in the cover clips. Tighten the fasteners



Joining covers

Wide fitting covers (600 mm or over) with overlap tongues on the joining faces can be joined to either end of a straight length cover

To join a wide fitting cover to a straight cover with an overlap tongue, push 'U'-shaped retaining nuts over the holes in the straight cover tongue. Fit the fitting cover with its tongue overlapping the straight cover tongue. Insert fasteners through the holes in the fitting cover tongue and into the retaining nuts. Tighten the fasteners

To join a wide fitting cover to a straight cover which has a straight (butt) end, push 'U'-shaped retaining nuts over the holes in the fitting cover overlap tongue. Fit the fitting cover with its overlap tongue under the end of the straight cover. Insert fasteners through the slots in the end of the straight cover and into the retaining nuts. Tighten the fasteners

All dimensions (mm) are nominal

All dimensions (mm) are nominal

Swifts® cable tray ancillary items

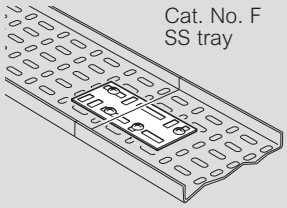
fishplates

Fishplates are designed for use when joining larger widths of MRF and SRF cable tray and all widths of SS cable tray which have been cut to length

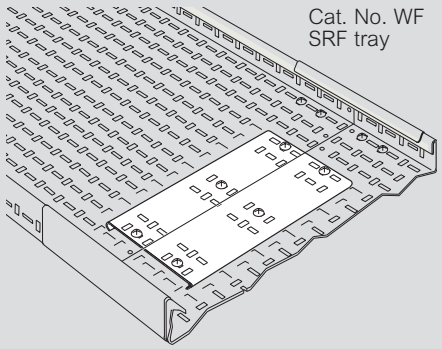
They fit across the underside of the tray joint to provide added strength and increase the safe working load. They also greatly enhance the lateral rigidity of the joint and prevent unevenness in the bed between adjacent trays. Supplied singly without fasteners

Installation (typical)

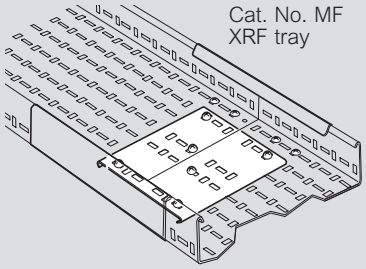
Cat. No. F
SS tray



Cat. No. WF
SRF tray



Cat. No. MF
XRF tray



Tray range	Tray width	Cat. No.
SS	50–300	F F
MRF	450–600	WF F
SRF	450–900	WF F
XRF[1]	225	F F
	300	MF F
	450–600	WF F

1 : Fishplates for XRF tray are only required when cable loading is in excess of 50% of maximum safe working load

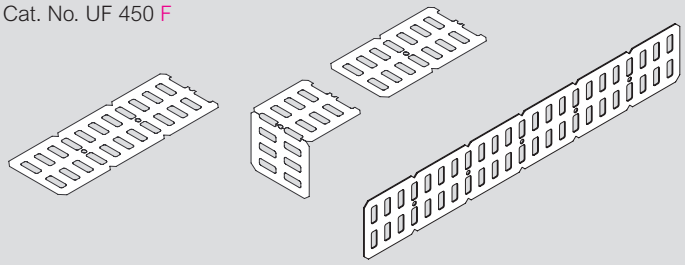
Universal fishplate

Fishplates are designed for extra strength when joining cable tray beds and can also help to protect cables from cut edges

The universal fishplate can be overfolded and split at 75 mm centres when working with narrow trays

Supplied singly without fasteners

Cat. No. UF 450 F



Key : Replace the letter shown in red with your choice from the following options :

F = Finish : G (hot dip galvanised after manufacture), D (deep galvanised), PG (pre-galvanised steel), S (stainless steel), E (powder coated black RAL 9005)

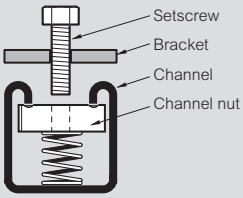
Wt = weight of section (kg/m)
A = cross-sectional area (mm^2)
I^{xx} = moment of inertia = second moment of area (mm^4)
Z^{top} = section modulus about xx axis (mm^3)
Z^{bottom} = section modulus about xx axis (mm^3)
r^{xx} = radius of gyration (mm)
I^{yy} = moment of inertia = second moment of area (mm^4)
r^{yy} = radius of gyration (mm)
xx = about xx axis
yy = about yy axis

Assembly

Fasteners for single (plain and slotted) and back-to-back channel supplied separately

Fixing brackets to Swiftrack channel



Standard fasteners for Swiftrack are high tensile hexagon head setscrews to BS 3692-8.8, these being zinc plated to BS 3382 : Part 2

Most standard Swiftrack brackets are made from 5 or 6 mm gauge steel

The use of too long a fastener will prevent proper tightening because the bolt end will foul the bottom of the channel before the head tightens down on the fitting

When fastening brackets other than Swiftrack, longer bolts may be required if the bracket thickness is greater than 8 mm

Fixing tray to Swiftrack channel

Use M10 x 16 mm high tensile hexagon head setscrews

Channel nuts

Channel nuts are for use with all channels and are supplied in packs of 100. For maximum load capacity M12 channel nuts should always be used

Channel nuts conform to BS 6946

Long spring | Short spring | No spring

All dimensions (mm) are nominal

Dimensions and weights (continued)

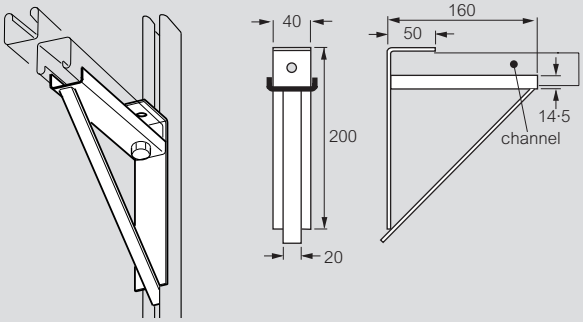
Cantilever arm bracket SA 756



Horizontal arm section from 3 mm steel only
Weight each (kg) : 1·13

Weights

All weights given are in kilograms (kg) based on nominal thickness and standard finish

Loads

Maximum uniformly distributed loads for individual cantilever arms are given with the illustrations in this catalogue. However, should the loading not be uniform then the safe limit can be obtained by calculating the bending moment produced by the intended loads and comparing this with the maximum permissible bending moment for the relevant arm

45 kgf.m for SA750 – SA755 and SA757
52 kgf.m for SA760 – SA766
95 kgf.m for SA770 — SA776

To obtain the bending moment resulting from any point load, multiply the size of the load by its distance from the inner end of the arm (see illustration A)

If several point loads exist then the total bending moment will be the sum of the individual bending moment produced by each point load (see illustration B)

If some part of the total load applied to an arm is uniformly distributed along a section of the arm only, then this part load can be treated as a point load acting at the mid-point of that section of arm to which it is applied (see illustration C)

Illustration A

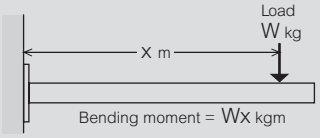


Illustration B

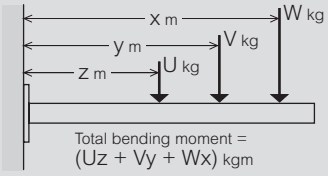

Illustration C

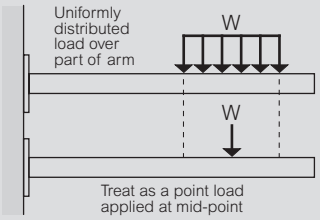


Values assume the tray or other loading medium is rigidly fixed to cantilever arm

Stainless steel cantilever arms
Loads are 60% of those given in the tables, except for those marked 3, in the tables opposite, where the limit is 50%

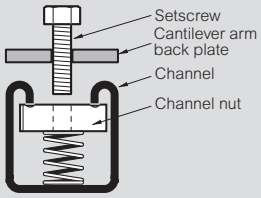
Finishes and standards

The standard finish for all cantilever arms is hot dip galvanised steel to BS EN ISO 1461
Stainless steel to BS EN 10088 : Grade 1.4404 (equivalent to S316L31) is also available as an alternative where applicable

Assembly

Fasteners (not included)

Cantilever arms to Swiftrack channel



Standard fasteners for Swiftrack are high tensile hexagon head setscrews to BS 3692-8.8, these being zinc plated to BS 3382: Part 2
Most standard Swiftrack brackets are made from 5 or 6 mm gauge steel
Standard cantilever arm backplates are made from 8 mm gauge steel
The use of too long a fastener will prevent proper tightening because the bolt end will foul the bottom of the channel before the head tightens down on the fitting
When fastening brackets other than Swiftrack, longer bolts may be required if the bracket thickness is greater than 8 mm

Channel type	Backplate thickness	Recommended fasteners
Deep channel SC400 series	6-8 mm 5-6 mm	M10 or M12 x 35 M10 or M12 x 25
Shallow channel SC200 series	7-8 mm 5-6 mm	M10 or M12 x 25 M10 or M12 x 20

All framework brackets are manufactured to BS 6946 from steel which complies with BS EN 10025 Grade S275JRC and are supplied singly. Channel nuts and setscrews are not supplied with brackets, therefore must be ordered separately

Dimensions and weights

Made from 5 or 6 mm thick steel unless otherwise stated

Brackets are 40 mm wide and have 14 mm diameter holes to accept M12 (or smaller) setscrews

All bend radii are 5 mm unless otherwise stated

Weights

All weights given are in kilograms (kg) based on nominal thickness and are for hot dip galvanised finish. For weights in stainless steel finish contact us on +44 (0) 345 605 4333

Loads

All loads are for hot dip galvanised brackets fixed with M12 setscrews and M12 zinc plated channel nuts. Loads for stainless steel brackets are available on request - contact us on +44 (0) 345 605 4333

Minimum Yield Stress of material is 275 N/mm^2

Only M10 or M12 channel nuts and bolts should be used for the attachment of load-bearing brackets

In most cases the mode of failure will be slippage of the bracket along the channel. However there are few channel/bracket combinations where the maximum load is dependant upon the strength of the bracket itself

Finishes and standards

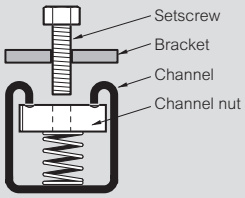
The standard finish for all framework brackets and beam clamps is hot dip galvanised steel to BS EN ISO 1461

Stainless steel to BS EN 10088 : Grade 1.4404 (equivalent to S316L31) is also available as an alternative where applicable. To order stainless steel finish add S to the end of the standard catalogue number
For example : SB500S

Assembly

Fasteners (not included)

Fixing brackets to Swiftrack channel



Standard fasteners for Swiftrack are high tensile hexagon head setscrews to BS 3692-8.8, these being zinc plated to BS 3382 : Part 2

The use of too long a fastener will prevent proper tightening because the bolt end will foul the bottom of the channel before the head tightens down on the fitting

When fastening brackets other than Swiftrack, longer bolts may be required if the bracket thickness is greater than 8 mm

For channel nuts, **p. 107**

Channel type	Backplate thickness	Recommended fasteners[1]
Deep channel SC400 series	6 mm and 8 mm 5 mm and 6 mm	M10 or M12 x 35 mm^2 M10 or M12 x 20 mm
Shallow channel SC200 series	7 mm and 8 mm 5 mm and 6 mm	M10 or M12 x 25 mm^2 M10 or M12 x 20 mm

1 : The use of too long a fastener will prevent proper tightening because the bolt end will foul the bottom of the channel before the head tightens down on the fitting

2 : When fastening brackets other than Swiftrack, longer bolts may be required if the bracket thickness is greater than 8 mm

DESIGN NOTES

Selecting the right finish

IN THIS SECTION...

Preventing corrosion

In planning any cabling or support installation the choice of an appropriate corrosion resistant finish is always a key issue at the specification stage, ranking alongside installation time and load carrying ability. However, unlike these other factors, which are only of importance during the installation phase, the correct choice of finish has long term implications and is crucial for ensuring the longevity (and aesthetics) of the complete installation in order to meet with the client's expectations.

Since future maintenance of any support system is virtually impossible, it is vital that the finish specified for the equipment is capable of providing lifetime protection from corrosion within the intended environment - ideally with some margin of safety.

The following pages give information on how corrosion occurs and supporting technical data on the standard construction materials and surface finishes available within each range of products supplied by Legrand. Contact our technical team on +44 (0) 345 605 4333 for further information.

Corrosion occurs on all metals to some extent. With some, such as stainless steel, its effects are usually only slight but even then the presence of certain chemicals or physical contact with other metals may cause rapid corrosion. It is therefore important to consider every aspect of the environment surrounding any intended installation in order to choose a material or finish which will minimise the risk of damage to the support system through the effects of corrosion.

1 Chemical corrosion

Few metals will suffer corrosion damage in a dry, unpolluted atmosphere at a normal ambient temperature. Unfortunately such environments are exceptional and atmospheric pollutants are likely to be present to some degree in most situations where support systems will be installed. Thus mild chemical corrosion is normal in almost all situations and useful information on the types of material or choices of finish which will inhibit and control this are given within the following pages.

Any support installation which will be situated in an area where higher concentrations of chemicals exist must receive more detailed consideration in order to select a finish which provides the best combination of initial cost and expected life. To assist in this, tables on page 123, give guidance on the suitability of the standard materials and finishes used for support systems in the presence of those chemicals most commonly found within industry. More detailed information is available upon request, please contact us on +44 (0) 345 605 4333.

2 Electrochemical corrosion

When two dissimilar metals are in contact and become damp it is possible for corrosion to be induced in one of the metals. Such corrosion may progress rapidly and cause considerable damage so it is important to consider and, if necessary, take steps to eliminate this process occurring.

Electrochemical (or electrolytic) corrosion takes place because the two different metals each behave as electrodes and the moisture as the electrolyte in a simple battery; as with any battery the resulting flow of current will cause corrosion of the anode. The likely effects of this reaction can be predicted using the Galvanic Series.

3 Galvanic Series

Even when two dissimilar metals are in moist contact, electrochemical corrosion need not necessarily take place. Its likelihood depends upon the potential difference between the two metals; this can be obtained by taking their respective values from the chart below and subtracting one from the other.

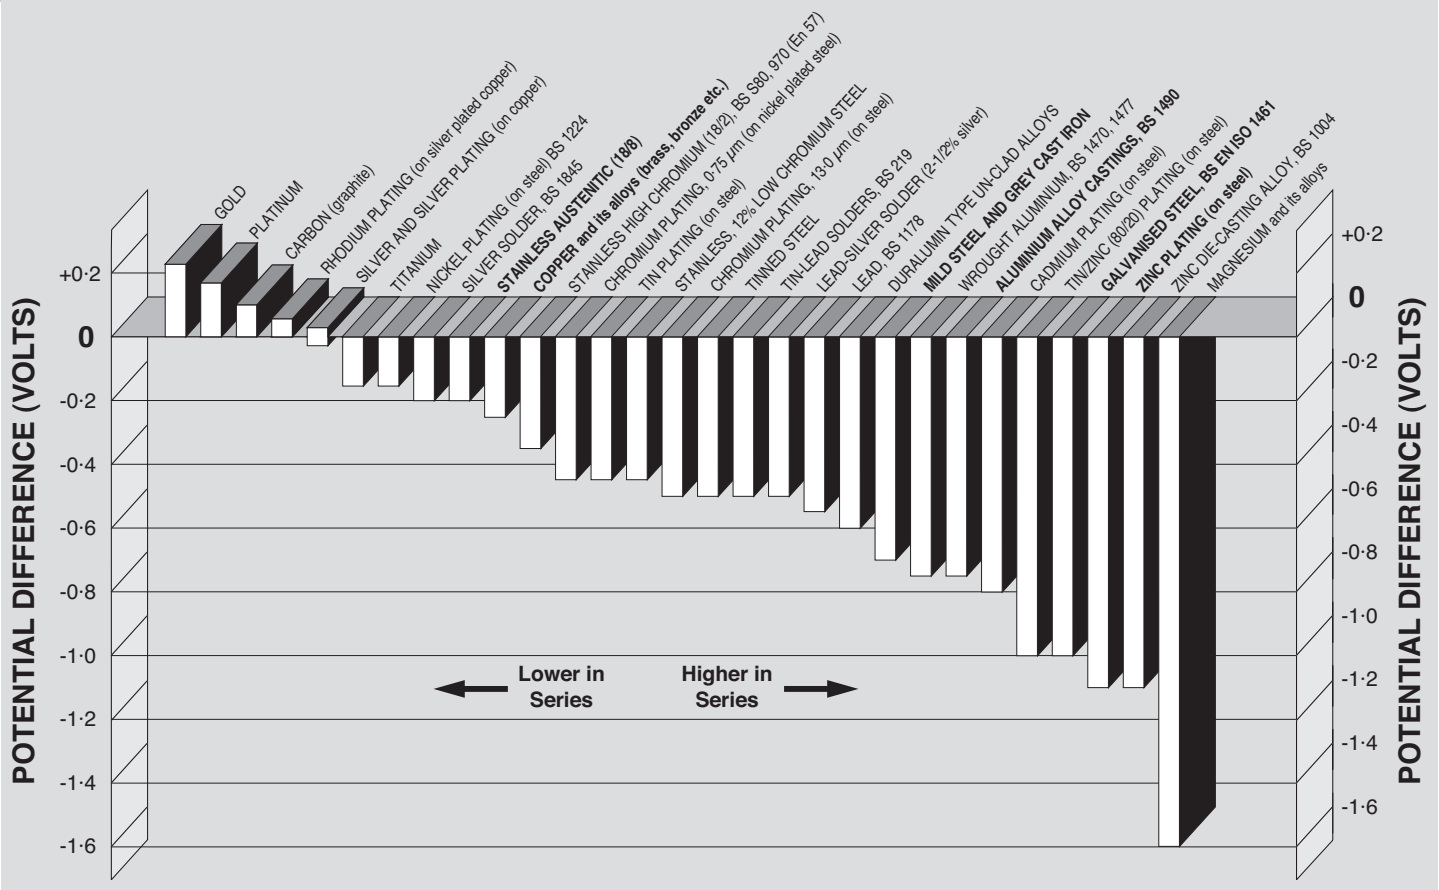
When the potential difference is less than the values given in the table to the right corrosion is unlikely to occur.

Environment	Maximum Potential Difference
Marine and outdoor	0·3 volts
Indoor	0·5 volts
Indoor, hermetically sealed (dry)	No restriction[1]

(1) With no moisture to act as the electrolyte no electrochemical corrosion can take place

If corrosion does take place the metal which is higher in the Series (to the right) will be corroded in preference to that which is lower in the Series (to the left).

Galvanic Series chart



The Galvanic Series illustrates the potential difference between a section of metal and a Calomel electrode when both are immersed in sea water at 25°C. This chart contains most commonly used engineering or plating metals.

If corrosion does take place the metal which is higher in the series (to the right) will be corroded in preference to that which is lower in the series (to the left).

If the affected metal has a small surface area in relation to its counterpart it will be corroded very aggressively and any sacrificial protection it provides may be short-lived. If on the other hand it has a large surface area in comparison to its less reactive counterpart, some minor corrosion may take place at points of contact but the process is likely to reach equilibrium rapidly so that any further reaction is insignificant.

If from consideration of this Series excessive corrosion does appear likely then the risk can be largely eliminated by insulating the dissimilar metals from one another, breaking the electrical path between them. A layer of paint on either surface is usually sufficient to achieve this.

4 The merits of Zinc

The Galvanic Series does show why zinc is such a useful corrosion resistant coating for mild steel.

Firstly, it forms an impervious zinc barrier around the steel, coating it with a metal whose own rate of chemical corrosion is both low and predictable in most situations.

Secondly, if the coating is damaged at any point (e.g. at a cut edge) the zinc surrounding the damaged area becomes the anode of the electrolytic cell and is sacrificially corroded away very slowly in preference to the underlying steel. This ensures the strength of the steel structure remains unaffected.

Because zinc appears near the top of the Galvanic Series it will act as a sacrificial anode in relation to most other metals; thus its relatively low cost and the ease with which it can be applied as a galvanised coating on steel means that it continues to be the most commonly specified protective finish for support systems.

Life expectancy of zinc coatings

The resistance of galvanising to atmospheric corrosion depends on a protective film which forms on the surface of the zinc. When the steel is withdrawn from the galvanising bath the zinc has a clean, bright, shiny surface. Over time the appearance will change to a dull grey patina as the surface reacts with oxygen, water and carbon dioxide in the atmosphere. A complex but tough, stable and protective layer is formed which adheres to the zinc. Contaminants in the atmosphere affect the nature of this protective film.

The most significant contaminant which will accelerate the corrosion rate of zinc is sulphur dioxide (S02) and it is the presence of S02 which largely controls the atmospheric corrosion of zinc.

The Galvanizers Association has undertaken significant research based upon the positioning of reference canisters placed throughout the UK and the Republic of Ireland to establish background corrosion rates for 10 km square grids which has resulted in the formation of The Zinc Millennium Map.

For most sites on this map an average hot dip galvanised coating will last between 40 to 100 years, highlighting the potential for significant financial savings when galvanising is specified. However, with the correct use of the map specific locations can be analysed for average zinc corrosion rates per year.

The Zinc Millennium Map

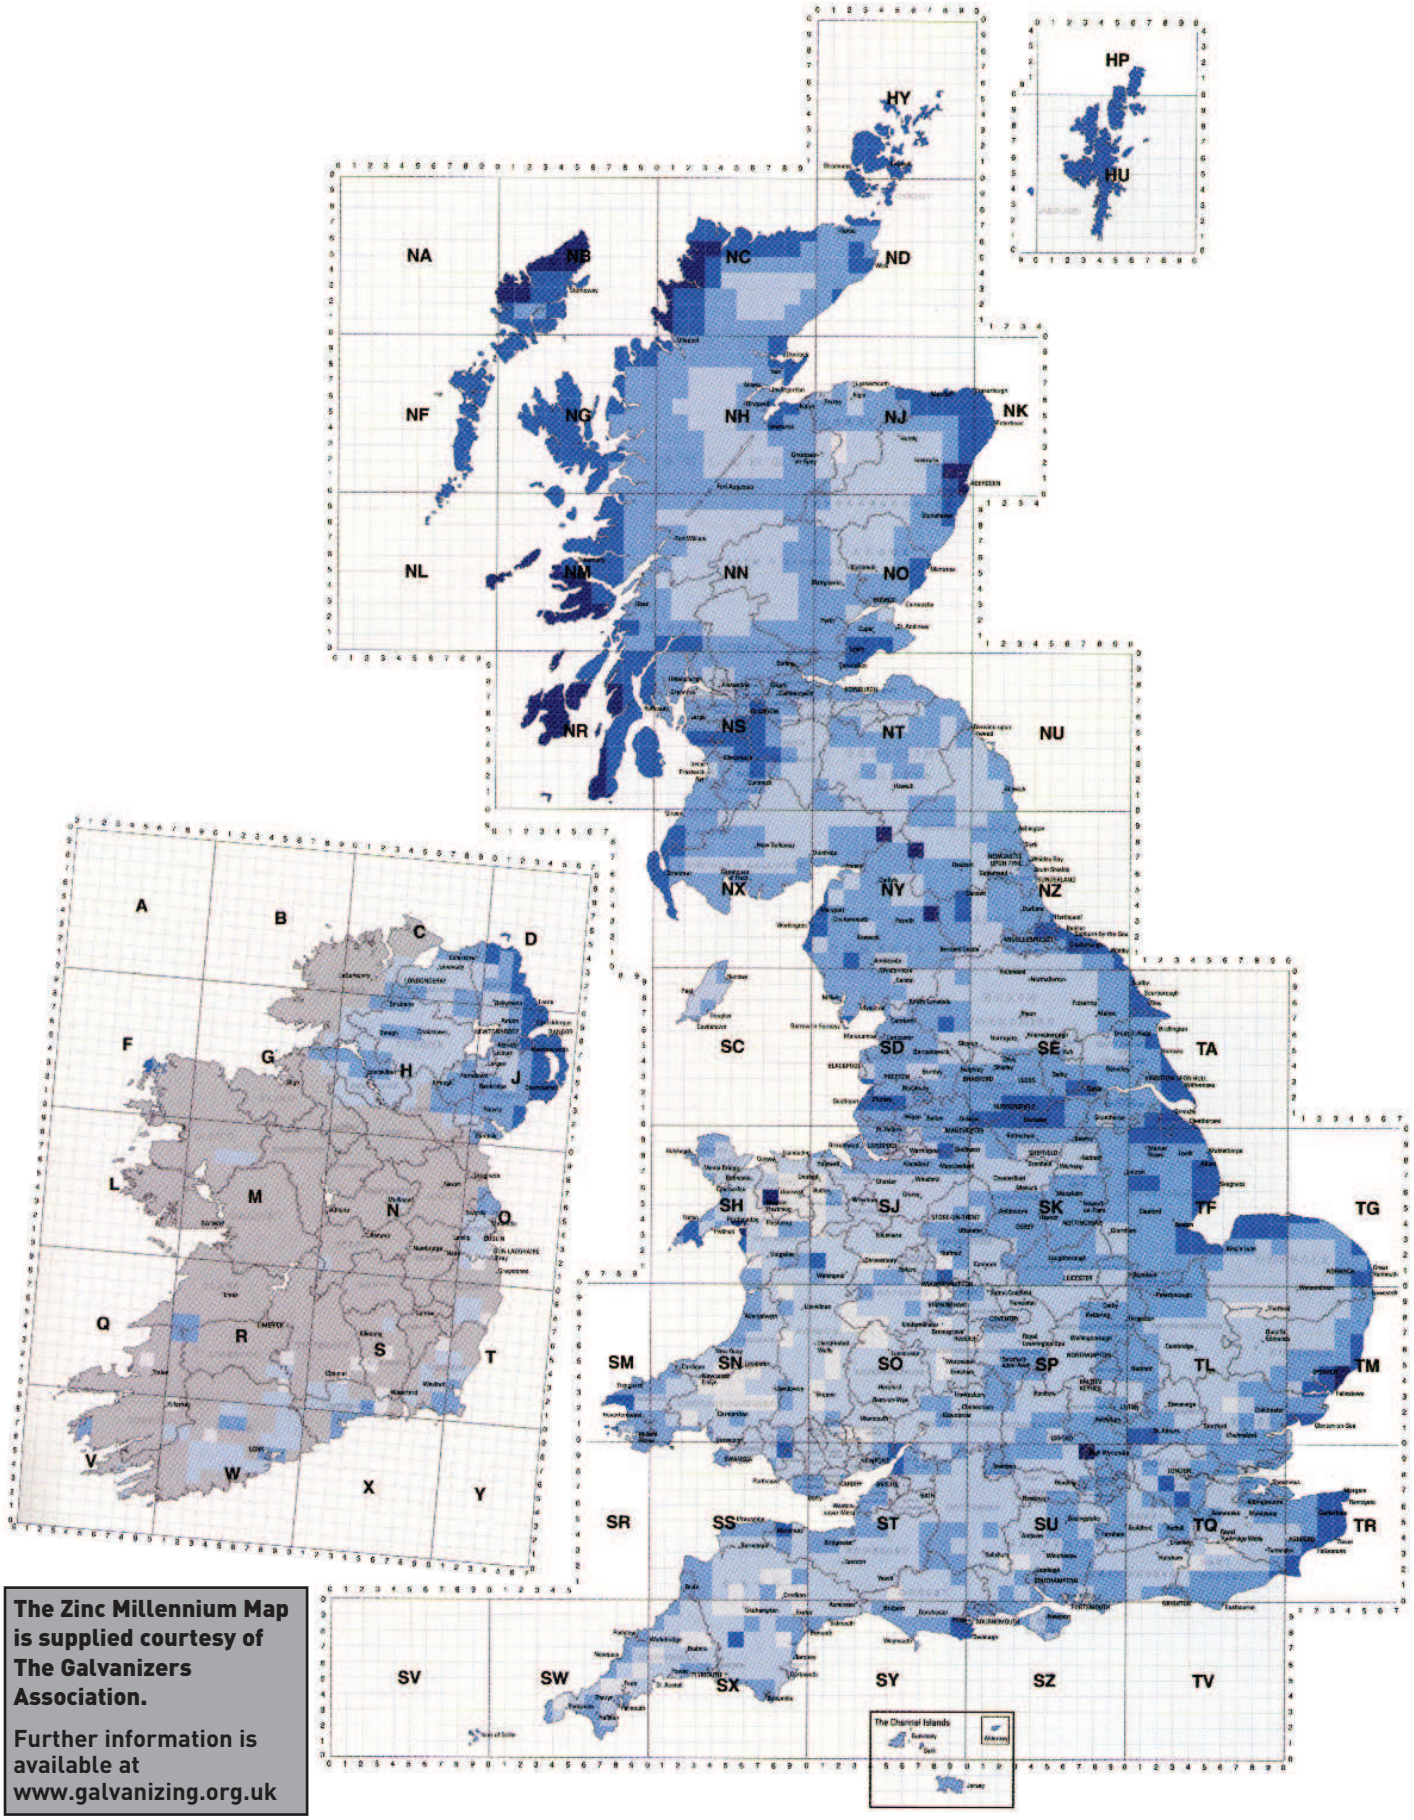
The definitive geographical guide to the different corrosion levels of galvanised steel products used in the construction industry.

Corrosion rate key	1	2	3	4	5
Average Corrosion rate (µm/year)	0·5	1	1·5	2	2·5
Average life of 85µm galvanised coating (years)	187	85	57	43	34

Please note this is an average background corrosion rate for zinc. For further information please contact the Galvanizers Association.

BS EN ISO 14713 general corrosion effects and life expectancy for zinc coated products

Corrosivity category	Corrosion rate of	Environment - interior	Environment - exterior	Pollution level	Zinc coating thickness	Coating life years (10 20 30 40 50 60 70 80 90 100)
C1	< 0.1 Very low	Warm, dry, no pollution		0	PG (Z275) = 19 microns	> 100
					G = 55 microns	> 100
					D = 110 microns	> 100
C2	0.1 to 0.7 Low	Unheated, low condensation, low pollution	Temperate, rural, urban with low pollution	<5	PG (Z275) = 19 microns	> 100
					G = 55 microns	> 100
					D = 110 microns	> 100
C3	0.7 to 2 Medium	Moderate condensation & pollution eg food processing plants	Temperate, urban with medium pollution, mild coastal	5 to 30	PG (Z275) = 19 microns	
					G = 55 microns	
					D = 110 microns	> 100
C4	2 to 4 High	High condensation, high pollution eg chemical or industrial plants,	Temperate, urban with high pollution, industrial, coastal	30 to 90	PG (Z275) = 19 microns	
					G = 55 microns	
					D = 110 microns	
C5	4 to 8 Very high	Very high condensation & industrial pollution, eg mines	Temperate, very high pollution, industrial & high salinity coastal	90 to 250	PG (Z275) = 19 microns	
					G = 55 microns	
					D = 110 microns	
CX	8 to 25 Extreme	Permanent condensation & high pollution	Very high pollution, extreme industrial, coastal & offshore with occasional salt	>250	PG (Z275) = 19 microns	
					G = 55 microns	
					D = 110 microns	



The Zinc Millennium Map is supplied courtesy of The Galvanizers Association.

Further information is available at www.galvanizing.org.uk

5 Common corrosion situations

Finally, the most common occurrences of contact between dissimilar metals within support systems are :

a. Where stainless steel components are being fixed to a carbon steel structure

b. Where galvanised or zinc plated components are being fixed onto a stainless steel support system

c. Where copper components (e.g. copper tubing or MICC cable) are being installed onto a galvanised steel support system

In relation to these three sets of conditions the following comments apply :

(i) Stainless steel – mild steel

This situation has been the subject of much consideration and debate over recent years, particularly in the offshore energy industry.

Whilst Legrand can supply kits of components (including, according to the circumstances, insulating pads, sleeves for fasteners or insulating coatings) the latest metallurgical advice from both the manufacturers of stainless steel and other bodies is that these metals are sufficiently close together in the Galvanic Series for any electrolytic effects to be ignored in normal offshore environments. One exception is when a small mild steel (or galvanised mild steel) component is in direct contact with a large mass of stainless steel.

It is now accepted that the application of a simple paint coating to one of the juxtaposed surfaces will provide sufficient insulation to break the electrical circuit, effectively eliminating any problems.

(ii) Small galvanised components on stainless steel

The zinc coating will provide very limited protection to its underlying steel because of the rapidity with which it will erode away. Once exposed the base steel (often a fastener) will be aggressively corroded causing unsightly staining of the stainless steel and premature failure to the component. In the case of fasteners such failure could be catastrophic to the installation so appropriate stainless steel fasteners should always be used with a stainless steel support system.

(iii) Copper on zinc

If copper is laid directly onto a galvanised surface the zinc will rapidly erode. Thus MICC cable should always have an insulating sheath if it is to be installed on galvanised cable tray.

Suitability of finishes

1 Metallic finishes

The table on the following page outlines the suitability of metallic finishes under a variety of conditions. The following notes apply to the data :

1. Hard water promotes the formation of a stable protective film on a hot dip galvanised coating.

2. Salt spray testing should not be used on galvanised coatings; the data provided by such accelerated weathering tests is misleading and inaccurate on this finish since the formation of the protective film (patina) is prevented from forming under the artificial conditions.

3. No information is available on the resistance of galvanised coatings to contact with this type of oil. However, in general terms galvanised coatings are resistant to oil-based products.

4. Resistant provided that the oil is stable, free from acidity and of mineral origin.

5. Under immersed conditions contact with this chemical is not recommended and over-coating with a paint or powder system is necessary. When this chemical is an airborne aerosol the coating performance depends on various factors specific to the particular application. Corrosion rates will be high and if condensation is likely to be heavy and its pH value is outside the range pH5 - pH12.5 then overpainting or coating of the galvanising is normally recommended.

If the galvanised surface is frequently washed by fresh water and allowed to periodically dry out then the level of corrosion will be less severe.

2 Organic finishes

Refer to the table on the following page for information on the suitability of organic finishes under a variety of conditions.

Finishes

IN THIS SECTION...

Available on cable tray and Swiftrack support systems

1 British standards

Legrand ensures that all of the materials used during the construction and finishing of their products conform to the relevant standards, a full list of which is provided on p. 146.
In particular, the relevant standards for steel are :

Finish	Product	Current standard/grade
G	Tray less than 1·5mm thick	BS EN 10130 : 2006 Grade DC01
G	Tray 1·5mm and thicker	BS EN 10111 : 1998 Grade 1.0332 / BS EN 10025 : 2004 Grade S275JRC
G	Swiftrack channel	BS EN 10025 : 1993 Grade S235JRC (Ys = 250N/mm² min)
G	Swiftrack brackets	BS EN 10025 : 2004 Grade S275JRC
D	Tray	High silicon steel to BS EN 10025-5 : 2004 Grade S355JOWP / Corten A*
PG	Tray	BS EN 10346 : 2009 Grade DX51D
PG	Swiftrack channel	BS EN 10346 : 2009 Grade S250GD + Z275
S	Tray and Swiftrack	BS EN 10088 : 2005 Grade 1.4404 (equivalent to S316L31)

Finishes :
G = hot dip galvanised after manufacture
D = deep galvanised
PG = pre-galvanised
S = stainless steel
E = powder coated

* Depending on availability of raw materials

Swiftrack channel support shown in PG finish
See p. 28

2 Hot dip galvanised (G)

Hot dip galvanising after manufacture is an excellent, economical protective finish used on support systems in many industrial and commercial applications.

Background

The galvanised coating is applied as a final manufacturing process by immersing a steel component (after various pre-treatments) in a large bath of molten zinc; the zinc forms an alloy with the steel substrate and protects the steel from corrosion in two ways.

Firstly, the zinc coating surrounds the base steel with a total, tough physical barrier preventing corrosion of the steel by the surrounding atmosphere. Secondly, if steel does become exposed, e.g. at a cut edge, the zinc coating acts as a sacrificial anode and will be gradually corroded in preference to the underlying steel. Corrosion products from the zinc will also be deposited onto the steel, effectively re-sealing the surface and maintaining the integrity of the barrier.

The life of a zinc coating is directly proportional to its thickness but in different environments this life does vary. However because hot dip galvanising has been used for many years its life in diverse environments has been well established. The most comprehensive guide to the design life of protective systems in different environments is contained in BS EN ISO 12944-5 : 2007 'Paints and varnishes' and BS EN ISO 14713 : 2009 'Parts 1 + 2 - zinc coatings'. In the presence of certain atmospheric pollutants (such as sulphur dioxide in industrial areas) or when installed in an aggressive coastal or marine environment the rate of dissipation of the zinc will be accelerated; however in most situations hot dip galvanising remains an extremely effective and economical corrosion resistant finish.

Specification

BS EN ISO 1461 provides the specification for a hot dip galvanised coating. Heavier gauges of steel will usually take up a thicker coating of zinc than lighter gauges so the standard defines the coating for different steel gauges in terms of the weight of zinc per square metre of surface area. Ensuring compliance with this standard is obviously important. Unfortunately it is not reasonable to use this weight principle for checking the coating weight on components which have already been galvanised as it involves calculating the surface area then weighing a component, destructively removing the coating by chemical means and then re-weighing the component. It is therefore usual to measure instead the coating thickness (which can be done non-destructively using magnetic or electronic instruments) at a number of points on the surface of a component. The coating thicknesses given in the standard and their equivalent coating weights are shown in table 1.

Table 1
Galvanising standard BS EN ISO 1461 : 2009
Minimum average zinc thickness

Steel thickness	Minimum average zinc thickness (microns)
Less than 1·5 mm	45
1·5 mm and thicker up to 3 mm	55
3 mm and thicker up to 6 mm	70
6 mm and thicker	85

Note

For threaded and very small components which are spun galvanised, thinner coatings are used as recommended by BS EN ISO 1461.

It is important to distinguish between 'hot dip galvanised after manufacture to BS EN ISO 1461' and less precise descriptions such as 'galvanised', 'mill galvanised' or even the term 'hot dip galvanised', when used without reference to any standard. Mill galvanised steel is frequently used as an alternative finish for many support system components (see 'pre-galvanised steel', page 126), and is available from Legrand, but this material does have a much thinner zinc coating which renders it unsuitable for exposed applications.

Suggested specification text : "All components should be hot dip galvanised after completed manufacture to the requirements of BS EN ISO 1461."

3 Deep galvanised (D)

A deep galvanised finish has all of the characteristics of hot dip galvanising but with a much thicker coating of zinc. This gives 2-3 times the life of the standard hot dip galvanised (BS EN ISO 1461) finish.

Background

The life of a galvanised coating depends very much upon the degree of pollution of the surrounding atmosphere; in an industrial or marine environment corrosion of the zinc may take place at double or treble the rate which would occur in an inland environment. Thus, if heavy atmospheric pollution or aggressive conditions exist in the vicinity of an installation, it is well worth considering the benefits provided by deep galvanising.

Since this finish is produced in the same basic process as normal hot dip galvanising the initial cost premium of the material is relatively low; however the site installation costs will remain unchanged. Therefore, for a relatively modest premium on the overall installed cost the life of the installation can be increased dramatically.

Specification

Although the appropriate British Standard for deep galvanising is BS EN ISO 1461 (the same as for hot dip galvanising after manufacture) the process requires the use of steel containing a slightly higher proportion of silicon; often referred to as high silicon steel. When galvanising normal mild steel the process effectively ceases after a short immersion time in the galvanising bath, giving, depending on the gauge of the steel, the coating thicknesses laid down within BS EN ISO 1461. However with silicon bearing steels the chemistry of the galvanising process changes, resulting in the zinc coating continuing to increase in thickness as long as the steel remains immersed in the zinc.

Coatings up to three times as thick as the minimum requirements of BS EN ISO 1461 are both possible and practical to achieve. However the most cost effective coating thickness is usually twice the thickness required by BS EN ISO 1461.

4 Pre-galvanised (PG)

A zinc coating can be economically applied to steel sheet immediately after its manufacture; the result, pre-galvanised steel (to BS EN 10346) can be an attractive, bright material which is suitable for non-arduous environments.

Background

Pre-galvanised (or mill galvanised) steel is produced by unwinding steel coil and passing it continuously through a bath of molten zinc and then past air jets to remove excess zinc from the surface. The process is closely controlled to produce a thin, even and ripple-free zinc coating with very few imperfections.

Because this pre-galvanised steel coil must then be cut to shape during subsequent manufacture of support equipment, the edges of the finished components will have no zinc coating; this aspect, together with the relatively light zinc coating provided by the process, make pre-galvanised services supports suitable for indoor, non-corrosive environments (particularly where an aesthetically attractive appearance is important) but unsuitable for humid indoor or outdoor applications.

Specification

For steel for Swiftrack channel, steel grade is BS EN 10346 : 2009 Grade S250GD + Z275

5 Stainless steel (S)

For all practical purposes most stainless steel services supports can be regarded as maintenance free and suffering no corrosion. Inevitably there is a relatively high price to pay for these attractive properties but, in aggressive environments or where the cost or inconvenience of gaining subsequent maintenance access is prohibitive, this initial cost premium may well be justified.

Background

Stainless steel contains a high proportion of chromium (usually at least 17%) and the steel's remarkable immunity to corrosive attack is conferred by the chromium-rich oxide film which occurs naturally on its surface. This invisible film is not only inert and tightly bonded to the surface, it also re-forms quickly if the surface is damaged in any way.

The fire resistance of stainless steel is particularly noteworthy; tests have demonstrated that stainless steel cable supports can be expected to maintain their integrity for considerable periods even when exposed to direct flame temperatures exceeding 1,000°C. This may be an important consideration where the electrical circuits being supported provide for emergency power or control systems.

Stainless steel is also used where hygiene is a major consideration. Its advantages in such applications are again its excellent resistance to the various chemicals and washes which are frequently used for cleaning purposes and the smoothness of surface (depending on the finish specified) which minimises the soiling or contamination that can take place.

Specification

Many grades of stainless steel are available but the one generally used in aggressive marine environments is BS EN 10088 Grade 1-4404 (equivalent to S316L31, BS 1449: Part 2). This grade has improved corrosion resistance (particularly in the presence of chlorides) and high temperature strength. It is much used in the chloride-laden marine conditions which exist on offshore installations and in coastal regions.

For less aggressive environments BS EN 10088 Grade 1-4301 (equivalent to 304, BS 1449: Part 2) is the normal grade. This grade offers good corrosion resistance in internal applications and also has a good aesthetic quality, often used in the dairy and food industries. Final finishes with mechanical brushing or polishing are often used to provide a good looking and robust surface finish.

Pickling and passivation

A stainless steel surface will have excellent corrosion resistance due to the chromium oxide layer on the surface of the product. With some stainless steels however, the surface areas can become subject to corrosion due to the depletion of chromium during welding, or the introduction of iron during a machining process (not applicable to most cable management products).

Where a uniform appearance is important after carrying out welding processes, it is often specified that all surfaces should be pickled and passivated to remove the smoke stain from the welding process. Also where extreme corrosion resistance is called for, this process may help to remove crevice corrosion from around the welding area. Experience has shown that this is not normally necessary for the majority of cable management products.

Pickling

The pickling process involves the article being immersed in a blend of acids which dissolve iron and iron oxides which adhere to, or are embedded in, the surface of the stainless steel. These acids cause a removal of the surface layer of between 1 and 3 microns. The article is finally rinsed with water to complete this stage of the process.

Passivation

Passivation of the stainless steel will occur naturally after pickling when the oxygen in the air will react with the surface of the steel to form a passive chromium oxide layer. However it is usual for this passivation process to be speeded up by immersing the article in a nitric acid or other passivating agent.

Pickle and passivation is available as a special order finish, for more information please contact us on +44 (0) 345 605 4333.

Electropolishing

In various industries such as food, pharmaceutical and electronics, there is a requirement for easier cleaning and reduced bacterial growth on the surface of the stainless steel. This increased surface smoothness is achieved by a process called electropolishing.

Electropolishing is, in principle, a reversal of the electroplating process. The article is submerged in a special acid electrolyte and a DC current passed into the article and through the electrolyte. This process removes the high spots from the surface micro roughness leaving a surface which is bright and smooth.

6 Powder coated (E)

Powder coated finishes give excellent protection against scratches as they are normally between 50 - 100% harder than the equivalent wet paint finishes.

They are available in a wide range of colours and can have matt or various gloss finishes. In addition to the aesthetic qualities powder coating are available in various grades to cope with different site conditions. Grades are produced to cope with exterior applications where there can be high levels of ultra violet light or low smoke and fume applications for fire risk areas such as occur in tunnels.

Because powder coated finishes are inherently resilient and resistant to chemical or corrosive attack, these finishes are frequently used for protection only where there is no aesthetic requirement.

Background

The process of powder coating is carried out by applying the electrostatically charged powder to the article, and then passing the article into an oven where the powder is baked onto the surface of the article.

The application of the powder, and the associated stoving, can vary with different types of finish so the careful control of the process is required.

Specification

With such a wide variety of types of powder available it is necessary to specify in addition to the colour what the finish is required to do.

The colour can be specified by BS or RAL number, or by exact colour match if a sample of the colour is provided. The required gloss level should also be given.

The usual finish is for aesthetic indoor use, but if other qualities are required they should be clearly indicated at the outset as the powder cost and application cost can vary considerably between different types of powder.

Epoxy coated

Epoxy coatings are based on thermo-setting epoxy resins and give a very hard, durable finish suitable for internal applications. Epoxy coatings are usually quite thin but they have good chemical resistance with excellent adhesion and coating flexibility.

Polyester epoxy mix

Some modern coating developments consist of both polyester and epoxy. These give properties which are very suitable for use with cable support systems. The finish is thick and fairly soft and gives good protection to the cables being installed. The coating has strong adhesive properties and in cases of fire is halogen free with low smoke and fume characteristics. There are many types and grades of these materials and when using them advice should be sought from our technical sales support team, please contact us on +44 (0) 345 605 4333.

Architectural powder coatings

These powder coatings are formulated to meet the particular requirements of exterior environments. They are inherently resilient and resistant to damage and chemical or corrosive attack, providing maximum protection to the substrate. When subjected to high levels of ultra violet light present within sunlight the coatings have excellent gloss retention and resistance to chalking. These coatings would normally be applied over a galvanised finish.

Clear powder coating on pre-galvanised steel

Pre-galvanised steel with a clear polyester resin powder coating has excellent weathering characteristics.

This is due to the hard powder coated finish, which gives good mechanical protection and excellent corrosion resistance, being bonded to a sub surface of zinc. The zinc giving protection against deep surface scatches by cathodic action.

Pre-galvanised Steel

This finish is described on page 126.

Clear Powder Coating

This is carboxylated polyester resin finish which is a different compound to the powder coated finish described opposite.

The application is the same as standard powder coating, namely it is applied as an electrostaticaly charged powder to the article which is then melted onto the surface and baked into a hard surface in a stoving oven.

The resultant surface finish gives a corrosion resistance in the ASTM B117 Salt Spray test of 500 hours with creepage of corrosion less than 2mm from the scribe mark.

Installation of services

IN THIS SECTION...

Cable tray systems

Cable tray systems

Cable tray systems are intended for the support of a combination of cables, electrical equipment and/or communication system installations. Where necessary cable tray systems may be used for the segregation of cables.

Note : these systems are designed for use as supports for cables and not as enclosures giving full mechanical protection.

These systems are covered by BS EN 61537.

1 Design factors to consider

Consideration should be given to the following factors when undertaking the design of a support system although some of these (e.g. snow/wind loads) may not be relevant to every installation.

(i) Distributed loads (eg. cables, pipes)
(ii) Point loads
(iii) Snow, wind and external forces
(iv) Safety factor
(v) Deflection
(vi) Spacing of supports
(vii) Location of couplers
(viii) Installation of cables within a support system
(ix) Earth protection
(x) Electromagnetic compatibility (EMC)
(xi) Thermal expansion and contraction

The following sections provide a wealth of useful information on each of these design aspects.

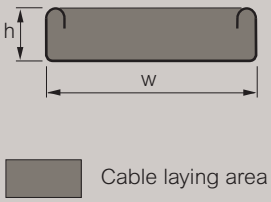
(i) Distributed loads

Before commencing the design process for a new installation it is usual to consider whether future changes in the pattern of demand for building services will impose increased loading requirements on the support system. If so, it is good design practice to allow both the physical space and sufficient load carrying capacity for the future addition of 25% more cables or other loading medium.

Estimation of cable loads

If full details of the cabling layout are available then the likely cable load can be calculated using either manufacturer's published information or the tables of cable weights and diameters which are given opposite. However, it is often necessary to select a tray design in the absence of accurate information on the likely cable load. To assist this selection process a useful approach can be to choose a likely size of tray and then to estimate the maximum cable weight which is capable of being contained within it. This estimate may be arrived at using the following guide :

Max. cabling capacity (kg/m) = cable laying area (m^2) x 1 700



Cable laying area (m^2) = w (m) x h (m)
Applicable to cable tray

Note : this formula only provides an estimate of the maximum load which can be physically contained within a tray. The ability of that tray to support such a load depends upon the spacing of its supports.

Cable weights and diameters

Tables 1 and 2 below give typical weights and diameters (D) for PVC sheathed, steel wire armoured cables with stranded copper conductors.

Tables 3 and 4 give typical weights and diameters for PVC sheathed, unarmoured stranded copper power cables. Cables with XLPE (cross linked polyethylene) insulation are usually slightly lighter so the information given may also be used for these cables too.

For all other types of cable (e.g. paper insulated cable or cable with aluminium conductors) refer to the cable manufacturer's catalogue for details and guidance.

Values show approx. weight and diameter of typical cables.
D = Overall cable diameter.

(ii) Point loads

Point loads may consist of permanent equipment, such as lighting luminaires, junction boxes or other switchgear, or temporary loads such as commissioning equipment or installation personnel (however, consider 'Safety during the installation phase' page 145).

Analysis of uniformly distributed loads (UDL), such as cables or pipes is relatively simple but analysing the effect of a point load is quite complex; fortunately a simple alternative approach is available.

Firstly, one makes the reasonable assumption that the point load will be situated in the worst position at mid-span. The force this point load imposes can then be taken as equivalent to that imposed by a load of twice its value uniformly distributed along the span. Thus the point load can be converted to the equivalent uniformly distributed load which is then added to other UDL's to produce one total uniform load.

Example:

Point load = 30 kg

Support spacing = 3 m

UDL = 100 kg/m

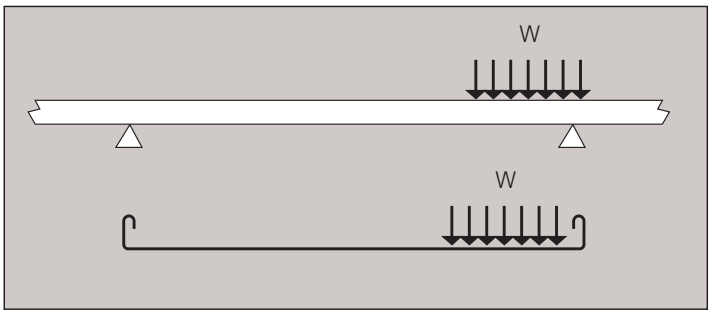
UDL equivalent to 30 kg point load =

2 x Point Load = 2 x 30 kg = 60 kg = 20 kg/m

Total UDL = 100 kg/m + 20 kg/m = 120 kg/m

The suitability of a tray to carry this total load can then be considered using the loading graph information (see p. 134 to 135).

Although this treatment does assume the point load will be in the 'worst case' position, the installer should, given discretion, always position any point load as close as possible both to a support and to either side flange, minimising the stress on the installation, as per the following illustration.



Single spans

For single spans the loading capability is also severely reduced. In this circumstance the safe working load (SWL) should, as a simple rule, be reduced to half that indicated by the loading graphs on p. 134 to 135, and there must be no joint in the span.

This derating of the loading capacity for either single spans or point loads depends to some extent upon the tray type and the intended span. If therefore the design calculations indicate this aspect is critical, more detailed information should be sought from Legrand, contact us on +44 (0) 345 605 4333.

(iii) Snow, wind and external forces

The loading graphs on p. 134 to 135 show the maximum safe working steady load for each type of support system. If the system is outdoors and must also sustain snow, ice, wind or other variable forces these must also be taken into account at the design stage.

Appropriate design data for UK weather conditions is given in British Standard BS EN 1991, see p. 146.

For snow and ice the appropriate extra weight as indicated by these standards must be added to the weight of the cable (and any point loads) to give a total working load; this should then be compared with the safe working load (SWL) for the tray using the graphs in this document.

The horizontal force imposed by a wind is proportional to the vertical surface area of the installation so particular care must be taken where cable tray will be mounted on edge. Where high winds are likely, large spans should be avoided.

High winds can also create a strong lifting force on tray or covers and this too must be borne in mind when installing covers in exposed locations. Ideally covers should not be installed temporarily, they should only be installed after the electrical installation has been completed and they must be properly secured immediately.

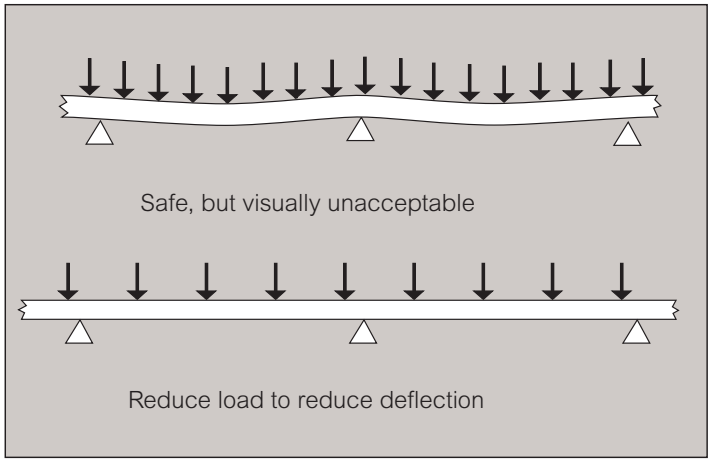
(iv) Safety factor

To arrive at a safe working load (SWL) for each type of equipment Legrand test their products to find the ultimate failure load. The SWL is obtained by dividing the load before failure by a factor of 1·7 minimum.

This safety factor may need to be increased by the designer depending upon the circumstances. For example, if the support system is expected to be subject to aggressive abuse a safety factor as high as three or more may be used. Such treatment is, however, the exception and care should be taken not to over-design the system by using an unnecessarily high safety factor.

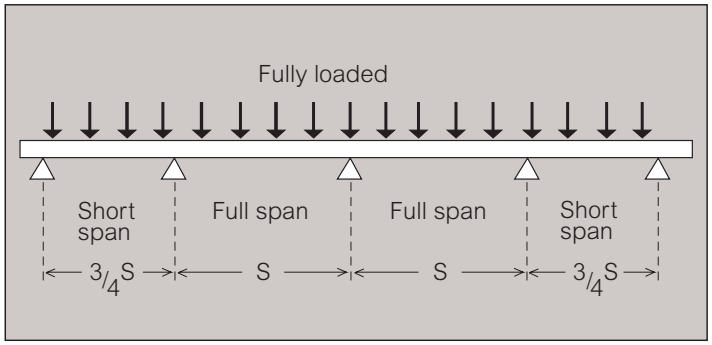
(v) Deflection

The deflection of a cable tray under load is not directly related to its strength but it is obviously of aesthetic importance. For this reason it may be necessary to estimate the likely deflection whilst designing an installation, especially if it will be in a highly visible location. Experience has shown that in order to maintain a degree of deflection which is subjectively acceptable to the eye, the load on the cable tray will often be restricted to well below its safe maximum.



(vi) Spacing of supports

Services support installations are usually considered as multi-span arrangements but it is important to recognise that the loading capability of the system is not uniform from end-to-end. The strength of the two end spans in any run is much lower than that of intermediate spans, even when the ends are rigidly fixed. In many situations the end spans will be more lightly loaded anyway; if however they are not and the installation will be fully loaded from end-to-end then it is recommended that the support spacing of both end spans should be reduced to no more than three quarters that of intermediate spans. However it is not a mandatory requirement, but is both useful and advisable.



Sometimes the necessary support spacing may be dictated by the nature of the building fabric. If however the designer has discretion over the spacing of supports the loading graphs can be used to maximise this distance. This will reduce the number of support components and fixings that will be required, thus reducing the overall cost of the installed system.

Supports for Cable Tray

If light duty (SS) cable tray is being installed then in most circumstances a 1 m support spacing is ideal. Many light duty tray installations are intended to carry just one or two cables and often the tray supports will be mounted on the existing building fabric. However, where more substantial cable trays are being used it is often necessary to build a dedicated supporting structure; some attention to the design of this can provide tremendous economies in both purchasing and installation costs. On wider trays the maximum Safe Working Load can be increased by fitting an appropriate fishplate across the underside of each tray-to-tray joint.

For further information, contact us on +44 (0) 345 605 4333

Support of fittings

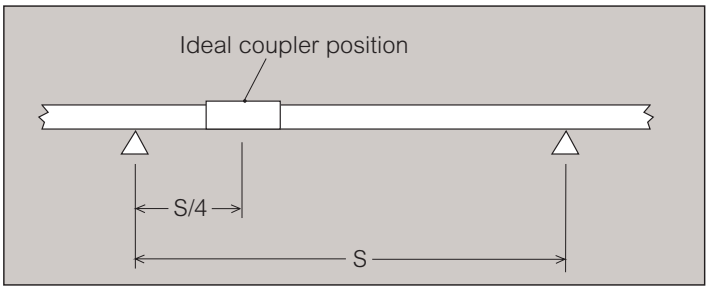
Cable tray fittings must always be provided with local support. The illustrations on pages 131 to 132 give recommended support positions.

(vii) Location of couplers

In practice it is often impossible to predetermine where the couplers will be located within a straight run of cable tray. However it is well worth making some effort to roughly plan their position during the early stages of installation.

The worst positions for the couplers is at mid-span. At these locations they will suffer the greatest stress. A mid-span joint should be particularly avoided on the end spans of an installation to minimise deflections.

The best position for joints in a continuous installation is on quarter of the span distance on either side of each point of support.



Loading graphs

Refer to loading graphs on pages 134 to 135.

(viii) Installation of cables within a support system

Detailed guidance concerning the selection and use of appropriate electric cables is available from cable manufacturers, relevant standards (both British Standards and European Cenelec Standards) and the Wiring Regulations. However the following general comments may also be helpful.

Cables are designed for continuous operation within a range of ambient temperatures; attention must be paid to the ventilation arrangements to ensure that the maximum temperature is not consistently exceeded. Where cable routings pass through enclosed ducts it is important to ensure that the ducts are large enough to avoid overheating.

Cable support spacing

Cables must either be continuously supported or supported at intervals which are no more than those given in Table 5 below. Cables should not themselves be used as a support or as a restraint for other loads.

Table 5

Cable diameter (mm)	Support spacing (mm) Horizontal[1]	Vertical[2]
Below 100	250	400
10 to 15	300	400
16 to 20	350	450
21 to 40	400	550

(1) From horizontal through to 60° inclination
(2) From 60° inclination (30° from vertical) through to vertical

Fixing of cables to cable tray

Moulded plastic cable ties, cable cleats or perforated metal strapping are most commonly used for attaching cables to cable tray. The slots in the tray are designed to accept M6 fasteners and the perforation pattern will allow banding up to 18mm wide to be used.

Minimum bending radius of cables

All cables have a minimum bending radius beyond which they should not be bent either during handling or when finally installed. Details of the minimum bending radius for various types of cable are given in Table 6 below.

Table 6

Type of cable (mm)	Minimum bending radius D = cable diameter
Unarmoured cable, D ← 10 mm	3D
Unarmoured cable, 25 mm ← D ← 10 mm	4D
Unarmoured cable, D ← 25 mm	6D
Armoured cable to BS 5467, BS 6346 and BS 6724 (LSF cables)	8D

Radius of fittings

On a cable support system the size and type of cables must be considered to ensure that the radius of the support fittings exceeds the minimum bending radius of the cables themselves.

The table above gives a general guide to these minimum values. Cables must not be accidentally bent to a tighter radius during installation.

(ix) Earth protection

Cable tray is deemed to provide continuous support to any cables installed upon it but, because it is not completely enclosed, it does not offer mechanical protection. For this reason unsheathed, single insulated power cables should not be installed on tray, all cables should have some mechanical protection in the form of PVC sheathing, steel wire armouring or a copper covering (MICC). Where moisture may be present, copper covered cables must also be PVC sheathed to avoid electrochemical corrosion between the copper and the cable support system.

Cable tray can be specifically designed to act as a circuit protective conductor (CPC), which connects exposed conductive parts of equipment to the main earth terminal and will thereby provide some protection against electric shock. For this to be acceptable the cross-sectional area of the cable support must exceed a value obtained by calculation, the formula for this calculation being given in Regulation 543-01-03 of the Wiring Regulations BS 7671. This formula takes into account the fault current of the circuit, the nature of the cables themselves and the operating time of the disconnecting device used to protect against excessive currents. Other features, such as protection of the support system against mechanical damage and corrosion (to ensure the CPC remains intact), visual identification that the support system is being used as a CPC and the impedance of the circuit must also be considered by a competent electrical engineer before tray can be used as a CPC.

If armoured cables (with an integral CPC) are installed on a tray and the support system is not being used as a protective conductor, then it is generally considered as a metal part which is neither extraneous nor exposed; continuity is not an issue in this situation. Normal tray assembly methods are adequate and BS 7671 (the Wiring Regulations) impose no requirement for continuity of such metal parts unless they are being used as a protective conductor.

If unarmoured cables are installed on a tray installation which is not being used as a protective conductor, consideration should be given to the possibility of damage to these cables, causing the tray to become live and hence the need to earth the support system.

The continuity of properly fixed tray joints is such that earth continuity connectors (bonding connectors) are not necessary for any general tray application; however in special locations or hazardous areas (as described in BS 7671: Part 7) earth continuity connectors may be required, subject to consideration by a competent electrical engineer.

(x) Electromagnetic Compatibility (EMC)

In normal use cable tray is considered as passive in respect of electromagnetic influences. The installation of current carrying media may cause emissions and these media may also be influenced by electromagnetic signals from elsewhere but the degree of influence will depend on the nature of the installation and the apparatus connected to the system.

A draft technical report IEC1000-S-1 provides details of the cable separation required according to the type of signal being considered and the IEE Guidance Note No.1 provides further information on the subject of EMC. However, as a basic principle, if power and signal cables can be run separately on different trays then this will significantly reduce any possibility of one electrical circuit having any undesirable influence upon another.

(xi) Thermal expansion and contraction

In locations where large variations in temperature are anticipated the design of the support system should make allowance for changes in the length of the support system due to the expansion and the contraction of the metal.

2 Use of loading graphs

Provided the relevant graph column lies above the intersection of the load/span lines, the proposed arrangement is acceptable (see opposite).

The deflection will often be less than 1/200th of the span and in most cases it will be less than 1/360th of the span.

However where point loads will be imposed, or where there are short runs with three spans or less, the deflection will increase and the safe working loads (SWL) may need to be reduced from the values given.

Further information on this subject is given on pages 128 to 130.

These graphs should not be extrapolated to longer spans than shown, nor should they be used for situations where the bed of the tray is vertically orientated. In exposed situations the use of long spans requires particularly careful consideration.

Any further information on loads and deflections for such circumstances should be sought from Legrand, contact us on +44 (0) 345 605 4333.

The values given in this document have been obtained from extensive testing of our cable support equipment. They are given as a guide, so that their customers may use Legrand's products to the best advantage; they are nevertheless average figures which are given in good faith, but without accepting any liability in contract, tort or otherwise in the event of different performance by equipment which is actually supplied.

The cable support systems in this document are not designed for use as walkways or to support personnel during cable installation.

Loading graphs

The loads shown on all graphs are the safe recommended maximum loads that can be applied and must include wind, snow and any other external forces in addition to the cable load.

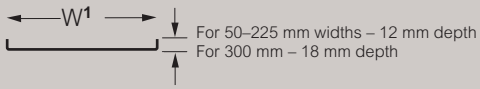
The graphs show the maximum load for tray installed at a support spacing within its recommended range.

When the graph column is above the intersection of the required load and span lines, the support equipment is suitable for use within those load and span conditions.

The graphs shown are for hot dip galvanised finish.

When installed, inner span deflection will vary depending on joint positions but will typically be about half of test end span deflection shown on following page.

SS light duty



50-300 mm width trays

On XRF lengths the graph shows the maximum safe working load when a fishplate is fitted across the underside of each length-to-length joint. Typical cable loads which are normally 50% of the maximum would not require a fishplate

Structural support characteristics

including channel support systems

IN THIS SECTION...

Structural characteristics

1 Cable tray

On many occasions cable tray is installed in circumstances where it will only ever carry a light cable load, possibly just one or two cables, and its main role is to physically secure and protect its contents. In these situations it is often the inherent ruggedness or the aesthetics of the tray design which bear most heavily on the specification decision. However, when a support system is required to be more heavily loaded it is useful to have a knowledge of the theoretical aspects of rudimentary structural design in order to ensure that the completed system does fulfil its purpose with the greatest safety and economy.

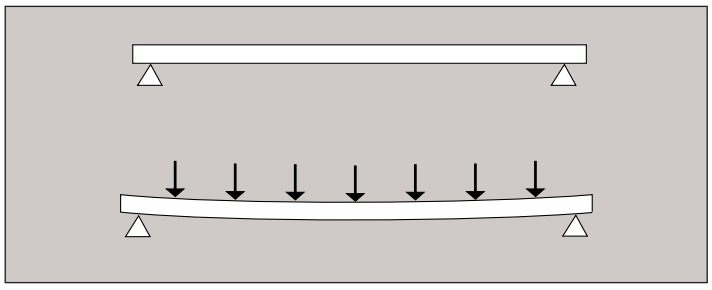
2 Beams

Any installed tray system can be considered structurally as a loaded beam; four basic beam configurations may be found in a typical installation :

Simple beam
Fixed beam
Continuous beam
Cantilever beam

Simple beam

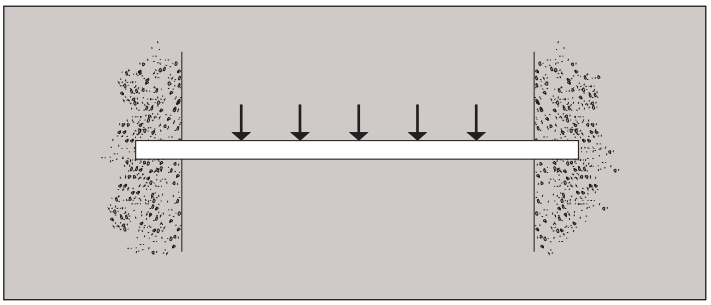
A single length of cable tray mounted on, but not fastened to, two supports represents a simple beam, which will bend as any load is applied to it with the supports offering no restraint to this bending.



This simple arrangement is fairly onerous and does not realistically model many real-life installations; thus the load/deflection information given in this document is based upon more typical multi-span configurations, which incorporate joints too. However, if an unjointed single span does actually occur the safe working load (SWL) can, as a practical guide, be taken as 1/2 of that indicated by the loading graphs.

Fixed beam

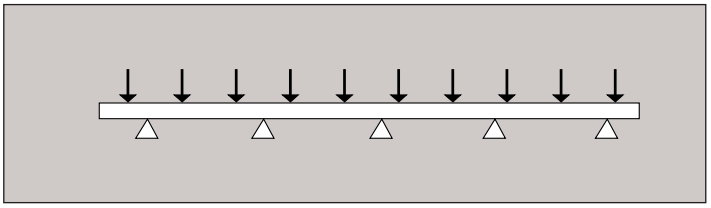
A fixed beam arrangement is a single structural member with both ends fastened rigidly to supports. Compared with a simple beam this degree of restraint does significantly increase the ability of the beam to carry loads but it is unlikely that cable tray can, in practice, be secured sufficiently rigidly to be considered as a fixed beam.



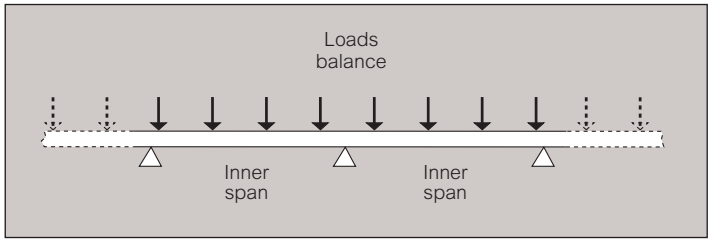
However, in the context of a complete tray system the main importance of the fixed beam configuration is that some appreciation of its properties, along with those of a simple beam arrangement, will assist the designer to understand the more complex behaviour of a continuous, multi-span cable tray installation.

Continuous beam

A typical multi-span tray installation behaves largely as a continuous beam and the greater the number of spans the closer the similarity. However in practice a run must contain joints and it can also never be considered of infinite length so it is important to appreciate how its characteristics do vary from span to span and how these variations should be taken into account when designing the installation.

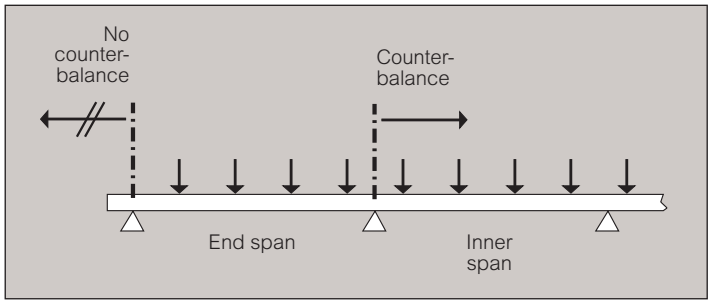


When a run of cable tray is loaded uniformly from end to end the load on each span is effectively in balance with the loads on the adjacent spans.

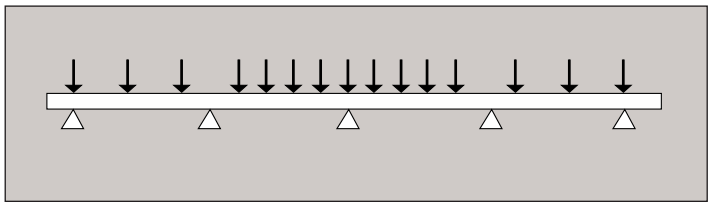


This causes the inner spans to behave substantially as fixed beams imparting to them a considerable load carrying ability.

However the two end spans of the installation are not so counterbalanced thus they perform more akin to simple beams, with consequently lower load carrying capabilities.



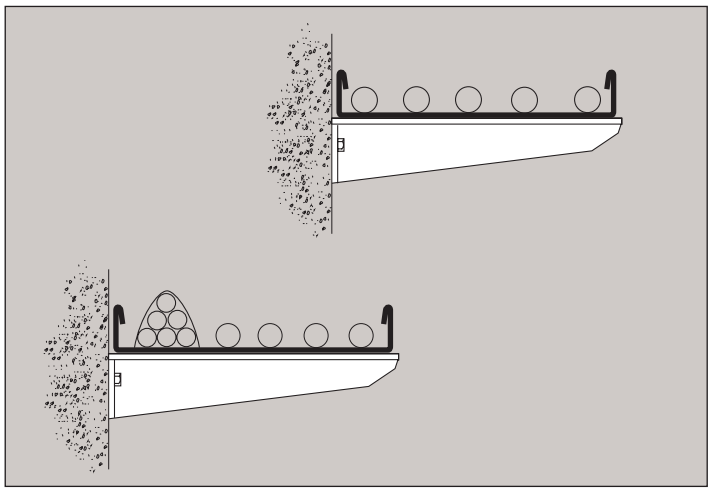
However if this is not the case the support spacing on the two end spans should advisably be reduced to 3/4 of the intermediate spans in order to compensate (see page 130, spacing of supports).



Cantilever beam

This type of arrangement most commonly occurs with the brackets which are used to support cable tray, these being fixed to the structure at one end only.

For cable tray installations it is usual to consider the cable load to be uniformly distributed along the length of the cantilever arm (i.e. across the width of the tray); however, if cables will be bunched then their combined weight effectively acts as a point load on the arm so the bunch should, ideally, be laid nearest the supported inner end.



3 Columns

Any vertically arranged component, whether tray or channel, acts structurally as a column; however it is not usual to consider tray in this way because it is not designed for this purpose.

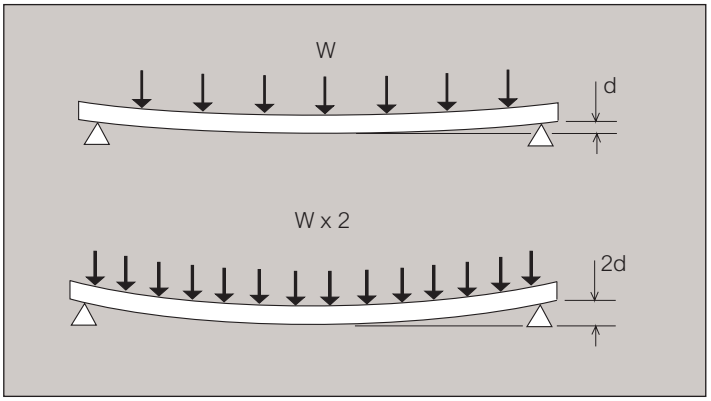
Swiftrack channel sections, in both single and multiple configurations, are however frequently arranged as vertical columns and the properties of these sections are both consistent and well known, making them suitable for an analytical approach to be used.

The downward load which can be applied to the end of a column is proportional to the compressive strength of the material from which it is made, but will reduce as the column gets longer. However there are few real applications where no loads are applied from other directions and since the effects of such loads are very significant it is important to consider the totality of the intended structure rather than focus simplistically only on the loads applied down the column.

Proper structural analysis must take detailed account of any side forces or eccentric loads caused by cantilever arms or other brackets fixed to the vertical channel. Such calculations must be carried out by a qualified engineer. The necessary data on the structural properties of the various channel sections is given on page 138, 'Designing support systems'.

4 Deflection

As discussed earlier (page 129, Deflection), the deflection of a tray under load is not directly related to its strength. However deflection is directly proportional to the applied load, so doubling the load will double the consequent deflection.



Any point load will have a magnified effect upon deflection. For a point load placed at mid-span (the worst position) the deflection will be approximately double that caused by the same load uniformly distributed along the span, although this value will vary depending upon the coupler and support positions.

Designing support systems

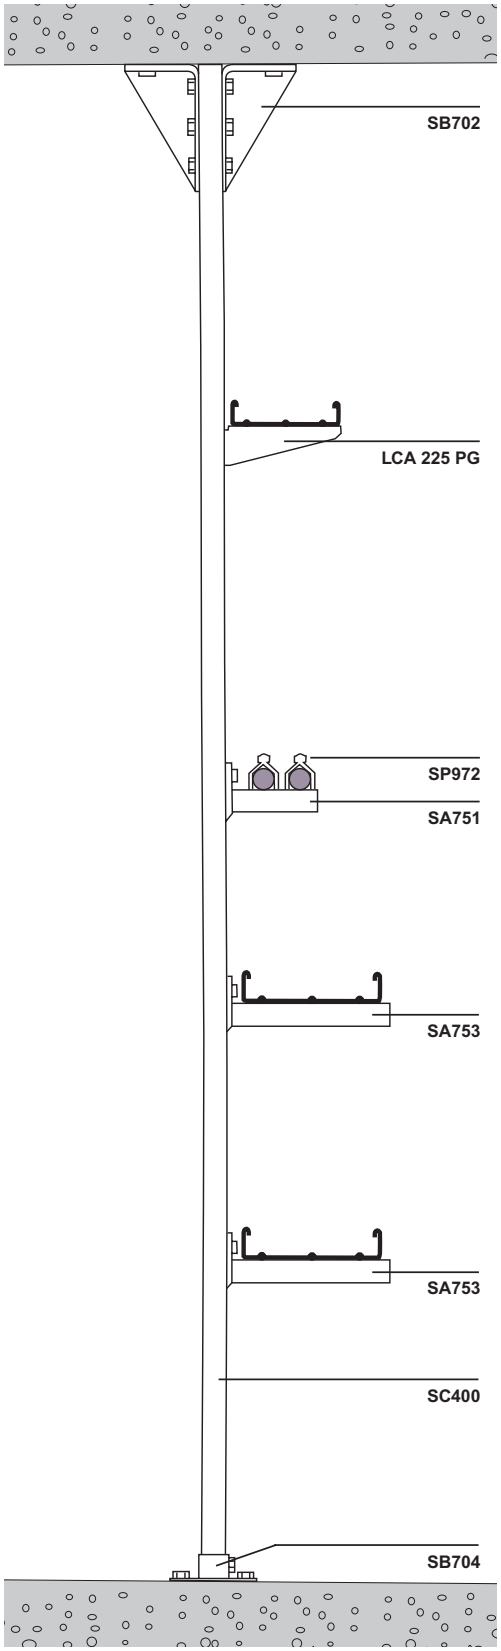
Swiftrack channel support system includes a range of versatile components which link together to provide support for any building services, including tray, ladder, trunking, piping, sprinkler systems and heat/ventilation ducting. Assembled on site, without welding, Swiftrack can be broken down into various elements. Each element needs to be checked to ensure the following :

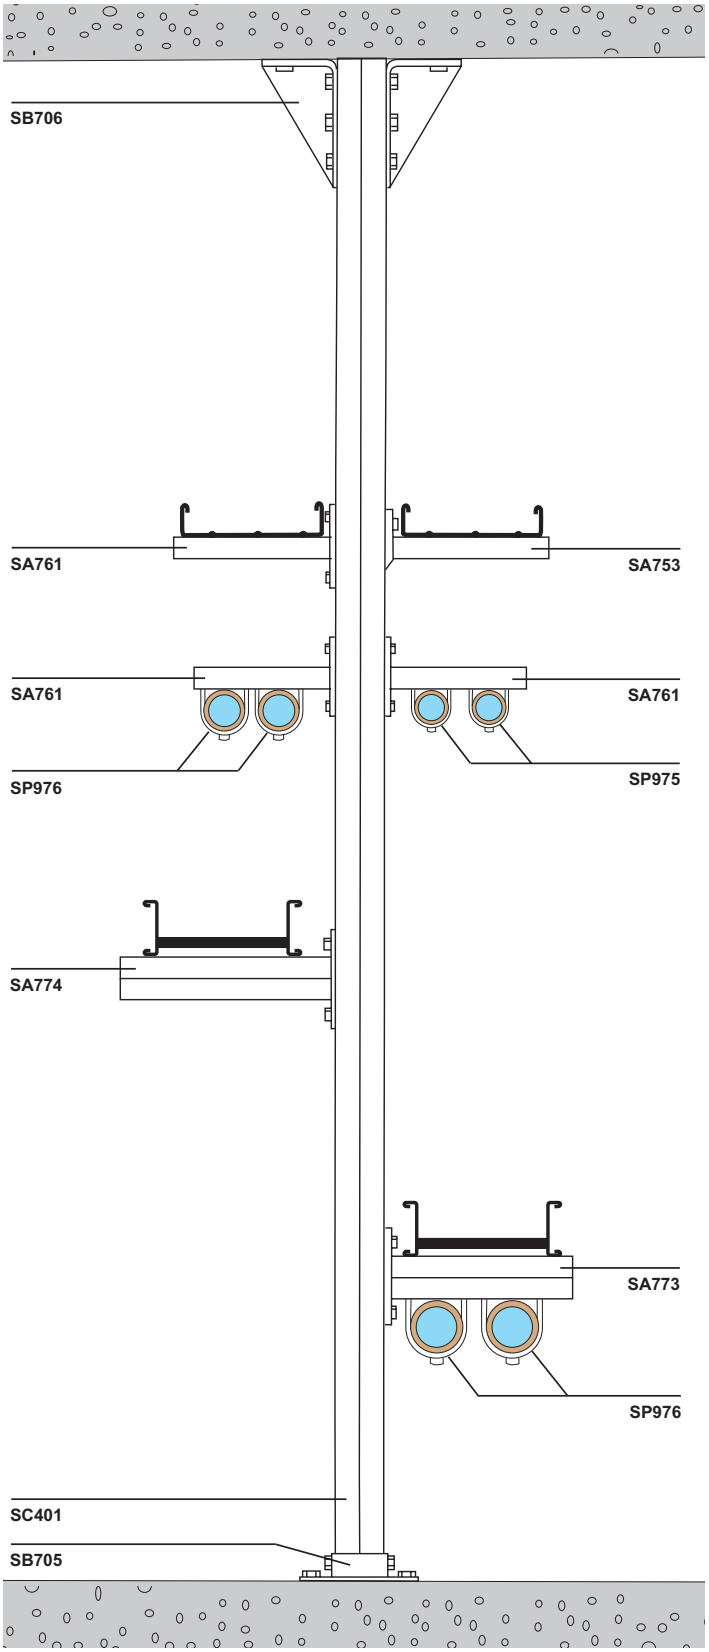
– It can safely support the loads being imposed upon it (see p. 142-143)

– The proposed fixing to adjacent elements can also support the required loads (see p. 142)

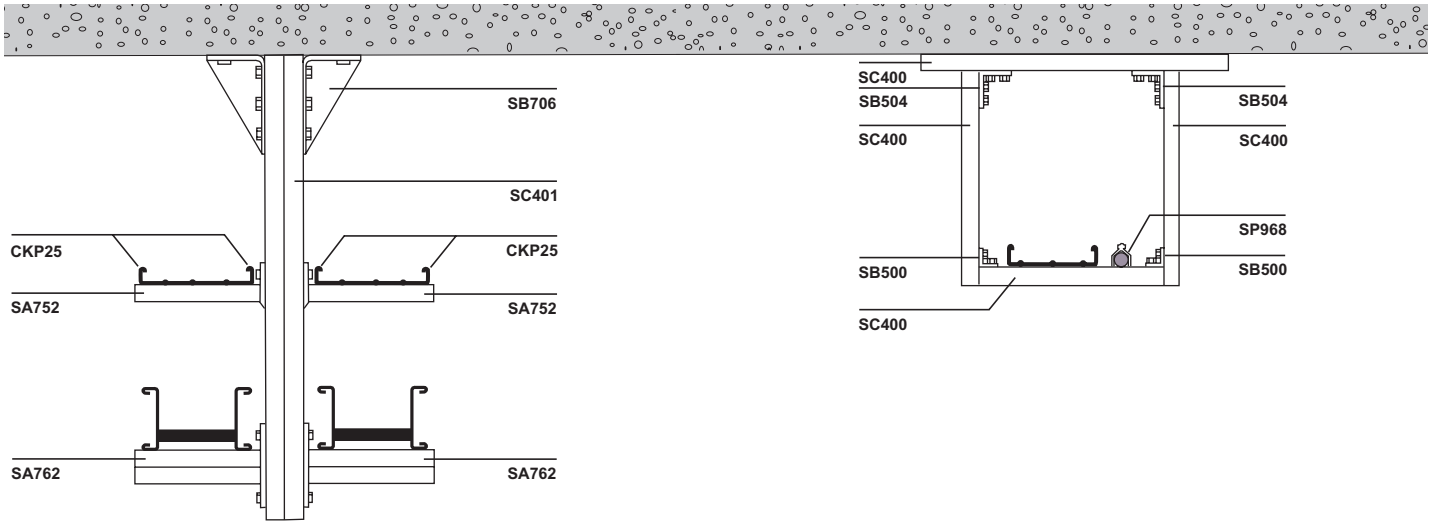
Conforms to BS 6946

1 Ceiling to floor applications

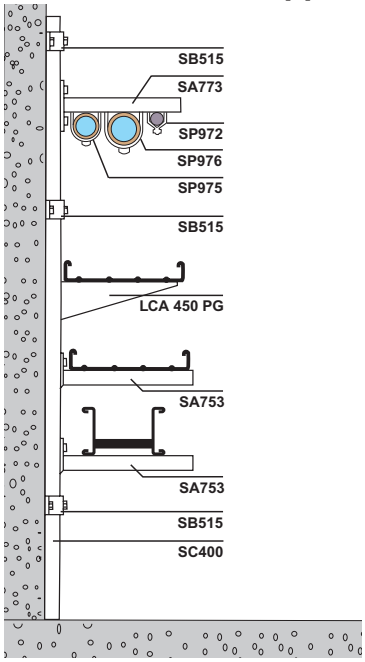


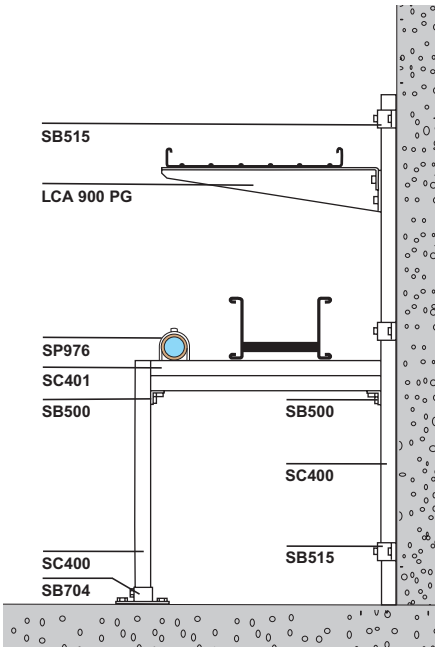


2 Ceiling mounted applications

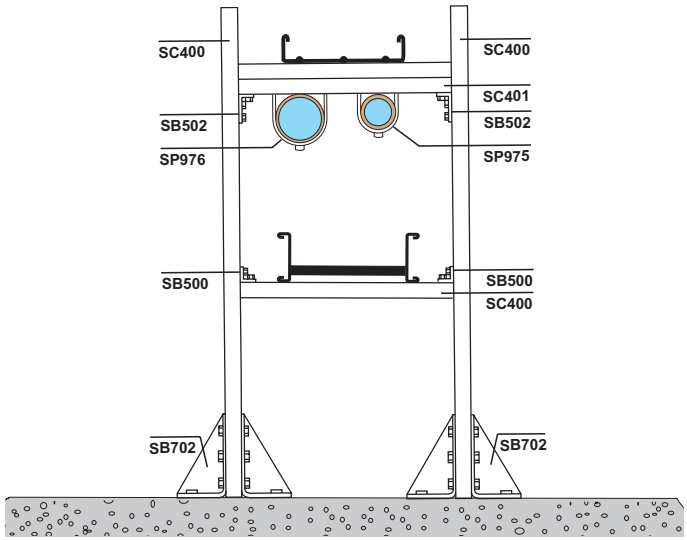


3 Wall mounted applications





4 Floor mounted applications



Swiftrack channel support

1 Channels

Standard channels are cold rolled to BS 6946 from 2·5 mm pre-galvanised mild steel to BS EN 10346 : 2009 grade S250GD + Z275.

Light gauge channels are cold rolled from 1·5 mm pre-galvanised mild steel to BS EN 10346 : 2009 grade S250GD + Z275.

Back-to-back channels are formed by spot welding together two finished single channels at 150 mm centres under controlled conditions to BS EN 1993-1-3 : 2006. All welds and spot welds are suitably protected.

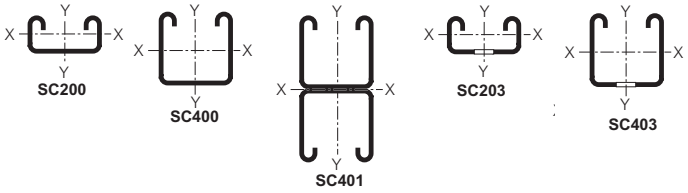
The standard lengths for single or multiple channels are 3 m and 6 m.

Minimum yield strength, Ys : 250N/mm^2

Minimum ultimate strength : 350N/mm^2

Minimum design strength, Py : 250N/mm^2

Section properties



Cat. Nos.	Wt kg/m	A mm^2	I^{xx} mm^4	Z^{top} (min) mm^3	Z^{btm} (max) mm^3	r^{xx} mm	I^{yy} mm^4	r^{yy} mm
SC200	1·8	219	10 779	862	1 330	7·1	49 776	15·1
SC203	1·6	219	8 960	794	961	6·4	49 318	15·0
SC400	2·6	322	67 157	2 857	3 772	14·5	88 783	16·6
SC401	5·3	645	339 300	8 215	8 215	23·0	177 566	16·6
SC403	2·4	322	57 221	2 645	2 909	13·3	88 325	16·5

Wt = weight of section (kg/m)

A = cross-sectional area (mm^2)

I^{xx} = moment of inertia = second moment of area (mm^4)

Z^{top} = section modulus about xx axis (mm^3)

Z^{bottom} = section modulus about xx axis (mm^3)

r^{xx} = radius of gyration (mm)

I^{yy} = moment of inertia = second moment of area (mm^4)

r^{yy} = radius of gyration (mm)

xx = about xx axis

yy = about yy axis

2 Channel nuts

The safe working loads for zinc plated channel nuts only.

Slip M10 : 3·0kN
M12 : 3·5kN

Pullout M10 : 6·0kN
M12 : 8·0kN

Safety Factor 3 when tested to BS 6946

Torque tightened to : M10 : 5·5 kgf.m (40 ftlb)
M12 : 7 kgf.m (50 ftlb)

3 Framework brackets

Brackets are manufactured to BS 6946.

Unless otherwise stated, brackets are made from 5 or 6 mm thick steel to BS EN 10025 Grade S275JRC.

Material Properties

Minimum yield strength : 275 N/mm^2

Maximum Loads

Maximum loads for individual brackets are given with the illustrations on pages 108 to 111. In most cases the mode of failure will be slippage of the bracket along the channel. However there are few channel/bracket combinations where the maximum load is dependent upon the strength of the bracket itself. Only M10 or M12 channel nuts and bolts should be used for the attachment of load-bearing brackets.

4 Fasteners

Fixing brackets and supports to Swiftrack channel

Standard fasteners for Swiftrack are high tensile hexagon head setscrews to BS 3692-8.8, these being zinc plated to BS 3382 : Part 2.

Channel type	Fitting thickness	Recommended fastener[1]
Deep channel SC400 series	6 mm and 8 mm 5 mm and 6 mm	M10 or M12 x 35 mm[2] M10 or M12 x 20 mm
Shallow channel SC200 series	7 mm and 8 mm 5 mm and 6 mm	M10 or M12 x 25 mm[2] M10 or M12 x 20 mm

(1) The use of too long a fastener will prevent proper tightening because the bolt end will foul the bottom of the channel before the head tightens down on the fitting

(2) When fastener brackets other than Swiftrack, longer bolts may be required if the bracket thickness is greater than 8 mm

Fixing tray to supports

Use M10 high tensile hexagon head setscrews. Screws should be 20 mm long for shallow channel and 35 mm long for deep channel.

5 Cantilever arms

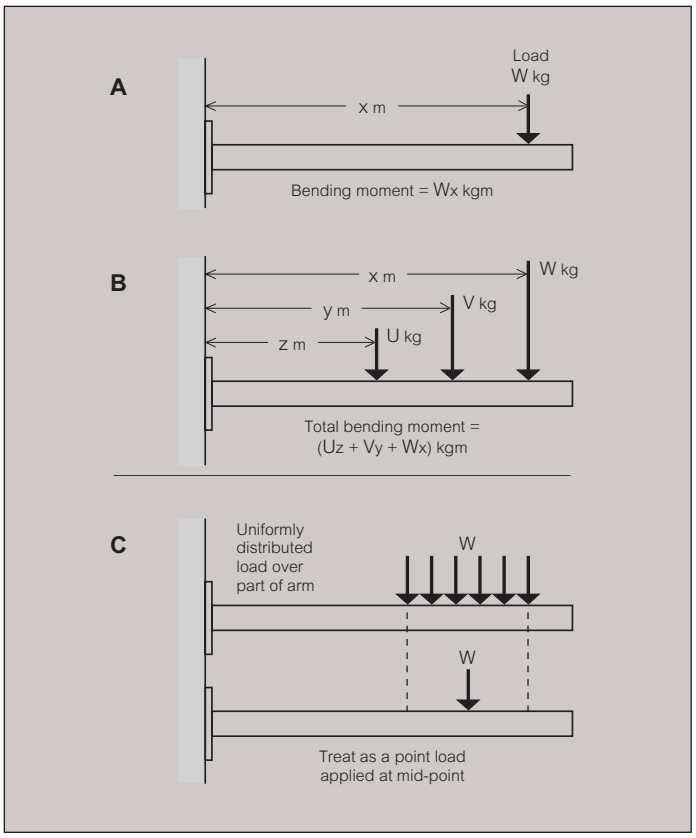
Maximum uniformly distributed loads for individual cantilever arms are given on page 108. However, should the loading not be uniform then the safe limit can be obtained by calculating the bending moment produced by the intended loads and comparing this with the maximum permissible bending moment for the relevant arm.

45 kgf.m for SA750 - SA755 and SA757
52 kgf.m for SA760 - SA766
95 kgf.m for SA770 - SA776

To obtain the bending moment resulting from any point load, multiply the size of the load by its distance from the inner end of the arm (see illustration A).

If several point loads exist then the total bending moment will be the sum of the individual bending moment produced by each point load (see illustration B).

If some part of the total load applied to an arm is uniformly distributed along a section of the arm only, then this part load can be treated as a point load acting at the mid-point of that section of arm to which it is applied (see illustration C).



Note

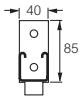
Assumes loads are rigidly fixed to cantilever arms in such a way as to prevent the arms from twisting.

6 Maximum safe recommended loadings

(Based upon a load factor of 1·6 for hot dip galvanised unrestrained condition as specified in BS EN 1993 – 1-3 : 2006)

Cantilever arms

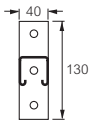
Cat. Nos.	Unit weight (kg)	Arm length (mm)	Maximum uniformly distributed load (kgf)	Point load at outer end (kgf)
SA750	0·64	150	350(1)	303
SA751	0·85	225	350(1)	198
SA752	1·03	300	304	152
SA753	1·42	450	202	101
SA754	1·81	600	150	75
SA755	2·20	750	110	55
SA757	2·60	900	90	45



Values assume the tray or other loading medium is rigidly fixed to cantilever arm

Cantilever arms, universal

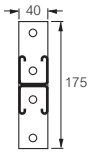
Cat. Nos.	Unit weight (kg)	Arm length (mm)	Maximum uniformly distributed load (kgf)	Point load at outer end (kgf)
SA760	0·64	150	700(1)	350
SA761	0·85	225	456(1)	228
SA762	1·03	300	350	175
SA763	1·42	450	230	115
SA764	1·81	600	170	85
SA765	2·20	750	136	68
SA766	2·60	900	110	55



Values assume the tray or other loading medium is rigidly fixed to cantilever arm

Cantilever arms, double channel

Cat. Nos.	Unit weight (kg)	Arm length (mm)	Maximum uniformly distributed load (kgf)	Point load at outer end (kgf)
SA770	1·14	150	700(1)	648
SA771	1·68	225	700(1)	420
SA772	2·02	300	650	325
SA773	2·90	450	430	215
SA774	3·78	600	320	160
SA775	4·66	750	250	125
SA776	5·60	900	200	100



Values assume the tray or other loading medium is rigidly fixed to cantilever arm

Note

The loads for stainless steel cantilever arms are 60% of those given in the tables, except those marked (1) where the limit is 50%.

Cantilever arm loads detailed in the tables above are for M12 screws and channel nuts.

Assumes loads are rigidly fixed to cantilever arms in such a way as to prevent the arms from twisting.

7 Channels used as beams

The maximum safe load for a channel can be calculated knowing the strength of the steel (yield stress). Alternatively, if the appearance of the channel under load is considered important, then its deflection can be kept within visually acceptable limits.

Deflection limitations may render a lower recommended loading than that calculated from the strength of the steel.

Thus the two alternative approaches are:

1) To apply a maximum mid-span deflection of 1/200th of the span.
2) To place no limit on deflection and to apply a maximum load derived from calculations which include both the minimum yield stress of the steel and a safety factor (1.6).

Details of the maximum recommended uniformly distributed and point loads under both of these conditions are given in the table on page 143; these are provided for both restrained and unrestrained conditions (see opposite) and they apply to the worst situation of a simple single span only.

If in practice loads are neither uniformly distributed across the complete beam nor imposed at mid-span only, it is still possible to use a safe approximation and assess the suitability of a channel section. Do this by assuming that all loads are point loads imposed at mid-span only, and then consider the point load data in the table. This approximation will render a cautious result, which is nevertheless sufficient in most cases to show that a channel is satisfactory. However, if it does yield an unsatisfactory result check with Legrand, as the degree of inherent caution is such that the design may still be safe. Legrand will be pleased to recheck your calculations, using your intended loadings – contact us on +44 (0) 345 605 4333.

The data provided in the table on page 143 is calculated in accordance with BS 5950 Part 5.

8 Channels used as columns

It is rare that any loads will be applied only to the end of a vertical column; most practical loading conditions involve the use of brackets and fittings attached to the open side of the channel. Loads applied in this way will produce a combined axial force down the column and a bending force on the side of the column which will reduce the allowable maximum load. The effects of such eccentric loadings should be carefully checked in accordance with standard design practice as given in BS 5950 Part 5.

Legrand will be pleased to give further advice and assistance on request – contact us on +44 (0) 345 605 4333.

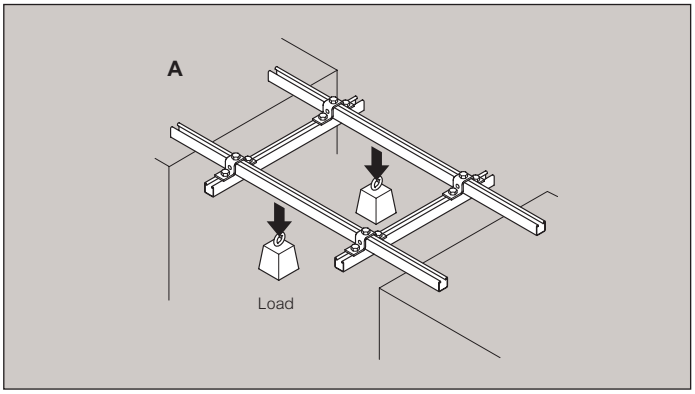
9 Fully restrained and unrestrained loads

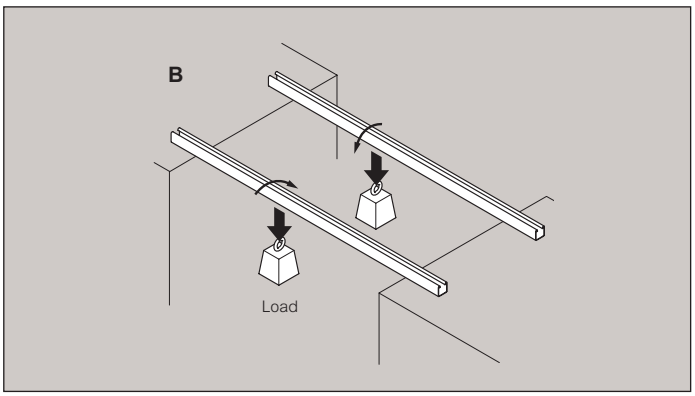
There are two alternative approaches to providing information on the structural strength of channel section used as beams.

Data is sometimes given on the basis of a fully restrained condition, which assumes that the channel section is in some way completely prevented from twisting under load (see illustration A). Alternatively data may be given on the basis of an unrestrained condition which assumes that, because no channel is perfect, placing it under load may result in some twisting taking place even though the ends of the channel are firmly secured (see illustration B).

Because the channel is constrained to remain in the optimum position, data given on a fully restrained basis will, for larger spans, suggest that a far higher load can be applied than with the unrestrained condition.

Both alternative sets of data are given in the table on page 143; however, unless positive intermediate restraint is applied to completely prevent any twisting it is recommended that the data for unrestrained channels, given in the table opposite, should normally be used.





10 Beam loads

Cat. Nos.	Distance between supports (m)	Laterally unrestrained condition Safe maximum loads: Uniformly distributed across span (kgf)	Laterally unrestrained condition Safe maximum loads: Point load at mid-span (kgf)	Laterally unrestrained condition Maximum deflection of span/200: UD load (kgf)	Laterally unrestrained condition Maximum deflection of span/200: Point load at mid-span (kgf)	Fully laterally restrained condition Safe maximum loads: Uniformly distributed across span (kgf)	Fully laterally restrained condition Safe maximum loads: Point load at mid-span (kgf)	Fully laterally restrained condition Maximum deflection of span/200: UD load (kgf)	Fully laterally restrained condition Maximum deflection of span/200: Point load at mid-span (kgf)

Note to tables

(1) Based on a limited deflection of $\frac{L}{200}$, the safe maximum load value is given which will give a deflection of $\leq\frac{L}{200}$

(2) Limited by slip on a single bolt connection each end

(3) For columns, the limiting slenderness ratio of 180 is exceeded at the length indicated

(4) It should be noted that maximum axial column loads are supplied for guidance only. It is unlikely that columns will be loaded with axial load only. Most practical load conditions will involve the use of brackets and fittings attached to the column. Loads applied in this way will produce both axial load and bending on the columns which will reduce the allowable maximum load

The above loads have been treated as imposed loads in accordance with BS 5950 Part 5 and accordingly a load factor of f = 1·6 has been assumed. Should the loads to be applied be of a permanent nature it may be appropriate to use a load factor of f = 1·4. This would lead to an increase in the load capacity provided that capacity is not limited by bolt slip or deflection

Loads given in the chart are for pre-galvanised channels to BS EN 10346 grade S250GD Z275. The process of manufacturing channel increases the strength of the steel and this increase has been allowed for in the data (as recommended in BS 5950 Part 5). However, if channels are subsequently hot dip galvanised the stresses created during manufacture are relieved by the heat of the process, thereby negating the strength enhancement Therefore for hot dip galvanised channels the loads in the chart should be reduced by between 10% and 20% depending on the section. A 20% reduction will provide a conservative maximum load value for all types of hot dip galvanised channel

All loads are for brackets fixed with M12 setscrews and M12 zinc plated channel nuts

Packaging, handling, storage and safety

IN THIS SECTION...

Export packaging

Safe handling

All Legrand products can be supplied packed appropriately for any mode of shipment.

The various packing options are illustrated below.

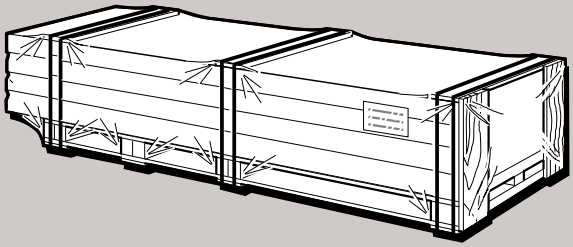
Further details and packing recommendations are available from Legrand, contact us on +44 (0) 345 605 4333.

Even when appropriately packed it is most important that equipment is correctly loaded.

All equipment must be properly secured against movement during transit otherwise damage may occur during the journey.

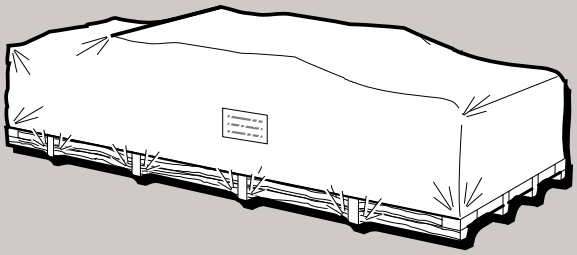
Containerised seafreight

Straight lengths



- The specially designed wooden framework enables lifting of the pallet by fork lift vehicle from either side or one end only. It is also designed to prevent insertion of the forks between components which will cause damage.
- Equipment is steel strapped to the wooden framework. If required the complete assembly is shrink wrapped in heavy duty polythene.
- Shipping marks are applied to meet with contract requirements.

Cable tray and support system accessories



- The specially designed wooden framework enables lifting of the pallet by fork lift vehicle from either side or one end only. It is also designed to prevent insertion of the forks between components which will cause damage.
- Equipment is steel strapped to the wooden framework. The complete assembly is shrink wrapped in heavy duty polythene.
- Shipping marks are applied to meet with contract requirements.

Non-containerised seafreight, road or airfreight

Straight lengths

Equipment is steel strapped onto a wooden base.

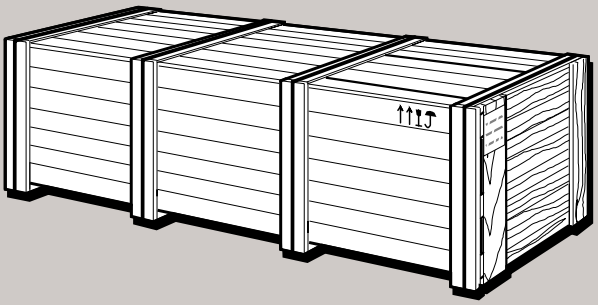
If required the complete assembly is shrink wrapped in heavy duty polythene.

Shipping marks are applied to meet with contract requirements.

Specialised packing

Legrand can also supply equipment packed in wooden crates or wooden cases for shipment to destinations where transhipment or rough handling en route is likely or where transport over rough terrain is anticipated.

Wooden casing



Equipment is steel strapped in suitable stacks.

Stacks are then tightly packed within a case constructed from close wooden boards with no gaps.

Wooden crating

Equipment is steel strapped in suitable stacks.

Each stack is then shrink wrapped in heavy duty polythene.

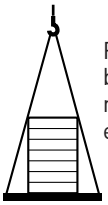
Stacks are then tightly packed within a wooden crate.

Handling and storage

Safe handling

Site deliveries will only be made provided suitable mechanical handling equipment is available on site.

The delivered material must be treated with care. Lifting must only be carried out from the sides and lifting forks must pass below a complete stack. Forks must never be inserted into the end of the stack (unless goods are packed in special containerisation crates, see Export Packaging on page 144); this practice is likely to cause the safety limits of most lifting vehicles to be exceeded and will certainly cause damage to the equipment being lifted.



For offloading by crane suitable lifting beams should be inserted from side to side beneath a stack and these must be sufficiently long to avoid undue pressure on the edges of the bottom components.

The tensioned banding used for securing bundles of equipment during transport is not suitable for lifting purposes. When cutting this banding appropriate eye protection must be worn to avoid injury.

Sheared steel (particularly pre-galvanised or stainless steel) does have relatively sharp edges and protective gloves must be worn during handling.

Storage

Most support equipment is supplied with a corrosion resistant finish (often hot dip galvanising) which will, once the equipment is erected and open to the air, have a service life of many years. However if hot dip galvanised equipment is allowed to become wet whilst stacked awaiting installation the finish can quickly suffer from unsightly staining and powdering on the surface. This is known as Wet storage stain (see below) and the effects are particularly exaggerated if products are left in back to back contact.

It is therefore essential that all support system equipment is stored in a dry, unheated environment and that the following precautions are observed to prevent deterioration on site :

a. Any outer packaging should be removed from stacks immediately following delivery, before the goods are placed in store.

b. Store all support equipment under cover, in dry, unheated premises. Do not leave any uncovered, part-used stacks lying outside for long periods.

c. If stacks of equipment have become wet they must be re-stacked as soon as possible with wooden battens inserted between components to allow air to circulate.

d. If no undercover storage is available then equipment should be re-stacked as in (c) immediately following delivery and a simple shelter, using polythene or a tarpaulin, should be erected over the stored equipment to protect it from rain. This covering should not be laid directly onto the stack as air must be allowed to circulate through and around the stored goods.

e. Inspect stored goods regularly to ensure that moisture has not penetrated into the stacks.

f. Do not store the delivered material where people will walk across it.

Wet storage stain

Failure to comply with the above storage conditions may result in galvanised material being quickly disfigured by Wet storage stain. Fortunately this problem is rarely serious and (unless the poor storage conditions have continued unchecked for several months) it has no significant effect on the long term corrosion resistance of the finish. Where equipment has been affected by Wet storage stain the unsightly marking will usually become much less prominent and will often disappear completely within months of installation.

Safety during installation phase

Site safety

Heavy duty cable trays are designed for rugged conditions and can withstand some abuse. However they are not designed or intended for use as walkways or scaffolds and proper working platforms or temporary access scaffolding must be provided for the use of installation personnel.

Control of hazardous substances

Legrand cable management support systems will have a surface coating of either zinc, light oil or a plastic material, depending upon the specified finish.

If any welding of equipment is carried out these substances can give rise to fumes and so appropriate ventilation must be provided to ensure the exposure of the operator is kept below the statutory limits.

The current occupational exposure limits for zinc oxide fumes published by the U.K. Health & Safety Executive are 10mg/m^3 for short term exposure and 5mg/m^3 for long term exposure.

Protection classifications

Protection against solid bodies and liquids : Index of protection - IP xx

Degree of protection of enclosures of electrical equipment in accordance with standards IEC 60529, BS EN 60529
Up to 1 000 V~ and 1 500 V⎓

1st digit: protection against solid bodies			Additional letter IP XX (ABCD): protection against direct contact resulting from the access to hazardous current-carrying parts		
IP	tests		IP	tests	protection
0		No protection	A		The back of the hand remains remote from dangerous parts
1		Protected against solid bodies larger than 50 mm			
2		Protected against solid bodies larger than 12.5 mm	B		The dangerous parts can not be touched when introducing a finger
3		Protected against solid bodies larger than 2.5 mm	C		The dangerous parts can not be touched when introducing a tool (eg a screwdriver)
4		Protected against solid bodies larger than 1 mm	D		The dangerous parts can not be touched when introducing a wire
5		Protected against dust (no harmful deposit)			
6		Completely protected against dust			

2nd digit: protetion against liquids		
IP	tests	
0		No protection
1		Protected against vertically-falling drops of water (condensation)
2		Protected against drops of water falling at up to 15° from the vertical
3		Protected against drops of rain water at up to 60° from the vertical
4		Protected against projections of water from all directions
5		Protected against jets of water from all directions
6		Protected against jets of water of similar force to heavy seas
7		Protected against the effects of immersion
8		Protected against prolonged effects of immersion under presure

Protection against mechanical impact : Index of protection - IK

According to standards IEC 62262 and BS EN 62262

IK	Tests	Impact energy (in Joules)
IK 00		0
IK 01		0.15
IK 02		0.2
IK 03		0.35
IK 04		0.5
IK 05		0.7
IK 06		1
IK 07		2
IK 08		5
IK 09		10
IK 10		20

(1) A product previously classed as IP xx-7 can be assumed to fulfill the conditions of an IP xx - IK 08

This table can be used to ascertain the resistance of a product to an impact given in Joules from the IK code (graduated from 00 to 10).
It can also be used to ascertain the correspondence with the old IP code 3rd digit and the corresponding external “Ag” conditions.

The contents of the Protection Classifications charts are for guidance only. If you have any doubt as to the interpretation of the information contained therein, please refer either to the standard itself or contact Legrand.

Health and Safety at Work, etc. Act. 1974

Statement to Purchasers and Prospective Purchasers

1. Section 6 of this Act provides that manufacturers, designers, importers or suppliers of articles for use at work have a duty to ensure so far as is reasonably practical, that the article will be safe and without risk to health when properly used. An article is not regarded as being ‘properly used’ if it is used without regard to any relevant information or advice relating to its use made available by the manufacturer, designer, importer or supplier.

2. With regard to these provisions the following is given as a guide to the information which is readily available to you. This information relates to those products detailed in our catalogue(s) or associated literature or may be obtained by specific request to the Company.

3. All products should be installed and maintained in accordance with good engineering practice and relevant British or other applicable standards, regulations for the installation of equipment by the Institute of Electrical Engineers or any other applicable Codes of Practice.

Health and Safety at Work Act

The Electricity at Work Regulations, 1989

1. All installations and maintenance should be carried out within the provision of the above Act and by persons so qualified as defined in the Act.

2. Information and advice on the suitability of our products can be obtained from Legrand Electric Limited on specific request.
