# Introduction

## Company overview

ABB Jokab Safety has been helping machine builders to create production-friendly and safe work environments for operators since 1988.

### **We develop products and solutions for machine safety**

We make it simple to build safety systems. Developing products and solutions for machine safety has been our business idea since the company Jokab Safety, now a part of ABB, was founded in Sweden in 1988.

Many industries around the world have discovered how much easier it has become to build protection and safety systems with our components and guidance. Our extensive program of products, safety solutions and our long experience in machine safety makes us a safe partner.

---

Together we create a safe world!

### Products and systems

We deliver machine safety solutions for single machines or entire production lines. Our long experience of helping customers making solutions for demanding environments has made us experts in combining production demands with safety demands for production-friendly solutions.

We market a wide range of safety products, which makes it easy to build safety systems. We develop these intelligent products continuously, in cooperation with our customers.

### Our experience of safety requirements and standards

Directives and standards are very important to machine builders and safety component manufacturers. We represent Sweden in several international committees that develop standards, for e.g. industrial robots, safety distances and control system safety features. We work daily with the practical application of safety requirements in combination with production requirements. We are happy to share our knowledge of standards with our customers. You can use our experience for training and advice.

### Markets and industries

Solutions from ABB Jokab Safety can be found in all types of industries across the globe. But we pride ourselves in having products and solutions that are especially well suited for e.g.:

- Robotics
- Food and beverage
- General machinery (OEM)

# Our range of safety products

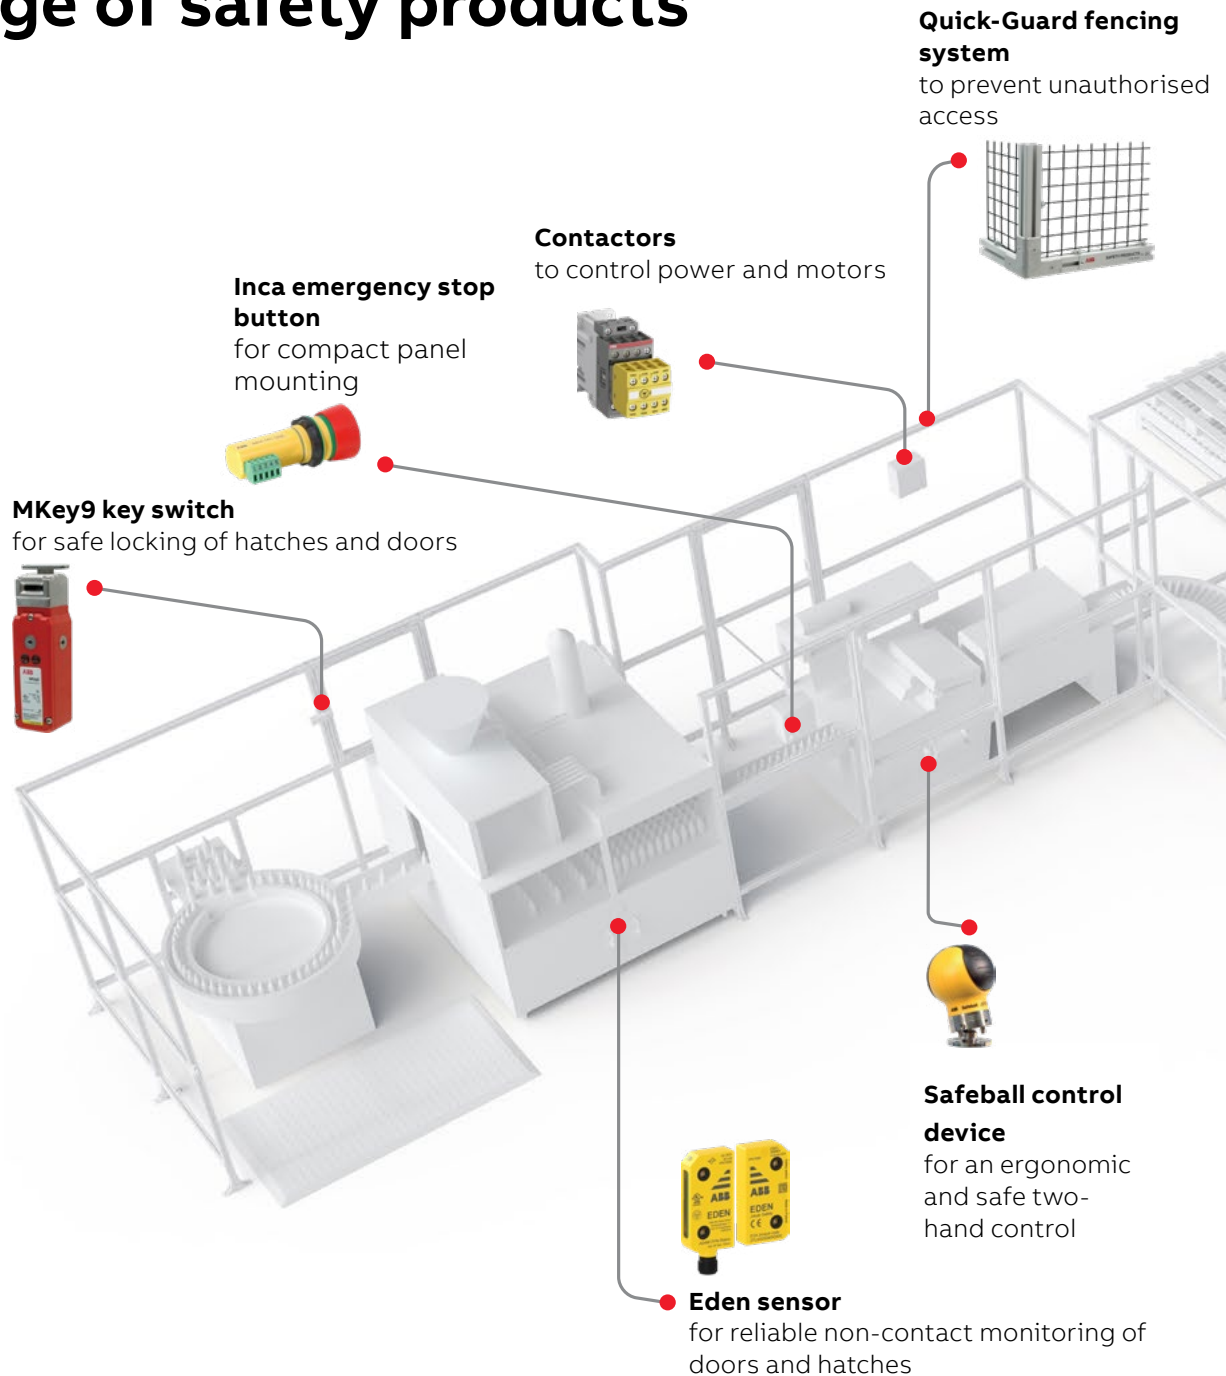

ABB is the only supplier that can deliver complete safety solutions (including output devices such as contactors and frequency converters) together with automation solutions such as robotics, motors, drives and PLCs.

# European Directives and Standards

Directives and standards are of great importance for manufacturers of machines and safety components.

In the European Union, the EU Directives gives requirements for the minimum level of health and safety, and these are mandatory for manufacturers to fulfill. In every member country the Directives are implemented in national legislation.

Machines which have been placed on the market since 2010, must comply with the new Machinery Directive 2006/42/EC. Before that, the old Machinery Directive 98/37/EC was valid.

Although the requirements in the Directives are specific for Europe, they also apply to machines that are imported to Europe. And the Directives are supported by standards, of which many also are valid internationally.

The objectives of the Machinery Directive, 2006/42/EC, are to maintain, increase and equalise the safety level of machines within the members of the European Community. Based on this, the free movement of machines/products between the countries in this market can be achieved. The Machinery Directive is developed according to “The New Approach” which is based on the following principles:

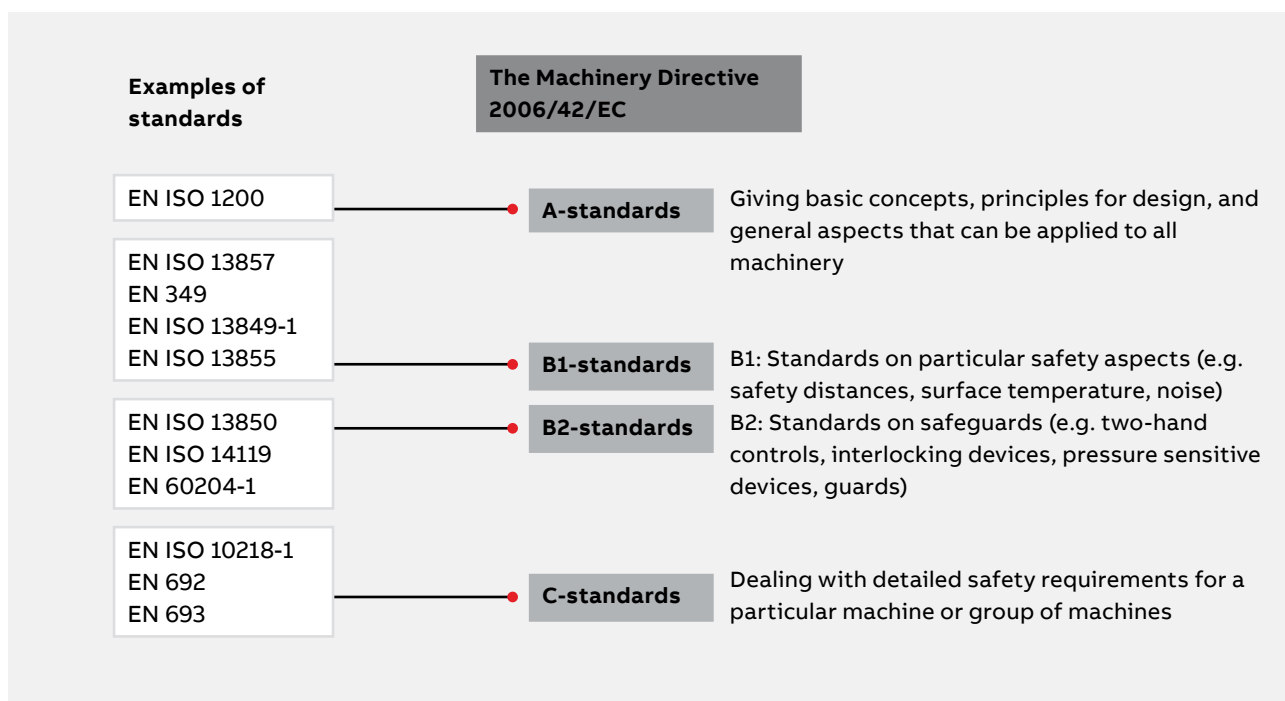

- The directives give the basic health and safety requirements, which are mandatory.
- Detailed solutions and technical specifications are found in harmonised standards.
- Standards are voluntary to apply, but products designed according to the harmonised standards will fulfill the basic safety requirements in the Machinery Directive.

## Harmonised standards

Harmonised standards give support on how to fulfill the requirements of the Machinery Directive. The relationship between the Machinery Directive and the harmonised standards is illustrated by the diagram below.

Within ISO (The International Organization for Standardization) work is also going on in order to harmonise the safety standards globally in parallel with the European standardisation work.

ABB Jokab Safety takes an active part in the working groups both for the ISO and EN standards.

## Machinery Directive

### The Machinery Directive, for machines and safety components

#### From 2006/42/EC

1. This Directive applies to the following products:

- a) machinery;
- b) interchangeable equipment;
- c) safety components;
- d) lifting accessories;
- e) chains, ropes and webbing;
- f) removable mechanical transmission devices;
- g) partly completed machinery.

The Machinery Directive gives a detailed definition of a machine, which can be simplified as something that has linked parts that are moving, where the energy source is not human effort. Two or more machines that are put together into a production line is also regarded as one machine.

### CE-marking and Declaration of conformity

Machines manufactured or placed on the market from december 29, 2009, shall be CE-marked and fulfil the requirements according to the European Machinery Directive 2006/42/EC. This is also valid for old machines (manufactured before 1 January 1995) if they are manufactured in a country outside the EEA and imported to be used in a country in the EEA (European Economic Area).

For machines manufactured and/or released to the market between january 1, 1995, and december 28, 2009, the old Machinery Directive (98/37/EC) is valid.

#### NOTE!

Machines have to be accompanied by a Declaration of Conformity (according to 2006/42/EC, Annex II 1.A) that states which directive and standards the machine fulfills. It also shows if the product has gone through EC Type Examination.

Safety components have to be accompanied with a Declaration of Conformity.

### Requirements for the use of machinery

For a machine to be safe it is not enough that the manufacturer has been fulfilling all valid/necessary requirements. The user of the machine also has requirements to fulfill. For the use of machinery there is a Directive 2009/104/EC.

It requires that the work equipment that is provided to workers must comply with relevant Community directives.

This means that when repair/changes are made on the machine it shall still fulfill the requirements of the Machinery Directive. This doesn't have to mean that a new CE-marking is required (unless the changes are extensive).

#### NOTE!

This means that the buyer of a machine also has to make sure that a new machine fulfills the requirements in the directives. If the machine does not fulfill the requirements the buyer is not allowed to use it.

### “Old” machines

For machines delivered or manufactured in the EEA before 1 January 1995 the following is valid.

#### From 2009/104/EC

- b) work equipment which, if already provided to workers in the undertaking or establishment by 31 December 1992, complies with the minimum requirements laid down in Annex I no later than 4 years after that date;
- c) without prejudice to point (a)(i), and by way of derogation from point (a)(ii) and point (b), specific work equipment subject to the requirements of point 3 of Annex I, which, if already provided to workers in the undertaking or establishment by 5 December 1998, complies with the minimum requirements laid down in Annex I, no later than 4 years after that date.

Annex I contains minimum requirements for health and safety. There can also be additional national specific requirements for certain machines.

#### NOTE!

The point in time when the Machinery Directive was implemented in each Member Country varies. Therefore it is necessary to check with the national authorities in ones own country, to find out what is considered as “old” and respectively “new” machines.

## Risk assessment

An important tool both when constructing a new machine and when assessing risks on older machines.

### "Old" machines

Machinery that is placed on the market or put into service before 1995 in the EEA.

**Use of work equipment**  
2009/104/EC

Possible national legislation  
on specific machines

### "New" machines

1. Machinery that is placed on the market or put into service from 1995 in the EEA.
2. All machinery that are imported to the EEA irrespective of date of origin.

**Use of work equipment**  
2009/104/EC

**Note!**

Not Annex 1 - instead use  
applicable directives.

**The Machinery Directive**  
98/37/EC (1995 - 2009)  
2006/42/EC (from 2010)

CE-marking + Declaration  
of conformity

**EMC Directive**  
2014/30/EU

**Low Voltage Directive**  
2014/35/EU

Possible more directives

### Risk assessment

A well thought-out risk assessment supports manufacturers/users of machines to develop production friendly safety solutions. One result of this is that the safety components will not be a hindrance. This minimizes the risk of the safety system being defeated.

### New machines

The following requirement is given by the Machinery Directive

#### From 2006/42/EC

The manufacturer of machinery or his authorised representative must ensure that a risk assessment is carried out in order to determine the health and safety requirements which apply to the machinery. The machinery must then be designed and constructed taking into account the results of the risk assessment.

The standard EN ISO 12100 gives guidance on the information required to allow risk assessment to be carried out. The standard does not point out a specific method to be used. It is the responsibility of the manufacturer to select a suitable method.

### Machines in use

A risk assessment must have been carried out on all machines that are in use; CE-marked as well as not CE-marked. A risk assessment must also be performed when making changes on a machine, to determine if the safety measures need to be adapted.

### Documentation of risk assessment

The risk assessment shall be documented. The risk assessment should take into consideration the severity of the potential injuries as well as the probability that they occur.

### Protection or warning?

How is it possible to choose safety measures that are production friendly and in every way well balanced? The Machinery Directive gives an order of priority for the choice of appropriate methods to remove the risks. Here it is further developed in a five step method.

### Prioritize safety measures according to the 5-step-method

1. Eliminate or reduce risks by design and construction
2. Move the work tasks outside the risk area
3. Use guards/safety devices
4. Develop safe working routines/information/education
5. Use warnings as pictograms, light, sound etc.

The further away from the center of the circle, the greater responsibility for the safety is placed onto the user of the machine. If full protection is not effectively achieved in one step, one has to go to the next step and find complementary measures. What is possible is dependant on the need for accessibility, the severity of the risk, appropriate safety measures etc.

### Example on prioritizing according to the 5-step-method

| Priority   | Example of hazard and safety measure taken |  |
|--|--|--|
| <b>1. Make machine safe by design and construction</b> | Hazard:                                    | Cuts and wounds from sharp edges and corners on machinery  |
|  | Safety measure:                            | Round off sharp edges and corners.   |
| <b>2. Move the work tasks outside the risk area</b>    | Hazard:                                    | Crushing of fingers from machine movements during inspection of the production inside the risk area  |
|  | Safety measure:                            | Installation of a camera.  |
| <b>3. Use guard/safety devices</b>                     | Hazard:                                    | Crushing injuries because of unintended start during loading of work pieces in a mechanical press  |
|  | Safety measure:                            | Install a light curtain to detect operator and provide safe stop of the machinery.   |
| <b>4. Safe working routines/information</b>            | Hazard:                                    | Crushing injuries because the machine can tip during installation and normal use.  |
|  | Safety measure:                            | Make instructions on how the machine is to be installed to avoid the risks. This can include requirements on the type of fastening, ground, screw retention etc. |
| <b>5. Warning</b>                                      | Hazard:                                    | Burns because of hot surfaces in reach   |
|  | Safety measure:                            | Warning signs  |

### Combine the 5-step-method with production friendly thinking. This can give you e.g.

- fast and easy restart of machines after a safety stop
- enough space to safely program a robot
- places outside the risk area to observe the production
- electrically interlocked doors, instead of guards attached with screws, to be able to take the necessary measures for removing production disturbances
- a safety system that is practical for all types of work tasks, even when removing production disturbances

The likelihood that the safety solution will be well made, well received and suitable for the application increases if each risk is handled according to the 5-step-method.

# Examples of regularly used EN/ISO standards

|                    |   |   |
|--------------------|---|---|
| EN ISO 12100       | <b>Safety of machinery - General principles for design - Risk assessment and risk reduction</b>                                     | The primary purpose of this standard is to provide designers with an overall framework and guidance for decisions during the development of machinery to enable them to design machines that are safe for their intended use.   |
| EN ISO 13857       | <b>Safety of machinery - Safety distances to prevent hazard zones being reached by upper and lower limbs</b>                        | This standard establishes values for safety distances to prevent danger zones being reached by the upper and lower limbs. The distances apply when adequate safety can be achieved by distances alone.  |
| EN 349 (ISO 13854) | <b>Safety of machinery – Minimum gaps to avoid crushing of parts of the human body</b>  | The object of this standard is to enable the user (e.g. standard makers, designers of machinery) to avoid hazards from crushing zones. It specifies minimum gaps relative to parts of the human body and is applicable when adequate safety can be achieved by this method.   |
| EN ISO 13850       | <b>Safety of machinery – Emergency stop – Principles for design</b>   | This standard specifies design principles for emergency stop equipment for machinery. No account is taken of the nature of the energy source.   |
| EN 574             | <b>Safety of machinery – Two-hand control devices – Functional aspects – Principles for design</b>                                  | This standard specifies the safety requirements of a two-hand control device and its logic unit. The standard describes the main characteristics of two-hand control devices for the achievement of safety and sets out combinations of functional characteristics for three types.   |
| EN ISO 14120       | <b>Safety of machinery – Guards – General requirements for the design and construction of fixed and movable guards</b>              | This standard specifies general requirements for the design and construction of guards provided primarily to protect persons from mechanical hazards.   |
| EN ISO 13849-1     | <b>Safety of machinery – Safety-related parts of control systems – Part 1: General principles for design</b>                        | This standard provides safety requirements and guidance on the principles for the design of safety-related parts of control systems. For these parts it specifies categories and describes the characteristics of their safety functions. This includes programmable systems for all machinery and for related protective devices. It applies to all safety-related parts of control systems, regardless of the type of energy used, e.g. electrical, hydraulic, pneumatic, mechanical. It does not specify which safety functions and which categories shall be used in a particular case. |
| EN ISO 13849-2     | <b>Safety of machinery - Safety-related parts of control systems - Part 2: Validation</b>   | This standard specifies the procedures and conditions to be followed for the validation by analysis and testing of: <ul style="list-style-type: none"> <li>• the safety functions provided, and</li> <li>• the category achieved of the safety-related parts of the control system in compliance with EN 954-1 (ISO 13849-1), using the design rationale provided by the designer.</li> </ul>   |
| EN 62061           | <b>Safety of machinery - Functional safety of safety-related electrical, electronic and programmable electronic control systems</b> | The standard defines the safety requirements and guiding principles for the design of safety-related electrical/electronic/programmable parts of a control system.  |
| EN ISO 13855       | <b>Safety of machinery - Positioning of safeguards with respect to the approach speeds of parts of the human body</b>               | This standard provides parameters based on values for hand/arm and approach speeds and the methodology to determine the minimum distances from specific sensing or actuating devices of protective equipment to a danger zone.  |
| EN ISO 14119       | <b>Safety of machinery - Interlocking devices associated with guards - Principles for design and selection</b>                      | This standard specifies principles for the design and selection — independent of the nature of the energy source — of interlocking devices associated with guards. The standard provides measures to minimize defeat of interlocking devices in a reasonably foreseeable manner.  |
| EN 60204-1         | <b>Safety of machinery - Electrical equipment of machines - Part 1: General requirements</b>  | This part of IEC 60204 provides requirements and recommendations relating to the electrical equipment of machines so as to promote: <ul style="list-style-type: none"> <li>• safety of persons and property;</li> <li>• consistency of control response;</li> <li>• ease of maintenance.</li> </ul>   |

## Standards for safety in control systems

Building a protection system that works in practice and provides sufficient safety requires expertise in several areas.

**The design of the safety functions in the protection system in order to ensure they provide sufficient reliability is a key ingredient. As help for this there is, for example, the EN ISO 13849-1 standard. The purpose of this text is to provide an introduction to the standard and its application in conjunction with our products. Please note that outside of the European Union there are often other standards that are used in place of EN ISO 13849.**

### Introducing the standard

The generation change for standards on safety in control systems introduced new concepts and calculations for machine builders and machine users. The EN 954-1 standard has been phased out and is replaced by EN ISO 13849-1 (PL, Performance Level) and EN 62061 (SIL, Safety Integrity Level).

### PL or SIL? What should I use?

The standard you should use depends on the choice of technology, experience and customer requirements.

### Choice of technology

- PL (Performance Level) is a technology-neutral concept that can be used for electrical, mechanical, pneumatic and hydraulic safety solutions.
- SIL (Safety Integrity Level) can, however, only be used for electrical, electronic or programmable safety solutions.

### Experience

EN ISO 13849-1 uses categories from EN 954-1 for defining the system structure, and therefore the step to the new calculations is not so big if you have previous experience of the categories. EN 62061 defines the structures slightly differently.

### Customer requirements

If you or your end customer comes from an industry that is accustomed to using SIL (e.g. the process industry), requirements can also include safety functions for machine safety being SIL rated.

We notice that most of our customers prefer PL as it is technology-neutral and that they can use their previous knowledge in the categories. In this text we show some examples of how to build safety solutions in accordance with EN ISO 13849-1 and calculate the reliability of the safety functions to be used for a particular machine. The examples in this text are simplified in order to provide an understanding of the principles. The values used in the examples can change.

### What is PL (Performance Level)?

PL is a measure of the reliability of a safety function. PL is divided into five levels (a-e). PL e gives the best reliability and is equivalent to that required at the highest level of risk.

### To calculate which PL level the system achieves you need to know the following:

- The system's structure (categories B, 1-4)
- The Mean Time To dangerous Failure of the component ( $MTTF_d$ )
- The system's Diagnostic Coverage (DC)

### You will also need to:

- protect the system against simultaneous failure of both channels (CCF)
- protect the system from systematic errors built into the design
- follow certain rules to ensure software can be developed and validated in the right way

The five PL-levels (a-e) correspond to certain ranges of  $PFH_b$ -values (probability of dangerous failure per hour). These indicate how likely it is that a dangerous failure could occur over a period of one hour. In the calculation, it is beneficial to use  $PFH_b$ -values directly as the PL is a simplification that does not provide equally accurate results.

### What is the easiest way of complying with the standard?

#### 1. Use pre-calculated components.

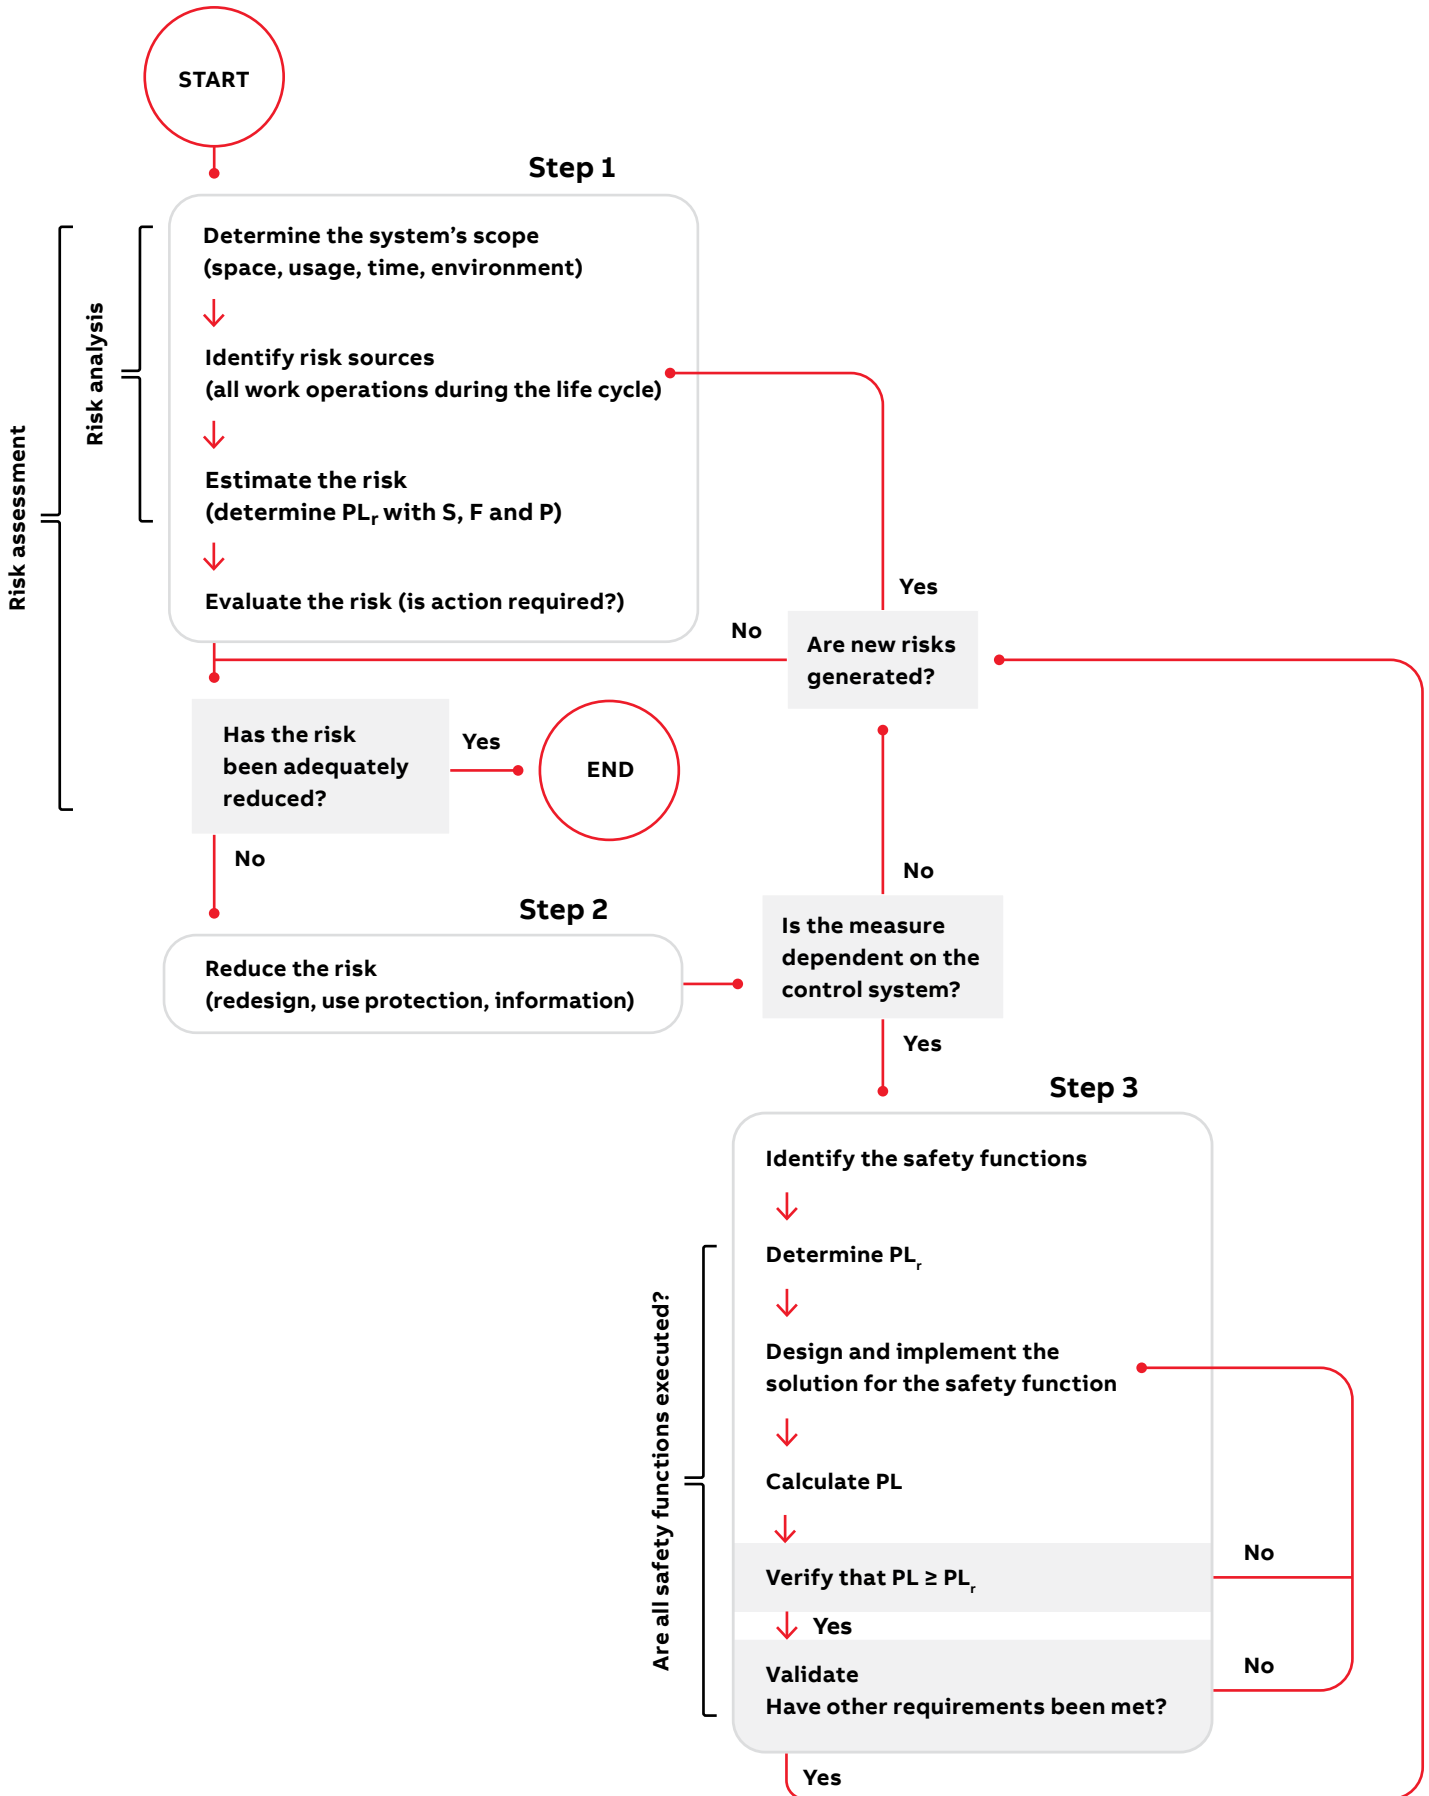

As far as it is possible, use components with pre-calculated PL and  $PFH_b$ -values. You then minimise the number of calculations to be performed. All ABB Jokab Safety products have pre-calculated  $PFH_b$ -values.

#### 2. Use a calculation tool.

With the calculation softwares FSDT or SISTEMA you avoid making calculations by hand. You also get help to structure your safety solutions and provide the necessary documentation.

#### 3. Use Pluto or Vital

Use the Pluto programmable safety controller or Vital safety controller. Not only is it easier to make calculations and changes in the future, but above all it is easier to ensure a higher level of safety.

**Risk estimation**

To calculate the performance level required (PL<sub>r</sub>).

**S Severity of injury**

**S1** slight (normally reversible injury)

**S2** serious (normally irreversible injury or death)

**F Frequency and/or exposure to hazard**

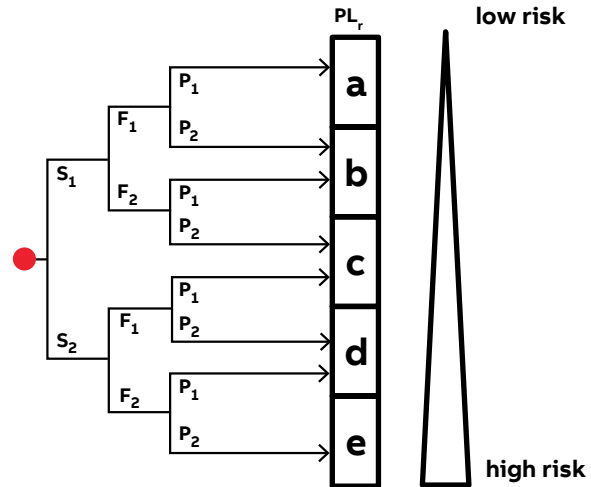

**F1** seldom to less often and/or exposure time is short

**F2** frequent to continuous and/or exposure time is long

**P Possibility of avoiding hazard or limiting harm**

**P1** possible under specific conditions

**P2** scarcely possible

**Risk assessment and risk minimisation**

According to the Machinery Directive, the machine builder (anyone who builds or modifies a machine) is required to perform a risk assessment for the machine design and also include an assessment of all the work operations that need to be performed. EN ISO 12100 stipulates the requirements for a risk assessment. It is this that EN ISO 13849-1 is based on, and a completed risk assessment is a prerequisite for being able to work with the standard.

**Step 1 – Risk assessment**

A risk assessment begins with determining the scope of the machine. This includes the space that the machine and its operators need for all of its intended applications, and all operational stages throughout the machine's life cycle. All risk sources must then be identified for all work operations throughout the machine's life cycle.

A risk estimation is made for each risk source, i.e. indication of the degree of risk. According to EN ISO 13849-1 the risk is estimated using three factors: injury severity (S), frequency of exposure to the hazard (F) and the possibility you have of avoiding or limiting the injury (P). For each factor two options are given. Where the boundary between the two options lies is not specified in the standard, but the following are common interpretations and our recommendations:

**S1 bruises, abrasions, puncture wounds and minor crushing injuries**

**S2 skeletal injuries, amputations and death**

**F1 less frequent than once a week**

**F2 once a week or more often**

**P1 slow machine movements, plenty of space, low power**

**P2 quick machine movements, crowded, high power**

By selecting S, F and P for the risk, you will get the PL<sub>r</sub> that is necessary for the risk source.

Finally, the risk assessment includes a risk evaluation where you determine if the risk needs to be reduced or if sufficient safety is ensured.

**Step 2 – Reduce the risk**

If you determine that risk reduction is required, you must comply with the priority in the Machinery Directive in the selection of measures:

1. Avoid the risk already at the design stage. (E.g. reduce power, avoid interference in the danger zone.)
2. Use protection and/or safety devices. (E.g. fences, light grids or control devices.)
3. Provide information about how the machine can be used safely. (E.g. in manuals and on signs.)

If risk reduction is performed using safety devices, the control system that monitors these needs to be designed as specified in EN ISO 13849-1.

**Step 3 - Design and calculate the safety functions**

To begin with you need to identify the safety functions on the machine. (Examples of safety functions are emergency stop and monitoring of gate.)

For each safety function, a PL<sub>r</sub> should be established (which has often already been made in the risk assessment). The solution for the safety function is then designed and implemented. Once the design is complete, you can calculate the PL the safety function achieves. Check that the calculated PL is at least as high as PL<sub>r</sub> and then validate the system as per the validation plan. The validation checks that the specification of the system is carried out correctly and that the design complies with the specification. You will also need to verify that the requirements that are not included in the calculation of the PL are satisfied, that is, ensure that the software is properly developed and validated, and that you have taken adequate steps to protect the technical solution from systematic errors.

The relationship between categories, the  $DC_{avg}$ ,  $MTTF_d$  for each channel and PL. The table also shows the  $PFH_D$ -range that corresponds to each PL.

**PL calculation in Step 3**

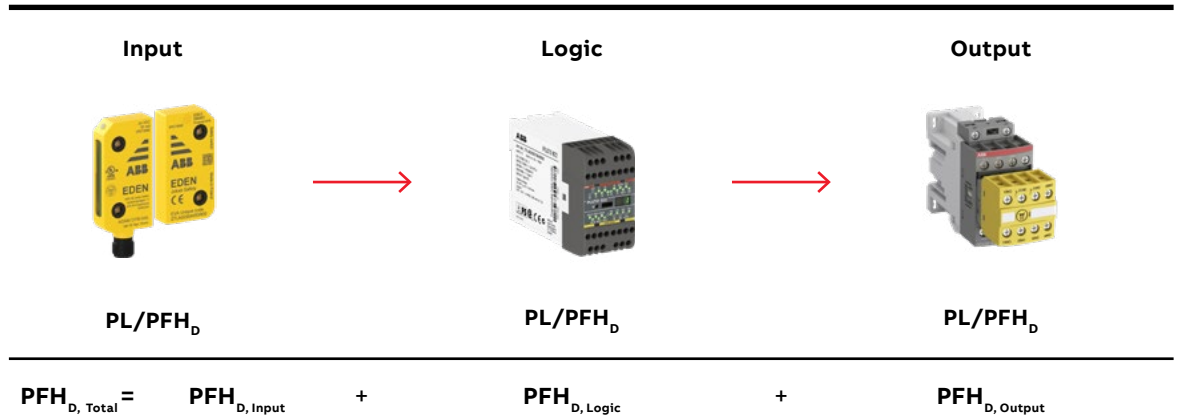

When you calculate the PL for a safety function, it is easiest to split it into separate, well defined blocks (also called subsystems). It is often logical to make the breakdown according to input, logic and output (e.g. switch - safety relay - contactors), but there may be more or fewer than three blocks depending on the connection and the number of components used (an expansion relay could for example create an additional logic block).

For each block, you calculate a PL or  $PFH_D$ -value. It is easiest if you obtain these values from the component manufacturer, so you do not have to calculate yourself. The manufacturer of switches,

sensors and logic devices often have PL and  $PFH_D$ -values for their components, but for mechanical devices (such as key switches or contactors) a PL-value cannot be supplied since it depends on how often the component will be used. You then need to calculate yourself according to EN ISO 13849-1 or use default values from the standard, if provided.

To calculate PL or  $PFH_D$  for a block, you need to know its category, DC and  $MTTF_d$ . In addition, you need to protect the system against systematic errors and ensure that an error does not knock out both channels, and generate and validate any software used correctly. The following text gives a brief explanation of what to do.

**Safety function (SF)**

### Category

The structure for the component(s) in the block is assessed to determine the category (B, 1-4) it corresponds to. For category 4, for example, individual failures do not result in any loss of the safety function. In order to achieve category 4 with contactors, you need to have two channels - i.e., two contactors - that can cut the power to the machine individually. The contactors need to be monitored by connecting opening contacts to a test input on, for example a safety relay. For monitoring of this type to work, the contactors need to have positive-guided contacts.

### Diagnostic Coverage (DC)

A simple method to determine DC is explained in Appendix E in EN ISO 13849-1. It lists various measures and what they correspond to in terms of DC. For example, DC=99 % (which corresponds to DC high) is achieved for a pair of contactors by monitoring the contactors with the logic device.

### Mean Time To dangerous Failure (MTTF<sub>d</sub>)

The MTTF<sub>d</sub>-value should primarily come from the manufacturer. If the manufacturer cannot provide values, they are given from tables in EN ISO 13849-1 or you have to calculate MTTF<sub>d</sub> using the B<sub>10d</sub>-value, (average number of cycles until 10% of the components have a dangerous failure). To calculate the MTTF<sub>d</sub>, you also need to know the average number of cycles per year that the component will execute.

Calculation of the average number of cycles is as follows:

$$MTTF_d = \frac{B_{10d}}{0,1 \times n_{op}}$$

where

$$n_{op} = \frac{d_{op} \times h_{op} \times 3600}{t_{cycle}}$$

|             |   |                           |
|-------------|---|---------------------------|
| $n_{op}$    | = | Number of cycles per year |
| $d_{op}$    | = | Operation days per year   |
| $h_{op}$    | = | Operation hours per day   |
| $t_{cycle}$ | = | Cycle time (seconds)      |

Example:  $d_{op} = 365$  days,  $h_{op} = 24$  hours and  $t_{cycle} = 1,800$  seconds (2 times/hour) which gives  $n_{op} = 17,520$  cycles. With a  $B_{10d} = 2 \cdot 10^6$  this gives a  $MTTF_d = 1,141$  year which corresponds to  $MTTF_d = \text{high}$ .

Note that when you calculate MTTF<sub>d</sub> you have to calculate according to the total number of cycles the component will be working. A typical example of this is the contactors that frequently work for several safety functions simultaneously. This means that you must add the number of estimated cycles per year from all the safety functions that use the contactors. When MTTF<sub>d</sub> is calculated from a B<sub>10d</sub>-value, also consider that if

the MTTF<sub>d</sub>-value is less than 200 years, the component needs to be replaced after 10% of the MTTF<sub>d</sub>-value (due to the T<sub>10d</sub>-value). That is, a component with MTTF<sub>d</sub> = 160 years needs to be replaced after 16 years in order for the conditions for achieving PL to continue to be valid. This is because EN ISO 13849-1 is based on a "mission time" of 20 years.

### Common Cause Failure (CCF)

In Appendix F of EN ISO 13849-1 there is a table of actions to be taken to protect against CCF, to ensure a failure does not knock out both channels.

### Systematic errors

Appendix G of EN ISO 13849-1 describes a range of actions that need to be taken to protect against incorporating faults into your design.

### PL for safety functions

PL is given in the table on the previous page. If you want to use an exact PFH<sub>b</sub>-value instead, this can be produced using a table in Appendix K in EN ISO 13849-1. Once you have produced the PL for each block, you can generate a total PL for the safety function in Table 11 of EN ISO 13849-1. This gives a rough estimate of the PL. If you have calculated PFH<sub>b</sub> for each block instead, you can get a total of PFH<sub>b</sub> for the safety function by adding together all the values of the blocks. The safety function's total PFH<sub>b</sub> corresponds to a particular PL in Table 3 of EN ISO 13849-1.

### Requirements for safety-related software

If you use a safety PLC for implementing safety functions, this places requirements on how the software is developed and validated. To avoid error conditions, the software should be readable, understandable and be possible to test and maintain.

A software specification must be prepared to ensure that you can check the functionality of the program. It is also important to divide the program into modules that can be tested individually. Paragraph 4.6 and Appendix J of EN ISO 13849-1 specify requirements for safety related software.

The following are examples of requirements for software from EN ISO 13849-1:

- A development life cycle must be produced with validation measures that indicate how and when the program should be validated, for example, following a change.
- The specification and design must be documented.
- Function tests must be performed.
- Validated functional blocks must be used whenever possible.
- Data and control flow are to be described using, for example, a condition diagram or software flow chart.

### Case study 1 - Safety relay Sentry

Protection layout for a packaging machine with low risks

#### Step 1 – Risk assessment

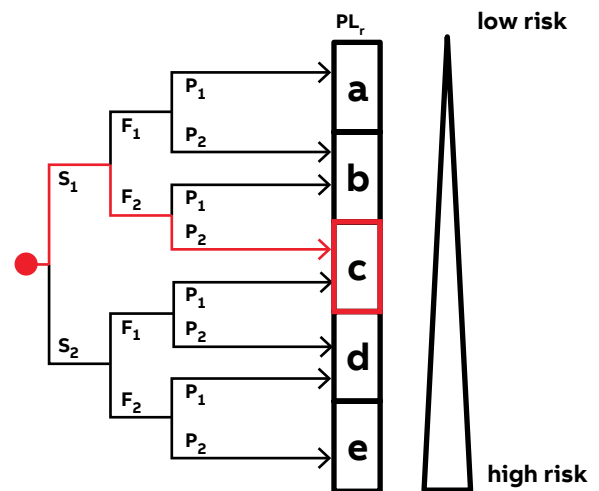

Food to be packaged is loaded into the cell manually through the rear door. A batch is prepared for the packing conveyor in the infeed hopper. The cell is reset and restarted. The packaging machine with conveyor belt only operates when both doors are closed and when the protection system has been reset.

In the risk assessment it was established that the machine is to be operated in three shifts (8 hours per shift) 365 days a year. The total access to the danger zone is estimated to be two times per hour (F2), including manual packaging and tending operational disturbances. Unexpected start-ups are not considered to cause serious injury but rather minor healable injuries (S1). The operator is considered not to have the possibility of avoiding injury as the machine moves quickly (P2).

The number of cycles for the safety function = 365 days/year x (3x8) hours/day x 2 cycles/hour = 17,520 cycles/year  
 The assessment for the safety function required for access to the machine is  $PL_r = c$  (S1, F2, P2). In addition to this safety function, an emergency stop function is needed. This is also assessed as  $PL_r = c$ .

#### Step 2 – Reduce the risk

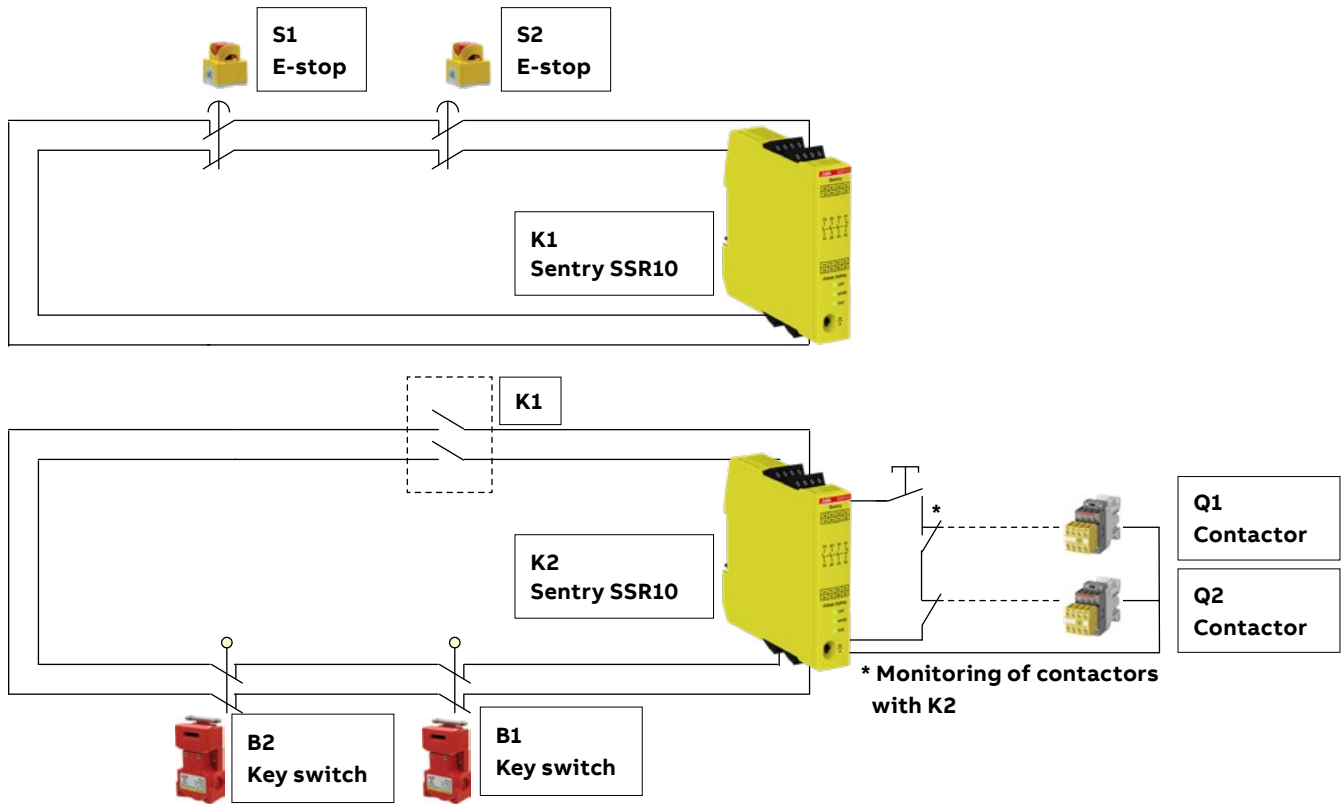

As protection, an interlocked door is selected with the key switch MKey5. Stopping time is short enough for the dangerous movement to have ceased before the operator can access it. The emergency stop is placed within easy reach, on both sides of the cell near the doors.

Determination of the  $PL_r$  necessary for the safety function with interlocked door for this example.

#### NOTE!

The assessment needs to be made for each safety function.

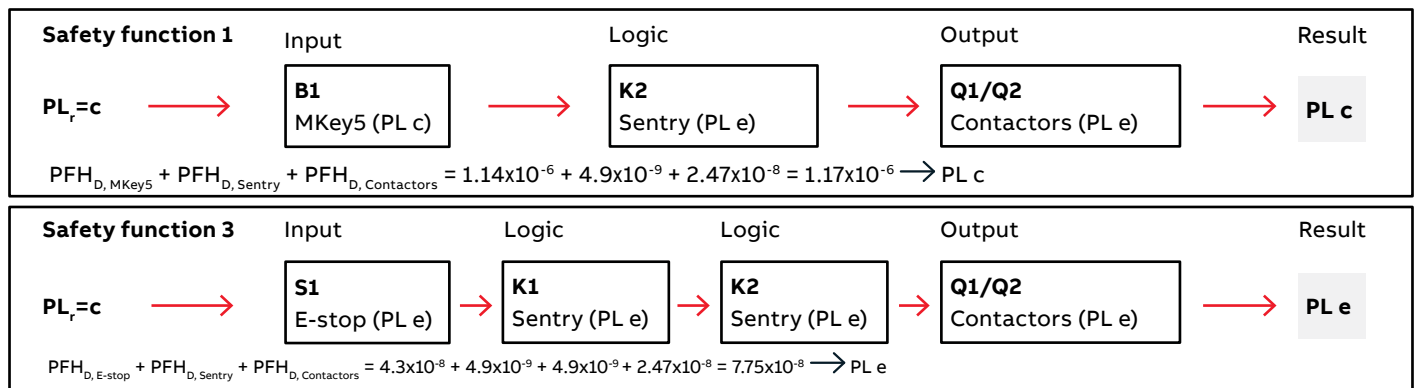

**Step 3 - Calculate the safety functions**

The output subsystem that is composed of double monitored contactors has been calculated at  $2.47 \times 10^{-8}$ . The safety functions are represented by block diagrams. Safety functions 1 and 2 are identical. Therefore, only safety function 1 is shown. Safety functions 3 and 4 are identical. Therefore, only safety function 3 is shown.

**How safe is a mechanical switch?**

Mechanical switches have a tendency to break if misused. Manufacturer instructions must be followed, e.g. no excessive force or dirty environment. For interlocking switches in general EN ISO 14119 must be considered. It handles e.g. the possibility to defeat a switch and requirements on key switches. Connecting key switches in series gives a significant risk of masking errors, as stated in the technical report ISO/TR 24119, which limits the maximum achievable DC depending on the number of frequently used doors connected in series.

The reason for not achieving more than PL c with Safety function 1 is that only one key switch is used per door, and a key switch is mechanically a Category 1 device. For e-stop devices though, a fault exclusion for the mechanical parts is allowed according to EN ISO 13849-2 if a maximum number of operations is considered. For this solution to reach a higher PL, EN ISO 14119 and ISO/TR 24119 need to be consulted.

## Case study 2 - Safety controller Vital

Protection layout for a robot cell with high risks

### Step 1 – Risk assessment

The workpieces are transported into the robot cell where the robot places them in a test cabinet. Approved workpieces leave the cell on the conveyor belt, while workpieces that fail the tests are placed on the table for manual adjustments. The work that needs to be done in the robot cell is to correct operational disturbances for the test equipment and the conveyor belt (about once an hour), unloading from the manual station (about once an hour), program adjustments (once/week) and cleaning (once/week) (F2). Unexpected start-ups of the robot are considered to cause potentially serious injury (S2). The operator is considered not to have the possibility of avoiding injury as the robot moves quickly (P2). The risk estimation gives  $PL_r=e$  (S2, F2, P2) for the safety functions required for access to the machine.

The standard for robot systems/cells (EN ISO 10218-2) specifies that safety functions shall comply with at least PL d, unless the risk assessment determines otherwise. In this case the risk assessment gives us  $PL_r=e$ .

### Step 2 – Reduce the risk

As protection, the door and hatch are interlocked with Eden non-contact sensors. To protect against entering the cell the wrong way, transport of materials in and out is protected with light curtains and provided with muting to distinguish between material and people. The emergency stop function is also a safety function that

is required. The energy to all hazardous machine functions shall be removed by all safety functions.

The solution with Vital makes it possible to implement a robot application with only one safety controller, which does not need to be configured or programmed. Vital makes it possible to connect up to 30 safety functions in a single DYNlink loop, with PL e in accordance with EN ISO 13849-1.

Determination of PL<sub>r</sub> for the safety function with interlocked door.

### NOTE!

The assessment needs to be made for each safety function.

**Step 3 - Calculate the safety functions**

The  $PFH_D$ -value of the robot’s safety stop input is  $5.79 \times 10^{-8}$  (the value applies to ABB industrial robots with IRC5 controller). The safety functions are represented by block diagrams.

**Safety function 3 - muting of light guards**

If the logic of the muting function is included in the light guard, the  $PFH_D$ -value of the light guard should include the  $PFH_D$ -values for the muting components. If the logic is external (i.e. safety PLC) the muting sensors should be added as separate blocks in the safety function.

These safety functions with Vital meet PL e in accordance with EN ISO 13849-1. Note that the above functions are only selected examples of the safety functions in the robot cell.

### Case study 3 - Programmable safety controller Pluto

Protection layout for a production cell with high risks

#### Step 1 – Risk assessment

The workpieces are fed into the cell through a conveyor belt and positioned by the operator in the pneumatic machining tool in station 1. The operator starts station 1 manually. The operator then places the workpiece on the conveyor belt for transfer to station 2. A light curtain prevents the operator from entering station 2 unnoticed. The robot in station 2 places the workpiece in the hydraulic press. The workpiece leaves the cell by transport out onto the conveyor.

The work that needs to be done in station 2 is, e.g. to address operational disturbances in the press and the robot a few times a week (F2). Unexpected start-ups of the robot are considered to cause serious injury (S2). The operator is considered not to have the possibility of avoiding injury as the robot moves quickly (P2). The risk estimation for the safety function required for access to station 2 is  $PL_r=e$  (S2, F2, P2). This estimation would still be the same for the press. For the safety function for the risks associated with the conveyor belt, the estimation S1, F2, P1 is made giving  $PL_r=b$ .

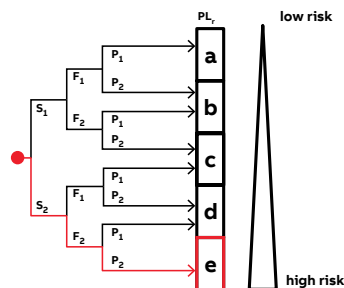

#### Step 2 – Reduce the risk

As protection, interlocked doors are selected with the Eden non-contact sensor. Station 1 with the pneumatic machining tool is operated by a two-hand device. When the two-hand device is released, the dangerous movement will be stopped safely. Station 2 can be in automatic mode, when a light curtain (Orion) and a non-contact sensor at door 4 (Eden) protects the entry. If the door is opened or the light curtain is

interrupted, energy to the hazardous functions in station 2 is removed. By opening doors 2 and 3 (also monitored by Eden sensors) the conveyor belt and the pneumatic machining tool will stop safely. Manual reset must always be done after actuation of any safety device.

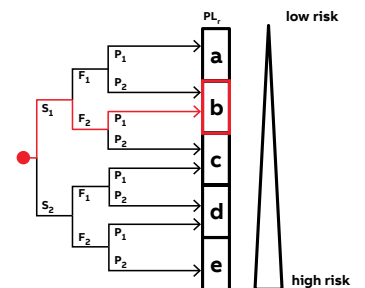

When the protection system requires a number of safety devices and that multiple machines must be stopped, Pluto programmable safety controller is the most effective solution. If the protection system also has to work by zones and in different modes of operation, this is another good reason to use Pluto. With Pluto,  $PL_e$  can be achieved regardless of the number of connected safety devices.

#### Robot

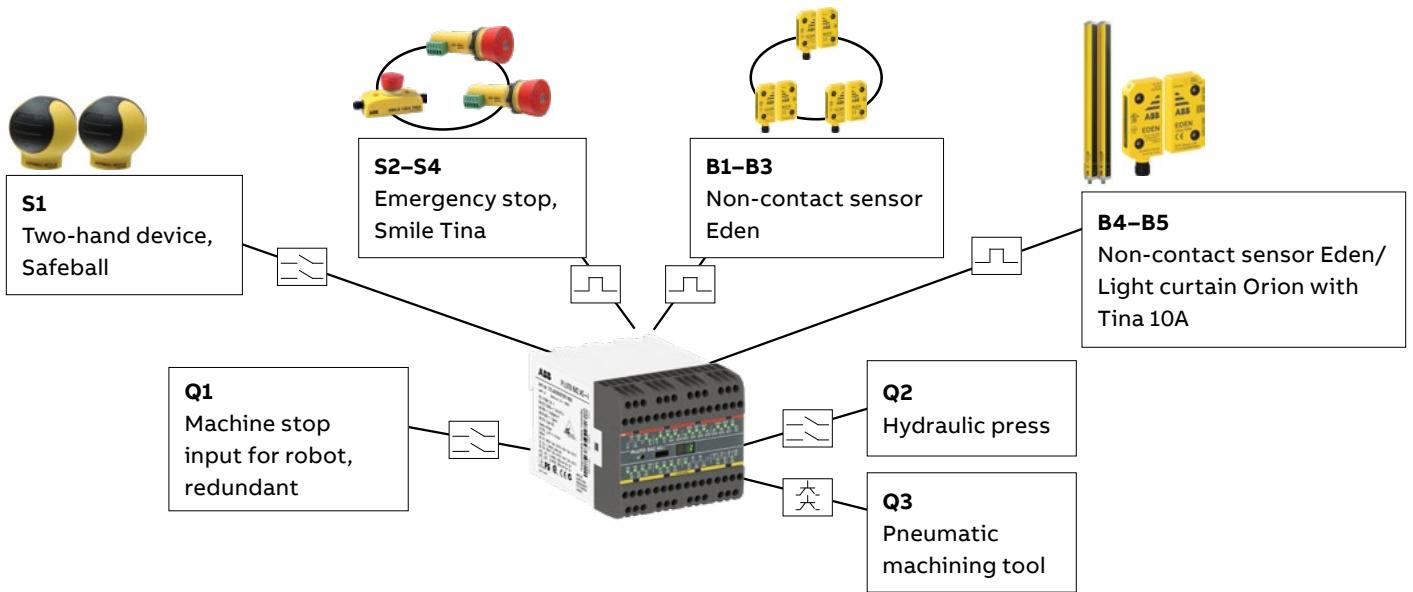

$PL_r=e$  for the robot and hydraulic press.

#### Conveyor belt

$PL_r=b$  for the conveyor belt.

**Step 3 - Calculate the safety functions for the robot cell**

The PFH<sub>D</sub>-value for the robot's safety stop input is 5.79x10<sup>-8</sup> (the value applies to ABB industrial robots with IRC5 controller).

Only safety functions to help remove energy to the industrial robot are shown below. This is only a subset of the safety functions. When energy is removed to multiple machines in a cell, the safety functions can be defined in different ways depending on the risk assessment. The safety functions are represented by block diagrams.

| Safety function 1   | Input                          | Logic                                    | Output                                   | Result                    |
|---|--------------------------------|--|--|---------------------------|
| $PL_r=e$  | <b>B1</b><br>Eden (PL e)       | <b>K1</b><br>Pluto, relay outputs (PL e) | <b>Q1</b><br>Robot (PL e)                | <b>PL e</b>               |
| $PFH_{D,Eden} + PFH_{D,Pluto} + PFH_{D,Robot} = 4.5 \times 10^{-9} + 2 \times 10^{-9} + 5.79 \times 10^{-8} = 6.44 \times 10^{-8} \rightarrow PL e$   |                                |  |  |                           |
| Safety function 2   | Input                          | Logic                                    | Output                                   | Result                    |
| $PL_r=e$  | <b>S2</b><br>Smile Tina (PL e) | <b>K1</b><br>Pluto, relay outputs (PL e) | <b>Q1</b><br>Robot (PL e)                | <b>PL e</b>               |
| $PFH_{D,Smile\ Tina} + PFH_{D,Pluto} + PFH_{D,Robot} = 4.66 \times 10^{-9} + 2 \times 10^{-9} + 5.79 \times 10^{-8} = 6.46 \times 10^{-8} \rightarrow PL e$                                   |                                |  |  |                           |
| Safety function 3   | Input                          | Logic                                    | Output                                   | Result                    |
| $PL_r=e$  | <b>B5</b><br>Orion (PL e)      | <b>Tina 10A</b><br>(PL e)                | <b>K1</b><br>Pluto, relay outputs (PL e) | <b>Q1</b><br>Robot (PL e) |
| $PFH_{D,Orion} + PFH_{D,Tina\ 10A} + PFH_{D,Pluto} + PFH_{D,Robot} = 2.5 \times 10^{-9} + 4.5 \times 10^{-9} + 2 \times 10^{-9} + 5.79 \times 10^{-8} = 6.69 \times 10^{-8} \rightarrow PL e$ |                                |  |  |                           |

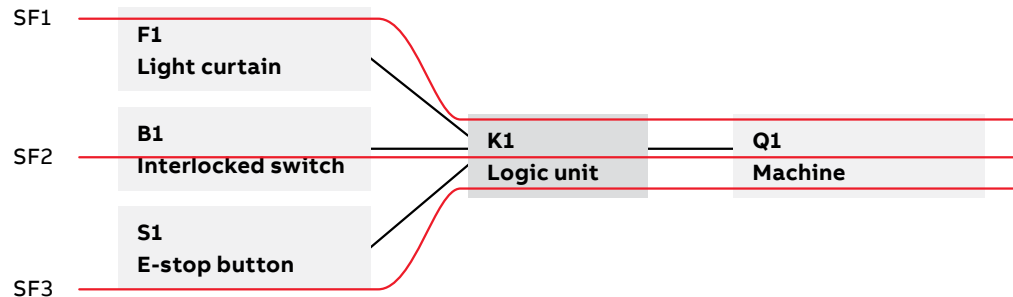

These safety functions with Pluto meet PL e in accordance with EN ISO 13849-1. Note that the above functions are only selected examples of the safety functions in the robot cell.

# What defines a safety function?

Calculating that you have achieved the  $PL_r$  that is required is not difficult, especially if you use “pre-calculated” safety devices and logic units. But which parts should be included in each safety function? This must be resolved before you start the calculations. To summarise in simple terms you can say that each safety device should be a part of the safety function for each machine that is affected by the safety device in question. Three safety devices that all remove the energy to three machines in a cell is therefore equal to nine safety functions. In the section that follows, we explain the background.

## Multiple safety functions for a machine

Multiple safety devices are often used on a machine in order to provide satisfactory and practical protection for the operators. In the following example, a machine is protected by three safety devices connected to a logic device. The following figure illustrates this interconnection schematically.

Three safety functions (SF) are defined for the machine and are calculated as:

$$SF1: PFH_{D,F1} + PFH_{D,K1} + PFH_{D,Q1} = PFH_{D,SF1}$$

$$SF2: PFH_{D,B1} + PFH_{D,K1} + PFH_{D,Q1} = PFH_{D,SF2}$$

$$SF3: PFH_{D,S1} + PFH_{D,K1} + PFH_{D,Q1} = PFH_{D,SF3}$$

## Multiple safety functions for multiple machines in a cell

It is quite common for several machines in a single cell/zone to be protected by multiple safety devices. The following figure illustrates the interconnection schematically for an example. Each of the machines Q1 – Q3 is shut down separately and independently by K1.

If the operator enters the cell, he is exposed in this case to the same type of risk from all three machines. The power to all three machines must be cut e.g. when the operator enters the cell through the door interlocked by B1.

### Theoretical approach for multiple machines

The theoretical approach to calculate the safety function is as follows:

For the full safety function to be performed you require all the components to be working. Note that if B1 or K1 has a dangerous malfunction, the entire safety function is disabled. However, if for example machine Q1 has a dangerous malfunction, and is not shut down, machines Q2 and Q3 will still be shut down. One disadvantage in considering the safety function in this way is that you may have trouble achieving the  $PL_r$  required. But if you achieve the  $PL_r$  required, you can use the theoretical approach.

Sources:  
[http://www.dguv.de/medien/ifa/en/prg/en13849/safety\\_functions.pdf](http://www.dguv.de/medien/ifa/en/prg/en13849/safety_functions.pdf)

### Practical approach for multiple machines

A more practical approach is to divide the safety function into three parts, one for each of the three machines.

This is an approach that can provide a more accurate way of looking at the safety functions, especially where a different  $PL_r$  is required for the safety functions above. If machine Q1 is a robot and machine Q2 is a conveyor which is designed to have negligible risks, the different  $PL_r$  required to protect against risks from Q1 and Q2 will also be different. This practical approach is therefore the one recommended. The interpretation is based on information provided by IFA (Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung). For more information on this and other issues, see Sources.

### Example of safety functions for multiple machines in a cell

For a cell with three machines (one robot, one hydraulic press and one pneumatic machining tool) a risk assessment is made resulting in different  $PL_r$  for the individual machines. The robot and the hydraulic press requires  $PL_r = e$ , while the pneumatic machining tool requires  $PL_r = d$ .

One of the safety functions is that a non-contact sensor

(Eden) supervised by a safety PLC (Pluto) shall disconnect the energy to all three machines in the hazard zone:

Eden B1 ( $PFH_{D,B1} = 4.5 \times 10^{-9}$ )

Pluto K1 ( $PFH_{D,K1} = 2 \times 10^{-9}$ )

Robot Q1 ( $PFH_{D,Q1} = 5.79 \times 10^{-8}$ )

Hydraulic press Q2 ( $PFH_{D,Q2} = 8 \times 10^{-8}$ )

Pneumatic machining tool Q3 ( $PFH_{D,Q3} = 2 \times 10^{-7}$ ).

### Practical approach

If you use the practical approach the safety functions are as follows:

Robot:

$$PFH_{D,B1} + PFH_{D,K1} + PFH_{D,Q1} = 4.5 \times 10^{-9} + 2 \times 10^{-9} + 5.79 \times 10^{-8} = 6.44 \times 10^{-8} \longrightarrow PL\ e$$

Hydraulic press:

$$PFH_{D,B1} + PFH_{D,K1} + PFH_{D,Q2} = 4.5 \times 10^{-9} + 2 \times 10^{-9} + 8 \times 10^{-8} = 8.65 \times 10^{-8} \longrightarrow PL\ e$$

Pneumatic machining tool:

$$PFH_{D,B1} + PFH_{D,K1} + PFH_{D,Q3} = 4.5 \times 10^{-9} + 2 \times 10^{-9} + 2 \times 10^{-7} = 2.07 \times 10^{-7} \longrightarrow PL\ d$$

This is to be done in a similar way with other safety functions for the cell. For each safety device, you define the machines it affects, and establish the various safety functions according to this.

### Theoretical approach

What would the result be using the theoretical approach? Would the safety function achieve  $PL\ e$ ?

All machines:

$$PFH_{D,B1} + PFH_{D,K1} + PFH_{D,Q1} + PFH_{D,Q2} + PFH_{D,Q3} \\ = 4.5 \times 10^{-9} + 2 \times 10^{-9} + 5.79 \times 10^{-8} + 8 \times 10^{-8} + 2 \times 10^{-7} = 3.44 \times 10^{-7} \longrightarrow PL\ d$$

In this case, the safety function would not achieve a total  $PL\ e$ , which was required for the risks associated with the robot and hydraulic press.

### Conclusions

- Use the practical approach for multiple machines.
- Use safety devices/logic units with high reliability (low  $PFH_D$ ) to make it easy to achieve the  $PL_r$  required.
- With Vital or Pluto, it is easier to achieve the  $PL_r$  required.

Please note that the examples on these pages are simplified in order to explain the principles. Values of products can also change.

# FSDT and SISTEMA

## Tools for determining performance level (PL)

### Tools to simplify the process of safety function design

FSDT is an ABB software for determining PL and SIL of safety functions and generating technical documentation. The tool helps simplifying the process of safety function design, verification and documentation. It supports the compliance of the requirements of both EN ISO 13849-1 and IEC 62061 as well as the European Machinery Directive. Please turn to your local ABB contact in order to purchase FSDT.

Another commonly used software tool for the calculation of PL according to EN ISO 13849-1 is SISTEMA, developed by IFA (The Institute for Occupational Safety and Health) in Germany. With SISTEMA it is possible to “build” safety functions, verify them and generate the technical documentation required. The tool is freeware and can be downloaded from the IFA website.

To simplify the use of FSDT and SISTEMA with our products we have created a library containing all of our safety products.

# Applying IEC/EN 62061

If a safety function is designed in accordance with IEC/EN 62061, the level of reliability is expressed as the Safety Integrity Level, SIL. There are a total of 4 levels, but in the IEC/EN 62061 standard SIL 3 is the highest level. SIL is similar to PL (performance level) and uses the same PFH<sub>D</sub> (probability of dangerous failure per hour) to express the reliability of components and systems.

| Safety Integrity Level, SIL | Probability of dangerous Failure per Hour (PFH <sub>D</sub> ) |
|-----------------------------|---|
| 3                           | $\geq 10^{-8}$ to $< 10^{-7}$                                 |
| 2                           | $\geq 10^{-7}$ to $< 10^{-6}$                                 |
| 1                           | $\geq 10^{-6}$ to $< 10^{-5}$                                 |

There is a method in IEC/EN 62061 for assigning the Safety Integrity Level.

| Severity (Se) | Class (CI) |      |      |       |       |
|---------------|------------|------|------|-------|-------|
|               | 3-4        | 5-7  | 8-10 | 11-13 | 14-15 |
| 4             | SIL2       | SIL2 | SIL2 | SIL3  | SIL3  |
| 3             |            | (OM) | SIL1 | SIL2  | SIL3  |
| 2             |            |      | (OM) | SIL1  | SIL2  |
| 1             |            |      |      | (OM)  | SIL1  |

CI=Fr+Pr+Av  
OM=Other Measures

The severity of injury that can occur is divided into four levels. Class is the addition of the values of frequency (Fr, stated as a value between 1 and 5, where 5 represents the highest frequency), probability that a dangerous event will occur (Pr, stated as a value between 1 and 5, where 5 represents the highest probability) and the possibility of avoiding or limiting injury (Av, stated as a value of 1, 3 or 5, where 5 represents the least chance of avoiding or limiting an injury).

The safety function that is to be designed must at least fulfill the SIL that has been assigned to it in the risk assessment. The safety function consists of a number of sub-elements. Example: a door is interlocked by a non-contact sensor which is in turn monitored by a Pluto safety PLC, with outputs that break the power to two supervised contactors. The sensor is sub-element 1, Pluto is sub-element 2 and the two supervised contactors are sub-element 3. If in the assessment it has been established that SIL2 shall be used, every individual sub-element in the safety function must fulfill the SIL2 requirements. And the safety function must in its entirety fulfill the SIL2 requirements.

## Definition of protective safety in accordance with IEC/EN 62061

"Function of a machine whose failure can result in an immediate increase of the risk(s)"

If the SIL requirements are not fulfilled in any of the sub-elements or by the safety function in its entirety, a re-design must be made.

## Finally

This is just a brief introduction to the EN ISO 13849-1 and IEC/EN 62061 standards. You are welcome to contact us for more information and we are happy to guide you in how to apply the standards to our products.

The information given in this document is not intended to replace the standards - we strongly encourage you to purchase the standards if you are working with machine safety.

# Overview

## Selection orientation and standards

### Conventional safety devices

By conventional safety devices, we mean safety devices with one or two channels with contacts (e.g. key switches and emergency stop buttons), devices with OSSD outputs (e.g. light guards and Eden OSSD), safety devices with solid state outputs (e.g. safety magnetic sensors) and pressure sensitive devices (e.g. safety mats, safety edges and bumpers). A safety controller compatible with conventional safety devices can be used with most safety devices on the market, independently of the brand.

### The DYNlink solution

The DYNlink solution is a unique ABB Jokab Safety feature allowing to connect safety devices in series and still reach category 4/PL e/SIL 3 with only one channel (instead of two with conventional safety devices). This saves cabling and hardware.

For a small machine, the Vital safety controller can be a very cost effective solution since up to 30 DYNlink devices can be connected to one Vital and still reach category 4/PL e/SIL 3. With conventional safety devices this would require one safety relay per safety device.

When Pluto programmable safety controller is used, only one safety input is necessary for each DYNlink circuit instead of two inputs for a traditional safety device, which means that less I/Os are necessary.

Tina adapters allow the use of conventional safety devices in a DYNlink solution and transform between DYNlink signals and conventional safety signals, while maintaining the highest level of safety. This means that most conventional safety devices can be used in a DYNlink solution when used together with a suitable Tina adapter.

### Programmable logic

Quite often, there is a need for logic between the different safety functions. For instance:

IF (“door A” AND “door B” are open) OR (“door C” is open)  
THEN “Action 1”.

A logic like this can be hardwired without using programmable safety controllers, but the cabling becomes much more complicated, modifications are time consuming, errors happen more often and are difficult to find.

With a programmable safety controller, the safety devices are simply connected to the safe inputs of the controller and the logic is made in the program of the safety controller. The logic is then easy to modify without changing anything in the cabling. The Pluto Manager programming software allows you to view the active logic and see on screen if there are any problems, which means much faster troubleshooting.

### Standards

Some of the more important safety standards to follow when designing safety solutions are:

- CSA Z1002-12 risk assessment and control
- CSA Z432-16 Safeguarding of machinery
- EN ISO 12100 - Risk assessment
- EN ISO 13849 - Performance Level
- EN ISO 62061 - SIL
- ISO/TR 23849 - Guidance on the use of the PL and SIL standards
- EN 60204 - Electrical equipment

# Safety relay

## Sentry

The Sentry safety relays are powerful and easy to use safety relays, suitable for all common types of safety applications.

The Sentry series contains basic models for simple applications and easy output expansion, as well as highly flexible models with extremely accurate timer functions.

Sentry safety relays are used in both simple and more advanced safety solutions when safety devices need to be monitored according to the requirements of functional safety standards.

Continuous operation

### LEDs and display

3-colour LEDs allow for more status messages and simplify troubleshooting. Models with display offer preset configurations and extensive fault information.

### Advanced timer functions

Timer functions with an accuracy of  $\pm 1\%$  minimize unnecessary downtime.

### Multi-reset

The multi-reset function enables reset of up to 10 Sentry safety relays using just one reset button.

Optimized logistics

### Universal models

A single safety relay for all common safety applications reduces stock and saves warehouse space.

### Multi-voltage

Multi-voltage models offer more flexibility and less stock.

### Compact size

All models are only 22.5 mm wide, even models with 2 NO + 2 NO outputs.

Easy to install

### Detachable terminal blocks

Detachable terminal blocks speed up connection and replacement.

### Switch for reset selection

Manual or automatic reset easily selectable by switch.

### Powerful outputs

Powerful outputs allow you to drive larger contactors and simplify installation by saving the use of an intermediary contactor.

## Applications

### Sentry

#### Monitoring of safety devices

Sentry safety relays make it easy to reach the required level of safety when monitoring safety devices like emergency stop buttons, door switches, light guards, etc.

#### Expansion of safety outputs

Sentry expansion modules are used to increase the number of safety outputs of a safety control module in order to control more machinery.

## Features

### Sentry

#### Timer functions with an accuracy of $\pm 1\%$

Several timer functions are available: On/Off-delay, time bypass and time reset.

On/Off-delay are used to postpone the activation/deactivation of the safety outputs with a preset time delay. This is used in e.g. Category 1 stops.

Time bypass activates the safety outputs for a maximum predefined time when the safety inputs are closed. Inching is an example of application.

Time reset activates the safety outputs for a maximum predefined time when the safety inputs are opened. Pre-reset is an example of application.

An accuracy of  $\pm 1\%$  allows a very precise time to be set in order to increase safety and minimize unnecessary downtime.

#### Multi-reset

The multi-reset function enables reset of up to 10 Sentry safety relays using just one reset light-button. This simplifies connection, minimizes cabling and unnecessary downtime. The multi-reset function is available for all +24 VDC Sentry models offering manual reset.

#### Light-button function

The light-button function is used for the multi-reset function, but can also be used for a standard reset button.

The function of the LED in the light-button is the following:

- on - at least one input is not accepted
- flashing - all inputs are accepted, reset possible
- off - all inputs accepted, reset performed, outputs active

Note: if an input is accepted it means that the door is closed, the light curtain is not interrupted, etc.

#### Configurable models with display

The models with display are configurable and the user can choose between preset configurations and a custom configuration that can be protected by password.

#### Faster troubleshooting with display

The display minimizes troubleshooting by giving extensive information about internal faults, I/O faults, system faults, function faults and a log of the last 10 errors.

#### Switch for selection of the reset function

All models can be used in automatic reset and some models allow you to choose manual reset, either by switch or by configuration, which simplifies connection. In order to prevent mistakes, it is not possible to change reset function during operation by just flipping the switch.

#### Powerful outputs

The outputs have a switching capacity of up to 6A DC-13. This allows Sentry to drive larger contactors and saves the use of an intermediary contactor.

#### Delayed outputs

Some Sentry models have delayed outputs in order to e.g. give a machine time to apply breaking force before power is disconnected. For models with 2 NO + 2 NO outputs, it is only the second pair of NO outputs that is delayed. For models with 3 NO + 1 NC, all outputs are delayed.

#### Single function or universal models

Sentry SSR models are single function safety relays designed for a specific application such as 1 and 2 channel devices, OSSD devices or two-hand devices. Sentry USR models are universal safety relays. They are capable of handling most types of applications and safety devices, i.e. 1 and 2 channel devices, OSSD-devices, two-hand devices and contact mats/bumpers/edges. This means that only one type of relay is necessary as a spare, which reduces stock and saves warehouse space.

a) These models can also be used for expansion of Pluto safe transistor outputs (-24 VDC)

b) No monitoring of two-channel fault, i.e. max Category 3 without fault exclusion.

c) The safety relay detects a short-circuit, not a change in resistance.

d) Off-delay, On-delay, Time bypass or Time reset.

e) BSR23 must be monitored by another device in order to reach higher than Category 1/PL c according to EN ISO 13849-1, for example a safety relay, a safety PLC or an Orion light guard (EDM function).

#### Accessories

| Description   | Type | Order code      |
|---|------|-----------------|
| Screw terminal block for Sentry safety relays. One piece.     | S30A | 2TLA010099R0000 |
| Push-in terminal block for Sentry safety relays. One piece.   | S30C | 2TLA010099R0001 |
| Coding kit for terminal blocks. One kit for one Sentry relay. | S30B | 2TLA010099R0100 |

Note! The relays must be cycled at least once a year.

##### Electrical data

Operating voltage +24 VDC (19.2-27.6 VDC) PELV / SELV  
 Mains models: 85-265 VAC (50 / 60 Hz) or 120-375 VDC

Response time at deactivation 20 ms

##### Maximum switching capacity

DC13, DC1 Up to 6 A (except relays with 2 NO + 2 NO outputs that switch 3 A)  
 AC15, AC1 Up to 5 A (except relays with 2 NO + 2 NO outputs that switch 3 A)

##### Mechanical data

Operating temperature BSR10, BSR11, BSR23, SSR10M, SSR20M, TSR20M  
 -10 °C to 55 °C  
 SSR10, SSR20, SSR32, SSR42, TSR10, TSR20, USR10,  
 USR22  
 -10 °C to 65 °C

Humidity range 25% ... 90%

Protection class IP20 (enclosure/electrical cabinet must have at least an IP54)

Mounting 35 mm DIN rail (DIN 50022)

Minimum space between relays in the enclosure 0 mm

# Safety controller

## Vital

Vital is a configurable safety controller that does not require programming. It uses the DYNlink system, which allows up to 30 safety devices to be connected in series to the same circuit, while achieving PL e.

This enables a single Vital to supervise all safety functions on many machines that otherwise would have required a programmable safety controller or multiple safety relays.

Vital is also commonly used to supervise all emergency stops for larger machine lines.

Speed up your projects

### Easy connection

Reduced installation and engineering time thanks to simple installation with serial connection using M12 connectors.

No programming required  
The use of only one safety module without any programming simplifies engineering, commissioning and replacement.

### Less components

Significantly less components needed to achieve PL e/SIL 3.

Continuous operation

### LED diagnostics

Integrated LED diagnostics reduces down time when troubleshooting.

### Detachable connection blocks

Detachable connection blocks simplify replacement.

### Exchange without configuration

The configuration is made with jumpers in the detachable connection blocks. In case of exchange, the new unit automatically gets the correct configuration.

Safety and protection

### Easy to reach highest safety level

The DYNlink solution makes it possible to maintain the highest level of safety with up to 30 sensors connected in series.

### Extensive fault detection

The DYNlink solution enables unique fault detection features and prevents 2-channel faults.

## Applications and features

### Vital

#### Applications

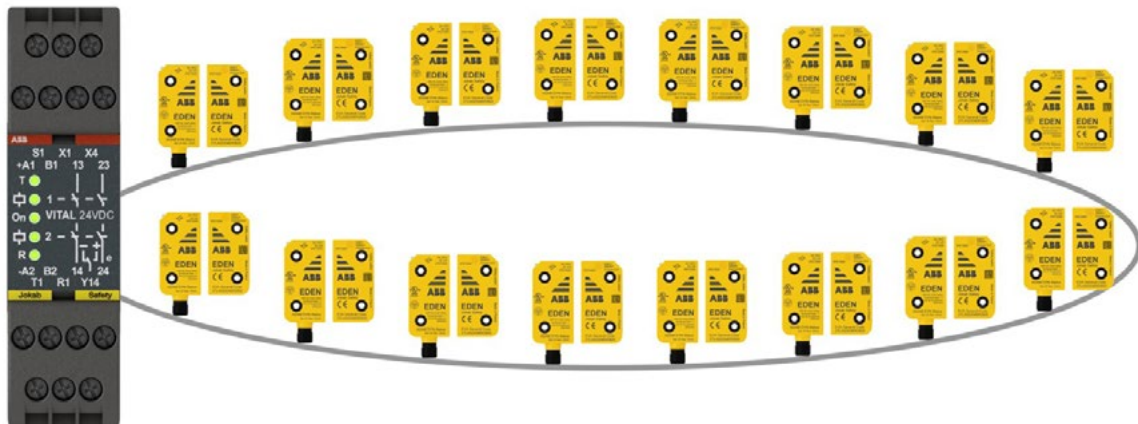

Vital safety controller excels at supervising multiple safety devices on the same machine, since up to 30 safety devices can be connected in series to the same input while achieving up to PL e. Typical applications are machines with multiple doors/hatches or emergency stop buttons.

#### Features

##### DYNlink

The DYNlink circuit is a unique solution that uses one single channel to achieve up to Cat. 4/PL e. Vital sends out a square wave signal that is inverted by each safety device. A connection between B1 and S1 sets if Vital should receive a non-inverted signal, i.e. an even number of devices are connected (no shunt indicates an odd number). Vital checks the returning signal 200 times/second and a fault such as a short circuit will be detected before any safety device is used.

Vital can only be used with DYNlink safety devices, such as Eden DYN, and devices with a Tina adapter.

## Ordering information

### Vital

#### Description

| DYNlink circuits | Maximum DYNlink devices | Safe outputs | Type    | Order code      |
|------------------|-------------------------|--------------|---------|-----------------|
| 1                | 30                      | 2 NO         | Vital 1 | 2TLA020052R1000 |

#### Tina adaptation units to DYNlink

The Tina devices adapt the DYNlink signals from Pluto to safety components with mechanical contacts, such as E-stops, switches and light beams/curtains with dual outputs. Tina is available in several versions depending on the type of safety component that is connected to the DYNlink solution. Also available is connector blocks and a blind plug.

| Type of safety device   | Type of connection to the DYNlink loop  | Description  | Type        | Order code      |
|---|---|--|-------------|-----------------|
| Devices with positively driven force-guided contacts like E-stop buttons and key switches | Via the device connection   | Mounted directly on the device enclosure to a M20 cable entry.   | Tina 2A     | 2TLA020054R0100 |
|   |   | Placed inside the safety device enclosure  | Tina 2B     | 2TLA020054R1100 |
|   | M12-5 male connector  | Mounted directly on the device enclosure to a M20 cable entry.   | Tina 3A     | 2TLA020054R0200 |
|   | M12-5 male connector with extra conductor for the supply of the safety device | Two circuits and with supply voltage for the safety sensor. Connects to a M20 cable entry.                                     | Tina 3Aps   | 2TLA020054R1400 |
| Devices with positively driven force-guided contacts like E-stop buttons and key switches | Removable terminal blocks   | Mounted on a DIN rail in the electrical cabinet. Note that the connected safety device(s) must be mounted on the same cabinet. | Tina 7A     | 2TLA020054R0700 |
| Devices with OSSD outputs like Orion light guards   | M12-5 male connector  | Adaptation of OSSD to DYNlink. Two M12 connectors.   | Tina 10A v2 | 2TLA020054R1210 |
|   |   | Adaptation of OSSD to DYNlink with possibility to connect a local reset button. Three M12 connectors.                          | Tina 10B v2 | 2TLA020054R1310 |
|   |   | Adaptation of OSSD to DYNlink with possibility to power the transmitter. Three M12 connectors.                                 | Tina 10C v2 | 2TLA020054R1610 |

#### Connection blocks for serial connection of DYNlink devices (or devices with Tina adapter)

| Description  | Type     | Order code      |
|--|----------|-----------------|
| Tina 1A is a blind plug connected to the unused M12 connectors of the connection blocks Tina 4A and Tina 8A. | Tina 1A  | 2TLA020054R0000 |
| Connection block for the serial connection of up to 4 DYNlink devices with M12-5 connectors                  | Tina 4A  | 2TLA020054R0300 |
| Connection block for the serial connection of up to 8 DYNlink devices with M12-5 connectors                  | Tina 8A  | 2TLA020054R0500 |

# Programmable safety controller

## Pluto

The safety controllers from ABB can monitor anything from a single safety function to complete manufacturing lines.

Pluto is a cost effective, powerful and compact programmable safety controller used in a variety of applications: in large and small systems, for process and functional safety, and even on trains.

Pluto can control most types of safety devices on the market, as well as ABB Jokab Safety DYNlink safety devices, analog sensors, encoders, contactors, valves and many more. Programming is done easily in the complimentary software, Pluto Manager.

The models with safety bus communication simplify the design of safety systems, thanks to our All-Master concept. A wide range of gateways allows communication with other networks and also remote monitoring of a Pluto system.

Speed up installation

### Great flexibility

Up to 32 Pluto units can exchange data on the same safety bus, and the unique All-Master system allows simple scaling, splitting and modification.

### Powerful yet compact

Unexpected features for its size, like real programming and speed monitoring, enables replacement of more complex PLC systems in some applications.

### More sensors and less cabling

The DYNlink solution allows series connection of up to 10 safety devices on each input. StatusBus and light button feature also reduces cabling to a minimum.

Optimum interface

### Programming software free of charge

Pluto Manager is an easy to use PC based programming software provided free of charge.

### Easy programming

Ready-made TÜV approved function blocks for safety functions make it easy to reach PL e/SIL3. Ladder logic and text programming allow the design of more advanced functions and the control of complete machines.

### Communication with external networks

Pluto gateways provide a two-way communication between the Pluto safety bus and other field buses.

Continuous operation

### Easy modification

Easy and quick replacement of units without any configuration.

### Flexible monitoring

Online monitoring from any Pluto in the system and remote monitoring and control with an Ethernet gateway.

## Features

### Pluto

#### I/Os

**Failsafe inputs (I)** are used to connect the safety devices to be monitored. Some of them can be used as analog inputs and counter inputs. The choice is made in the Pluto program when the I/Os are configured. Depending on the model, the analog inputs can be low resolution 0-27 V or high resolution 0-10 V/4-20 mA. The fast counter inputs can handle frequencies up to 14 kHz.

**Failsafe inputs/non-failsafe outputs (IQ)** are terminals that can be used as failsafe inputs or communication outputs (non-failsafe). The choice is made in the Pluto program when the I/Os are configured. A specific configuration is “light button” which means that both the contact and the LED indicator of an illuminated push-button are connected to only one IQ, thus saving one I/O.

**Failsafe outputs (Q)** are individually safe and independently programmable outputs. There are both relay and transistor outputs. The transistor outputs deliver a negative voltage (-24 VDC) that facilitates the detection of a short circuit with other voltage potentials and increases safety. The transistor outputs are primarily intended for electromechanical components such as contactors and valves.

#### DYNlink solution

The DYNlink circuit is a unique solution that allows up to 10 DYNlink devices to be connected in series to a Pluto input while still reaching up to Cat. 4/PL e/SIL3. This saves inputs and cabling, since to reach the same level with standard two-channel safety devices, two inputs are necessary and series connection is not possible. The DYNlink solution checks the signal 200 times/second and a fault such as a short circuit will be detected before any safety device is used. Examples of DYNlink devices are Eden and Smile Tina. Most two-channel safety devices can be connected to the DYNlink solution using Tina adapters.

#### StatusBus functionality

The StatusBus functionality is available with some DYNlink devices and allows to collect the status of each individual safety device, even when connected in series. A single input on Pluto can collect the status of up to 30 safety devices. The devices are connected using standard cable and M12-5 connectors. No specific bus cable or extra communication module is necessary. All Pluto models offer the StatusBus functionality.

StatusBus logotype

#### Safety bus with All-Master function

The unique All-Master system allows simple scaling, splitting and modification of the safety system.

In a traditional safety PLC network, there is one Master and additional Slave units. But for Plutos connected to a safety bus, all units are Masters and make their own decisions, while still having the possibility to listen to what is happening to the other Plutos on the safety bus. This enables great flexibility when it comes to modification of the safety system. It also enables very simple replacement of a broken Pluto, since all Plutos have a copy of the application software of all other Plutos on the safety bus stored locally. If the replacement Pluto is given the same ID as the broken Pluto (using IDFIX), the software is downloaded from the safety bus with a simple button on the front of Pluto.

Up to 32 Pluto units can be connected to the Pluto safety bus. The Pluto S20 and S46 are stand-alone models and cannot be connected to the Pluto safety bus. All other models have bus functionality. The Safety bus functionality is necessary in order to use a Pluto gateway.

## Features

### Pluto

#### Pluto Manager

Pluto Manager is the programming software for Pluto, downloaded free of charge from our website <http://new.abb.com/low-voltage/products/safety-products/programmable-safety-controllers/pluto>

An update function in Pluto Manager helps you to always have the latest version installed as long as you have an Internet connection. Pluto Manager is a user friendly PC software that allows a simple configuration of the Pluto I/Os and programming in ladder logic and with TÜV approved function blocks.

Examples of what the available function blocks can handle:

- Two-channel safety devices, with or without Reset and Monitoring
- Single channel functions with Reset
- Muting functions
- Encoders and counters
- Communication with Gateways and StatusBus

Examples of ladder logic functions provided:

- Boolean instructions, Edge/inverted edge detection, Latch function, Toggle
- Timers
- Addition, Subtraction, Multiplication, Division
- Remanent memories
- Registers: 16 and 32 bit
- Sequence programming
- Option handling
- Online monitoring

In Pluto Manager there is a unique Option handling function suitable for series production of machines with different customer options. All versions of a machine type can have the same PLC program. To handle the different customer options, check boxes are used to set memories that activate the different functions of the code.

#### Current monitoring

Pluto A20 has a special current monitoring function. The function is mainly used to check if the connected muting lamps are working.

#### Harsh Environment

Pluto D20 and D45 are available in models that are suited for harsh environments and railway rolling stock in particular. These models have certificates for railway standards (e.g. EN 50126) and comply with standards for railway applications (EN 50155) that includes requirements on important electrical and mechanical aspects, as well as fire and smoke protection standard (EN 45545).

#### Remote monitoring and control

Remote monitoring allows the connection to a remote Pluto system via the Internet and an Ethernet gateway. Pluto Manager is used for the monitoring.

This function can be used for:

- Support of local maintenance personnel during trouble-shooting
- Regular monitoring of the status of the machine or process
- Follow-up of operational data like number of cycles/day or runtime.

Pluto Manager also offers remote control of a Pluto system using the Internet and an Ethernet gateway.

With the remote control function it is possible to:

- Download a program from PC to the remote Pluto
- Configure addressing of StatusBus slaves, write IDFIX code

The security of the remote control function is guaranteed by the use of the K-button on the Pluto. A change in a remote Pluto system cannot be made without a person at the remote Pluto confirming the action by pressing the K-button.

Configuration of the gateway itself, e.g. switching remote control on/off, can only be made via the programming port on the gateway and not via the Ethernet port.

## Accessories

### Pluto

#### Pluto gateways

Pluto gateways provide two-way communication between the Pluto safety bus, i.e. all the Pluto units connected to it, and other field buses. Several models are available for the most common field buses. Ready-made function blocks in Pluto Manager facilitate the communication. A gateway can be located anywhere on the Pluto safety bus.

#### Operator panels

An operator panel can be connected to the programming port of Pluto with a specific cable and communicate with Pluto in MODBUS ASCII. We recommend the ABB CP600 series operator panels that offer the appropriate communication driver. An operator panel can also communicate with Pluto via a GATE-MT gateway.

#### Pluto safe encoders

Rotary absolute encoders can be used for safe position determination. Our safe encoders are intended to be connected to the Pluto safety bus. They are available in single and multi-turn versions, with shaft or hollow shaft. Up to 16 absolute encoders can be connected to a Pluto safety bus. In Pluto Manager, specific function blocks make it easy to read and evaluate the values of two encoders forming a PL e/SIL3 solution. Apart from position, the speed values are available which means that also zero speed and overspeed can be monitored.

Examples of applications are gantry robots, industrial robots, and also eccentric shaft presses, where the encoders can replace existing cam mechanisms.

## Ordering information

### Pluto

#### Pluto ordering table

Pluto is available in different models depending on the needs of your application.

Optional features includes bus communication, high resolution analog inputs, current monitoring and adaption for harsh environments.

| Safety bus | Failsafe outputs a) | Failsafe inputs (max) b) | Analog inputs (max) b) | Fast counter inputs (max) b) | StatusBus inputs (max) b) | Non failsafe outputs (max) b) | Width mm                 | Type                     | Order code      |
|------------|---------------------|--------------------------|------------------------|------------------------------|---------------------------|-------------------------------|--------------------------|--------------------------|-----------------|
| No         | 4                   | 16                       | 1 c)                   | -                            | 4                         | 8                             | 45                       | Pluto S20                | 2TLA020070R4700 |

a) Failsafe outputs

2 failsafe outputs:

-2 independent individually safe potential free relay outputs (Q0 and Q1) with 3 contacts each

4 failsafe outputs:

-2 independent individually safe potential free relay outputs (Q0 and Q1)

-2 independent individually safe transistor outputs (-24 VDC) (Q2 and Q3)

6 failsafe outputs:

-2 independent individually safe potential free relay outputs (Q0 and Q1)

-2 independent individually safe potential free relay outputs with common supply (Q4 and Q5)

-2 independent individually safe transistor outputs (-24 VDC) (Q2 and Q3)

b) -The number of failsafe inputs available decreases with the number of used non-failsafe outputs, analog inputs, fast counter inputs and StatusBus inputs.

-The number of analogue inputs available decreases with the number of used fast counter inputs.

-The number of non-failsafe outputs available decreases with the number of StatusBus inputs used.

Check the Pluto hardware manual for more information.

c) 0-27 V analog inputs

d) 0-10 V/4-20 mA (high resolution) analog inputs

e) Expansion model with failsafe inputs and no failsafe outputs.

f) Expansion model with 2 failsafe outputs with 3 contacts each. Also possible to use as stand-alone unit.

g) Model with current monitoring

h) Pluto D20 (Harsh Env) and Pluto D45 (Harsh Env) have coated circuit boards and can be used in severe environments where cold and condensation can cause problems, like on trains and other vehicles and in the wind energy segment.

- They comply with railway standard EN 50155

- They can be used on all trains up to the highest hazard level (HL3) according to the fire and smoke protection standard EN 45545.

## Ordering information

### Pluto accessories

#### IDFIX identifiers

IDFIX is an identification circuit that is connected to Pluto. It must be used: when several Pluto are connected to the Pluto Safety bus (IDFIX-R or IDFIX-RW)

| Description   | Type           | Order code      |
|---|----------------|-----------------|
| Pre-programmed unique identification number.  | IDFIX-R        | 2TLA020070R2000 |
| Programmable identification number, i.e. the user can choose the identification number. | IDFIX-RW       | 2TLA020070R2100 |
| Storage of the Pluto program, 10 Kbyte. Especially useful for stand-alone Pluto.        | IDFIX-PROG 10k | 2TLA020070R2600 |

#### Pluto cables and connection accessories

| Description  | Type               | Order code      |
|--|--------------------|-----------------|
| Pluto programming and on-line monitoring cable. For a PC serial port, 9-pole D-sub connector.  | Pluto cable serial | 2TLA020070R5600 |
| Pluto programming and on-line monitoring cable. For a PC USB port.   | Pluto cable USB    | 2TLA020070R5800 |
| Cable for connecting a HMI-panel to the Pluto programming port. Connector on HMI-side: 15-pole D-sub. On Pluto side: 90 degrees angled Modbus contact. | Pluto cable HMI    | 2TLA020070R5700 |
| Cable for connecting HMI-panel ABB CP400 to Pluto programming port. Connector on HMI-side: 9-pole D-sub.   | Pluto cable CP400  | 2TLA020070R6700 |
| Cable for connecting HMI-panel ABB CP600 to Pluto programming port. Connector on HMI-side: 9-pole D-sub.   | Pluto cable CP600  | 2TLA020070R6900 |
| Bus cable for Pluto safety bus, 2 x 0.75 mm <sup>2</sup> . 100-meter ring.   | PCABLE-100         | 2TLA020070R6810 |
| Bus cable for Pluto safety bus, 2 x 0.75 mm <sup>2</sup> . 500-meter drum.   | PCABLE-500         | 2TLA020070R6850 |

#### Other accessories

| Description   | Type              | Order code      |
|---|-------------------|-----------------|
| Set of function blocks for mechanical presses.  | Pluto press block | 2TLA020070R4100 |
| Smile reset button for light button function with M12-5 connector.  | Smile 11 RB       | 2TLA030053R0100 |
| Handheld terminal StatusBus. Used for e.g. addressing and test. Connection to PC via USB-micro cable  | FIXA              | 2TLA020072R2000 |
| Terminating resistor for Pluto safety bus. Necessary for each stand-alone Pluto and on the Pluto units at each end of the Pluto safety bus. Should be removed from the other Pluto units. | R120 Resistor     | 2TLA020070R2200 |

## Ordering information

### DYNlink solution

#### Tina adaptation units to DYNlink

The Tina devices adapt the DYNlink signals from Pluto to safety components with mechanical contacts, such as E-stops, switches and light beams/curtains with dual outputs. Tina is available in several versions depending on the type of safety component that is connected to the DYNlink solution. Also available is connector blocks and a blind plug.

| Type of safety device   | Type of connection to the DYNlink loop  | Description  | Type        | Order code      |
|---|---|--|-------------|-----------------|
| Devices with positively driven force-guided contacts like E-stop buttons and key switches | Via the device connection   | Mounted directly on the device enclosure to a M20 cable entry.   | Tina 2A     | 2TLA020054R0100 |
|   |   | Placed inside the safety device enclosure  | Tina 2B     | 2TLA020054R1100 |
|   | M12-5 male connector  | Mounted directly on the device enclosure to a M20 cable entry.   | Tina 3A     | 2TLA020054R0200 |
|   | M12-5 male connector with extra conductor for the supply of the safety device | Two circuits and with supply voltage for the safety sensor. Connects to a M20 cable entry.                                     | Tina 3Aps   | 2TLA020054R1400 |
| Devices with positively driven force-guided contacts like E-stop buttons and key switches | Removable terminal blocks   | Mounted on a DIN rail in the electrical cabinet. Note that the connected safety device(s) must be mounted on the same cabinet. | Tina 7A     | 2TLA020054R0700 |
| Devices with OSSD outputs like Orion light guards   | M12-5 male connector  | Adaptation of OSSD to DYNlink. Two M12 connectors.   | Tina 10A v2 | 2TLA020054R1210 |
|   |   | Adaptation of OSSD to DYNlink with possibility to connect a local reset button. Three M12 connectors.                          | Tina 10B v2 | 2TLA020054R1310 |
|   |   | Adaptation of OSSD to DYNlink with possibility to power the transmitter. Three M12 connectors.                                 | Tina 10C v2 | 2TLA020054R1610 |

#### Connection blocks for serial connection of DYNlink devices (or devices with Tina adapter)

| Description  | Type     | Order code      |
|--|----------|-----------------|
| Tina 1A is a blind plug connected to the unused M12 connectors of the connection blocks Tina 4A and Tina 8A. | Tina 1A  | 2TLA020054R0000 |
| Connection block for the serial connection of up to 4 DYNlink devices with M12-5 connectors                  | Tina 4A  | 2TLA020054R0300 |
| Connection block for the serial connection of up to 8 DYNlink devices with M12-5 connectors                  | Tina 8A  | 2TLA020054R0500 |

## Ordering information

### Accessories

#### Pluto gateways

With the use of a gateway, Pluto can communicate with other control systems and form a part of a larger network. The gateway models GATE-D2 and C2 can also be used as an extension of the safety bus cable to extend the Pluto network.

| Fieldbus    | Ethernet | Type     | Order code      |
|-------------|----------|----------|-----------------|
| CANopen     |          | GATE-C2  | 2TLA020071R8100 |
| DeviceNet   |          | GATE-D2  | 2TLA020071R8200 |
| PROFIBUS-DP |          | GATE-P2  | 2TLA020071R8000 |
| EtherCAT    | x        | GATE-EC  | 2TLA020071R9100 |
| Ethernet/IP | x        | GATE-EIP | 2TLA020071R9000 |
| Modbus TCP  | x        | GATE-MT  | 2TLA020071R9400 |
| PROFINET    | x        | GATE-PN  | 2TLA020071R9300 |
| SERCOS III  | x        | GATE-S3  | 2TLA020071R9200 |

For more information, see the gateway manuals:  
Pluto gateways 2TLC172009M0210,  
Pluto Ethernet gateways 2TLC172285M0203

#### Pluto safe encoders

The safe encoders can be used together with Pluto to safely determine the position of machine movements.

| Function    | Shaft  | Shaft diameter (mm) | Type of connection      | Type                | Order code      |
|-------------|--------|---------------------|-------------------------|---------------------|-----------------|
| Single-turn | Solid  | 10                  | Connector male 12 poles | RSA 597 connector   | 2TLA020070R3600 |
|             |        | 6                   | 1.5 m cable             | RSA 597 1.5 m cable | 2TLA020070R3300 |
|             | Hollow | 12                  | 2 m cable               | RHA 597 2 m cable   | 2TLA020070R3400 |
|             |        |                     | 10 m cable              | RHA 597 10 m cable  | 2TLA020070R5900 |
| Multi-turn  | Solid  | 10                  | M12 connector           | RSA 698 10 mm solid | 2TLA020070R3700 |

For more information, see the manual:  
Pluto safe encoders 2TLC172006M0206

#### Pluto safe encoders accessories

| Description   | Type                           | Order code      |
|---|--------------------------------|-----------------|
| Female 12 pole connector to be used with absolute encoder "RSA 597 connector". Connector to be mounted on the cable.    | Connector for absolute encoder | 2TLA020070R3900 |
| M12 plug with Pluto safety bus termination resistor. To be used when the encoder is at one end of the Pluto safety bus. | M12-CANend                     | 2TLA020061R0300 |

#### Operator panels

An operator panel (also called HMI) can be connected to the Pluto programming port (on the Pluto front) with a special cable and communicate with Pluto using MODBUS ASCII. We recommend the ABB CP600 series that offer the appropriate communication driver. An operator panel can also communicate with Pluto via a GATE-MT gateway.

| Description   | Type  | Order code      |
|---|-------|-----------------|
| Operator panel, 4.3" touch screen, 480 x 272 pixels | CP604 | 1SAP504100R0001 |
| Eco cont panel, 7" tft hmi                          | CP607 | 1SAP507100R0001 |

# Introduction and overview

## Selection orientation and standards

Choose the right resolution for your application

### Finger detection

Light curtains with 14 mm resolution are intended for finger detection when the light guard needs to be very close to the machine in order to give the operator a good view and easy accessibility to the machine.

### Hand detection

Light curtains with 30 mm resolution are intended for hand detection and area protection and is often a good compromise between cost and accessibility to the machine. They offer a better sensing range than finger detection light curtains, but require a slightly greater safety distance.

### Body detection

Light grids have a resolution adapted for detection of the whole body and are intended for perimeter guarding where there is a requirement for high accessibility. They offer a very good sensing range, but require a much greater safety distance than light guards for finger and hand detection.

### Resolution and safety distance

The optical safety device must be installed so that no-one can reach the hazardous area without first passing through the detection zone of the light guard. The distance from the hazardous area to the detection zone of the optical safety device must be large enough in order for the machine to have time to stop before someone can reach the hazardous area.

This distance is called the safety distance, and it shall be calculated using the formula from EN ISO 13855.

The safety distance is influenced by the distance between each beam in the light guard. The closer the beams are together, the smaller the safety distance can be, which is why light curtains for finger detection can be placed much closer to the hazardous area than light grids for body detection.

## Safety distance according to EN ISO 13855

The distance 'S' is the minimum distance between a light curtain and a hazardous area. This is calculated with the formula from EN ISO 13855 - Safety of machinery - Positioning of safeguards with respect to the approach speeds of parts of the human body.

$$S = (K \times T) + C$$

S = minimum distance in mm

K = approach speed (of hand or body) in mm/s

T = stopping time of the machine (including reaction time of safety devices) in seconds

C = additional distance in mm based upon the body's intrusion towards the hazardous area before the safety device has been actuated.

Resolution for finger ( $\leq 14$  mm) gives  $C = 0$

NB If it is possible to reach the hazard zone by reaching over the light beam, an adjustment is made to the formula. In table 1 in EN ISO 13855 an alternative safety distance addition ( $C_{ro}$ ) is given to the formula  $S = (K \times T) + C$ . The greatest value out of C and  $C_{ro}$  is to be used to prevent reaching the hazard zone by reaching over the light curtain/grid.

## Minimum distances for light curtains installed vertically and horizontally according to EN ISO 13855

S = minimum distance in mm

H1 = the lower beam may not be situated higher than 300 mm above the ground

H2 = the upper beam may not be situated lower than 900 mm above the ground

S = minimum distance in mm

H = the light curtain detection zone must be positioned between 0 and 1000 mm above the floor

**For  $S \leq 500$  mm the minimum distance for vertical installation is calculated with the following formula:**

$$S = (2000 \times T) + 8 \times (d-14)$$

where d is the light curtain's resolution in mm.

K = 2000 mm/s is used to represent the speed of the hand. The expression  $(8 \times (d-14))$  may never be less than 0. Minimum distance S may never be less than 100 mm.

**If the minimum distance according to the formula above gets larger than 500 mm one can instead use:**

$$S = (1600 \times T) + 8 \times (d-14)$$

K = 1600 mm/s is used to represent the speed of the body. Minimum distance according to this formula is 500 mm.

**The minimum distance for horizontal installation is calculated with the following formula:**

$$S = (1600 \times T) + (1200 - 0.4 \times H)$$

where H is the height of the detection zone above the reference plane, e.g. the ground

$(1200 - 0.4 \times H)$  may not be less than 850 mm. Depending on the resolution, d, that the light curtain has, there is a minimum height where the detection zone may be placed. This is calculated with:

$$H = 15 \times (d - 50)$$

H cannot be less than 0. With a resolution  $d = 14$  or 30 mm one can therefore install the light curtain from  $H = 0$  and up. The higher it is situated, the shorter the minimum distance gets. The highest permissible height H of the detection zone is 1000 mm.

When you use a horizontal light curtain as perimeter protection, the depth of the light curtain shall be at least 750 mm to prevent people from inadvertently stepping over it. The estimated minimum distance is measured from the machine's hazardous section to the outermost beam of the horizontal light curtain (seen from the machine).

## Safety distance according to EN ISO 13855

### Minimum distance for light beams according to EN ISO

For light beams the minimum distance is calculated from the following:

$$S = (1600 \times T) + 850 \text{ mm}$$

NOTE! The additional distance will in most cases be more than 850 mm due to the possibility to reach over a light beam. ( $C_{r0}$ )

The formula applies to light guards with 2, 3 or 4 beams. It is the risk assessment that decides the number of beams that are to be chosen. The following possibilities must be considered.

- to crawl under the lowest beam;
- to reach over the top beam;
- to reach in between two beams;
- that the body passes in between two beams.

To fulfill the requirements the beams shall be installed at the following heights:

| Number of beams | Height over the reference plane, e.g. ground |
|-----------------|--|
| 4               | 300, 600, 900, 1200                          |
| 3               | 300, 700, 1100                               |
| 2               | 400, 900                                     |

### Minimum distance for single beams according to EN ISO 13855

A single beam as only protection is normally not suitable to prevent whole body access. Single beams are mostly used in combination with other safety devices or fixed guards.

The risk assessment should determine if a single beam is a suitable protection for the hazard in question.

The safety distance is calculated using:

$$S = (1600 \times T) + 1200 \text{ mm}$$

A height of 750 mm from the reference plane has been found suitable to prevent inadvertent access to the danger zone.

# Safety light curtain

## Orion1 Base

Orion1 Base is an easy to use light curtain with compact dimensions and two resolutions for detection of fingers and hands.

Light curtains are usually used closed to the hazardous zone when repeated access to the machine is necessary, for example manually serviced machines.

Light curtains can also be used to limit work zones inside the hazardous area and be mounted horizontally for area protection.

### Cost effective solution

#### No unnecessary functions

Orion1 Base comes with a minimum of advanced functionalities to save cost.

#### Minimized cabling

A local reset button can be connected directly to the light curtain. In this way there is no need for a cable between the reset button and the electrical cabinet or for an extra control module.

#### External device monitoring

Each light curtain can monitor the actuators without any extra control module (EDM function).

### Continuous operation

#### Visible alignment level

Since the alignment level is displayed, the alignment can be improved before the occurrence of an unwanted stop.

#### Extensive error indication

Extensive error indication reduces troubleshooting time.

#### Protection against harsh environment

Protective tubes and lens shields protect the devices in harsh environments.

### Easy to install

#### Easy to align

Alignment help and a wide angle within the limits of a Type 4 device facilitate alignment. Rotation brackets also simplify alignment.

#### Easy to connect

M12 connectors speed up cabling.

## Applications and features

### Orion1 Base

#### Applications

##### Vertical mounting

When using standard vertical mounting the light guard can be placed close to the hazard zone. This is suitable for applications where repeated access to the machine is necessary, e.g. manually serviced machines.

##### Horizontal mounting

Horizontal mounting is mainly used for area protection and limitation of work zones.

#### Features

##### Finger detection

A 14 mm resolution is intended for finger detection when the light guard needs to be very close to the machine in order to give the operator a good view and easy accessibility to the machine. A 14 mm resolution enables a sensing range of 6 m.

##### Hand detection

A 30 mm resolution is intended for hand detection and area protection and is a good compromise between cost and accessibility to the machine. A 30 mm resolution enables a sensing range of 19 m.

##### Local reset

A local reset button is connected directly to the light guard instead of to the safety control module in the electrical cabinet. This saves safety relays/PLC inputs and minimizes cabling to the electrical cabinet. Smart accessories simplify connectivity.

##### EDM

External Device Monitoring is a feature allowing the light guard to supervise the actuators in simpler applications, eliminating the need for a safety relay or programmable safety controller.

## Accessories

### Orion1 Base

#### Accessories

| Mounting accessories  |                   |                 |
|---|-------------------|-----------------|
| Description   | Type              | Order code      |
| Orion Test Piece 14 mm  | Orion TP-14       | 2TLA022310R5200 |
| Orion Test Piece 30 mm  | Orion TP-30       | 2TLA022310R5300 |
| Orion Laser pointer   | Orion Laser       | 2TLA022310R5000 |
| 4 rotation brackets for Orion1 Base   | JSM Orion03       | 2TLA022310R0100 |
| Kit for mounting of Orion1 & Orion2 in Stand (4 pieces for lengths shorter than 1200 mm)  | JSM Orion06       | 2TLA022310R0400 |
| Kit for mounting of Orion1 & Orion2 in Stand (6 pieces for lengths of 1200 mm or more)  | JSM Orion07       | 2TLA022310R0500 |
| Kit for mounting of Orion1 Mirror in Stand  | JSM Orion11       | 2TLA022310R0900 |
| Orion Plate kit for adjustment of protective stand  | Orion Stand Plate | 2TLA022312R5000 |
| Deviating mirror to be mounted in Orion Stand with one kit JSM Orion11  | Orion1 Mirror*    |                 |
| Protective stand  | Orion Stand*      |                 |
| Protective tube   | Orion WET*        |                 |
| Lens shield   | Orion Shield*     |                 |
| Connection accessories  |                   |                 |
| Smile reset button with NO contact  | Smile 11 RA       | 2TLA030053R0000 |
| Smile reset button with NO contact for Pluto  | Smile 11 RB       | 2TLA030053R0100 |
| Smile reset button with NO contact for Orion1 Base  | Smile 11RO1       | 2TLA022316R3000 |
| Y-connector for series connection of DYNlink devices with M12-5 connectors, e.g. Eden   | M12-3A            | 2TLA020055R0000 |
| Y-connector for connection of a Smile reset button to Orion   | M12-3R            | 2TLA022316R0000 |
| Y-connector for easy connection of a transmitter  | M12-3D            | 2TLA020055R0300 |
| Heat shrinking tubes for M12 connectors. Protects M12 connectors in harsh environments and provides extra protection against tampering. | M12 Safety seal   | 2TLA020053R0800 |
| Adaptation of OSSD to DYNlink. Two M12-5 connectors.  | Tina 10A v2       | 2TLA020054R1210 |
| Adaptation of OSSD to DYNlink with possibility to connect a local reset button. Three M12-5 connectors.                                 | Tina 10B v2       | 2TLA020054R1310 |
| Adaptation of OSSD to DYNlink with possibility to power the transmitter. Three M12-5 connectors.  | Tina 10C v2       | 2TLA020054R1610 |
| Spare parts (included when ordering Orion)  |                   |                 |
| 4 standard brackets for Orion1 & Orion2   | JSM Orion01       | 2TLA022310R0000 |

\*These accessories are available in different sizes.

#### How to choose correct reset button

| Local or global reset   | Adaption to DYNlink* | Safety control module                                 | Type          | Useful connection accessories   |
|---|----------------------|---|---------------|---|
| Local reset button connected to the light guard (Orion in manual reset mode)        | Yes                  | Vital or Pluto  | Smile 11RO1   | Tina 10B: OSSD to DYNlink + local reset button M12-3A: Serial connection of DYNlink |
|   | No                   | Any safety control module compatible with light guard | Smile 11RO1   | M12-3R: Easy connection of a local reset button                                     |
| Global reset button connected to the control module (Orion in automatic reset mode) | Yes                  | Vital   | Smile 11 RA   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter      |
|   |                      | Pluto   | Smile 11 RB   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter      |
|   | No                   | Any safety control module compatible with light guard | Smile 11 RA** |   |

\* The ABB Jokab Safety DYNlink solution offers the following advantages:

- Serial connection of safety devices while maintaining PLe/cat. 4, up to 25 Tina 10 per Vital and up to 5 Tina 10 per Pluto input.
- Only one safety input of the Pluto instead of two with the standard OSSD outputs.

\*\* Smile 11 RA has one NO contact, which is the most common for reset buttons. Please check what is requested for the chosen safety control module.

## Cables and connectors

Letters (a, b, c, d, e, t1, t2, t3) refer to cables in connection examples, e.g.: -2TLC010002T0001 Connection diagram Orion\_cables Tina10 M12-3A M12-3D

- 1) M12-CTO1BA (t1) can be used for:
- connection of Orion1 Base to Tina 10A/C
  - replacement of Focus II in automatic reset with Orion in automatic reset.
- The EDM function should be deactivated in all cases.
- 2) M12-CTO1BM (t2) can be used for:
- connection of Orion1 Base to Tina 10B or M12-3R for use of a local reset button, for example Smile 11ROx
  - replacement of Focus II in manual reset with Orion in manual reset.
- The EDM function should be deactivated in all cases.

## Connection examples

### Orion1 Base

#### Orion with Tina 10A/C

Without local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10 A/C. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with Tina 10B

With local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10B. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with M12-3R

Connection of a local reset button via M12-3R.

# Safety light curtain

## Orion1 Extended

Orion1 Extended is an easy to use light curtain with compact dimensions. It has two resolutions for detection of fingers and hands, and comes with advanced features like cascading, muting and blanking.

Light curtains are usually placed closed to the hazardous zone when repeated access to the machine is necessary, for example manually serviced machines.

Cost effective solution

### Integrated muting function

Muting sensors are connected directly to the light grid, with no need for a remote muting module.

### No dead zones

The light beams cover all of the profile length, without the usual dead zones at the ends requiring extra mechanical guards.

### Easy serial connection

Cascading with the standard units: no separate slave or master units.

Easy to install

### Easy to align

Alignment help and a wide angle within the limits of a Type 4 device facilitate installation.

### Easy to connect

Our cables with M12 connectors speed up connectivity.

Continuous operation

### Reduced downtime

Extensive error indication reduces troubleshooting time.

### Interference protection

Protection against mutual interference with coding.

## Features

### Orion1 Extended

#### Finger detection

A 14 mm resolution is intended for finger detection when the light guard needs to be very close to the machine in order to give the operator a good view and easy accessibility to the machine. A 14 mm resolution enables a sensing range of 7 m.

#### Hand detection

A 30 mm resolution is intended for hand detection and area protection and is a good compromise between cost and accessibility to the machine. A 30 mm resolution enables a sensing range of 20 m.

#### Blanking

The blanking function allows to define a number of beams that can be constantly interrupted without stopping the machine. In this way a fixed material or a cable is allowed in the protected field, but a hand interrupting an extra beam would stop the machine. With floating blanking, the object, for ex. the cable, can move within the protected field.

#### No dead zones

A special feature of Orion1 Extended is that the light beams cover all of the profile length, without any dead zones. This enables to place it inside openings, instead of having a larger light guard in front of an opening.

#### Cascading

All Orion1 Extended units can be connected in series (cascaded) to easily create a suitable light curtain setup with no special units needed.

#### Muting

By connecting muting sensors to the light guard, it can distinguish material from persons and allow the material to pass through an opening but not persons.

#### Local reset

A local reset button is connected directly to the light guard instead of to the safety control module in the electrical cabinet. This saves safety relays/programmable inputs and minimizes cabling to the electrical cabinet.

#### EDM

External Device Monitoring is a feature allowing the light guard to supervise the actuators in simpler applications, eliminating the need for a safety relay or programmable safety controller.

# Safety light grid

## Orion2 Base

Orion2 Base is a compact light grid for access protection.

The light grid has 2-4 beams and is intended for body detection.

With an operating distance of 50 m between transmitter and receiver the light grid is suitable for applications with deviating mirrors.

Cost effective solution

### Minimized cabling

A local reset button can be connected directly to the light grid, eliminating the need for a cable between the reset button and the electrical cabinet or for an extra control module.

### External device monitoring

Each light grid can monitor the actuators without any extra control module (EDM function).

Easy to install

### Alignment help

Alignment help and a wide angle within the limits of a Type 4 device facilitate installation.

### Easy adjustment

Rotation brackets make alignment easy.

### Fast connection

M12 connectors speed up cabling.

Continuous operation

### Protection in harsh environments

The housing is IP65 rated. Protective tubes and lens shields are available to provide further protection for the device in harsh environments.

## Applications and features

### Orion2 Base

#### Applications

##### Body detection over long distances

With 2-4 beams and a maximum sensing range of 50 m between transmitter and receiver, the light grid is intended for body detection and can be used with deviating mirrors to form a protective perimeter around a dangerous area.

#### Features

##### EDM

External Device Monitoring is a feature allowing the light guard to supervise the actuators in simpler applications, eliminating the need for a safety relay or programmable safety controller.

##### Local reset

A local reset button is connected directly to the light guard instead of to the safety control module in the electrical cabinet. This saves safety relays/programmable inputs and minimizes cabling to the electrical cabinet. Smart accessories simplify connectivity.

#### How to choose correct reset button

| Local or global reset  | Adaption to DYNlink* | Safety control module                                 | Type          | Useful connection accessories  |
|--|----------------------|---|---------------|--|
| Local reset button connected to the light guard<br>(Orion in manual reset mode)        | Yes                  | Vital or Pluto  | Smile 11RO2   | Tina 10B: OSSD to DYNlink + local reset button<br>M12-3A: Serial connection of the DYNlink |
|  | No                   | Any safety control module compatible with light guard | Smile 11RO2   | M12-3R: Easy connection of a local reset button  |
| Global reset button connected to the control module<br>(Orion in automatic reset mode) | Yes                  | Vital   | Smile 11 RA   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter             |
|  | No                   | Pluto   | Smile 11 RB   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter             |
|  | No                   | Any safety control module compatible with light guard | Smile 11 RA** | -  |

\* The ABB Jokab Safety DYNlink solution offers the following advantages:

- Serial connection of safety devices while maintaining PLe/cat. 4, up to 25 Tina 10 per Vital and up to 5 Tina 10 per Pluto input.
- Only one safety input of the Pluto instead of two with the standard OSSD outputs.

\*\* Smile 11RA has one NO contact, which is the most common for reset buttons. Please check what is requested for the chosen safety control module.

## Cables

|           |               |        |                 |                                 |                         |                 |                 |

Letters (a, b, c, d, e, t3) refer to cables in connection examples, e.g: -2TLC010002T0001 Connection diagram Orion cables Tina10 M12-3A M12-3D

1) Used for the connection to Tina 10, M12-3D and M12-3R. Tina 10 can be connected directly to the light guard without cable, but will form an angle (i.e. not be aligned) with the light guard, which might be a problem if the light guard is mounted close to a wall/aluminum profile.

#### Separate Cables and connectors

| Description                                   | Type           | Order code      |

## Connection examples

### Orion2 Base

#### Orion with Tina 10A/C

Without local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10 A/C. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with Tina 10B

With local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10B. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with M12-3R

Connection of a local reset button via M12-3R.

# Safety light grid

## Orion2 Extended

Orion2 Extended is a compact light grid for access protection in muting applications.

The light grid has 2-4 beams and is intended for body detection.

### Cost effective solution

#### Integrated muting function

Muting sensors are connected directly to the light grid, with no need for a remote muting module.

#### Minimized cabling

A local reset button can be connected directly to the light grid, eliminating the need for a cable between the reset button and the electrical cabinet.

#### External device monitoring (EDM)

Each light grid can monitor the actuators without any extra control module.

### Easy to install

#### Alignment help

Alignment help and a wide angle within the limits of a Type 4 device facilitate installation.

#### Easy adjustment

Rotation brackets make alignment easy.

#### Fast connection

M12 connectors speed up cabling.

### Continuous operation

#### Protection in harsh environments

The housing is IP65 rated. Protective tubes and lens shields are available to provide further protection for the device in harsh environments.

## Features

### Orion2 Extended

#### Muting

Orion2 Extended is intended for muting applications. By connecting muting sensors to the light guard, it can distinguish material from persons and allow the material to pass through an opening but not persons. Muting sensors and a connection box for muting are available to simplify the muting application.

#### Local reset

A local reset button is connected directly to the light guard instead of to the safety control module in the electrical cabinet. This saves safety relays/PLC inputs and minimizes cabling to the electrical cabinet. Smart accessories simplify connectivity.

#### EDM

External Device Monitoring is a feature allowing the light guard to supervise the actuators in simpler applications, eliminating the need for a safety relay or programmable safety controller.

## Ordering information

### Orion2 Extended

#### Ordering details

| Resolution (Detection)<br>mm | Protected height<br>mm | Type<br>(Transmitter + receiver) | Order code      |
|------------------------------|------------------------|----------------------------------|-----------------|
| Body                         | 500 (2 beams)          | Orion2-4-K2-050-E                | 2TLA022305R0000 |
|                              | 800 (3 beams)          | Orion2-4-K3-080-E                | 2TLA022305R0100 |
|                              | 900 (4 beams)          | Orion2-4-K4-090-E                | 2TLA022305R0200 |
|                              | 1200 (4 beams)         | Orion2-4-K4-120-E                | 2TLA022305R0300 |

## Accessories

### Orion2 Extended

#### Connection Accessories

| Description   | Type            | Order code      |
|---|-----------------|-----------------|
| Connection box for two or four muting sensors   | OMC1            | 2TLA022316R2000 |
| Retroreflex photoelectric sensor  | Mute R2         | 2TLA022044R0500 |
| Adjustable mounting bracket for M18 sensors (e.g. Mute R2).   | JSM 64          | 2TLA040007R0200 |
| Reflector diameter 63 mm  | Reflect 1       | 2TLA022044R2000 |
| Reflector diameter 82 mm  | Reflect 2       | 2TLA022044R3000 |
| Smile reset button with NO contact  | Smile 11 RA     | 2TLA030053R0000 |
| Smile reset button with NO contact for Pluto  | Smile 11 RB     | 2TLA030053R0100 |
| Smile reset button with NC contact for Orion2 Base/Extended and Orion3 Extended   | Smile 11RO2     | 2TLA022316R3100 |
| Y-connector for series connection of DYNlink devices with M12-5 connectors, e.g. Eden   | M12-RA          | 2TLA020055R0000 |
| Y-connector for connection of a Smile reset button to Orion   | M12-3R          | 2TLA022316R0000 |
| Y-connector for easy connection of a transmitter  | M12-3D          | 2TLA020055R0300 |
| Heat shrinking tubes for M12 connectors. Protects M12 connectors in harsh environments and provides extra protection against tampering. | M12 Safety seal | 2TLA020053R0800 |
| Adaptation of OSSD to DYNlink. Two M12-5 connectors.  | Tina 10A v2     | 2TLA020054R1210 |
| Adaptation of OSSD to DYNlink with possibility to connect a local reset button. Three M12-5 connectors.                                 | Tina 10B v2     | 2TLA020054R1310 |
| Adaptation of OSSD to DYNlink with possibility to power the transmitter. Three M12-5 connectors.  | Tina 10C v2     | 2TLA020054R1610 |

#### Mounting accessories

|  |                   |                 |
|--|-------------------|-----------------|
| Orion Test Piece 14 mm   | Orion TP-14       | 2TLA022310R5200 |
| Orion Test Piece 30 mm   | Orion TP-30       | 2TLA022310R5300 |
| Orion Laser pointer  | Orion Laser       | 2TLA022310R5000 |
| 4 standard brackets for Orion1 & Orion2  | JSM Orion01       | 2TLA022310R0000 |
| 4 rotation brackets for Orion2   | JSM Orion04       | 2TLA022310R0200 |
| Kit for mounting of Orion1 & Orion2 in Stand (4 pieces for lengths shorter than 1200 mm) | JSM Orion06       | 2TLA022310R0400 |
| Kit for mounting of Orion1 & Orion2 in Stand (6 pieces for lengths of 1200 mm or more)   | JSM Orion07       | 2TLA022310R0500 |
| Orion Plate kit for adjustment of protective stand                                       | Orion Stand Plate | 2TLA022312R5000 |
| Deviating mirror in stand for Orion 2 and 3  | Orion Mirror*     |                 |
| Protective stand   | Orion Stand*      |                 |
| Protective tube  | Orion WET*        |                 |
| Lens shield  | Orion Shield*     |                 |

#### Spare parts (included when ordering Orion)

|   |             |                 |
|---|-------------|-----------------|
| 4 standard brackets for Orion1 & Orion2 | JSM Orion01 | 2TLA022310R0000 |
|---|-------------|-----------------|

\*These accessories are available in different sizes.

For more information see:

Orion Mirror 2TLC172060L0201, Orion Stand 2TLC172059L0201, Orion WET 2TLC172061L0201, Orion Shield 2TLC172071L0201

For more information about the connection accessories see:

Orion connection accessories 2TLC172101L0201

#### How to choose correct reset button

| Local or global reset                               | Adaption to DYNlink* | Safety control module                                 | Type          | Useful connection accessories  |
|---|----------------------|---|---------------|--|
| Local reset button connected to the light guard     | Yes                  | Vital or Pluto  | Smile 11RO2   | Tina 10B: OSSD to DYNlink + local reset button<br>M12-3A: Serial connection of DYNlink |
| (Orion in manual reset mode)                        | No                   | Any safety control module compatible with light guard | Smile 11RO2   | M12-3R: Easy connection of a local reset button  |
| Global reset button connected to the control module | Yes                  | Vital   | Smile 11 RA   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter         |
| (Orion in automatic reset mode)                     |                      | Pluto   | Smile 11 RB   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter         |
|   | No                   | Any safety control module compatible with light guard | Smile 11 RA** |  |

\* The ABB Jokab Safety DYNlink solution offers the following advantages:

- Serial connection of safety devices while maintaining PLe/cat. 4, up to 25 Tina 10 per Vital and up to 5 Tina 10 per Pluto input.
- Only one safety input of the Pluto instead of two with the standard OSSD outputs.

\*\* Smile 11 RA has one NO contact, which is the most common for reset buttons. Please check what is requested for the chosen safety control module.

## Cables

### Orion2 Extended

#### Cable with connectors

| Connector     | Female/male   | Length | Special feature                 | Type                            | Order code              |                 |                 |
|---------------|---------------|--------|---------------------------------|---------------------------------|-------------------------|-----------------|-----------------|
| M12-5         | Female        | 3 m    |                                 | M12-C31                         | 2TLA020056R0500         |                 |                 |

Letters (a, b, c, d, e, t3) refer to cables in connection examples, e.g:  
[2TLC010002T0001](#) Connection diagram Orion\_cables\_Tina10\_M12-3A\_M12-3D

- 1) Used for the connection to Tina 10, M12 3D and M12-3R. Tina 10 can be connected directly to the light guard without cable, but will form an angle (i.e. not be aligned) with the light guard, which might be a problem if the light guard is mounted close to a wall/aluminum profile.  
 2) M12-CYMUTE is used to simplify the connection of 2 or 4 muting sensors with the help of the OMC1 connection box.

#### Separate cables and connectors

| Description                                   | Type           | Order code      |

## Connection examples

### Orion2 Extended

#### Orion with Tina 10A/C

Without local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10 A/C. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with Tina 10B

With local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10B. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with M12-3R

Connection of a local reset button via M12-3R.

#### Connection of muting sensors with M12-CYMUTE and OMC1

NB: Cable with M12-5 male + female connectors shall be used between muting sensors and OMC1 inputs A1, B1, A2, B2.

#### Connection diagrams

# Safety light grid

## Orion3 Base

Orion3 Base is a light grid with a sturdy profile for access protection.

Only one of the parts needs power supplied, since both transmitter and receiver are in the same active part. The other part is passive with mirrors to reflect the beams.

With 2-4 beams and an operating range of up to 8 m, it is intended for body detection.

Easy to install

### Alignment help

Alignment help and a wide angle within the limits of a Type 4 device facilitate installation.

### Easy adjustment

Rotation brackets make alignment easy.

### Fast connection

M12 connectors speed up cabling.

### Less cabling

Only the active part needs connecting.

Cost effective solution

### Minimized cabling

A local reset button can be connected directly to the light grid, eliminating the need for a cable between the reset button and the electrical cabinet or for an extra control module.

### External device monitoring

Each light grid can monitor the actuators without any extra control module (EDM function).

Continuous operation

### Minimized cabling

A local reset button can be connected directly to the light grid, eliminating the need for cable between the reset button and the electrical cabinet or for an extra control module.

### External device monitoring

Each light grid can monitor the actuators without any extra control module (EDM function).

## Features

### Orion3 Base

#### Sturdy profile for demanding applications

With its thicker and sturdier profile Orion3 is suitable for applications with tougher requirements.

#### EDM

External Device Monitoring is a feature allowing the light guard to supervise the actuators in simpler applications, eliminating the need for a safety relay or programmable safety controller.

#### Power on one side

Both transmitter and receiver are in one active part, and the other part is passive containing mirrors. This simplifies installation and saves cables, making it easier to place in applications where cables need to be avoided.

#### Local reset

A local reset button is connected directly to the light guard instead of to the safety control module in the electrical cabinet. This saves safety relays/PLC inputs and minimizes cabling to the electrical cabinet. Smart accessories simplify connectivity.

## Ordering information

### Orion3 Base

#### Ordering details

| Detection | Protected height<br>mm | Active or passive part | Type               | Order code      |
|-----------|------------------------|------------------------|--------------------|-----------------|
| Body      | 500<br>(2 beams)       | Active part            | Orion3-4-K1C-050-B | 2TLA022306R0000 |
|           |                        | Passive part           | Orion3-4-M1C-050   | 2TLA022306R1000 |
|           | 800<br>(3 beams)       | Active part            | Orion3-4-K2C-080-B | 2TLA022306R0100 |
|           |                        | Passive part           | Orion3-4-M2C-080   | 2TLA022306R1100 |

## Accessories

### Orion3 Base

#### Accessories

| Mounting accessories  |                   |                 |
|---|-------------------|-----------------|
| Description   | Type              | Order code      |
| Orion Laser pointer   | Orion Laser       | 2TLA022310R5000 |
| 4 standard brackets for Orion3  | JSM Orion05       | 2TLA022310R0300 |
| Kit for mounting of Orion3 in Stand (4 pieces for lengths shorter than 1200 mm)   | JSM Orion08       | 2TLA022310R0600 |
| Kit for mounting of Orion3 in Stand (6 pieces for lengths of 1200 mm or more)   | JSM Orion09       | 2TLA022310R0700 |
| Orion Plate kit for adjustment of protective stand  | Orion Stand Plate | 2TLA022312R5000 |
| Deviating mirror in stand for Orion 2 and 3   | Orion Mirror*     |                 |
| Protective stand  | Orion Stand*      |                 |
| Connection accessories  |                   |                 |
| Smile reset button with NO contact  | Smile 11 RA       | 2TLA030053R0000 |
| Smile reset button with NO contact for Pluto  | Smile 11 RB       | 2TLA030053R0100 |
| Smile reset button with NC contact for Orion3 Base  | Smile 11 RO3      | 2TLA022316R3200 |
| Y-connector for series connection of DYNlink devices with M12-5 connectors, e.g. Eden   | M12-3A            | 2TLA020055R0000 |
| Y-connector for connection of a Smile reset button to Orion   | M12-3R            | 2TLA022316R0000 |
| Y-connector for easy connection of a transmitter  | M12-3D            | 2TLA020055R0300 |
| Heat shrinking tubes for M12 connectors. Protects M12 connectors in harsh environments and provides extra protection against tampering. | M12 Safety seal   | 2TLA020053R0800 |
| Adaptation of OSSD to DYNlink. Two M12-5 connectors.  | Tina 10A v2       | 2TLA020054R1210 |
| Adaptation of OSSD to DYNlink with possibility to connect a local reset button. Three M12-5 connectors.                                 | Tina 10B v2       | 2TLA020054R1310 |
| Adaptation of OSSD to DYNlink with possibility to power the transmitter. Three M12-5 connectors.  | Tina 10C v2       | 2TLA020054R1610 |
| Spare parts (included when ordering Orion)  |                   |                 |
| 4 standard brackets for Orion3  | JSM Orion02       | 2TLA022310R1000 |

\*These accessories are available in different sizes.

Orion connection accessories 2TLC172101L0201

#### How to choose correct reset button

| Local or global reset                               | Adaption to DYNlink* | Safety control module                                 | Type          | Useful connection accessories  |
|---|----------------------|---|---------------|--|
| Local reset button connected to the light guard     | Yes                  | Vital or Pluto  | Smile 11 RO3  | Tina 10B: OSSD to DYNlink solution + local reset button<br>M12-3A: Serial connection of the DYNlink solution |
|   | No                   | Any safety control module compatible with light guard | Smile 11 RO3  | M12-3R: Easy connection of a local reset button  |
| (Orion in manual reset mode)                        |                      |   |               |  |
| Global reset button connected to the control module | Yes                  | Vital   | Smile 11 RA   | Tina 10A: OSSD to DYNlink solution Tina 10C: OSSD to DYNlink solution + supply to transmitter/active part    |
|   |                      | Pluto   | Smile 11 RB   | Tina 10A: OSSD to DYNlink solution Tina 10C: OSSD to DYNlink solution + supply to transmitter/active part    |
| (Orion in automatic reset mode)                     |                      |   |               |  |
|   | No                   | Any safety control module compatible with light guard | Smile 11 RA** | -  |

\* The ABB Jokab Safety DYNlink solution offers the following advantages:

- Serial connection of safety devices while maintaining PLe/cat. 4, up to 25 Tina 10 per Vital and up to 5 Tina 10 per Pluto input.

- Only one safety input of the Pluto instead of two with the standard OSSD outputs.

\*\* Smile 11 RA has one NO contact, which is the most common for reset buttons. Please check what is requested for the chosen safety control module.

## Connection examples

### Orion3 Base

#### Orion with Tina 10A/C

Without local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10 A/C. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with Tina 10B

With local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10B. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with M12-3R

Connection of a local reset button via M12-3R.

#### Connection diagrams

For Orion3 Base connection diagrams please see <https://library.abb.com/>

# Safety light grid

## Orion3 Extended

Orion3 Extended is a sturdy light grid for access protection in muting applications.

Only one of the parts needs power supplied, since both transmitter and receiver are in the same active part. The other part is passive and contains mirrors to reflect the beams.

With 2-4 beams and an operating range of up to 8 m, it is intended for body detection.

Cost effective solution

### Integrated muting function

Muting sensors are connected directly to the light grid, with no need for a remote muting module.

### Minimized cabling

A local reset button can be connected directly to the light grid, eliminating the need for a cable between the reset button and the electrical cabinet.

### External device monitoring (EDM)

Each light grid can monitor the actuators without any extra control module.

Easy to install

### Alignment help

Alignment help and a wide angle within the limits of a Type 4 device facilitate installation.

### Easy adjustment

Rotation brackets make alignment easy.

### Fast connection

M12 connectors speed up cabling.

### Less cabling

Only the active part needs connecting.

Continuous operation

### Visible alignment level

Since the alignment level is displayed, the alignment can be improved before the occurrence of an unwanted stop.

### Extensive error indication

Extensive error indication reduces troubleshooting time.

## Applications and features

### Orion3 Extended

#### Application

##### Muting

Orion2 Extended is intended for muting applications. By connecting muting sensors to the light guard, it can distinguish material from persons and allow the material to pass through an opening but not persons. Muting sensors and a connection box for muting are available to simplify the muting application.

#### Features

##### Power on one side

Both transmitter and receiver are in one active part, and the other part is passive and contains mirrors. This simplifies installation and saves cables, making it easier to place in applications where cables need to be avoided.

##### EDM

External Device Monitoring is a feature allowing the light guard to supervise the actuators in simpler applications, eliminating the need for a safety relay or programmable safety controller.

##### Sturdy profile for demanding applications

With its thicker and sturdier profile Orion3 is suitable for applications with tougher requirements.

##### Local reset

A local reset button is connected directly to the light guard instead of to the safety control module in the electrical cabinet. This saves safety relays/PLC inputs and minimizes cabling to the electrical cabinet. Smart accessories simplify connectivity.

## Ordering information

### Orion3 Extended

#### Ordering details

| Detection | Protected height<br>mm | Active or passive part | Type               | Order code      |
|-----------|------------------------|------------------------|--------------------|-----------------|
| Body      | 500 (2 beams)          | Active part            | Orion3-4-K1C-050-E | 2TLA022307R0000 |
|           |                        | Passive part           | Orion3-4-M1C-050   | 2TLA022306R1000 |
|           | 800 (3 beams)          | Active part            | Orion3-4-K2C-080-E | 2TLA022307R0100 |
|           |                        | Passive part           | Orion3-4-M2C-080   | 2TLA022306R1100 |
|           | 900 (4 beams)          | Active part            | Orion3-4-K2C-090-E | 2TLA022307R0200 |
|           |                        | Passive part           | Orion3-4-M2C-090   | 2TLA022306R1300 |
|           | 1200 (4 beams)         | Active part            | Orion3-4-K2C-120-E | 2TLA022307R0300 |
|           |                        | Passive part           | Orion3-4-M2C-120   | 2TLA022306R1400 |

Please note that active and passive parts are ordered separately and both are necessary for Orion3 Extended to function.

## Accessories

#### How to choose correct reset button

| Local or global reset                               | Adaption to the DYNlink solution* | Safety control module                                 | Type          | Suitable connection accessories  |
|---|-----------------------------------|---|---------------|--|
| Local reset button connected to the light guard     | Yes                               | Vital or Pluto  | Smile 11R02   | Tina 10B: OSSD to DYNlink + local reset button<br>M12-3A: serial connection of DYNlink |
| (Orion in manual reset mode)                        | No                                | Any safety control module compatible with light guard | Smile 11R02   | M12-3R: Easy connection of a local reset button  |
| Global reset button connected to the control module | Yes                               | Vital   | Smile 11 RA   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter         |
| (Orion in automatic reset mode)                     |                                   | Pluto   | Smile 11 RB   | Tina 10A: OSSD to DYNlink<br>Tina 10C: OSSD to DYNlink + supply to transmitter         |
|   | No                                | Any safety control module compatible with light guard | Smile 11 RA** | -  |

\* The ABB Jokab safety DYNlink solution offers the following advantages:

- Serial connection of safety devices while maintaining PLe/cat. 4, up to 25 Tina 10 per Vital and up to 5 Tina 10 per Pluto input.

- Only one safety input of the Pluto instead of two with the standard OSSD outputs.

\*\* Smile 11RA has one NO contact, which is the most common for reset buttons. Please check what is requested for the chosen safety control module.

Letters (a, b, c, d, t2, t3) refer to cables in connection examples, e.g:  
[2TLC010002T0002 Connection diagram Cables Orion3 to Tina10](#)

- 1) These cables (t2) are used for the connection to Tina 10, M12 3D and M12-3R. Tina 10 can be connected directly to the light guard without cable, but will form an angle (i.e. not be aligned) with the light guard, which might be a problem if the light guard is mounted close to a wall/aluminum profile.  
 2) M12-CYMUTE is used to simplify the connection of 2 or 4 muting sensors with the help of the OMC1 connection box.

#### Separate cables and connectors

## Connection examples

### Orion3 Extended

#### Orion with Tina 10A/C

Without local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10 A/C. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with Tina 10B

With local reset button

Connection to the ABB Jokab Safety DYNlink signal via Tina 10B. To be used with Vital safety control module or Pluto programmable safety controller.

#### Reset to Orion with M12-3R

Connection of a local reset button via M12-3R.

#### Connection of muting sensors with M12-CYMUTE and OMC1

NB: Cable with M12-5 male + female connectors shall be used between muting sensors and OMC1 inputs A1, B1, A2, B2.

# Introduction and overview

## Selection guide

ABB has a full range of switches for monitoring doors and hatches, both with and without locking function.

|                     | Eden   | OCB   | Sense   |
|---------------------|--|---|---|
|                     |    |   |   |
| <b>Function</b>     | Interlock  | Connection Block  | Interlock   |
| <b>Type</b>         | Non-contact switch   | OCB Sensor connection block   | Magnetic non-contact switch   |
| <b>Description</b>  | The original non-contact sensor with unique fault-detection capabilities.  | Connection block for OSSD and voltage free safety sensor signals.   | Coded and non-coded magnetic switch available in plastic as well as stainless steel for harsh environments.   |
| <b>Applications</b> | Monitoring doors and hatches. Ideal for use in harsh environments such as food and beverage. Also for monitoring of end positions of e.g. an overhead crane.   | It is used to simplify the connection of multiple sensors by only having one cable out from the control cabinet to the sensors. Sensors are either treated as in series or with individual safety signals.  | Monitoring doors and hatches.   |
| <b>Advantage</b>    | <ul style="list-style-type: none"> <li>• Flexible mounting</li> <li>• M12 connectors</li> <li>• IP69K for harsh environments</li> <li>• One switch to reach Cat. 4</li> <li>• Unique coding to prevent defeat</li> <li>• Local reset minimizes cabling</li> <li>• Non-contact eliminates wear</li> </ul> | <ul style="list-style-type: none"> <li>• Reduced total cable length with appr. 30m</li> <li>• Reduced number of cables to the cabinet</li> <li>• Reduced number of cable glands in the cabinet</li> <li>• Reduced number of terminal blocks in the cabinet</li> <li>• M12 connectors</li> <li>• OCB housing has an IP67 rating</li> </ul> | <ul style="list-style-type: none"> <li>• Stainless steel</li> <li>• IP69K for harsh environments</li> <li>• Extreme temperature range</li> <li>• Coded sensor</li> <li>• Non-contact eliminates wear</li> </ul> |

|                     | MKey  | Magne   | GKey   |
|---------------------|---|---|--|
|                     |                     |                                  |    |
| <b>Function</b>     | Interlock and process/safety lock   | Interlock and process lock  | Interlock and safety lock  |
| <b>Type</b>         | Mechanical switch   | Electromagnetic lock  | Mechanical safety lock   |
| <b>Description</b>  | A classic and well-tried solution.  | A robust magnetic lock with strong holding force.   | A robust safety lock with die cast housing.  |
| <b>Applications</b> | Monitoring doors and hatches. Also available with safe locking.                                       | Locking doors and hatches to prevent interruption of machines with short stopping time e.g. robotics applications.  | Safe locking of hinged and sliding doors for machines with a long stopping time.   |
| <b>Advantage</b>    | <ul style="list-style-type: none"> <li>• Holds the door closed</li> <li>• Possible to lock</li> </ul> | <ul style="list-style-type: none"> <li>• Robust design for harsh environments</li> <li>• M12 connectors.</li> </ul> | <ul style="list-style-type: none"> <li>• Safe locking</li> <li>• Robust design</li> <li>• Room to integrate 22 mm pilot devices</li> <li>• Rear escape release</li> <li>• High level coding</li> <li>• Lockout function</li> <li>• Manual unlocking (auxiliary release)</li> </ul> |

## Introduction and overview

### Selection orientation

#### The difference between locking and interlocking functions

##### Interlocking function

An interlocking function indicates if a door is open or closed. When the door is open the interlocking function also prevents dangerous machine functions, but it does not prevent the door from being opened.

Interlocking function e.g. Eden

##### Locking function

A locking function prevents the door from being opened until an unlocking signal has been sent.

Locking function e.g. Magne

##### When to use interlocking and locking functions

An interlocking function is required if the dangerous machine functions needs to be stopped when someone enters the dangerous area.

A locking function is required if a user can open a door/hatch and reach the dangerous machine parts before the dangerous machine functions have ceased. It is also required if the process needs to be protected from unwanted stops that would occur if a person could open a door in the middle of a critical stage of the process..

#### The difference between a process lock and a safety lock

All locks of the ABB Jokab Safety range can be used as process locks but only GKey and the models of MKey that uses power to unlock can be used as safety locks. Here is why:

A **process lock** protects the process. One example of an application is a lock on a door giving access to a machine with short stopping time, e.g. a welding machine. The door should not be unlocked before the end of the welding cycle. Should the door be unlocked before the end of the cycle (as a consequence of a fault in the installation like a loss of power or a short-circuit) the door could be opened, which would result in a process stop. It might take a long time to restart the process, but no person would have had time to come close to the danger or get injured. Since the lock only protects the process there is no need for a safe locking signal.

Process lock e.g. Magne

A **safety lock** protects people. One example of an application is a lock on a door giving access to a dangerous machine with a long stopping time, e.g. a circular saw. The door should never be unlocked before the dangerous movement has stopped, not even as a consequence of a fault in the installation like a loss of power or a short-circuit. Should the door be unlocked before the machine has stopped, a person could open the door and have time to get close to the dangerous movement and get injured. Since the lock is protecting the person, the unlocking signal should be safe. Since a loss of power should not unlock a safety lock, only locks that require power to unlock (e.g. +24 VDC) can be used as safety locks.

Safety lock e.g. GKey

# Non-contact safety sensor

## Eden

Eden is a non-contact safety sensor used as an interlocking device for e.g. doors and safe position monitoring.

Eden consists of two parts: Adam and Eva. Adam senses the presence of Eva without mechanical contact and therefore without any wear. The compact size of Eden and its 360° mounting possibility make it easy to use in most applications.

Different models of Eden are available for different types of control modules. All Eden models make it very easy to reach PL e, often using fewer components than other solutions.

All Eden models have an IP67/IP69K sealing.

Continuous operation

### Easier troubleshooting

Extensive LED indication and status information reduce downtime.

### Suitable in harsh environments

IP67/IP69K and a temperature range of -40 to +70°C offer an excellent resistance in demanding environments.

### No wear, no mechanical breakage

Non-contact sensing means no mechanical wear and the large sensing tolerance gives a better tolerance to vibrations, resulting in fewer unwanted process stops.

Affordable range

### Local reset function

The integrated reset function reduces the number of cables and PLC inputs.

### PL e with fewer components

Series connection with PL e, local reset and DYNlink signal allow to considerably reduce the number of components needed to reach PL e.

Easy to install

### Large mounting tolerance

A 360° mounting possibility with generous tolerances facilitates mounting.

### Fast connection

M12 connectors, local reset and accessories speed up installation.

---

## Applications

### Eden

#### Doors and hatches

Eden monitors whether the hatch is open or closed. The dangerous movement is stopped as soon as the hatch is opened.

#### Position control

Eden can be used to monitor the position of a machine when someone is in the work area. This can be useful when removing power to the machine causes problems like a long restart time. As long as the machine remains in the safe position monitored by Eden, a person can be allowed to enter the hazardous area even though the machine is still powered. If the machine leaves the safe position while the person is still in the hazardous area, power is removed from the machine.

## Features

### Eden

#### Easy PL e with Eden safety sensor

Eden sensors can be connected in series while maintaining Cat. 4. Only one Eden per guard is necessary to reach PL e (instead of two key switches). Eden reaches PL e without any need for periodic checks (see ISO/TR 24119).

#### Low or high level coded sensor

Eva is available with General code or Unique code. If a new Adam is paired with an Eva general code at start up, Adam will accept all Eva with general code as a valid actuator. Eden will then classify as a low level coded sensor. If a new Adam is paired with an Eva Unique code at startup, Adam will only accept this specific Eva as a valid actuator. In this case Eden is classified as a high level coded sensor. A high level coded sensor should be used when the motivation to defeat a sensor cannot be eliminated (see EN ISO 14119:2013).

#### 360° mounting possibility

Eden offers 360° mounting possibility with generous tolerances.

#### Local reset button

A local reset button with integrated LED can be connected directly to Adam Reset instead of to the safety control module. In this way, each Eden can easily have its own reset button, which saves cable length and safety relay/PLC inputs. Adam Reset monitors the reset function and manages the LED in the reset button in the following way:

- on - Adam and Eva are not in contact
- flashing - Adam and Eva in contact, waiting for reset
- off - Adam and Eva in contact and reset

#### Info signal and extensive indication facilitate troubleshooting

All Eden models offer extensive LED indication to help troubleshooting and localizing which doors/hatches are opened. The LED on Adam lights in green or red depending on status:

- green - valid Eva within range
- red - valid Eva out of range
- flashing red/green - valid Eva within range, but no valid safety signal received (loop broken “upstream”)

#### Simple status information with StatusBus

StatusBus is a simple and cost effective way to collect the status information of safety sensors. The StatusBus functionality is available with some DYNlink devices and allows to collect the status of each individual safety device, even when connected in series. A single input on Pluto safety PLC can collect the status of up to 30 safety devices. The devices are connected using standard cable and M12-5 connectors. No specific bus cable or extra communication module is necessary.

## Models

### Eden

#### Eden DYN

Eden DYN consists of an Adam DYN and an Eva (general or unique code). Adam DYN uses the ABB Jokab Safety DYNlink signal that allows you to connect several safety products in series while maintaining PL e using only one channel. DYNlink signals must be used with Vital safety controller or Pluto safety PLC. Up to 30 Adam DYN can be connected in series to Vital and up to 10 Adam DYN can be connected in series to one input of Pluto. All products using the DYNlink signal can easily be connected in series and mixed in the same loop with a maintained PL e. Tina adapters allow the use of other products in a DYNlink loop, and a wide range of connection accessories simplifies the cabling.

#### Eden OSSD

Eden OSSD consists of an Adam OSSD and an Eva (general or unique code). Adam OSSD can be used with all safety relays and safety PLCs compatible with OSSD signals (commonly used for light guards). Up to 30 Adam OSSD can be connected in series, and since OSSD devices monitor their own outputs for short circuits, a Cat. 4/PL e can still be reached.

## Ordering information

## SAFETY PRODUCTS

**OCB**

## Sensor connection block

**OCB is a connection block for OSSD and voltage free safety sensor signals. It is used to simplify the connection of multiple sensors by only having one cable out from the control cabinet to the sensors.**

**Up to 4 sensors can be connected to each OCB.**

**Sensors can be either OSSD or voltage free.**

**Sensors are either treated as in series or with individual safety signals.**

Speed up your projects

**Easy connection**

The M12 connectors are fast and easy to use, while minimizing the risk of poor connection.

**No programming required**

Just connect the sensors to the OCB and the wires to the safety controller – and you're good to go.

**Reduced wiring**

Only one cable required for each OCB, reducing the number of wires to the cabinet to 25 % or less.

Continuous operation

**Simple replacement**

If you need to replace any of the sensors, you just disconnect it and connect the new one. No configuration required.

**Simple trouble shooting**

OCB always provides individual status information for each sensor, in order to simplify trouble shooting.

**Resistant to demanding environments**

The OCB housing has an IP67 rating and can be used in applications with temperatures from -25 to +80 °C.

Safety and protection

**Easy to reach highest safety level**

OSSD connection always reaches Cat 4/PL e.

Voltage free sensors with individual safety signals results in Cat 4/ PL e.

Voltage free sensors connected in series depends on the configuration, but are often Cat 3/PL d.

## Connection example

### OCB vs traditional connection

#### Traditional connection

A traditional connection with 4 sensors connected in series for gates and hatches on a machine, with individual status information for each sensor. The control cabinet is 10 m away from the machine.

#### OCB connection

Using OCB for the same machine would result in a number of advantages for the cabling:

- Reduced total cable length with appr. 30 m
- Reduced number of cables to the cabinet
- Reduced number of cable glands in the cabinet
- Reduced number of terminal blocks in the cabinet

## Models

### OCB

#### Model descriptions

##### OCB-1A - serial OSSD

OCB-1A is used for serial connection of the safety signals of up to 4 Eden OSSD sensors. It has four M12-8 pin female connectors for the connection of the safety sensors and one M12-8 pin male connector for connection to the electrical cabinet. The blanking plug JSOP-8 must be connected to any unused M12 sensor connectors. Individual information output is available from each sensor.

Compatible sensors: Adam OSSD-Info M12-8, and other OSSD sensors with compatible pin configuration.

OCB-1A

##### OCB-2A - serial voltage free

OCB-2A is used for serial connection of the safety signals of up to 4 sensors with voltage free contacts. It has four M12-5 pin female connectors for the connection of the safety sensors and one M12-8 pin male connector for connection to the electrical cabinet. Blanking plug JST2 must be connected to any unused M12 sensor connectors. Individual information output is available from each sensor.

Compatible sensors: Smile, LineStrong, MKey, EStrong, and other sensors with compatible pin configuration.

OCB-2A

##### OCB-3A - individual OSSD

OCB-3A is used for individual connection of the safety signals of up to 4 Eden OSSD sensors. It has four M12-5 pin female connectors for the connection of the safety sensors and one M12-12 pin male connector for connection to the electrical cabinet.

Compatible sensors: Adam OSSD-Info M12-5, Orion, and other OSSD sensors with compatible pin configuration.

OCB-3A

##### OCB-4A - individual voltage free

OCB-4A is used for individual connection of the safety signals of up to 4 sensors with voltage free contacts. It has four M12-5 pin female connectors for the connection of the safety sensors and one M12-12 pin male connector for connection to the electrical cabinet.

Compatible sensors: Smile, LineStrong, MKey, EStrong, and other sensors with compatible pin configuration.

# Safety magnetic switch

## Sense

Sense is a non-contact switch for interlocking gates and hatches that is available in coded and non-coded versions

Sense is available in plastic and stainless steel housing. The stainless steel versions are designed for harsh environments and extreme temperatures.

Sense offers an interlocking function reaching PL e/SIL3 with low level coding.

### Safety and protection

#### High safety level

Sense has two closing and one opening solid state contacts. Two of these need to be monitored to achieve PL e/SIL3.

#### LED indication

An integrated LED shows the status of the sensor.

### Easy to install

#### Compact size

Sense is compact in size to make it easy to position and hide on gates and hatches.

#### Large sensing distance

With a large sensing distance and a high tolerance for misalignment Sense7 is easy to install.

### Reliable in extreme conditions

#### Stainless steel models

With a stainless steel 316 body and a IP67/IP69K rating, Sense is resistant to harsh environments with both dirt and water. The stainless steel has a mirror polished finish (Ra4) suitable for CIP cleaning - food splash zones according to EHEDG guidelines.

#### High temperatures

Sense stainless steel models can be used at temperatures from -25 °C up to 105 °C.

## Ordering information

### Sense

#### Ordering details

Sense is always delivered with both switch and actuator.

| Description  | Connector  | Cable length (m) | Contacts | Type           | Order code      |

# Safety interlock switch

## MKey

MKey are mechanical safety switches used for monitoring doors and hatches. The switch is mounted on the frame and the actuator key on the moving part of the guard.

All MKey models have a safe interlocking function. Some MKey models can be locked and depending on the locking signal they can be used either as process locks or safety locks (with a safe unlocking function).

MKey switches are available in different materials and sizes in order to meet the requirements of different applications.

Safety and protection

### Highest level of safety

PL e/SIL3 can be reached when using two switches on a door.

### Safety lock

Models that use power to unlock can be used as safety locks.

### Emergency escape button

When using MKey8ER with an integrated emergency escape button, it is always possible to open the door from inside the dangerous zone.

Continuous operation

### Strong holding force

A holding force of up to 2000 N prevents unwanted process stops.

### Robust design

Models are available in full stainless steel housing with IP69K, suitable for most applications in food processing and chemical industries.

### Status information

Auxiliary contacts give status information.

Easy to install

### Easy mounting with rotating head

The head of the switch can be mounted in up to 8 actuating positions to allow different mounting positions.

### Flexible keys

Flexible keys are available to minimize mechanical wear and allow a smaller movement radius and use in reduced spaces.

## Applications

### MKey

#### Doors and hatches

MKey is used to monitor the position of doors and hatches.

The models with locking function are usually used for:

- Processes which should not be interrupted, such as welding.
- Machinery with a long stopping procedure, such as paper machinery that requires a long braking operation.
- Prevention of unauthorized access to a particular area.

Please note that all safety key switches (including MKey) normally need two switches per door/hatch in order to reach PL e/SIL3. (See EN ISO 13849 and EN ISO 14119.)

#### Locking and interlocking

An interlocking function indicates if a door is open or closed and prevents movement when the door is open, but it does not prevent the door from being opened. A locking function makes sure the door is kept closed.

#### Process lock with safe interlocking

All MKey models offer a safe interlocking function that will stop the process if the door/hatch is opened. All lockable models of MKey can also be used as a process lock to prevent the process from being interrupted.

An example of an application where a process lock could be used is a welding robot where the stopping time is short, but the welding should not be interrupted once it has started.

#### Safety lock with safe interlocking and safe unlocking

The MKey models that use power to unlock can be used as safety locks. They have a safe unlocking function, which means that the loss of power for these locks will not result in the release of the locking element, and the door will remain locked even during a power failure.

An example of an application where a safety lock should be used is a circular saw that would have a long stopping time after a power failure.

## Features

### MKey

#### Different models

MKey 1 through 6 are simple mechanical interlocks while MKey8 and MKey9 also have locking functions.

- MKey 1 through 6: plastic body with plastic or stainless steel head, or full stainless steel body and head. Holding force 12 N or 40 N.
- MKey8: robust design in die cast metal or stainless steel body and head. Holding force of 2000 N.
- MKey9: plastic body with stainless steel head. Holding force of 1800 N.

#### Different materials and protection classes

The housing and head of the key switches are available in different material in order to meet the requirements of different applications. Metal heads are more resistant to mechanical wear. The choice between plastic, die cast or stainless steel depends on the environment and the chemicals used. Models ending with -Z are completely made of stainless steel 316 and offers an IP69K protection class. They can be high pressure hosed with detergent at high temperature and can be used in harsh applications, e.g. the food processing and chemical industries. All other models offer IP67.

#### Emergency escape button

MKey8ER has a manual release button at the rear of the housing. It is used for emergency exit by a person locked inside the dangerous zone by mistake. It is a non-latching manual escape, and can be used when the risk assessment requires it. The switch must be mounted so that the release button is reachable from inside the dangerous zone, but not reachable from outside. Pressing and holding the button will release the locking mechanism allowing to open the door/guard.

#### Power to lock or power to unlock

Two different types of locking function are available:

- Spring lock (power to unlock) models are automatically locked when closing the door. An active signal (+24 VDC) must be supplied to unlock the switch, which makes these models suitable as safe locks.
- Electro-magnetic lock (power to lock) models are locked when an active signal (+24 VDC) is supplied, which makes these models suitable only as process locks.

#### Rotatable head

Depending on model, the head of MKey can be set in two or four directions with two entrance holes each, thus providing four or eight different mounting positions. The leading edges of the actuator key are reinforced and beveled in order to guide it properly into the hole.

#### Constructed for safety

All MKey switches have double positively operated forced-guided contacts controlled by the actuator key. This means that the contacts that are closed when the actuator key is in the switch will be forced to open, and the ones that are opened will be forced to close, when the actuator key is removed. It also means that it is not possible to have, e.g. NO and NC contacts opened at the same time due to a fault like one welded contact.

The actuator key is designed to prevent tampering with the safety switch using a tool, a magnet or any similar object. The lockable models also have forced-guided contacts controlled by the locking mechanism. MKey8 and MKey9 have auxiliary contacts giving status information.

## Accessories

### MKey

#### Actuator keys

Choose standard key or flat key depending on suitable mounting direction, e.g. standard door or sliding door.  
Flexible keys are suitable for doors/hatches with a smaller opening radius (i.e. 100-175 mm).

| Type of key  | Compatible MKey models   | Key housing     | Description  | Type          | Order code      |

# Electromagnetic process lock

## Magne

Magne is an electromagnetic process lock intended for locking doors and hatches.

Magne is usually used to prevent unwanted process interruptions, e.g. during a welding operation.

Magne models with integrated Adam safety sensor make it easy to achieve the highest safety level for the interlocking function.

Reliable in extreme conditions

### Sealed aluminium housing

IP67 sealing makes Magne suitable for harsh environments.

### Robust design

The electromagnetic lock without mechanical moving parts is a robust design with fewer parts that are subject to wear.

### Hygienic design

Flat surfaces without cavities or screws sticking out minimize the risk of accumulating dirt on the surface.

Easy to install

### M12 connectors

Quick and easy cabling with M12 connectors.

### Magnets simplify installation

Electromagnets offer larger mounting tolerances than mechanical locks.

Continuous operation

### LED diagnostics

Integrated LED diagnostics reduce down time when troubleshooting.

### Strong holding force

A holding force of up to 1500 N prevents unwanted process stops.

## Applications and features

### Magne

#### Applications

##### Protect the process

Magne 4 is a process lock, with a safe interlocking function. This means that the interlocking function reaches PL e/SIL3 but the unlocking signal is not a safe signal. A typical application is to prevent unintentional/unnecessary interruptions of a sensitive process when the dangerous movement has a very short stop time.

Magne 3 is a simple lock without any interlocking function/safety function.

#### Features

##### PL e in a simple and cost effective way

Magne 4 has an integrated Adam sensor. Models are available with either Adam DYN or Adam OSSD. Eva General code or Eva Unique code is ordered separately. The use of the Eden safety sensor makes it easy to reach PL e/SIL3 for the interlocking function, and enables serial connection of several Magne 4 locks to the Pluto safety PLC using only one input for Eden DYN and two for Eden OSSD. Tina 12A can be used for the serial connection of two Magne 4 locks in order to simplify connection, reduce cabling and risk of connection errors.

##### Optional permanent magnet

Anchor plates for Magne are ordered separately and are available with or without a permanent magnet. A permanent magnet holds the door closed when Magne is unlocked, or if there is a power loss. Without the permanent magnet, Magne has no magnetic field when unlocked, which avoids the accumulation of metallic particles on the magnet.

##### Harsh environments

With a hygienic enclosure in anodized aluminum and IP67 protection class, Magne is well suited for harsh environments.

##### M12 connectors

Since the Adam sensor is integrated in Magne 4, the amount of cabling is reduced so that only one cable is necessary for both the locking of Magne and the interlocking with Eden. The M12 connectors speed up connection and reduce the risk of connection errors.

##### Status indication

Most models offer an info signal indicating whether the Magne is locked or not, which simplifies troubleshooting and improves user friendliness.

##### Locking and interlocking

An interlocking function indicates if a door is open or closed and prevents movement when the door is open but it does not prevent the door from being opened. A locking function makes sure the door is kept closed.

## Ordering information

### Magne

#### Ordering details

For a complete Magne lock both door part and frame parts are necessary.  
Magne 4 also requires a separate Eva sensor.

| Safe interlocking with integrated Adam | Safety signal  | Extra function                            | Connector         | Type               | Order code      |

# Safety lock

## GKey

GKey is a robust safety lock with a die cast housing for hinged and sliding doors.

GKey offers an interlocking function reaching PL e/SIL 3 with high level coding. Power is needed to unlock GKey which makes GKey a safety lock.

GKey is fitted with a rear escape release button and manual unlocking (auxiliary release).

GKey offers four positions for 22 mm pilot devices.

Safety and protection

### Escape release

The door can always be opened from inside the danger zone using the escape release button.

### High level coding

A standard mechanical interlock combined with RFID coding offers high level coding.

### Lockout function

GKey can be padlocked off for safe working.

Easy to install

### Integrated buttons

There are four positions in the key housing that can be used for integrating push buttons, switches or pilot lights.

Reliable in extreme conditions

### Robust design

Made of die cast aluminum alloy with a robust construction, GKey is ideal for use in mechanically demanding environments.

## Ordering details

### GKey

For a complete safety lock, a switch and a mounting plate with front handle must be ordered separately.

Rear handle, spring catch, pilot devices and blanking plugs for the unused positions are available and also ordered separately.

#### Switches

All models are fitted with an escape release button and delivered with a high level coded RFID actuator.

| Material (body) | Positions for pilot devices | Manual unlock | Type     | Order code      |
|-----------------|-----------------------------|---------------|----------|-----------------|
| Die cast        | 4                           | Yes           | GKey4 RU | 2TLA050304R0002 |

#### Mounting plate with front handle

The handle can be mounted on hinged doors and sliding doors, on the left or on the right.

Note that door and frame must be aligned when the door is closed.

Each order code includes a mounting plate for the switch and a front handle.

| Type of handle | Material (mounting plates and sliding bolt) | Type      | Order code      |
|----------------|---|-----------|-----------------|
| Sliding        | Die cast                                    | FHS GKey4 | 2TLA050310R0032 |

#### Accessories - Rear handle and spring loaded catch

The spring loaded catch prevents from closing the door by mistake.

When the sliding handle is in open position, the catch must be pulled in order to be able to push back the handle to closed position.

| Type of handle | Material | Description  | Type          | Order code      |
|----------------|----------|--------------|---------------|-----------------|
| Sliding        | Die cast | Rear handle  | RHS GKey MKey | 2TLA050040R0510 |
|                |          | Spring catch | SCS GKey MKey | 2TLA050040R0511 |

#### Accessories - Pilot devices

Pilot devices and blanking plugs must be ordered separately. Make sure that the total amount is 4, so that all holes in GKey4 are covered.

| Description                          | Contacts | Illuminated | Voltage    | Type         | Order code      |
|--------------------------------------|----------|-------------|------------|--------------|-----------------|
| Emergency stop button                | 2NC      | No          | 24 V AC/DC | CE3P-10R-02  | 1SFA619501R1051 |

# Introduction and overview

## Selection orientation and standards

### Different types of control devices

#### When to use a two-hand or one-hand control device

A two-hand control device is often used for machines with manual loading or unloading. The operator uses the two-hand control device to safely start a machine cycle. A two-hand control must be used with a safety control device that supervises that both buttons are pressed simultaneously, i.e. both hands are on the control and therefore outside the dangerous zone, in order to start the dangerous movement. A one-hand control device can be used in applications when the operator cannot reach the hazardous area with his/her free hand, or on less dangerous machines.

#### When to use a three-position device

A three-position device (or hold-to-run device) is used to allow limited movement of the machine when the operator needs to be in the dangerous area without stopping the dangerous machine, for example during troubleshooting, test running or programming.

The operator pushes the larger black button to a middle position in order to allow a movement. In case of danger, the operator will either release the button or squeeze it to its bottom position and the machine will stop.

#### Standards

The safety distance of two-hand control devices should be calculated using EN ISO 13855.

When constructing a two-hand station for a machine, the standard EN 574 about functional aspects and principles for design needs to be followed.

# One-and two-hand devices

## Safeball™

Safeball™ is an ergonomic control device used for safe start and stop of machine cycles. Usually two Safeball™ are used together to form a two-hand control.

Safeball™ consists of a spherical ball containing two embedded push button switches, one on each side of the ball. Both buttons must be pressed in order to start and operate the machine. The risk of unintentional activation is thereby minimized and the device is simple and ergonomic to use.

When two Safeball™ are used in a two-hand device application, the operator must press all four push buttons simultaneously in order to operate the machine. If one or more of the buttons are released, a stop signal is given to the machine.

### Optimum interface

#### **Ergonomic design**

The design of Safeball™ allows for comfort of use for all hand sizes and has a variety of gripping positions. There is no need for shrouding top covers to prevent defeat, as there is for two-hand devices with standard push buttons.

#### **Flexible mounting**

With the JSM C5 mounting bracket, Safeball™ can be orientated in the most ergonomic position for the operator.

### Safety and protection

#### **Unique design**

The unique design of Safeball™ combines the highest level of safety with the best ergonomics.

#### **Highest safety level**

Safeball™ provides the operator with a dual switching function and short-circuit supervision in each hand.

## Applications and features

### Safeball™

#### Applications

##### One-hand control device

One Safeball™ can be used as an ergonomic “hold to run” button, i.e. the movement is allowed as long as both push buttons on Safeball™ are pressed, usually when the operator cannot reach the hazardous area with his/her free hand, or on less dangerous machines. Safeball™ is a very practical one-hand control device since it is very easy to locate and activate.

##### Two-hand control device

A two-hand control device is often used for machines with manual loading or unloading. The operator uses the two-hand control device to safely start a machine cycle. A two-hand control must be used with a safety control device that makes sure that both buttons are pressed simultaneously, i.e. both hands are on the control and therefore outside the dangerous zone, in order to start the dangerous movement. Using two Safeball™, it is easy to realize a custom two-hand device.

#### Features

##### Mounting methods

Safeball™ can be mounted in many different ways. It can be mounted on a table, on the machine, on a support or wherever suitable for ergonomic reasons. Safeball™ can be mounted in a fixed position or on a tilting and/or rotating support when used with a JSM C5. This flexibility in mounting enhances ergonomics and minimizes work-related musculoskeletal disorders.

When two Safeball™ are used as a two-hand device, no shrouding top cover is necessary to prevent defeat, as it is for two-hand devices with push buttons, since it is very difficult to push all 4 push buttons of the two Safeball™ with e.g. a hand and an elbow.

##### Highest level of safety

When used as a two-hand control device, a safety controller for two-hand devices must be used, like an appropriate Sentry safety relay or a Pluto programmable safety controller. The safety controller monitors that all four push buttons (i.e. on each side of both Safeball™) are pressed within 0.5 second, in order to detect e.g. a short circuit or fraud, like a rubber band around one device. Safeball™ is certified to comply with type III C according to EN 574+A1:2008.

##### JSTD25

The JSTD25 control stations are pre-built two-hand devices utilizing the ergonomics of the Safeball™. They can be used as fixed devices that are easy to install, or as mobile devices. All models are equipped with shields to protect the buttons from accidental operation, and also protect from damage if the device is dropped on the floor when used as a mobile device. All versions meet EN 574 and EN ISO 13849-1.

# Three-position device

## JSHD4

JSHD4 is a three-position device used to allow a limited movement of the machine when the operator is in the dangerous area, for example during troubleshooting, test running and programming.

The operator pushes the larger black button to a middle position in order to allow a movement. In case of danger, the operator will either release the button or squeeze it to its bottom position and the machine will stop.

JSHD4 is available with different types of connectors for an optimal adaptation to the application. Some models offer additional top and front button to control a non-safe signal, for ex. move forward and/or backward.

### Safety and protection

#### Cheat-safe hand recognition

All JSHD4 models comply with PL e/Cat 4. Some models offer an “anti-tamper” function: an extra signal that indicates if the JSHD4 is held in the middle position by a human hand. A machine movement will be authorized only in presence of this signal and not if the device is held in run position by any other (fraudulent) mean.

### Optimum interface

#### Ergonomic shape and operation

JSHD4 is ergonomic, both in respect of its shape, fitting to the hand, and the way the buttons are operated. JSHD4 is easy to operate using just the fingers (even with gloves), and the middle position provides a safe resting position.

### Continuous operation

#### Safely inspect a running machine

JSHD4 allows the operators to safely inspect the manufacturing process without completely stopping the machine.

## Applications and features

### JSHD4

#### Applications

##### Safe troubleshooting, programming and testing

If the operator has to enter a risk area for troubleshooting or test running, it is extremely important that he/she is able to stop the machinery without having to rely on someone else pushing a stop button. In addition, no-one else should be able to start the machinery after it has been stopped by the operator. An operator who is under pressure must also be able to give a stop signal, whether in panic he/she pushes harder on the button or just releases it.

JSHD4 three-position control device can be used for troubleshooting, programming and test running in situations where no other protection is available or feasible. JSHD4 allows the operator to safely inspect the process without completely stopping the machine. The big black button has 3 distinct positions: released, pressed gently and pressed hard. The middle position allows the machine to run with limited speed or range, but when released or pressed hard the machine stops.

#### Features

##### Hand recognition for protection against tampering

An optional “anti-tamper” function sends an extra signal to indicate if the JSHD4 is held by a human hand or not. By using this, the safety level is increased, and the risk of manipulation or bypass of the safety function is reduced. It is no longer possible to expose the operator to danger by trying to lock the three-position control device in run mode.

##### Ergonomic design

JSHD4 is ergonomic, both in respect of its shape, fitting to the hand and the way the buttons are operated. It is easy to operate the device by using just the fingers (even with gloves), and the middle position provides a secure resting position.

##### Additional top and front buttons for non-safe signals

The two additional buttons can be used for e.g. start/stop, up/down or forward/ back. Internally the device is duplicated. The three-position function itself is built up of two completely independent three-position buttons which feels like one button for the user.

## Ordering information

| JSHD4 protection coat   | JSHD4 Coat      | 2TLA020200R4600 |
| Heat shrinking tubes for M12 connectors. Protects M12 connectors in harsh environments and provides extra protection against tampering. | M12 Safety seal | 2TLA020053R0800 |

### JSHD4H2

The three-position button of JSHD4 is available as a separate part for either external mounting or panel mounting. JSHD4H2A/B are intended for mounting on the back side of a handheld teaching pendant or similar. JSHD4H2 can be mounted in a panel hole.

| Mounting                | Leads       | Hand  | Type           | Order code      |
|-------------------------|-------------|-------|----------------|-----------------|
| External mounting       | 6 x 150 mm  | Left  | JSHD4H2A       | 2TLA020002R0200 |
|                         |             | Right | JSHD4H2B       | 2TLA020002R0210 |
| Internal panel mounting | 6 x 150 mm  | -     | JSHD4H2 0.15 m | 2TLA020002R3100 |
|                         | 6 x 1200 mm | -     | JSHD4H2 1.2 m  | 2TLA020002R4500 |

## Electrical wiring diagrams

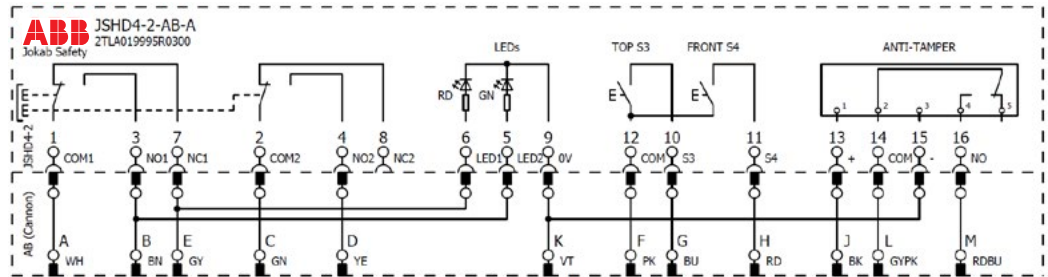

Examples with JSHD4-1 and JSHD4-2 models

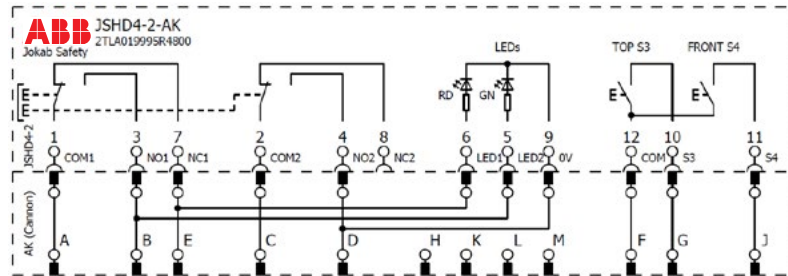

**JSHD4-1-AA, cable gland and 5 screw connections on JSHD4-1**

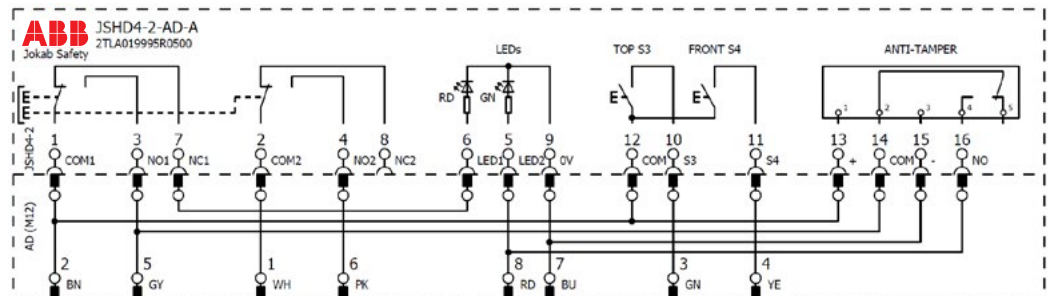

**JSHD4-2-AB-A, Cannon 12 pins**

**JSHD4-2-AK, Cannon 12 pins**

**JSHD4-2-AD-A, M12-8**

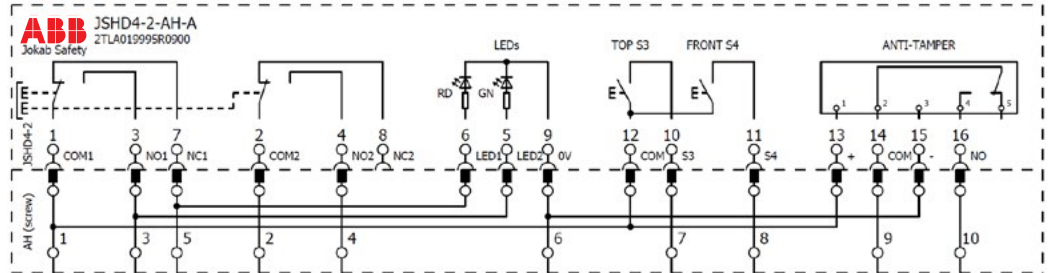

# Electrical wiring diagrams

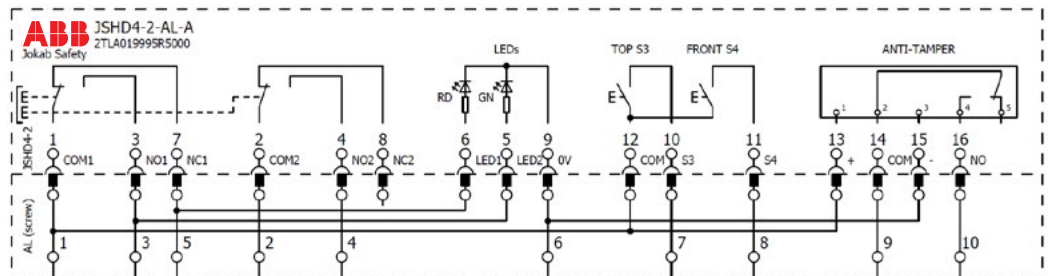

Examples with JSHD4-2 models

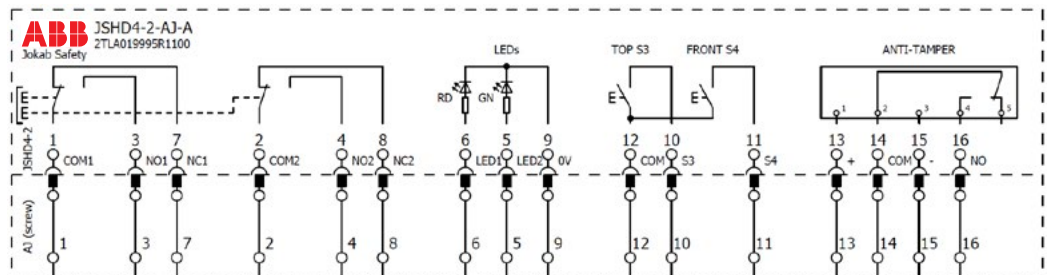

**JSHD4-2-AH-A, cable gland and 10 screw connection**

**JSHD4-2-AL-A, cable gland and 10 screw connection**

**JSHD4-2-AJ-A, cable gland and 16 screw connection**

## Technical data

### JSHD4

---

#### Technical data

##### Approvals

##### Conformity

2006/42/EC - Machines  
 2014/30/EU - EMC  
 2011/65/EU - RoHS  
 EN ISO 12100-1:2010, EN ISO 13849-1:2015, EN ISO 13849-2:2012, EN 60204-1:2006+A1:2009,  
 EN 61000-6-2:2005, EN 61000-6-3:2007

##### Functional safety data

EN ISO 13849-1:2016 Up to PL e (depending on number of operations per year)  
 B<sub>10d</sub>: 2 000 000 to middle position, 968 000 to bottom position

##### Electrical data

Current allowed, three-position button Per channel: Maximum +30 VDC, 20 mA, (Minimum +10 VDC, 8 mA)

Current allowed, extra button Maximum 500 mA

Operation force Approx. 15 N for three-position buttons (ON)

Approx. 45 N for three-position buttons (OFF)

Approx. 2.5 N for top/front push button

##### Mechanical data

Operating temperature - 10 ...+50 °C

Protection class IP65

Mechanical life 1 000 000 cycles to middle position

Weight Approx. 0.2 kg without cable

# Three-position device

## HD5

HD5 is a three-position device developed to meet most demands of the Food and Beverage industry.

A three-position device is used to allow a limited movement of the machine when the operator is in the dangerous area, for example during troubleshooting, test running and programming. The operator pushes the larger black button to a middle position in order to allow a movement. In case of danger, the operator will either release the button or squeeze it to its bottom position and the machine will stop.

The housing of the HD5 is made of PPh, that not only is approved for contact with foodstuff, but also resists the most commonly used chemicals during cleaning in the Food and Beverage industry. Without sharp edges, there are no places where dirt and bacteria can be accumulated. The construction of the HD5 prevents condensation inside the product when subject to temperature changes in a wet environment. The PPh used is fiberglass reinforced to prevent breakage and minimize risk of small broken bits falling in the foodstuff.

Safety and protection

### Safe inspection

Up to PL e/Cat 4, with TÜV and cULus approval.

Home position sensor to detect when the device is out of its holder.

Optimum interface

### Ergonomic, flexible and suitable for Food and Beverage

HD5 is easy to operate with additional buttons, integrated emergency stop button and flash-light.

Housing material minimizes risk of breakage and is approved for contact with foodstuff.

No places where dirt and bacteria can be accumulated.

Continuous operation

### Avoid unnecessary process stops

HD5 allows the operators to safely inspect the manufacturing process without completely stopping the machine. Resistant to most cleaning fluids and chemicals in Food and Beverage.

## Applications and features

### HD5

#### Applications

##### Safe troubleshooting, programming and testing

If the operator has to enter a risk area for troubleshooting or test running, it is extremely important that he/she is able to stop the machinery without having to rely on someone else pushing a stop button. In addition, no-one else should be able to start the machinery after it has been stopped by the operator. An operator who is under pressure must also be able to give a stop signal, whether in panic he/she pushes harder on the button or just releases it.

HD5 three-position control device can be used for troubleshooting, programming and test running in situations where no other protection is available or feasible. HD5 allows the operator to safely inspect the process without completely stopping the machine. The big black button has 3 distinct positions: released, pressed gently and pressed hard. The middle position allows the machine to run with limited speed or range, but when released or pressed hard the machine stops.

#### Features

##### Indication LEDs

Green and a red high intensity LEDs are integrated in the top of the housing. Their function is user-defined and they can be used, e.g. to indicate whether the three-position device is in the middle position or not.

##### Front button and top buttons

The function of the additional buttons is user-defined. They can be used, e.g. for a start/stop function for individual movements etc.

##### Flashlight

An integrated flashlight can be used to help e.g. troubleshooting in dark spaces.

##### Home position sensor

Used with an active holder, this sensor detects whether the HD5 is in place in its holder.

##### Emergency stop button with integrated LED in housing

Some models are fitted with an emergency stop button and two rows of LEDs are integrated into the housing of the HD5, below the emergency stop button, one green and one red.

##### Adapted to food and beverage

HD5 is specifically developed with focus on the requirements in food and beverage applications.

- It has a hygienic design with rounded edges and leaning surfaces to prevent collection of water and dirt.
- The operating surfaces of the buttons are directly injected in the housing.
- The plastics used are approved for food and beverage industry (PHH G30).
- The markings are laser permanent in order not to contaminate any food.
- An anti-condensation membrane prevents moist from building up inside.

# Introduction and overview

## Selection orientation

### Why an emergency stop is necessary

If a machine breaks down or if someone is in danger, anyone should be able to stop the machine, regardless of their knowledge of the specific application.

### When a safety stop could be used

A safety stop (also called machine stop) should be used to safely stop a part of the machine, e.g. as a stop for an individual hazardous motion. It should not be used as an emergency stop and stop the complete machine. Likewise, an emergency stop with red push button must not be used as a safety stop.

In order to separate the safety stop function from the emergency stop function, the safety stop

buttons should be coloured black.

### When a pull wire emergency stop could be used

A pull wire emergency stop is easier to install than a system of several emergency stop buttons along a carriage path which makes it ideal for installations over long distances. LineStrong can handle wires up to 200 m on one single switch and the emergency command can be initiated from any point along the installed wire length.

# Introduction and overview

## Standards

Important standards to follow when implementing emergency stop functions are e.g. EN ISO 13850 and EN ISO 60204-1.

### Stop categories

The following stop categories are defined in the standards:

|                 |   |
|-----------------|---|
| Stop Category 0 | stopping by immediate removal of power to the machine actuators   |
| Stop Category 1 | a controlled stop with power available to the machine actuators to achieve the stop and then removal of power when the stop is achieved |
| Stop Category 2 | a controlled stop with power left available to the actuators  |

Note that these categories should not be confused with the categories used to describe the architecture when calculating PL in EN ISO 13849. The risk assessment should determine which stop category to use, but stop category 2 is normally considered not to be suitable for emergency stops.

### Text and symbols

Neither the emergency stop nor its background should be labelled with text or symbols. It has previously been common with white arrows indicating the direction of unlatching, but this is not allowed anymore.

### Location and signs

The risk assessment should determine the locations of the emergency stop buttons, but they should in general be placed at operator stations, at locations where man/machine interaction is required and at entry/exit points. Signs to mark the location of emergency stops are not required, but if used they should be green with white markings.

# Emergency stop buttons

## Smile, INCA and EStrong

Emergency stop buttons are used to safely stop dangerous machine functions.

ABB offers a wide range of emergency stop buttons for external mounting or panel mounting, with plastic or metal housing and for different types of connections.

### Easy to install

#### Compact size

Models with a compact and appealing housing saves space and makes it easy to place.

#### Quick installation

Quick and easy installation of models with features such as centered mounting holes, removable terminal blocks and M12 connectors.

#### Serial connection

Tina models save cable length and installation time with serial connection.

### Optimum interface

#### Highly adaptable

Several models to choose between depending on position, installation and function.

#### Reliable in extreme conditions

Robust models and models in stainless steel for use in demanding environments.

### Continuous operation

#### LED diagnostics

Models with integrated LED diagnostics reduce downtime when troubleshooting.

## Models and application

### Emergency stop buttons

#### Models for external mounting

##### Smile

Smile is a small and easy to install emergency stop button. Its size allows mounting in reduced spaces, and its centered mounting holes makes it especially easy to mount on aluminum extrusions (e.g. Quick-Guard fencing system). Smile is available with M12 connectors or cable. Smile has an integrated LED in the button that shows the status and simplifies error tracking. The standard models of Smile have 2 contacts and can be used with safety controllers from all brands. Smile Tina models belong to the ABB DYNlink solution, with the advantages of serial connection using only one channel and still reaching Cat. 4/PL e.

##### EStrong

EStrong is an emergency stop button designed to provide a robust unit for exposed and severe environments. The unit has a stainless steel enclosure with IP69K rating that withstands high pressure and high temperature wash-down. It is therefore ideally suited for industries with special demands, such as food processing or chemical industry.

#### Models for panel mounting

##### INCA

INCA is an emergency stop button for panel mounting, designed for installation in 22.5 mm holes. Its removable terminal block facilitates connection and exchange. INCA has an integrated LED in the button that shows the status and simplifies error tracking. The standard model of INCA has 2 contacts and can be used with safety controllers from all brands. INCA Tina models belong to the ABB DYNlink solution, with the advantages of serial connection using only one channel and still reaching Cat. 4/PL e.

##### Smile Reverse

Smile Reverse is identical to the regular Smile emergency stop button aside from being reversed in order to be mounted on the back side of a panel. Smile Reverse has an IP65 housing that makes it suitable in panels where moisture and dust may occur. Smile Reverse has an integrated LED in the button that shows the status and simplifies error tracking. The standard model of Smile Reverse has 2 contacts and can be used with safety controllers from all brands. The Smile Reverse Tina model belongs to the ABB DYNlink solution, with the advantages of serial connection using only one channel and still reaching Cat. 4/PL e.

## Features

Emergency stop buttons

Communication features

### DYNlink

Emergency stop buttons with Tina in their name belong to the DYNlink solution, which enables serial connection using only one channel and still reaching Cat. 4/PL e. DYNlink devices must be used with a Vital safety controller or a Pluto programmable safety controller. Up to 30 DYNlink devices can be connected in series to Vital and up to 10 can be connected to each input on Pluto.

### StatusBus

StatusBus is a simple and cost effective way to collect the status information of emergency stops and safety sensors. The StatusBus functionality is available with some DYNlink devices and allows you to collect the status of each individual safety device, even when connected in series. A Pluto programmable safety controller must be used to read the StatusBus information, and a single input on Pluto can collect the status of up to 30 safety devices. The devices are connected using standard cable and M12-5 connectors. No specific bus cable or extra communication module is necessary.

# Safety stop buttons

## Smile and INCA

Safety stop buttons are used to safely stop a certain part of a dangerous machine.

ABB offers safety stop buttons to suit different needs of connection and communication. Various models are available for e.g. external mounting, panel mounting, adapted for the DYNlink solution or with 2 NC contacts.

Easy to install

### Compact size

Models with a compact and appealing housing saves space and makes it easy to place.

### Quick installation

Quick and easy installation of models with features such as centered mounting holes, removable terminal blocks and M12 connectors.

### Serial connection

Tina models save cable length and installation time with serial connection.

Optimum interface

### Highly adaptable

Several models to choose between depending on position, installation and function.

Continuous operation

### LED diagnostics

Models with integrated LED diagnostics reduce downtime when troubleshooting.

## Applications and features

### Safety stop buttons

#### Applications

A safety stop (also called machine stop) can be used to safely stop a part of the machine, e.g. as a stop for an individual hazardous machine function. It may not be used as an emergency stop and stop the complete machine or production line. Likewise, an emergency stop with red push button should not be used as a safety stop. In order to separate the safety stop function from the emergency stop function, the safety stop buttons should be coloured black.

#### Features

##### DYNlink

Safety stop buttons with Tina in their name belong to the DYNlink solution, which enables serial connection using only one channel and still reaching Cat. 4/PL e. DYNlink devices must be used with a Vital safety controller or a Pluto programmable safety controller. Up to 30 DYNlink devices can be connected in series to Vital and up to 10 can be connected to each input on Pluto.

## Models

### Safety stop buttons

#### Safety stop buttons for external mounting

##### Smile

Smile is a small and easy to install safety stop button. Its size allows mounting in reduced spaces, and its centered mounting holes makes it especially easy to mount on aluminum extrusions (e.g. Quick-Guard fencing system).

Smile has an integrated LED in the button that shows the status and simplifies error tracking.

The standard model of Smile has 2 contacts and can be used with safety controllers from all brands. The Smile Tina model belongs to the ABB DYNlink solution, with the advantages of serial connection using only one channel and still reaching Cat. 4/PL e.

Smile safety stops are identical to the corresponding Smile emergency stops apart from the colour of the button.

#### Safety stops for panel mounting

##### INCA

INCA is a safety stop button for panel mounting, designed for installation in 22.5 mm holes. Its removable terminal block facilitates connection and exchange.

INCA has an integrated LED in the button that shows the status and simplifies error tracking.

The standard model of INCA has 2 contacts and can be used with safety controllers from all brands. INCA Tina belongs to the ABB DYNlink solution, with the advantages of serial connection using only one channel and still reaching Cat. 4/PL e.

INCA safety stop is identical to INCA emergency stop apart from the colour of the button.

# Pull wire emergency stop switch

## LineStrong

LineStrong is a pull wire emergency stop switch, used for easy reach of the emergency stop function along machines and sections of conveyors.

A pull wire emergency stop switch allows you to initiate the emergency stop command from any point along the installed wire length by pulling the wire. It replaces a series of emergency stop buttons and is easier to install.

LineStrong is also available in different models for different lengths of wires, with different housing material.

### Easy to install

#### Quick installation

A pull wire emergency stop switch is easier to install than a system of several emergency stop buttons along a carriage path.

#### Highly adaptable

Several models to choose from, gives a variety of mounting possibilities and features.

#### Long wire length

Can handle wires up to 200 m on a single switch.

### Safety and protection

#### Easily accessible

Easy reach of the emergency stop function along machines, conveyors and processes.

#### High level of safety

The positive forced disconnect contacts provide a high level of safety and are double switching, i.e. triggers emergency stop in both directions of the wire.

### Continuous operation

#### Reliable in extreme conditions

Robust construction makes LineStrong ideal for use in demanding environments.

#### LED diagnostics

Integrated LED diagnostics ensures status can be seen easily from a distance.

## Applications

### LineStrong

#### Instead of multiple emergency stops

A pull wire emergency stop switch is often placed along conveyor belts or carriage paths where access to the stop function must be possible along the whole line. It is often easier to install a pull wire emergency stop switch than to place multiple emergency stop buttons if the distance is longer.

#### As protective device in low risk applications

LineStrong can be used as protection, for example along conveyors with low risks where the wire can be installed at waist height in front of the conveyor, which provides an emergency stop if someone walks or falls towards the conveyor, hence pulling the wire.

LineStrong can handle wires up to 200 m on one single switch and since the emergency stop command can be initiated from any point along the wire, this gives better access to the emergency stop function than using emergency stop buttons.

#### One, two or several switches

The maximum length of the wire attached to LineStrong depends on if there is a LineStrong unit attached to both ends of the wire or if one end is attached to a wall/fixed object. In the image below LineStrong2 is used as an example.

## Features

### LineStrong

#### Positive forced disconnected contacts

The contacts in LineStrong are positive force disconnected, which ensures that the contacts will not be held in a normally closed position due to a failure of the spring mechanism or the welding/sticking of the contacts.

#### Reset button

All models of LineStrong have an integrated reset button that needs to be pressed in order to reset the emergency stop if the emergency stop function has been triggered.

#### Emergency stop button

Most LineStrong models have an integrated emergency stop button on the housing of the switch. Since the first half meter of the wire is not intended to pull in order to trigger the emergency stop function, the integrated emergency stop button provides quick and simple access to the emergency stop function if you are standing right in front of LineStrong. The emergency stop button of LineStrong 2 can be moved to either side of LineStrong to enable best access depending on position and height of LineStrong.

#### Integrated LED

LineStrong2 and LineStrong3 have an integrated 2-colour LED that shows if the emergency stop function has been triggered or not. The LED is also available as spare part.

#### Material

LineStrong is available with a housing in yellow die cast aluminum alloy or with a housing in stainless steel 316 which is recommended for severe applications e.g. food processing and chemical industries.

#### Left hand, right hand or both sides

LineStrong1 and LineStrong2 can be mounted in any direction. LineStrong3 is available in different models depending on installation. L (left hand) should be used if the placement of the grab wire switch is to the left in the installation. R (right hand) should be used if the grab wire switch is to the right in the installation. D (double wire) has wire entries from both sides of the grab wire switch.

#### Wire breakage monitoring

The contacts are double switching which means that the emergency stop command is given both when someone pulls the wire and if the wire should break.

#### Indication of wire tension

All models are equipped with an indicator of the tension of the wire which simplifies installation and adjustment.

## Features

### LineStrong

#### Easier installation with tensioner/gripper

The tensioner/gripper accessory significantly reduces the installation time. Traditional grab wire systems normally need turnbuckle and clamps, which are difficult to tension and adjust, and normally require frequent re-tensioning. The tensioner/gripper integrates an eye hook, a tensioner thimble and a wire strength gripper in one assembly which enables rapid connection to the switch eye bolt and fast and accurate tensioning of the wire.

Thanks to the switch tension indicator, it is easy to adjust the system accurately and quickly. The double clamp mechanism prevents wire slippage and significantly reduces machine downtime which can occur with traditional turnbuckle systems.

For systems longer than 50 m, the tensioner/gripper is necessary on both sides.

#### Quick-link termination

The quick link termination is provided for easy connection to the safety spring or the switch eyebolt for systems up to 50 m.

#### Mounting accessories

The wire pull kits contain the suitable accessories for the included wire length.

- When using one switch, the wire must be anchored at the other end using a safety spring.
- The first eye bolt support must be placed no more than 500 mm from the switch eye bolt or safety spring.
- The part of the wire from the wire end to the first eye bolt support shall not be used as part of the active protection coverage.
- Wire support eye bolt must be fitted at 2.5 - 3 meter intervals along the complete wire length.
- The tensioner/gripper is used to adjust the correct tension

#### Corner pulley

A corner pulley can be used to navigate inside or outside corners without causing damage to the wire. They are in stainless steel and can be rigidly mounted. When using a safety spring, a maximum of one corner pulley may be used, to ensure that the complete length of the wire is visible from either the switch or the spring anchorage.

Examples of using the corner pulley

1. Tension to mid position as indicated by the green arrows in the viewing window of each switch
2. The tensioner thimble allows immediate accurate and final tensioning of the wire, whilst viewing the tension marker through the viewing window on the switch.
3. Quick Link termination.

# Reset button

## Smile

Smile reset buttons have compact housings with M12 connectors for easy connection.

The reset button contains an integrated white LED, and all buttons are delivered with a kit of coloured filters to snap on the top of the button. This way the colour of the button can be chosen after delivery and is also possible to change later.

The different models also allow a choice of:

- local reset connected directly to the sensor, or
- global reset connected to the safety control module.

Easy to install

### Easy to attach to profiles

The centered mounting holes make Smile easy to attach e.g. aluminum extrusion profiles.

### Speed up installation

The housing requires no assembly and the M12 connectors speed up installation and reduce the risk of connection error.

### Local reset

Local reset allows to have the reset button close to the safety device while reducing cabling.

Space saving

### Compact housing

A compact and appealing housing saves space and makes it easy to place.

Optimum interface

### Several button colours

All reset buttons are illuminated with a white LED and the colour of each button can be chosen after delivery and changed later using coloured snap-on filters.

## Ordering information

#### Ordering details

| Type of contact | Intended use  | Connectors          | Type        | Order code      |
|-----------------|---|---------------------|-------------|-----------------|
| 1 NO            | Most reset applications                                       | M12-5 male          | Smile 11 RA | 2TLA030053R0000 |
| 1 NO            | Pluto Safety PLC light button function*                       | M12-5 male          | Smile 11 RB | 2TLA030053R0100 |
| 1 NO            | Local reset of Orion1 Base                                    | M12-5 male          | Smile 11RO1 | 2TLA022316R3000 |
| 1 NC            | Local reset of Orion2 Base and Extended, and Orion3 Extended  | M12-5 male          | Smile 11RO2 | 2TLA022316R3100 |
| 1 NC            | Local reset of Orion3 Base                                    | M12-5 male          | Smile 11RO3 | 2TLA022316R3200 |
| 1 NO            | Local reset of Eden DYN-Reset M12-5 and Eden OSSD-Reset M12-5 | M12-5 male + female | Smile 12 RF | 2TLA030053R2600 |
| 1 NO            | Local reset of Eden OSSD-Reset M12-8                          | M12-8 male + female | Smile 12 RG | 2TLA030053R2700 |

\* See Pluto hardware manual for more information about the light button function

#### Accessories

| Description   | Type            | Order code      |
|---|-----------------|-----------------|
| Y-connector for series connection of DYNlink devices with M12-5 connectors, e.g. Eden.  | M12-3A          | 2TLA020055R0000 |
| Y-connector for series connection of Adam OSSD M12-8 with M12-5 cables  | M12-3H          | 2TLA020055R0800 |
| Y-connector for series connection of Adam OSSD M12-8 with M12-8 cables  | M12-3G          | 2TLA020055R0700 |
| Y-connector for connection of Smile reset button to Orion.  | M12-3R          | 2TLA022316R0000 |
| Heat shrinking tubes for M12 connectors. Protects M12 connectors in harsh environments and provides extra protection against tampering.   | M12 Safety seal | 2TLA020053R0800 |
| Adaptation unit of OSSD outputs to DYNlink signals for use with Vital control module or Pluto Safety PLC. Tina 10B has an extra M12 connector for connection of a reset button. | Tina 10B v2     | 2TLA020054R1310 |

#### Spare parts

| Description   | Type             | Order code      |
|---|------------------|-----------------|
| Kit of coloured filters (yellow, green, white, blue, red) | Coloured filters | 2TLA030059R2600 |

## Connection examples

### Smile reset buttons

#### Local reset to Orion with Tina 10A/C

Connection of Smile 11 ROx to Orion through M12-3R. For connection to any control module compatible with OSSD outputs.

#### Local reset to Orion with Tina 10B

Connection of Smile 11 ROx to Orion through Tina 10B. For connection to Vital control module or Pluto Safety PLC.

#### Local reset to Eden

Serial connection of Eden with local Smile reset buttons:

- Adam OSSD-Reset M12-8 with Smile 12 RG and M12-3G or M12-3H
- Adam DYN-Reset with Smile 12 RF and M12-3A

#### Global vs local reset

A global reset is connected directly to the control cabinet with separate cables. The safety controller in the control cabinet supervises the reset and decides the function and actions.

A local reset is connected directly to the safety device, and requires no communication with the control cabinet. The safety device supervises the reset and decides the actions. A local reset simplifies installation and minimizes cabling.

# Quick reference

## Quick reference

|   | Product name                        | Order code      | Description   |
|---|-------------------------------------|-----------------|---|
|    | Sentry BSR10<br>24VDC               | 2TLA010040R0000 | BSR10 is a safety/expansion relay with relay outputs, 3 NO + 1 NC, and a +24 VDC supply voltage. BSR10 is designed to connect safety devices, such as emergency stops, directly in the voltage supply circuit of the relay.   |
|   | Push-in spring<br>terminal: BSR10P  | 2TLA010040R0001 | BSR10 is also suitable as expansion relay for a safety relay/ safety PLC, in order to increase the number of safe outputs.  |
|    | Sentry BSR11<br>24VDC               | 2TLA010040R0200 | BSR11 is a safety/expansion relay with relay outputs, 4 NO, and a +24 VDC supply voltage. BSR11 is designed to connect safety devices, such as emergency stops, directly in the voltage supply circuit of the relay.  |
|   | Push-in spring<br>terminal: BSR11P  | 2TLA010040R0201 | BSR11 is also suitable as expansion relay for a safety relay/safety PLC, in order to increase the number of safe outputs.   |
|    | Sentry BSR23<br>24VDC               | 2TLA010041R0600 | BSR23 is a safety expansion relay with relay outputs, 4 NO + 1 NC, and a +24 VDC supply voltage. BSR23 is used as expansion relay for a safety relay/safety PLC, in order to increase the number of safe outputs.   |
|   | Push-in spring<br>terminal: BSR23P  | 2TLA010041R0601 |   |
|    | Sentry SSR10<br>24VDC               | 2TLA010050R0000 | SSR10 is a safety relay with relay outputs, 3 NO + 1 NC, and a +24 VDC supply voltage. SSR10 is used with safety devices with contacts, 1 or 2 channels , and safety devices with OSSD outputs. The reset function, automatic or manual, is set with a switch on the front.   |
|   | Push-in spring<br>terminal: SSR10P  | 2TLA010050R0001 |   |
|   | Sentry SSR10M<br>VAC/VDC            | 2TLA010050R0100 | SSR10M is a safety relay with relay outputs, 3 NO + 1 NC, and a 85-265 VAC (50/60 Hz)/120-375 VDC supply voltage. SSR10M is used with safety devices with 2 channels contacts. The reset function, automatic or manual, is set with a switch on the front.  |
|   | Push-in spring<br>terminal: SSR10MP | 2TLA010050R0101 |   |
|  | Sentry SSR20<br>24VDC               | 2TLA010051R0000 | SSR20 is a safety relay with relay outputs, 3 NO + 1NC, and a +24 VDC supply voltage. SSR20 is used with two-hand devices. The reset function, automatic or manual, is set with a switch on the front.  |
|   | Push-in spring<br>terminal: SSR20P  | 2TLA010051R0001 |   |
|  | Sentry SSR20M<br>VAC/VDC            | 2TLA010051R0100 | SSR20M is a safety relay with relay outputs, 3 NO + 1 NC, and a 85-265 VAC (50/60 Hz)/120-375 VDC supply voltage. SSR20M is used with two-hand devices. The reset function, automatic or manual, is set with a switch on the front.   |
|   | Push-in spring<br>terminal: SSR20MP | 2TLA010051R0101 |   |
|  | Sentry SSR32<br>24VDC               | 2TLA010052R0400 | SSR32 is a safety relay with relay outputs, 2 NO + 2 delayed NO, and a +24 VDC supply voltage. SSR32 is used with safety devices with contacts, 1 or 2 channels , and safety devices with OSSD outputs. The reset function, automatic or manual, is set with a switch on the front.   |
|   | Push-in spring<br>terminal: SSR32P  | 2TLA010052R0401 | The two delayed NO relay outputs have an OFF-delay time of 0,5 second.  |
|  | Sentry SSR42<br>24VDC               | 2TLA010053R0400 | SSR42 is a safety relay with relay outputs, 2 NO + 2 delayed NO, and a +24 VDC supply voltage. SSR42 is used with safety devices with contacts, 1 or 2 channels , and safety devices with OSSD outputs. The reset function, automatic or manual, is set with a switch on the front.   |
|   | Push-in spring<br>terminal: SSR42P  | 2TLA010053R0401 | The two delayed NO relay outputs have an OFF-delay time of 1,5 seconds.   |
|  | Sentry TSR10<br>24VDC               | 2TLA010060R0000 | TSR10 is a safety relay/safety timer with delayable relay outputs, 3 NO+ 1 NC, and a +24 VDC power supply. TSR10 offers 0-999 seconds timer functions with a better accuracy than 1%: OFF-delay, ON-delay, Time bypass and Time reset. A display on its front facilitate configuration and troubleshooting by displaying error codes and error log. A custom configuration can be protected by password. Automatic reset function only. |
|   | Push-in spring<br>terminal: TSR10P  | 2TLA010060R0001 |   |
|  | Sentry TSR20<br>24VDC               | 2TLA010061R0000 | TSR20 is a safety expansion timer with delayed relay outputs, 3 NO + 1 NC, and a +24VDC power supply. The OFF-delay time (0,5s or 1,5s) is set with a switch on the front.  |
|   | Push-in spring<br>terminal: TSR20P  | 2TLA010061R0001 |   |

## Quick reference

|   | Product name                                     | Order code      | Description  |
|---|--|-----------------|--|
|    | Sentry TSR20M<br>VAC/VDC                         | 2TLA010061R0100 | TSR20M is a safety expansion timer with delayed relay outputs, 3 NO + 1 NC, and a 85-265 VAC (50/60 Hz)/120-375 VDC power supply.<br>The OFF-delay time (0,5s or 1,5s) is set with a switch on the front.  |

|    | Sentry USR10<br>24VDC                            | 2TLA010070R0000 | USR10 is a universal safety relay/safety timer with delayable relay outputs, 3 NO +1 NC, and a +24 VDC power supply.<br>USR10 is used with safety devices with contacts, 1 or 2 channels , safety devices with OSSD outputs, two-hand devices, safety mats and safety edges/bumpers.<br>USR10 offers 0-999 seconds timer functions with a better accuracy than 1%: OFF-delay, ON-delay, Time bypass and Time reset.<br>A display on its front facilitate configuration and troubleshooting by displaying error codes and error log. A custom configuration can be protected by password.<br>The reset function is selectable between Automatic and Manual. |
|   | Push-in spring<br>terminal:<br>USR10P            | 2TLA010070R0001 |  |
|    | Sentry USR22<br>24VDC                            | 2TLA010070R0400 | USR22 is a universal safety relay/safety timer with relay outputs, 2 NO + 2 delayable NO, and a +24VDC power supply.<br>USR22 is used with safety devices with contacts, 1 or 2 channels , safety devices with OSSD outputs, two-hand devices, safety mats and safety edges/bumpers.<br>USR22 offers 0-999 seconds timer functions with a better accuracy than 1%: OFF-delay, ON-delay, Time bypass and Time reset.<br>A display on its front facilitate configuration and troubleshooting by displaying error codes and error log. A custom configuration can be protected by password.<br>The reset function is selectable between Automatic and Manual. |
|   | Push-in spring<br>terminal: USR22P               | 2TLA010070R0401 |  |
|   | Sentry S30A<br>Screw-in contact<br>block         | 2TLA010099R0000 | Screw-in terminal block for Sentry safety relays. One piece.   |
|  | Sentry S30C<br>Push-in terminal<br>contact block | 2TLA010099R0001 | Push-in terminal block for Sentry safety relays. One piece.  |
|  | Sentry S30B<br>Coding kit                        | 2TLA010099R0100 | Coding kit for terminal blocks for Sentry safety relays.<br>Should be enough for one Sentry relay.   |
|  | Vital 1  | 2TLA020052R1000 | Safety module with one single channel input for dynamic sensors. Relay outputs 2NO.  |
|  | JSHD4-1-AA                                       | 2TLA019995R0000 | Three-position device. Top part with no LED, no extra buttons. Bottom part with cable gland.   |
|  | JSHD4-1-AC                                       | 2TLA019995R0100 | Three-position device. Top part with no LED, no extra buttons. Bottom part with M12-5 connector.   |
|  | JSHD4-2-AB                                       | 2TLA019995R0200 | Three-position device. Top part with LEDs, front button and top button. Bottom part with Cannon connector.   |
|  | JSHD4-2-AD                                       | 2TLA019995R0400 | Three-position device. Top part with LEDs, front button and top button. Bottom part with M12-8 connector.  |

## Quick reference

|   | Product name           | Order code      | Description   |
|---|------------------------|-----------------|---|
|    | JSHD4-1 Top part       | 2TLA020006R2100 | Three-position device.  |
|    | JSHD4-2 Top part       | 2TLA020006R2200 | Three-position device incl. LEDs, front button and top button.        |
|    | JSHD4-2 Top part black | 2TLA020006R2201 | Three-position device incl. LEDs, front button and top button. Black. |
|    | JSHD4-3 Top part       | 2TLA020006R2300 | Three-position device incl. LEDs.                                     |
|    | JSHD4-4 Top part       | 2TLA020006R2400 | Three-position device incl. LEDs and front button.                    |
|  | JSHD4-5 Top part       | 2TLA020006R2500 | Three-position device incl. LEDs and top button.                      |
|  | JSHD4 AA               | 2TLA020005R1000 | Bottom part with cable gland  |
|  | JSHD4 AB               | 2TLA020005R1100 | Bottom part with Cannon connection                                    |
|  | JSHD4 AC               | 2TLA020005R1200 | Bottom part with M12 connection (5 poles).                            |
|  | JSHD4 AD               | 2TLA020005R1300 | Bottom part with M12 connection (8 poles).                            |
|  | JSHD4 AE               | 2TLA020005R1400 | Bottom part with M12 connection (8 poles) and emergency stop.         |
|  | JSHD4 AH               | 2TLA020005R1700 | Bottom part with cable gland and PCB with 10 screw connections        |
|  | JSHD4 AJ               | 2TLA020005R1800 | Bottom part with cable gland and PCB with 16 screw connections.       |
|  | JSHD4 AL               | 2TLA020005R2000 | Bottom part with JSM 53A and cable gland                              |

## Quick reference

|   | Product name      | Order code      | Description  |
|---|-------------------|-----------------|--|
|    | JSHD4 Anti-tamper | 2TLA020005R0900 | Accessories JSHD4. Anti-tamper PCB. Works with top part JSHD4-2 to JSHD4-5, combined with bottom part AB, AD, AF, AG, AH or AJ.  |
|    | JSHD4 Coat        | 2TLA020200R4600 | Extra protection coat for JSHD4.   |
|    | JSM 54A           | 2TLA020205R2800 | Wall bracket to mount Adam. Used with JSHD4 three position devices having an AL bottom part, i.e. JSHD4-x-AL(-A). The AL bottom part has a holder for Eva. Adam and Eva are ordered separately.                      |
|    | JSM 50G           | 2TLA020205R6300 | Big bottom plate for mounting of two actuators/keys of safety interlock switches on the JSHD4 in order to monitor the position of the JSHD4 when not in use. If used with Mkey5, use bracket JSM5B for the switches. |
|    | JSM 50H           | 2TLA020205R6400 | Bottom plate for mounting of an Eva on the JSHD4 in order to monitor the position of the JSHD4 when not in use. Adam and Eva are sold separately.  |
|   | JSM 55            | 2TLA040005R0500 | Wall bracket for JSHD4 enabling device.  |
|  | JSM 5B            | 2TLA040005R0700 | Wall bracket for 2 pcs Mkey5 interlock switches. Mkey5 switches are ordered separately.  |
|  | JSHD2C type E     | 2TLA020001R1000 | JSHD2C type E 3-position pushbutton, 3 cables 200mm, Au, IP54  |
|  | JSHD2C type A     | 2TLA020001R1100 | JSHD2C type A 3-position pushbutton, 3 cables 190mm, Au, IP40  |
|  | JSHD2C type K     | 2TLA020001R1300 | JSHD2C type K 3-position pushbutton, 2 cables 290mm, Ag, IP54  |
|  | JSHD2C type F     | 2TLA020001R1400 | JSHD2C type F 3-position pushbutton, 3 cables 850mm, Au, IP54  |
|  | JSHD4H2A 0,15m    | 2TLA020002R0200 | JSHD4H2A Three-position control device for external panel mounting. 6x150mm leads.   |
|  | JSHD4H2B 0,15m    | 2TLA020002R0210 | JSHD4H2B Three-position control device for external panel mounting. 6x150mm leads.   |
|  | JSHD4H2 0,15m     | 2TLA020002R3100 | JSHD4H2 Three-position control device for internal panel mounting. 6x150mm leads.  |
|  | JSHD4H2 1,2m      | 2TLA020002R4500 | JSHD4H2 Three-position control device for internal panel mounting. 6x1200mm leads.   |

## Quick reference

|   | Product name  | Order code      | Description  |
|---|---------------|-----------------|--|
|    | HD5-M-001     | 2TLA920509R0001 | Active holder (for home position sensor)                         |
|    | HD5-M-002     | 2TLA920509R0001 | Passive holder   |
|    | JSHK0         | 2TLA020003R0300 | 12 pole female Cannon connector for JSKD4.                       |
|    | JSHK1-C       | 2TLA020003R0700 | 12-pole male Cannon connector for cabinet mounting.              |
|    | JSHK1-A       | 2TLA020003R0800 | 12-pole female Cannon connector for cabinet mounting.            |
|    | JSHK1-B       | 2TLA020003R0900 | 12-pole male Cannon connector for cable mounting.                |
|   | HK40S4        | 2TLA020003R3500 | Spiral cable 4m and 12 leads with Cannon female connector. PUR.  |
|  | HK60S4        | 2TLA020003R3600 | Spiral cable 6m and 12 leads with Cannon female connector. PUR.  |
|  | HK5           | 2TLA020003R4700 | Cable 5m and 12 leads with Cannon female connector.              |
|  | HK10          | 2TLA020003R4800 | Cable 10m and 12 leads with Cannon female connector.             |
|  | HK20          | 2TLA020003R4900 | Cable 20 m and 12 leads with Cannon female connector.            |
|  | HK16S4        | 2TLA020003R5000 | Spiral cable 1.6m and 12 leads with Cannon female connector.     |
|  | HK20S4        | 2TLA020003R5100 | Spiral cable 2m and 12 leads with Cannon female connector. PUR.  |
|  | HK32S4        | 2TLA020003R5200 | Spiral cable 3.2m and 12 leads with Cannon female connector. PUR |
|  | HK80S4        | 2TLA020003R5300 | Spiral cable 8m and 12 leads with Cannon female connector. PUR.  |
|  | JSD-TK5-12    | 2TLA930050R0000 | 5 m cable with M23-12 female connector                           |
|  | JSD-TK10-12   | 2TLA930051R0000 | 10 m cable with M23-12 female connector                          |
|  | JSD-TK100S-12 | 2TLA930034R0000 | 10 m spiral cable with M23-12 female connector                   |
|  | JSD-TK5-19    | 2TLA930057R0000 | 5 m cable with M23-19 female connector                           |

## Quick reference

|   | Product name     | Order code      | Description  |
|---|------------------|-----------------|--|
|    | JSD-TK10-19      | 2TLA930058R0000 | 10 m cable with M23-19 female connector  |
|    | M12-C51-ASi      | 2TLA910093R0000 | 5 m unshielded cable with M12-5 female connector   |
|    | M12-C251S-ASi    | 2TLA910094R0000 | 2.5 m unshielded spiral cable with M12-5 female connector  |
|    | JSTD1-A          | 2TLA020007R3000 | JSTD1-A Safeball, 1NO + 1NC, 2 m cable (4 leads). Ergonomic design with several grip possibilities and low activation force (approx. 2N) and flexible mounting options. Provides highest level of safety for use in two hand control applications when using two Safeballs in conjunction with appropriate safety relay or Pluto Safety PLC. Maximum load of 30VDC, 2A resistive, IP67 protection degree, plastic body.                                    |
|    | JSTD1-B          | 2TLA020007R3100 | JSTD1-B Safeball, 1NO + 1NC, 0.2m wires x 4 for direct connection into an enclosure. Ergonomic design with several grip possibilities and low activation force (approx. 2N) and flexible mounting options. Provides highest level of safety for use in two hand control applications when using two Safeballs in conjunction with appropriate safety relay or Pluto Safety PLC. Maximum load of 30VDC, 2A resistive, IP67 protection degree, plastic body. |
|    | JSTD1-C          | 2TLA020007R3200 | JSTD1-C Safeball, 1NO + 1NC, 10 m cable (4 leads). Ergonomic design with several grip possibilities and low activation force (approx. 2N) and flexible mounting options. Provides highest level of safety for use in two hand control applications when using two Safeballs in conjunction with appropriate safety relay or Pluto Safety PLC. Maximum load of 30VDC, 2A resistive, IP67 protection degree, plastic body.                                   |
|   | JSTD1-E          | 2TLA020007R3400 | JSTD1-E Safeball, 2 NO, 0.2m wires x 4 for direct connection into an enclosure. Ergonomic design with several grip possibilities and low activation force (approx. 2N) and flexible mounting options. Provides highest level of safety for use in two hand control applications when using two Safeballs in conjunction with appropriate safety relay or Pluto Safety PLC. Maximum load of 30VDC, 2A resistive, IP67 protection degree, plastic body.      |
|  | JSM C5           | 2TLA020007R0900 | Accessories Safeball. Ball & socket for flexible mount for mounting the Safeball to Enclosures, machines or table tops.  |
|  | JSM C7           | 2TLA020007R1200 | Suspension shelf in stainless steel for JSTD25 F/G/H/K   |
|  | Safeball Coat    | 2TLA020007R1900 | Extra protection coat for Safeball.  |
|  | JSTD25F          | 2TLA020007R6000 | Two-hand device with JSTD1-B Safeballs. Buttons are side mounted on a 44x88 extruded aluminum profile designed for two-hand applications. Pre-wired to a M12 5-pin connector with protective flanges of the safeballs. Highest level of safety can be achieved when used in conjunction with a JSBR4 safety relay or Pluto Safety PLC.   |
|  | JSTD25H          | 2TLA020007R6300 | Two-hand device with JSTD1-B Safeballs. Buttons are side mounted on a 44x88 extruded aluminum profile designed for two-hand applications. Pre-wired to a M12 8-pin connector with protective flanges of the safeballs. Highest level of safety can be achieved when used in conjunction with a JSBR4 safety relay or Pluto Safety PLC.   |
|  | JSTD25K          | 2TLA020007R6900 | Two-hand device with JSTD1-B Safeballs. Buttons are side mounted on a 44x88 extruded aluminum profile designed for two-hand applications. On top there is a Smile 10 EA mounted. All pre-wired to a M12 8-pin connector. The safeballs have protective flanges. Highest level of safety can be achieved when used in conjunction with a JSBR4 safety relay or Pluto Safety PLC.  |
|  | Eva General code | 2TLA020046R0800 | Eva actuator with general code for use with Adam DYN/OSSD sensors in the Eden sensor system, IP69K, yellow, 4pcs of DA 2B spacer rings are included.   |

## Quick reference

|   | Product name          | Order code      | Description   |
|---|-----------------------|-----------------|---|
|    | Eva Unique code       | 2TLA020046R0900 | Eva actuator with unique code for use with Adam DYN/OSSD sensors in the Eden sensor system, IP69K, yellow, 4pcs of DA 2B spacer rings are included.   |
|    | Adam DYN-Info M12-5   | 2TLA020051R5100 | Adam safety sensor unit with DYNlink signal and information output. M12-5 male connector, IP69K, yellow. 4pcs of DA 1B distance plates and 4pcs of DA 2B distance rings are included.                             |
|    | Adam DYN-Status M12-5 | 2TLA020051R5200 | Adam safety sensor unit with DYNlink signal, StatusBus, fixed 5-pole M12 male connector, IP69K, yellow, 4pcs of DA 1B protection plate and 4pcs of DA 2B spacer rings are included.                               |
|    | Adam DYN-Reset M12-5  | 2TLA020051R5300 | Adam safety sensor unit with DYNlink signal and reset with indication. M12-5 male connector, IP69K, yellow. 4pcs of DA 1B distance plate and 4pcs of DA 2B distance rings are included.                           |
|   | Adam OSSD-Info M12-5  | 2TLA020051R5400 | Adam safety sensor unit with OSSD signals and information output. M12-5 male connector, IP69K, yellow. 4pcs of DA 1B distance plates and 4pcs of DA 2B distance rings are included.                               |
|  | Adam OSSD-Reset M12-5 | 2TLA020051R5600 | Adam safety sensor unit with OSSD signals and reset with indication. M12-5 male connector, IP69K, yellow. 4pcs of DA 1B distance plates and 4pcs of DA 2B distance rings are included.                            |
|  | Adam OSSD-Info M12-8  | 2TLA020051R5700 | Adam safety sensor unit with OSSD signals and information output. M12-8 male connector, IP69K, yellow. 4pcs of DA 1B distance plates and 4pcs of DA 2B distance rings are included.                               |
|  | Adam OSSD-Reset M12-8 | 2TLA020051R5900 | Adam safety sensor unit with OSSD signals and reset with indication. M12-8 male connector, IP69K, yellow. 4pcs of DA 1B distance plates and 4pcs of DA 2B distance rings are included.                            |
|  | DA 2B Distance ring   | 2TLA020053R0300 | Spare part. 4 distance rings 4.5 x 8 x 4 mm in black polyamide. To be mounted in Adam/Eva mounting holes.   |
|  | DA 3A Convert. plate  | 2TLA020053R0600 | Converting plate in stainless steel for replacing Eden E with Eden DYN or Eden OSSD.  |
|  | DA 1B Distance plate  | 2TLA020053R0700 | Spare part. 4 distance plates in yellow PBT. Thickness 2.5 mm. For all Adam and Eva except Adam E and Eva E.  |
|  | M12 Safety seal       | 2TLA020053R0800 | Heat shrinking tubes for M12 connectors. Protects M12 connectors in harsh environments and provides extra protection against tampering.   |
|  | M12 Torque wrench     | 2TLA020053R0900 | Wrench for tightening of M12 connectors according to specified torque: 0,6 Nm. Robust, glass-fibre reinforced plastic, high quality hexagonal stainless steel insert and chrome-vanadium-molybdenum steel tongue. |
|  | JSM D20 Slide lock    | 2TLA020302R1000 | Sliding lock for Eden on conventional doors. Made in steel, yellow. Eden is not included.   |

## Quick reference

|   | Product name      | Order code      | Description   |
|---|-------------------|-----------------|---|
|    | JSOP-1 Terminator | 2TLA020053R7000 | Termination plug M12-5. For Adam OSSD with M12-3H. Connects pin 1 with pin 2 and 4.   |
|    | JSOP-2 Terminator | 2TLA020053R7100 | Termination plug M12-8. For Adam OSSD with M12-3G. Connects pin 2 with pin 3 and 4.   |
|    | Tina 1A           | 2TLA020054R0000 | Tina 1A blind plug is connected to the unused M12 connectors of the connection blocks Tina 4A or Tina 8A. M12-5 male connector.   |
|    | Tina 2A           | 2TLA020054R0100 | Adaptation of devices with 2 positively driven force-guided contacts like emergency stop buttons and key switches, to the DYNlink solution. Tina 2A is mounted directly on the device enclosure to a M20 cable entry.   |
|    | Tina 3A           | 2TLA020054R0200 | Adaptation of devices with 2 positively driven force-guided contacts like emergency stop buttons and key switches, to the DYNlink solution. Tina 3A is mounted directly on the device enclosure to a M20 cable entry and has a M12-5 male connector for connection to the DYNlink loop.   |
|   | Tina 4A           | 2TLA020054R0300 | Connection block for series connection of up to 4 DYNlink devices. Four M12-5 female connectors for the devices. The information signal of each device can be wired separately. The cable used for the connection to the Tina 4A should have a diameter 7 - 12 mm. If less than a devices are connected, complete with Tina 1A blind plugs.   |
|  | Tina 8A           | 2TLA020054R0500 | Connection block for series connection of up to 8 DYNlink devices. Eight M12-5 female connectors for the devices. The information signal of each device can be wired separately. The cable used for the connection to the Tina 8A should have a diameter 7 - 12 mm. If less than 8 devices are connected, complete with Tina 1A blind plugs.  |
|  | Tina 7A           | 2TLA020054R0700 | Adaptation of devices with 2 positively driven force-guided contacts like emergency stop buttons and key switches, to the DYNlink solution. Tina 7A is mounted on a DIN rail in the electrical cabinets and the connected safety device(s) must be mounted on the same cabinet, e.g. an emergency-stop button mounted on the cabinet. Electrical connection via detachable terminal blocks. |
|  | Tina 2B           | 2TLA020054R1100 | Adaptation of devices with 2 positively driven force-guided contacts like emergency stop buttons and key switches, to the DYNlink solution. Tina 2B is placed inside the safety device enclosure.   |
|  | Tina 10A V2       | 2TLA020054R1210 | Adaptation of devices with OSSD outputs, like light guards, to the DYNlink solution. Tina 10A V2 has one M12-5 male connector towards the DYNlink loop and one M12-8 female connector towards the OSSD device.  |
|  | Tina 10B V2       | 2TLA020054R1310 | Adaptation of devices with OSSD outputs, like light guards, to the DYNlink solution with possibility to connect a local reset button. Tina 10B V2 has one M12-5 male connector towards the DYNlink loop, one M12-8 female connector towards the OSSD device and one M12-5 female connector for the local reset button.  |
|  | Tina 3Aps         | 2TLA020054R1400 | Adaptation of devices with 2 positively driven force-guided contacts like E-stop buttons and key switches, to the DYNlink solution, with extra conductor for the supply of the safety device. Tina 3A is mounted directly on the device enclosure to a M20 cable entry and has a M12-5 male connector for connection to the DYNlink loop. Connection to +24VDC and 0V on the device side.   |
|  | Tina 10C V2       | 2TLA020054R1610 | Adaptation of devices with OSSD outputs, like light guards, to the DYNlink solution with possibility to power the transmitter. Tina 10C V2 has one M12-5 male connector towards the DYNlink loop, one M12-8 female connector towards the OSSD device and one M12-5 female connector for the supply of the transmitter (0V and +24VDC)   |
|  | Tina 11A          | 2TLA020054R1700 | Connection block for series connection of 2 DYNlink devices with M12-5 connectors. Two M12-5 female connectors for the devices and one M12-5 male connector towards the DYNlink loop.   |
|  | Tina 12A          | 2TLA020054R1800 | Connection block for series connection of 2 DYNlink devices with M12-8 connectors, e.g. Magne, Dalton M12 with Eden DYN or Knox (M12-8). Two M12-8 female connectors for the devices and one M12-8 male connector towards the DYNlink loop.   |

## Quick reference

|   | Product name       | Order code      | Description  |
|---|--------------------|-----------------|--|
|    | M12-3A             | 2TLA020055R0000 | M12 Y-connector for series connection of DYNlink devices such as Eden sensors, Smile Tina and Inca Tina emergency stop buttons, Spot single beam, and Tina adapters. One M12-5 pole female connector (#2) for connection of the safety device, one M12-5 male connector (#1) for connection of +24VDC, 0V and the incoming dynamic signal and one M12-5 female connector (#3) for continuation of the circuit towards another safety device or Vital/Pluto safety PLC. |
|    | M12-3B             | 2TLA020055R0100 | M12 Y-connector for parallel connection of 2 DYNlink devices such as Eden sensors, Spot single beams and Tina adapters. Two M12-5 female connectors (#2, #3) for connection of the safety devices and one M12-5 male connector (#1) for connection towards the DYNlink loop.   |
|    | M12-3E             | 2TLA020055R0200 | M12 Y-connector for the connection of 2 DYNlink devices or one DYNlink and one light button to Pluto safety PLC with only one cable. One M12-5 female connector (#2) for connection of the first circuit. One M12-5 female connector (#3) for connection of the second circuit. One M12-5 male connector (#1) for connection to IQs on the Pluto safety PLC.   |
|    | M12-3D             | 2TLA020055R0300 | M12 Y-connector for easier installation of a light guard with transmitter and receiver. One M12-8 female connector for the receiver (#2), one M12-5 female connector for the transmitter (#3) and one M12-8 male connector (#1) for cabling to safety control unit.  |
|    | M12-3S             | 2TLA020055R0600 | M12-3S M12 Y-connector for series connection of DYNlink devices with the StatusBus function. One M12-5 pole female connector (#2) for connection of the safety device, one M12-5 male connector (#1) for connection of +24VDC, 0V, the incoming dynamic signal and the StatusBus and one M12-5 female connector (#3) for the outgoing inverted dynamic signal towards another safety device or Vital/Pluto safety PLC.   |
|   | M12-3G             | 2TLA020055R0700 | M12 Y-connector for series connection of Adam OSSD M12-8 safety sensor with M12-8 cables. One M12-8 female connector (#2) for connection of the safety sensor one M12-8 male connector (#1) for connecting +24VDC, 0V and the incoming OSSD signals and one M12-8 female connector (#3) for continuation of the circuit towards another safety device or the safety control device.  |
|  | M12-3H             | 2TLA020055R0800 | M12 Y-connector for series connection of Adam OSSD M12-8 safety sensor with M12-5 cables. One M12-8 female connector (#2) for connection of the safety sensor one M12-5 male connector (#1) for connecting +24VDC, 0V and the incoming OSSD signals and one M12-5 female connector (#3) for continuation of the circuit towards another safety device or the safety control device.  |
|  | M12-C01            | 2TLA020055R1000 | Straight M12-5 female connector with cable screw connection. Cable diameter range 2.5–6.5 mm.  |
|  | M12-C02            | 2TLA020055R1100 | Straight M12-5 male connector with cable screw connection. Cable diameter range 2.5–6.5 mm.  |
|  | M12-C03            | 2TLA020055R1600 | Straight M12-8 female connector with cable screw connection. Cable diameter range 2.5–6.5 mm.  |
|  | M12-C04            | 2TLA020055R1700 | Straight M12-8 male connector with cable screw connection. Cable diameter range 2.5–6.5 mm.  |
|  | M12 protection cap | 2TLA020055R2100 | Protection of the M12 male connector from dust.  |
|  | M12-C61            | 2TLA020056R0000 | 6 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female connector.  |
|  | M12-C62            | 2TLA020056R0200 | 6 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12 male connector. Shield connected to pin3 (0V) on male connector.   |
|  | M12-C31            | 2TLA020056R0500 | 3 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female connector.  |

## Quick reference

|   | Product name | Order code      | Description  |
|---|--------------|-----------------|--|
|    | M12-C61V2    | 2TLA020056R0600 | 6 m cable 5 x 0.34 mm <sup>2</sup> + shield with angled M12-5 female connector.  |
|    | M12-C101     | 2TLA020056R1000 | 10 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female connector.   |
|    | M12-C102     | 2TLA020056R1200 | 10 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 male connector. Shield connected to pin3 (0V) on male connector.          |
|    | M12-C201     | 2TLA020056R1400 | 20 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female connector.   |
|    | M12-C101V2   | 2TLA020056R1500 | 10 m cable 5 x 0.34 mm <sup>2</sup> + shield with angled M12-5 female connector.   |
|    | M12-C112     | 2TLA020056R2000 | 1 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female + male connectors. Shield connected to pin3 (0V) on male connector. |
|  | M12-C312     | 2TLA020056R2100 | 3 m cable 5 x 0,34 mm <sup>2</sup> + shield with straight M12-5 female + male connectors. Shield connected to pin3 (0V) on male connector. |
|  | M12-C612     | 2TLA020056R2200 | 6 m cable 5 x 0,34 mm <sup>2</sup> + shield with straight M12-5 female + male connectors. Shield connected to pin3 (0V) on male connector. |
|  | M12-C1012    | 2TLA020056R2300 | 10 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12 female + male connectors. Shield connected to pin3 (0V) on male connector.  |
|  | M12-C2012    | 2TLA020056R2400 | 20 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12 female + male connectors. Shield connected to pin3 (0V) on male connector.  |
|  | M12-C63      | 2TLA020056R3000 | 6 m cable 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 female connector.  |
|  | M12-C103     | 2TLA020056R4000 | 10 m cable 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 female connector.   |
|  | M12-C203     | 2TLA020056R4100 | 20 m cable 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 female connector.   |
|  | M12-C134     | 2TLA020056R5000 | 1 m cable 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 female + male connector. Shield connected to pin7 (0V) on male connector.  |
|  | M12-C334     | 2TLA020056R5100 | 3 m cable 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 female + male connectors. Shield connected to pin7 (0V) on male connector. |
|  | M12-C1612    | 2TLA020056R5400 | 16 m cable 5 x 0.34 mm <sup>2</sup> with straight M12-5 female connector.  |
|  | M12-C0312    | 2TLA020056R5800 | 0.3 m cable 5 x 0.34 mm <sup>2</sup> with M12-5 female + male connectors.  |
|  | M12-C00612   | 2TLA020056R6300 | 60 mm cable 5 x 0.34 mm <sup>2</sup> with straight M12-5 female+male connectors.   |

## Quick reference

|   | Product name  | Order code      | Description  |
|---|---------------|-----------------|--|
|    | M12-C00634    | 2TLA020056R6400 | 60 mm cable 8 x 0.34 mm <sup>2</sup> with straight M12.8 female + male connectors.   |
|    | M12-C1012V2   | 2TLA020056R6700 | 10 m cable 5 x 0.34 mm <sup>2</sup> with straight male + angled female connectors.   |
|    | M12-C65       | 2TLA020056R7200 | 6 m cable 12x0.13 mm <sup>2</sup> + shield with straight M12-12 female connector.  |
|    | M12-C105      | 2TLA020056R7300 | 10 m cable 12x0.13 mm <sup>2</sup> + shield with straight M12-12 female connector.   |
|    | M12-C205      | 2TLA020056R7500 | 20 m cable 12x0.13 mm <sup>2</sup> + shield with straight M12-12 female connector.   |
|    | M12-C61HE     | 2TLA020056R8000 | Sensor cable suitable for Harsh Environments. 6 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female connector. Ambient temperature (operation) -40 °C ... 105 °C (Plug/socket). Degree of protection IP65/IP67/IP69K. Cable type Halogen-free PP gray.  |
|   | M12-C101HE    | 2TLA020056R8100 | Sensor cable suitable for Harsh Environments. 10 m cable 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female connector. Ambient temperature (operation) -40 °C ... 105 °C (Plug/socket). Degree of protection IP65/IP67/IP69K. Cable type Halogen-free PP gray. |
|  | C5 cable 100m | 2TLA020057R0010 | C5 cable 5x0.34 shielded 100m on spool.  |
|  | C5 cable 200m | 2TLA020057R0020 | C5 cable 5x0.34 shielded 200m on spool.  |
|  | C5 cable 500m | 2TLA020057R0050 | C5 cable 5x0.34 shielded 500m on spool.  |
|  | C8 cable 200m | 2TLA020057R1020 | C8 cable 8x0.34 shielded 200m on spool.  |
|  | C8 cable 500m | 2TLA020057R1050 | C8 cable 8x0.34 shielded 500m on spool.  |
|  | C9 cable 150m | 2TLA020057R1515 | C9 cable 7x0.51+2x0.82 shielded 150m on spool.   |
|  | C9 cable 350m | 2TLA020057R1535 | C9 cable 7x0.51+2x0.82 shielded 350m on spool.   |

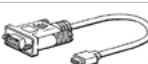

## Quick reference

|   | Product name          | Order code      | Description   |
|---|-----------------------|-----------------|---|
|    | C13 cable 100m        | 2TLA020057R2010 | C13 cable 11x0.51+2x0.82 shielded 100m on spool.  |
|    | C13 cable 250m        | 2TLA020057R2025 | C13 cable 11x0.51+2x0.82 shielded 250m on spool.  |
|    | M12-CT0212            | 2TLA020060R0400 | Transfer cable, L=20 cm, 5 x 0.34 mm <sup>2</sup> + shield with straight M12-5 female + male connectors. Shield connected to pin3 (0V) on male connector. Can be used for connection of DYNlink devices to Tina 4A/Tina 8A where the "info-pin" of each M12 connector works like a individual safe signal. Note: Only allowed when connected to a Pluto IQ input. |
|    | RSA 597 1.5m cable    | 2TLA020070R3300 | Pluto safe absolute encoder RSA 597, single turn, 1.5m cable, 6mm solid shaft.  |
|    | RHA 597 2m cable      | 2TLA020070R3400 | Pluto safe absolute encoder RHA 597, single turn, 2m cable, hollow shaft, 12mm hole.  |
|   | RSA 597 connector     | 2TLA020070R3600 | Pluto safe absolute encoder RSA 597, single turn, connector, 10mm solid shaft.  |
|  | RHA 597 10m cable     | 2TLA020070R5900 | Absolute encoder RHA 597, single turn, 10m cable, hollow shaft, 12mm hole.<br><br>2TLA020070R3600   |
|  | RSA 698 10mm solid    | 2TLA020070R3700 | Pluto safe absolute encoder RSA 698, multi-turn, M12 connector, 10mm shaft.   |
|  | Connector for RSA 597 | 2TLA020070R3900 | Female 12 pole connector for absolute encoder "RSA 597 connector". Connector to be mounted on the cable.  |
|  | M12-CANend            | 2TLA020061R0300 | M12-5 plug with Pluto safety bus termination resistor for encoders. To be used when the encoder is at one end of the Pluto safety bus.  |
|  | Pluto A20 v2          | 2TLA020070R4500 | Safety PLC with Pluto safety bus. Totally 20 I/O: 8 failsafe inputs + 8 non-failsafe outputs/failsafe inputs + 2 individually failsafe relay outputs + 2 individually failsafe transistor outputs. Current monitoring on Q16 + Q17. NOTE: Version 2 hardware/processor.   |
|  | Pluto B20 v2          | 2TLA020070R4600 | Safety PLC with Pluto safety bus. Totally 20 I/O: 8 failsafe inputs + 8 non-failsafe outputs/failsafe inputs + 2 individually failsafe relay outputs + 2 individually failsafe transistor outputs. NOTE: Version 2 hardware/processor.  |
|  | Pluto B46 v2          | 2TLA020070R1700 | Safety PLC with Pluto safety bus. Totally 46 I/O: 24 failsafe inputs + 16 non-failsafe outputs/failsafe inputs + 4 individually failsafe relay outputs + 2 individually failsafe transistor outputs.  |
|  | Pluto S20 v2          | 2TLA020070R4700 | Safety PLC. Totally 20 I/O: 8 failsafe inputs + 8 non-failsafe outputs/failsafe inputs + 2 individually failsafe relay outputs + 2 individually failsafe transistor outputs. (Without Pluto safety bus). NOTE: Version 2 hardware/processor.  |

## Quick reference

|   | Product name          | Order code      | Description  |
|---|-----------------------|-----------------|--|
|    | Pluto B22             | 2TLA020070R4800 | Safety PLC with Pluto safety bus. Totally 22 I/O: 14 failsafe inputs + 8 non-failsafe outputs/failsafe inputs. (Without Pluto safety outputs)  |
|    | Pluto D20             | 2TLA020070R6400 | Safety PLC with Pluto safety bus and analogue inputs. Totally 20 I/O: 4 combined failsafe analogue and digital inputs + 4 failsafe inputs + 8 non-failsafe outputs/failsafe inputs + 2 individually failsafe relay outputs + 2 individually failsafe transistor outputs. Analogue input range 0-10V/4-20mA.                |
|    | Pluto D20 (Harsh Env) | 2TLA020070R6401 | Safety PLC with Pluto safety bus and analogue inputs. Totally 20 I/O: 4 combined failsafe analogue and digital inputs + 4 failsafe inputs + 8 non-failsafe outputs/failsafe inputs + 2 individually failsafe relay outputs + 2 individually failsafe transistor outputs. Analogue input range 0-10V/4-20mA. Coated PCBs.   |
|    | Pluto D45             | 2TLA020070R6600 | Safety PLC with Pluto safety bus and analogue inputs. Totally 45 I/O: 8 combined failsafe analogue and digital inputs + 16 failsafe inputs + 15 non-failsafe outputs/failsafe inputs + 4 individually failsafe relay outputs + 2 individually failsafe transistor outputs. Analogue input range 0-10V/4-20mA.              |
|    | Pluto D45 (Harsh Env) | 2TLA020070R6601 | Safety PLC with Pluto safety bus and analogue inputs. Totally 45 I/O: 8 combined failsafe analogue and digital inputs + 16 failsafe inputs + 15 non-failsafe outputs/failsafe inputs + 4 individually failsafe relay outputs + 2 individually failsafe transistor outputs. Analogue input range 0-10V/4-20mA. Coated PCBs. |
|  | Pluto O2              | 2TLA020070R8500 | Safety PLC output module with Pluto safety bus. Safety output module. Totally 6 I/O: 2 Failsafe inputs for monitoring + 2 non-failsafe outputs/failsafe inputs + 2 individually failsafe relay outputs (with 3 contacts each).   |
|  | Pluto S46 v2          | 2TLA020070R1800 | Safety PLC. Totally 46 I/O: 24 failsafe inputs + 16 non-failsafe outputs/failsafe inputs + 4 individually failsafe relay outputs + 2 individually failsafe transistor outputs. (Without Pluto safety bus)  |
|  | GATE-P2               | 2TLA020071R8000 | Gateway for 2-way communication between the Pluto bus and Profibus.  |
|  | GATE-C2               | 2TLA020071R8100 | Gateway for 2-way communication between the Pluto bus and CANopen.   |
|  | GATE-D2               | 2TLA020071R8200 | Gateway for 2-way communication between the Pluto bus and Devicenet.   |
|  | GATE-EIP              | 2TLA020071R9000 | Gateway for 2-way communication between the Pluto bus and Ethernet. Ethernet protocol EtherNet I/P.  |
|  | GATE-EC               | 2TLA020071R9100 | Gateway for 2-way communication between the Pluto bus and Ethernet. Ethernet protocol EtherCAT.  |
|  | GATE-S3               | 2TLA020071R9200 | Gateway for 2-way communication between the Pluto bus and Ethernet. Ethernet protocol SERCOS III.  |
|  | GATE-PN               | 2TLA020071R9300 | Gateway for 2-way communication between the Pluto bus and Ethernet. Ethernet protocol PROFINET.  |

## Quick reference

|   | Product name       | Order code      | Description   |
|---|--------------------|-----------------|---|
|    | GATE-MT            | 2TLA020071R9400 | Gateway for 2-way communication between the Pluto bus and Ethernet. Ethernet protocol Modbus TCP.   |
|    | FIXA               | 2TLA020072R2000 | Handheld terminal for addressing, configuration and testing of StatusBus devices, DYNlink devices and conventional PNP devices.   |
|    | Pluto cable serial | 2TLA020070R5600 | Pluto programming and on-line monitoring cable from a PC serial port, 9-pole D-sub connector, to the Pluto programming port.  |
|    | Pluto cable HMI    | 2TLA020070R5700 | Cable for connecting a HMI-panel to the Pluto programming port. Connector on HMI-side: 15-pole D-sub. On Pluto side: 90 degrees angled Modbus contact.  |
|    | Pluto cable USB    | 2TLA020070R5800 | Pluto programming and on-line monitoring cable from a PC USB port to the Pluto programming port.  |
|    | Pluto cable CP400  | 2TLA020070R6700 | Cable for connecting HMI-panel ABB CP400 to Pluto programming port. Connector at HMI-side: 9-pole D-sub.  |
|    | PCABLE-100         | 2TLA020070R6810 | CAN-Bus cable 2x0.75mm <sup>2</sup> , yellow. UL & CSA approved. 100 meter ring.  |
|  | PCABLE-500         | 2TLA020070R6850 | CAN-Bus cable 2x0.75mm <sup>2</sup> , yellow. UL & CSA approved. 500 meter drum.  |
|  | Pluto cable CP600  | 2TLA020070R6900 | Cable for connecting HMI-panel ABB CP600 to Pluto programming port. Connector at HMI-side: 9-pole D-sub.  |
|  | IDFIX-R            | 2TLA020070R2000 | Identifier, read only, for assigning an address to the Pluto it is connected to. Each Pluto connected to the Pluto safety bus needs an IDFIX. The IDFIX number is fixed at delivery.                                  |
|  | IDFIX-RW           | 2TLA020070R2100 | Identifier, read/write, for assigning an address to the Pluto it is connected to. Each Pluto connected to the Pluto safety bus needs an IDFIX. The IDFIX number is programmable, i.e. the user can choose the number. |
|  | R120 Resistor      | 2TLA020070R2200 | Terminating resistor for Pluto safety bus. Delivered with each Pluto. Necessary for each stand-alone Pluto and on the Pluto units at each end of the Pluto safety bus. Should be removed from the other Pluto units.  |
|  | IDFIX-PROG 10k     | 2TLA020070R2600 | External program memory, 10 kbyte. For projects with only one Pluto the memory can store the PLC program.   |
|  | CP604 4.3IN        | 1SAP504100R0001 | CP604 ECO CONT PANEL 4.3IN TFT HMI  |
|  | CP607 7IN          | 1SAP507100R0001 | CP607 ECO CONT PANEL 7IN TFT HMI  |

## Quick reference

|   | Product name      | Order code      | Description   |
|---|-------------------|-----------------|---|
|    | CP610 10IN        | 1SAP510100R0001 | CP610 ECO CONT PANEL 10.1IN TFT   |
|    | CP620 4.3IN       | 1SAP520100R0001 | CP620 CONT PANEL 4.3IN TFT HMI  |
|    | CP630 5.7IN       | 1SAP530100R0001 | CP630 CONT PANEL 5.7IN TFT HMI  |
|    | CP635 7IN         | 1SAP535100R0001 | CP635 CONT PANEL 7IN TFT HMI  |
|    | CP651 10.4IN      | 1SAP551100R0001 | CP651 CONT PANEL 10.4IN TFT HMI   |
|   | CP661 12.1IN      | 1SAP561100R0001 | CP661 CONT PANEL 12.1IN TFT HMI   |
|  | CP665 13.3IN      | 1SAP565100R0001 | CP665 CONT PANEL 13.3IN TFT HMI   |
|  | CP676 15IN        | 1SAP576100R0001 | CP676 CONT PANEL 15IN TFT HMI   |
|  | Mute R2           | 2TLA022044R0500 | MUTE R2 Retroreflex photoelectric sensor  |
|  | REFLECT 1         | 2TLA022044R2000 | REFLECT 1 - Reflector diam. 63 mm   |
|  | REFLECT 2         | 2TLA022044R3000 | REFLECT 2 - Reflector diam. 82 mm   |
|  | Orion1-4-14-015-B | 2TLA022300R0000 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=150mm, Range=0.2-6m, Type 4. |
|  | Orion1-4-14-030-B | 2TLA022300R0100 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=300mm, Range=0.2-6m, Type 4. |

## Quick reference

|   | Product name      | Order code      | Description   |
|---|-------------------|-----------------|---|
|    | Orion1-4-14-045-B | 2TLA022300R0200 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=450mm, Range=0.2-6m, Type 4.     |
|    | Orion1-4-14-060-B | 2TLA022300R0300 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=600mm, Range=0.2-6m, Type 4.     |
|    | Orion1-4-14-075-B | 2TLA022300R0400 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=750mm, Range=0.2-6m, Type 4.     |
|    | Orion1-4-14-090-B | 2TLA022300R0500 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=900mm, Range=0.2-6m, Type 4.     |
|   | Orion1-4-14-105-B | 2TLA022300R0600 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1050mm, Range=0.2-6m, Type 4.    |
|  | Orion1-4-14-120-B | 2TLA022300R0700 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1200mm, Range=0.2-6m, Type 4.    |
|  | Orion1-4-14-135-B | 2TLA022300R0800 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1350mm, Range=0.2-6m, Type 4.    |
|  | Orion1-4-14-150-B | 2TLA022300R0900 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1500mm, Range=0.2-6m, Type 4.    |
|  | Orion1-4-14-165-B | 2TLA022300R1000 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1650mm, Range=0.2-6m, Type 4.    |
|  | Orion1-4-14-180-B | 2TLA022300R1100 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1800mm, Range=0.2-6m, Type 4.    |
|  | Orion1-4-14-030-E | 2TLA022301R0100 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=300mm, Range=0.2-7m, Type 4. |
|  | Orion1-4-14-045-E | 2TLA022301R0200 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=450mm, Range=0.2-7m, Type 4. |

## Quick reference

|   | Product name      | Order code      | Description  |
|---|-------------------|-----------------|--|
|    | Orion1-4-14-060-E | 2TLA022301R0300 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=600mm, Range=0.2-7m, Type 4.  |
|    | Orion1-4-14-075-E | 2TLA022301R0400 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=750mm, Range=0.2-7m, Type 4.  |
|    | Orion1-4-14-090-E | 2TLA022301R0500 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=900mm, Range=0.2-7m, Type 4.  |
|    | Orion1-4-14-105-E | 2TLA022301R0600 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1050mm, Range=0.2-7m, Type 4. |
|   | Orion1-4-14-120-E | 2TLA022301R0700 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1200mm, Range=0.2-7m, Type 4. |
|  | Orion1-4-14-135-E | 2TLA022301R0800 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1350mm, Range=0.2-7m, Type 4. |
|  | Orion1-4-14-150-E | 2TLA022301R0900 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1500mm, Range=0.2-7m, Type 4. |
|  | Orion1-4-14-165-E | 2TLA022301R1000 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1650mm, Range=0.2-7m, Type 4. |
|  | Orion1-4-14-180-E | 2TLA022301R1100 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=14mm, Protected height=1800mm, Range=0.2-7m, Type 4. |
|  | Orion1-4-30-015-B | 2TLA022302R0000 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=150mm, Range=0.2-19m, Type 4.     |
|  | Orion1-4-30-030-B | 2TLA022302R0100 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=300mm, Range=0.2-19m, Type 4.     |
|  | Orion1-4-30-045-B | 2TLA022302R0200 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=450mm, Range=0.2-19m, Type 4.     |
|  | Orion1-4-30-060-B | 2TLA022302R0300 | Orion1 Base Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=600mm, Range=0.2-19m, Type 4.     |

## Quick reference

|    | Orion1-4-30-090-E | 2TLA022303R0500 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=900mm, Range=0.2-20m, Type 4.  |
|    | Orion1-4-30-105-E | 2TLA022303R0600 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=1050mm, Range=0.2-20m, Type 4. |
|    | Orion1-4-30-120-E | 2TLA022303R0700 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=1200mm, Range=0.2-20m, Type 4. |
|    | Orion1-4-30-135-E | 2TLA022303R0800 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=1350mm, Range=0.2-20m, Type 4. |
|   | Orion1-4-30-150-E | 2TLA022303R0900 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=1500mm, Range=0.2-20m, Type 4. |
|  | Orion1-4-30-165-E | 2TLA022303R1000 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=1650mm, Range=0.2-20m, Type 4. |
|  | Orion1-4-30-180-E | 2TLA022303R1100 | Orion1 Extended Light Curtain, Transmitter + Receiver, Resolution=30mm, Protected height=1800mm, Range=0.2-20m, Type 4. |
|  | Orion2-4-K2-050-B | 2TLA022304R0000 | Orion2 Base Light Grids, Transmitter + Receiver, 2 beams, Protected height=500mm, Range=0.5-50m, Type 4.                |
|  | Orion2-4-K3-080-B | 2TLA022304R0100 | Orion2 Base Light Grids, Transmitter + Receiver, 3 beams, Protected height=800mm, Range=0.5-50m, Type 4.                |
|  | Orion2-4-K4-090-B | 2TLA022304R0200 | Orion2 Base Light Grids, Transmitter + Receiver, 4 beams, Protected height=900mm, Range=0.5-50m, Type 4.                |
|  | Orion2-4-K4-120-B | 2TLA022304R0300 | Orion2 Base Light Grids, Transmitter + Receiver, 4 beams, Protected height=1200mm, Range=0.5-50m, Type 4.               |
|  | Orion2-4-K2-050-E | 2TLA022305R0000 | Orion2 Extended Light Grids, Transmitter + Receiver, 2 beams, Protected height=500mm, Range=0.5-50m, Type 4.            |
|  | Orion2-4-K3-080-E | 2TLA022305R0100 | Orion2 Extended Light Grids, Transmitter + Receiver, 3 beams, Protected height=800mm, Range=0.5-50m, Type 4.            |

## Quick reference

|   | Product name       | Order code      | Description   |
|---|--------------------|-----------------|---|
|    | Orion2-4-K4-090-E  | 2TLA022305R0200 | Orion2 Extended Light Grids, Transmitter + Receiver, 4 beams, Protected height=900mm, Range=0.5-50m, Type 4.  |
|    | Orion2-4-K4-120-E  | 2TLA022305R0300 | Orion2 Extended Light Grids, Transmitter + Receiver, 4 beams, Protected height=1200mm, Range=0.5-50m, Type 4. |
|    | Orion3-4-K1C-050-B | 2TLA022306R0000 | Orion3 Base Light Grids, Active unit, 2 beams, Protected height=500mm, Range=0.5-8m, Type 4.                  |
|    | Orion3-4-K2C-080-B | 2TLA022306R0100 | Orion3 Base Light Grids, Active unit, 3 beams, Protected height=800mm, Range=0.5-8m, Type 4.                  |
|   | Orion3-4-K2C-090-B | 2TLA022306R0200 | Orion3 Base Light Grids, Active unit, 4 beams, Protected height=900mm, Range=0.5-6.5m, Type 4.                |
|  | Orion3-4-K2C-120-B | 2TLA022306R0300 | Orion3 Base Light Grids, Active unit, 4 beams, Protected height=1200mm, Range=0.5-8m, Type 4.                 |
|  | Orion3-4-M1C-050   | 2TLA022306R1000 | Orion3 Light Grids, Passive unit, 2 beams, Protected height=500mm.  |
|  | Orion3-4-M2C-080   | 2TLA022306R1100 | Orion3 Light Grids, Passive unit, 3 beams, Protected height=800mm.  |
|  | Orion3-4-M2C-090   | 2TLA022306R1300 | Orion3 Light Grids, Passive unit, 4 beams, Protected height=900mm.  |
|  | Orion3-4-M2C-120   | 2TLA022306R1400 | Orion3 Light Grids, Passive unit, 4 beams, Protected height=1200mm.   |
|  | Orion3-4-K1C-050-E | 2TLA022307R0000 | Orion3 Extended Light Grids, Active unit, 2 beams, Protected height=500mm, Range=0.5-8m, Type 4.              |
|  | Orion3-4-K2C-080-E | 2TLA022307R0100 | Orion3 Extended Light Grids, Active unit, 3 beams, Protected height=800mm, Range=0.5-8m, Type 4.              |
|  | Orion3-4-K2C-090-E | 2TLA022307R0200 | Orion3 Extended Light Grids, Active unit, 4 beams, Protected height=900mm, Range=0.5-6.5m, Type 4.            |

## Quick reference

|   | Product name       | Order code      | Description  |
|---|--------------------|-----------------|--|
|    | Orion3-4-K2C-120-E | 2TLA022307R0300 | Orion3 Extended Light Grids, Active unit, 4 beams, Protected height=1200mm, Range=0.5-8m, Type 4.  |
|    | SPOT 10 T/R        | 2TLA020009R0600 | SPOT 10 T/R SAFETY LIGHT BEAM  |
|    | JSM7A              | 2TLA040006R0500 | Mirror for 0-20 m, adjustable mirror plate. Dimensions: 115 x 80 x 30 mm. Screws for bracket included.   |
|    | JSM64              | 2TLA040007R0200 | Adjustable mounting bracket with rotational knuckle for 18mm barrel style sensors, for example, Spot 10T/R or MUTE R (FSTR1).  |
|    | JSM Orion01        | 2TLA022310R0000 | JSM Orion01 - 4 standard brackets for Orion1 & Orion2. For all lengths, 2 brackets should be used per unit (transmitter or receiver unit). These are spare parts since the necessary number of bracket are delivered with the light-guard. |
|   | JSM Orion03        | 2TLA022310R0100 | JSM Orion03 - 4 rotation brackets for Orion1 Base. For all lengths, 2 brackets should be used per unit (transmitter or receiver unit).   |
|  | JSM Orion04        | 2TLA022310R0200 | JSM Orion04 - 4 rotation brackets for Orion2. For all lengths, 2 brackets should be used per unit (transmitter or receiver unit).  |
|  | JSM Orion05        | 2TLA022310R0300 | JSM Orion05 - 4 rotation brackets for Orion3. For 500, 800 and 900 mm units, 2 brackets should be used per unit (active or passive unit). For 1200 mm units, 3 brackets should be used per unit.   |
|  | JSM Orion06        | 2TLA022310R0400 | JSM Orion06 - Kit for mounting of Orion1 & Orion2 in Stand (4 brackets) - For light guards shorter than 1200 mm  |
|  | JSM Orion07        | 2TLA022310R0500 | JSM Orion07 - Kit for mounting of Orion1 & Orion2 in Stand (6 brackets) - For light guards with a height from 1200 mm  |
|  | JSM Orion08        | 2TLA022310R0600 | JSM Orion08 - Kit for mounting of Orion3 in Stand (4 brackets) - For light guards shorter than 1200 mm   |
|  | JSM Orion09        | 2TLA022310R0700 | JSM Orion09 - Kit for mounting Orion3 in Stand (6 brackets) - For light guards with a height from 1200 mm  |
|  | JSM Orion10        | 2TLA022310R0800 | JSM Orion10 - Kit Orion1 Mirror on wall  |
|  | JSM Orion11        | 2TLA022310R0900 | JSM Orion11 - Kit for mounting Orion1 Mirror in Stand  |

|   | Product name      | Order code      | Description   |
|---|-------------------|-----------------|---|
|    | JSM Orion02       | 2TLA022310R1000 | JSM Orion02 - 4 standard brackets for Orion3. For 500, 800 and 900 mm units, 2 brackets should be used per unit (active or passive unit). For 1200 mm units, 3 brackets should be used per unit (active or passive unit). These are spare parts since the necessary number of bracket are delivered with the light-guard. |
|    | Orion Laser       | 2TLA022310R5000 | Orion Laser pointer - Alignment tool  |
|    | Orion TP-14       | 2TLA022310R5200 | Orion TP-14 - Test Piece 14 mm  |
|    | Orion TP-30       | 2TLA022310R5300 | Orion TP-30 - Test Piece 30 mm  |
|    | Orion1 Mirror 060 | 2TLA022311R0100 | Orion1 Mirror 060 - Deviating mirror exclusive stand - for Orion1 - Length = 600 mm - The length of the mirror must be at least 100 mm longer than the protected height of the light curtain  |
|    | Orion1 Mirror 090 | 2TLA022311R0200 | Orion1 Mirror 090 - Deviating mirror exclusive stand - for Orion1 - Length = 900 mm - The length of the mirror must be at least 100 mm longer than the protected height of the light curtain  |
|   | Orion1 Mirror 120 | 2TLA022311R0300 | Orion1 Mirror 120 - Deviating mirror exclusive stand - for Orion1 - Length = 1200 mm - The length of the mirror must be at least 100 mm longer than the protected height of the light curtain   |
|  | Orion1 Mirror 165 | 2TLA022311R0400 | Orion1 Mirror 165 - Deviating mirror exclusive stand - for Orion1 - Length = 1650 mm - The length of the mirror must be at least 100 mm longer than the protected height of the light curtain   |
|  | Orion1 Mirror 190 | 2TLA022311R0500 | Orion1 Mirror 190 - Deviating mirror exclusive stand - for Orion1 - Length = 1900 mm - The length of the mirror must be at least 100 mm longer than the protected height of the light curtain   |
|  | Orion Stand 060   | 2TLA022312R0000 | Orion Stand 060 - Protective stand for light guard with an actual length shorter than 60 cm - The actual length is longer than the protected height - Fits Orion1 Mirror 060 and shorter  |
|  | Orion Stand 100   | 2TLA022312R0100 | Orion Stand 100 - Protective stand for light guard with an actual length shorter than 100 cm - The actual length is longer than the protected height - Fits Orion1 Mirror 090 and shorter   |
|  | Orion Stand 120   | 2TLA022312R0200 | Orion Stand 120 - Protective stand for light guard with an actual length shorter than 120 cm - The actual length is longer than the protected height - Fits Orion1 Mirror 120 and shorter   |
|  | Orion Stand 165   | 2TLA022312R0300 | Orion Stand 165 - Protective stand for light guard with an actual length shorter than 165 cm - The actual length is longer than the protected height - Fits Orion1 Mirror 165 and shorter   |
|  | Orion Stand 190   | 2TLA022312R0400 | Orion Stand 190 - Protective stand for light guard with an actual length shorter than 190 cm - The actual length is longer than the protected height - Fits Orion1 Mirror 190 and shorter   |
|  | Orion Mirror K050 | 2TLA022312R1000 | Orion Mirror K050 - Deviating mirror in stand - For corresponding Orion2 or Orion3  |

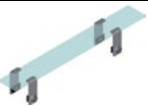

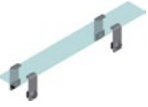

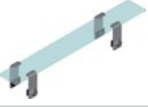

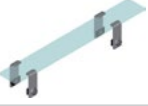

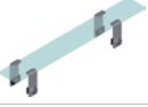

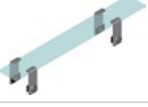

## Quick reference

|   | Product name      | Order code      | Description  |
|---|-------------------|-----------------|--|
|    | Orion Mirror K080 | 2TLA022312R1100 | Orion Mirror K080 - Deviating mirror in stand - For corresponding Orion2 or Orion3 |
|    | Orion Mirror K090 | 2TLA022312R1200 | Orion Mirror K090 - Deviating mirror in stand - For corresponding Orion2 or Orion3 |
|    | Orion Mirror K120 | 2TLA022312R1300 | Orion Mirror K120 - Deviating mirror in stand - For corresponding Orion2 or Orion3 |
|    | Orion Stand Plate | 2TLA022312R5000 | Orion Stand Plate - Adjustment of Stand  |
|    | Orion WET-015     | 2TLA022313R0000 | Orion WET-015 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-030     | 2TLA022313R0100 | Orion WET-030 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-045     | 2TLA022313R0200 | Orion WET-045 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-060     | 2TLA022313R0300 | Orion WET-060 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-075     | 2TLA022313R0400 | Orion WET-075 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-090     | 2TLA022313R0500 | Orion WET-090 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-105     | 2TLA022313R0600 | Orion WET-105 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-120     | 2TLA022313R0700 | Orion WET-120 - Protective tube for corresponding Orion1 Base                      |
|  | Orion WET-135     | 2TLA022313R0800 | Orion WET-135 - Protective tube for corresponding Orion1 Base                      |

## Quick reference

|   | Product name     | Order code      | Description   |
|---|------------------|-----------------|---|
|    | Orion WET-150    | 2TLA022313R0900 | Orion WET-150 - Protective tube for corresponding Orion1 Base |
|    | Orion WET-165    | 2TLA022313R1000 | Orion WET-165 - Protective tube for corresponding Orion1 Base |
|    | Orion WET-180    | 2TLA022313R1100 | Orion WET-180 - Protective tube for corresponding Orion1 Base |
|    | Orion WET-K050   | 2TLA022313R3000 | Orion WET-K050 - Protective tube for corresponding Orion2     |
|   | Orion WET-K080   | 2TLA022313R3100 | Orion WET-K080 - Protective tube for corresponding Orion2     |
|  | Orion WET-K090   | 2TLA022313R3200 | Orion WET-K090 - Protective tube for corresponding Orion2     |
|  | Orion WET-K120   | 2TLA022313R3300 | Orion WET-K120 - Protective tube for corresponding Orion2     |
|  | Orion Shield-015 | 2TLA022313R5000 | Orion Shield-015 - Lens shield for corresponding Orion1 Base  |
|  | Orion Shield-030 | 2TLA022313R5100 | Orion Shield-030 - Lens shield for corresponding Orion1 Base  |
|  | Orion Shield-045 | 2TLA022313R5200 | Orion Shield-045 - Lens shield for corresponding Orion1 Base  |
|  | Orion Shield-060 | 2TLA022313R5300 | Orion Shield-060 - Lens shield for corresponding Orion1 Base  |
|  | Orion Shield-075 | 2TLA022313R5400 | Orion Shield-075 - Lens shield for corresponding Orion1 Base  |
|  | Orion Shield-090 | 2TLA022313R5500 | Orion Shield-090 - Lens shield for corresponding Orion1 Base  |

## Quick reference

|   | Product name      | Order code      | Description  |
|---|-------------------|-----------------|--|
|    | Orion Shield-105  | 2TLA022313R5600 | Orion Shield-105 - Lens shield for corresponding Orion1 Base |
|    | Orion Shield-120  | 2TLA022313R5700 | Orion Shield-120 - Lens shield for corresponding Orion1 Base |
|    | Orion Shield-135  | 2TLA022313R5800 | Orion Shield-135 - Lens shield for corresponding Orion1 Base |
|    | Orion Shield-150  | 2TLA022313R5900 | Orion Shield-150 - Lens shield for corresponding Orion1 Base |
|   | Orion Shield-165  | 2TLA022313R6000 | Orion Shield-165 - Lens shield for corresponding Orion1 Base |
|  | Orion Shield-180  | 2TLA022313R6100 | Orion Shield-180 - Lens shield for corresponding Orion1 Base |
|  | Orion Shield-K050 | 2TLA022313R8000 | Orion Shield-K050 - Lens shield for corresponding Orion2     |
|  | Orion Shield-K080 | 2TLA022313R8100 | Orion Shield-K080 - Lens shield for corresponding Orion2     |
|  | Orion Shield-K090 | 2TLA022313R8200 | Orion Shield-K090 - Lens shield for corresponding Orion2     |
|  | Orion Shield-K120 | 2TLA022313R8300 | Orion Shield-K120 - Lens shield for corresponding Orion2     |
|  | M12-C02PT2T       | 2TLA022315R0100 | M12-C02PT2T - Transmitter cable for Orion1 Extended          |
|  | M12-C02PT6RB      | 2TLA022315R0200 | M12-C02PT6RB - Receiver cable Blanking Orion1 Extended       |
|  | M12-C02PT62RM     | 2TLA022315R0300 | M12-C02PT62RM - Receiver cable Muting Orion1 Extended        |

## Quick reference

|   | Product name     | Order code      | Description   |
|---|------------------|-----------------|---|
|    | PT-C1PT          | 2TLA022315R1000 | PT-C1PT - Cascade cable for Orion1 Extended, 1 m  |
|    | PT-C05PT         | 2TLA022315R1100 | PT-C05PT - Cascade cable for Orion1 Extended, 0.5 m   |
|    | PT-C005PT        | 2TLA022315R1200 | PT-C005PT - Cascade cable for Orion1 Extended, 0.05 m   |
|    | M12-CTO1BA       | 2TLA022315R3000 | Transfer cable, L=0.2 m, 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 pole male + female connectors. Shield connected to pin 7 (0 V) on male connector. Can be used when connecting an Orion1 Base in auto reset to Tina 10A or Tina 10C.  |
|    | M12-CTO1BM       | 2TLA022315R3100 | Transfer cable, L=0.2 m, 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 pole male + female connectors. Shield connected to pin 7 (0 V) on male connector. Can be used when connecting an Orion1 Base in manual reset to Tina 10B or M12-3R.  |
|   | M12-CTO3B        | 2TLA022315R3200 | Transfer cable, L=0.2 m, 8 x 0.34 mm <sup>2</sup> + shield with straight M12-8 pole male + female connectors. Shield connected to pin 7 (0 V) on male connector. Can be used when connecting an Orion3 Base to Tina 10A/B/C or M12-3R.  |
|  | M12-3R           | 2TLA022316R0000 | M12 Y-connector for connection of a reset light button to Orion1 Base (M12-CTO1BM necessary), Orion 2 Base/Extended, Orion3 Base (M12-CTO3B necessary) and Orion3 Extended. One M12-8 pole female connector (#2) for connecting Orion, one M12-5 pole male connector (#1) for connecting +24 VDC, 0 V and the OSSD signals and one M12-5 pole female connector (#3) for connecting a reset light button like Smile. |
|  | M12-CYMUTE       | 2TLA022316R0100 | M12 Y-cable for connection of muting sensors to Orion2 Extended and Orion3 Extended. One M12-8 pole female connector (#1) for connecting Orion, one M12-8 pole male connector (#2) for connecting Orion to another equipment and one M12-5 pole male connector (#3) for connecting the muting sensors (e.g. using OMC1).  |
|  | OMC1             | 2TLA022316R2000 | Connection box for two or four muting sensors. Connection to Orion1 Extended using M12-C02PT62RM and to Orion2 Extended and Orion3 Extended using M12-CYMUTE. Four M12-5 pole female connectors for muting sensors (A1, A2, B1, B2).  |
|  | Smile 11RO1      | 2TLA022316R3000 | Reset light button in Smile enclosure for connection to Orion1 Base using M12-3R or Tina 10B (M12-CTO1BM necessary). One M12-5 pole male connector.   |
|  | Smile 11RO2      | 2TLA022316R3100 | Reset light button in Smile enclosure for connection to Orion2 Base, Orion2 Extended and Orion3 Extended using M12-3R or Tina 10B. One M12-5 pole male connector.   |
|  | Smile 11RO3      | 2TLA022316R3200 | Reset light button in Smile enclosure for connection to Orion3 Base using M12-3R or Tina 10B (M12-CTO3B necessary). One M12-5 pole male connector.  |
|  | Smile 11 EA Tina | 2TLA030050R0000 | Emergency stop button in Smile enclosure, Tina adaptation unit to DYNlink included, Status LED in button, 1 x M12 5-pin male connector.   |

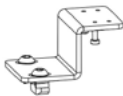

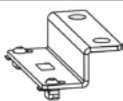

## Quick reference

|   | Product name      | Order code      | Description  |
|---|-------------------|-----------------|--|
|    | Smile 11 EAR Tina | 2TLA030050R0100 | Emergency stop button in Smile enclosure, Tina adaptation unit to DYNlink included, Status LED in button, 1 x M12 5-pin male connector, reversed button attachment(from bottom). |
|    | Smile 12 EA Tina  | 2TLA030050R0200 | Emergency stop button in Smile enclosure, Tina adaptation unit to DYNlink included, Status LED in button, 1 x M12 5-pin male connector and 1 x M12 5-pin female connector.       |
|    | Smile 10 EA Tina  | 2TLA030050R0400 | Emergency stop button in Smile enclosure, Tina adaptation unit to DYNlink included, Status LED in button, 1 meter 5-pole cable out from bottom.                                  |
|    | Smile 11 SA Tina  | 2TLA030050R0500 | Safety stop button (black) in Smile enclosure, Tina adaptation unit to DYNlink included, Status LED in button, 1 x M12 5-pin male connector.                                     |
|    | Smile 11 EC Tina  | 2TLA030050R0900 | Emergency stop in Smile enclosure, Tina adaptation unit included for dynamic circuit with StatusBus functionality, Status LED in button, 1 x M12 5-pin male connector.           |
|   | Smile 11 EA       | 2TLA030051R0000 | Emergency stop button in Smile enclosure, 2 x NC, Status LED in button, 1 x M12 5-pin male connector.  |
|  | Smile 11 EAR      | 2TLA030051R0100 | Emergency stop button in Smile enclosure, 2 x NC, Status LED in button, 1 x M12 5-pin male connector, reversed button attachment(from bottom).                                   |
|  | Smile 12 EA       | 2TLA030051R0200 | Emergency stop button in Smile enclosure, 2 x NC, Status LED in button, 1 x M12 5-pin male connector and 1 x M12 5-pin female connector.   |
|  | Smile 10 EA       | 2TLA030051R0400 | Emergency stop button in Smile enclosure, 2 x NC, Status LED in button, 1 meter 5-pole cable out of bottom.  |
|  | Smile 10 EK       | 2TLA030051R0600 | Emergency stop button in Smile enclosure, 2 x NC, 1 meter 4-pole cable out of bottom.  |
|  | Smile 11 SA       | 2TLA030051R0900 | Machine stop(Black button) in Smile enclosure, 2 x NC, Status LED in button, 1 x M12 5-pin male connector.   |
|  | JST2              | 2TLA030051R1300 | Termination for Smile 12 EA, when the last Smile is not a Smile 11 EA. Connects pin 1 with pin 5, and pin 2 with pin 4.  |
|  | Smile 11 RA       | 2TLA030053R0000 | Reset button in Smile enclosure, 1 x NO button, 1 x Blue LED, 1 x M12 5-pin male connector.  |
|  | Smile 11 RB       | 2TLA030053R0100 | Reset button in Smile enclosure, Pluto Lightbutton connection, 1 button+Blue LED, 1 x M12 5-pin male connector.  |

## Quick reference

|   | Product name       | Order code      | Description   |
|---|--------------------|-----------------|---|
|    | Smile 12 RF M12-5  | 2TLA030053R2600 | Reset button in Smile enclosure for local reset of Adam Reset M12-5. Blue LED, M12-5 male + female connectors.  |
|    | Smile 12 RG M12-8  | 2TLA030053R2700 | Reset button in Smile enclosure for local reset of Adam Reset M12-8. Blue LED, M12-8 male + female connectors.  |
|    | INCA 1 Tina        | 2TLA030054R0000 | Emergency stop button for panel mounting, 22.5 mm holes, Tina adaptation to DYNlink, status LED in button, terminal blocks.   |
|    | INCA 1             | 2TLA030054R0100 | Emergency stop button for panel mounting, 22.5 mm holes, 2 NC contacts, status LED in button, terminal blocks.  |
|    | INCA 1S Tina       | 2TLA030054R0200 | Safety stop (black button) for panel mounting, 22.5 mm holes, Tina adaptation to DYNlink, status LED in button, terminal blocks.  |
|   | INCA 1S            | 2TLA030054R0300 | Safety stop (black button) for panel mounting, 22.5 mm holes, 2 NC contacts, status LED in button, terminal blocks.   |
|  | Inca 1 EC Tina     | 2TLA030054R1400 | Emergency stop button for panel mounting, 22.5 mm holes, Tina adaptation to DYNlink and StatusBus functionality, Indication LED in button, detachable terminal blocks.  |
|  | Surround for Inca  | 2TLA030054R0400 | Elevated yellow surround for panel mounted emergency stop button.   |
|  | E-Sign 22.5        | 2TLA030054R0900 | Yellow surround for panel mounted emergency stop button, for 22.5 mm hole.  |
|  | E-Sign 32.5        | 2TLA030054R1000 | Yellow surround for panel mounted emergency stop button, for 32.5 mm hole.  |
|  | Coloured filters   | 2TLA030059R2600 | Kit of coloured filters (yellow, green, white, blue, red)   |
|  | Magne 3X M12-5     | 2TLA042022R2700 | Electromagnetic lock with M12-5 connector. Locking with +24VDC. Holding force 1500N. Protection class IP67. Anchor plate and cellular rubber are not included.  |
|  | Magne 4X DYN M12-5 | 2TLA042022R3000 | Electromagnetic lock with integrated Adam DYN for safe interlocking and M12-5 connector. Locking with +24VDC. Holding force 1500N. Protection class IP67. Eva actuator and anchor plate must be ordered separately: "Eva General code" or "Eva Unique code", "Magne Anchor 32A" or "Magne Anchor 32B".  |
|  | Magne 4 DYN-Info   | 2TLA042022R3400 | Electromagnetic lock with integrated ADAM DYN-Info for safe interlocking and M12-8 connector. Both "Locked" and "Closed" information outputs. Locking with +24VDC. Holding force 1500N. Protection class IP67. Eva actuator and anchor plate must be ordered separately: "Eva General code" or "Eva Unique code", "Magne Anchor 32A" or "Magne Anchor 32B". |
|  | Magne 4 DYN-2Info  | 2TLA042022R3410 | Electromagnetic lock with integrated ADAM DYN-Info for safe interlocking and M12-8 connector. Both "Locked" and "Closed" information outputs. Locking with +24VDC. Holding force 1500N. Protection class IP67. Eva actuator and anchor plate must be ordered separately: "Eva General code" or "Eva Unique code", "Magne Anchor 32A" or "Magne Anchor 32B". |

## Quick reference

|   | Product name      | Order code      | Description   |
|---|-------------------|-----------------|---|
|    | Magne 4 OSSD-Info | 2TLA042022R4600 | Electromagnetic lock with integrated ADAM OSSD-Info for safe interlocking and M12-8 connector. Both "Locked" and "Closed" information outputs. Locking with +24VDC. Holding force 1500N. Protection class IP67.<br>Eva actuator and anchor plate must be ordered separately: "Eva General code" or "Eva Unique code", "Magne Anchor 32A" or "Magne Anchor 32B". |
|    | JSM D28           | 2TLA042023R0100 | Aluminum profile used as both door handle and mounting kit for Magne. Completely covers the Magne unit when the door is closed.   |
|    | JSM D23           | 2TLA042023R0200 | Mounting kit for Magne on sliding door. Fits all Magne.   |
|    | JSM D24           | 2TLA042023R0300 | Mounting kit for Eva on conventional door when used with Magne with integrated Adam.  |
|    | Magne Anchor 32B  | 2TLA042023R0400 | Anchor plate with permanent magnet. Holding force: 30N. Delivered with cellular rubber. A permanent magnet keeps the door/hatch closed when the Magne is unlocked. The door can still easily be opened.   |
|    | Magne Anchor 32D  | 2TLA042023R0410 | Anchor plate without permanent magnet. Delivered with Magne rubber. Without permanent magnet, there is no magnetic field when the Magne is unlocked, which avoid the accumulation of metallic particles on the anchor plate.  |
|  | Magne Anchor 32E  | 2TLA042023R0420 | Anchor plate with permanent magnet. Holding force: 30N. Delivered with Magne rubber. A permanent magnet keeps the door/hatch closed when the Magne is unlocked. The door can still easily be opened.  |
|  | JSM D21B          | 2TLA042023R0500 | Mounting kit for Magne. For conventional door (5–15 mm door gap). Fits all Magne. Note: when used with Magne with integrated Adam, a mounting kit is also required for Eva (JSM D24).   |
|  | JSM D27           | 2TLA042023R1000 | Handle and screws for use with JSM D21B.  |
|  | Magne Anchor 32A  | 2TLA042023R1300 | Anchor plate without permanent magnet. Delivered with cellular rubber. Without permanent magnet, there is no magnetic field when the Magne is unlocked, which avoid the accumulation of metallic particles on the anchor plate.   |
|  | Magne rubber      | 2TLA042023R3600 | Spare part. Cellular rubber for Magne anchor plate. 10 mm thick. Delivered with Magne.  |
|  | LineStrong1       | 2TLA050200R1030 | LINESTRONG1, 2NC/2NO, NPT   |

|  | MKey Key 1     | 2TLA050040R0201 | Standard key for MKey safety switches with plastic head. Key in stainless steel 316.         |
|  | MKey Key 2     | 2TLA050040R0202 | Standard key for MKey safety switches with metal head. Key in stainless steel 316.           |
|  | MKey Key 5     | 2TLA050040R0203 | Flexible key for MKey safety switches. Stainless steel 316 key, die cast metal housing.      |
|  | MKey Key 6     | 2TLA050040R0204 | Flexible key for MKey safety switches. Stainless steel 316 key with stainless steel housing. |

## Quick reference

|   | Product name          | Order code      | Description  |
|---|-----------------------|-----------------|--|
|    | MKey Key 3            | 2TLA050040R0220 | Flat key for Mkey safety switches. Stainless steel 316 key with plastic shroud.  |
|    | MKey Key              | 2TLA050040R0200 | MKEY1 ANGLED ACTUATOR  |
|    | MKey8Z Manual release | 2TLA050040R0400 | Bit for manual unlocking of MKey8Z. Stainless steel  |
|    | MKey Slide lock left  | 2TLA050040R0500 | Slide lock for MKey8 and MKey9, left. Rugged metal construction that withstands shearing forces of up to 10000N (1000kg) on large hinged doors. MKey not included.                                 |
|    | MKey Slide lock right | 2TLA050040R0501 | SLIDE LOCK MKEY8,9 RIGHT   |
|   | MKey Slide lock rear  | 2TLA050040R0510 | Rear handle for MKey Slide lock. The rear handle is necessary to open or close the slide lock from inside the protected area.  |
|  | MKey Slide lock catch | 2TLA050040R0511 | Spring loaded catch for Mkey Slide lock. The catch is used to prevent accidental movement of the slide lock: when mounted, the catch has to be drawn out in order to open or close the slide lock. |
|  | Sense 4 10M           | 2TLA050072R6120 | SENSE 4, SS 10M CABLE, 2NC/1NO   |
|  | Sense 4 QC            | 2TLA050072R2120 | SENSE 4, SS QC CABLE, 2NC/1NO  |
|  | Sense 5Z 5M           | 2TLA050054R5120 | SENSE 5Z, SS 5M CABLE, 2NC/1NO LED   |
|  | Sense 5Z 10M          | 2TLA050054R6120 | SENSE 5Z, SS 10M CABLE, 2NC/1NO LE   |
|  | Sense 6 QC            | 2TLA050074R2120 | SENSE 6, SS QC CABLE, 2NC/1NO  |

|  | Sense 12 10M           | 2TLA050080R6120 | SENSE 12, SS 10M CABLE, 2NC/1NO  |
|  | Sense7Z Key SS         | 2TLA050040R0212 | Actuator to safety magnetic switch Sense7Z, stainless steel. This is a spare part since Sense7Z is delivered complete with actuator.   |
|  | Sense 7 Key            | 2TLA050040R0211 | SENSE 7, SPARE ACTUATOR  |
|  | Edge1 Roller Plunger   | 2TLA050101R0100 | EDGE1, ROLLER PLUNGER NPT, 2NC/1NO   |
|  | Edge1 Hinge Lever      | 2TLA050102R0100 | EDGE1, HINGE LEVER NPT, 2NC/1NO  |
|  | Edge1 Adj Roller Lever | 2TLA050105R0100 | EDGE1 ADJ. ROLLER LEVER NPT 2NC/1NO  |
|  | Edge1 Roller Lever     | 2TLA050111R0100 | EDGE1, ROLLER LEVER NPT, 2NC/1NO   |

## Quick reference

|   | Product name               | Order code      | Description  |
|---|----------------------------|-----------------|--|
|    | Edge2 Pin 3M End           | 2TLA050120R4000 | EDGE2, PIN 3M END CABLE, 2NC/1NO   |
|    | Edge2 Roller 3M            | 2TLA050121R4000 | EDGE2, ROLLER 3M END CABLE, 2NC/1N   |
|    | Edge2 Roller 3M Side Cable | 2TLA050121R4008 | EDGE2, ROLLER 3M SIDE CBL, 2NC/1NO   |
|    | Estrongz E                 | 2TLA050220R1020 | ESTRONGZ E-STOP 2NC/2NO, NPT, SS   |
|    | Estrongz LED               | 2TLA050220R0222 | Emergency stop, 2NC/2NO, stainless steel 316 body, LED status indication, Conduit entry 3xM20  |
|   | Estrongz Estop             | 2TLA050220R1222 | ESTRONGZ ESTOP 2NC/2NO NPT SS LED  |
|  | Estrongz E                 | 2TLA050220R1422 | ESTRONGZ E-STOP 2NC/2NO, NPT, SS L   |
|  | GKey4 RU                   | 2TLA050304R0002 | Safety lock GKey with 4 positions for pilot devices, die-cast housing, escape release and manual unlock function. Can be mounted on hinged doors and on sliding doors, both on the left and on the right. Delivered with mechanical tongue actuator, RFID actuator, entry cover and screw bit. |
|  | FHS GKey4                  | 2TLA050310R0032 | Front slide handle for GKey4. Can be mounted on hinged doors and on sliding doors, both on the left and on the right. Includes a mounting plate for GKey4.   |
|  | RHS GKey MKey              | 2TLA050040R0510 | Rear handle for GKey front slide handle and MKey slide lock. The rear handle is necessary to open or close the slide handle from inside the protected area.  |
|  | SCS GKey MKey              | 2TLA050040R0511 | Spring loaded catch for GKey slide handle and Mkey slide lock. The catch prevents from closing the door by mistake: when the sliding handle is in open position, the catch must be pulled in order to push back the handle to closed position.   |
|  | OCB-1A                     | 2TLA020055R3000 | OCB-1A is a connection box for up to four Eden OSSD sensors with M12-8 pin connector, or other compatible safety sensors. Safety signals are connected in serial. Individual information signal from each Eden sensor.   |
|  | OCB-2A                     | 2TLA020055R3100 | OCB-2A is a connection box for up to four safety sensors with M12-5 pin connector. Safety signals are connected in serial. Individual information signal from each sensor.   |
|  | OCB-3A                     | 2TLA020055R3200 | OCB-3A is a connection box for up to four Eden OSSD sensors with M12-5 pin connector, or other compatible safety sensors. Safety signals are connected individually and can have different safety functionality.   |

## Quick reference

|   | Product name | Order code      | Description   |
|---|--------------|-----------------|---|
|  | OCB-4A       | 2TLA020055R3300 | OCB-4A is a connection box for up to four safety sensors with M12-5 pin connector. Safety signals are connected individually and can have different safety functionality. |
|  | JSOP-8       | 2TLA020055R2400 | OSSD termination plug. Required for unused connectors on OCB-1A   |
