Safety functions

1

Safety functions
Selection of protective functions

1

On the basis of the risk estimation established, the designer will select one or more protective functions that will meet the needs.
The standards classify these functions into two distinct groups.
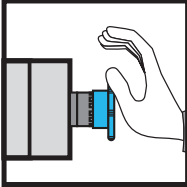

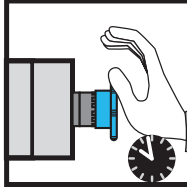

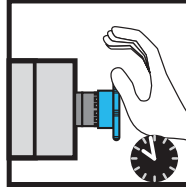

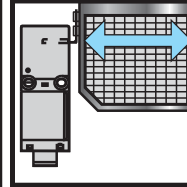

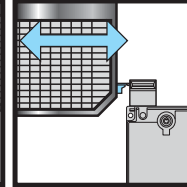

Emergency stops

This function, required on all machines, is not considered as a principal method of risk reduction. It supplements other protective measures (standard EN/ISO 12100).

Depending on the type of stop, the standard recognises three categories (see details below):
- emergency stop categories 0 or 1,
- controlled stop categories 1 or 2, generally used with variable speed drives
(please refer to our specific Variable Speed Drive catalogues).

Selection of safety function families

Emergency stop			Protective solutions	
			Protective functions	
			Control of access to hazardous zones	
Stop category 0	Stop category 1	Stop category 2	Interlocking Guard	
			Without guard locking	With guard locking
Access to hazardous zones:				
■ Free, frequent to continuous				
-	-		-	-
■ Occasional (e.g.: once per shift) or frequent *(1)*				
-	-		X	X
Protection for all personnel				
-	-		X	X
Stopping time of a dangerous movement:				
■ Short				
X	-		X	-
■ Long (high inertia)				
-	X		-	X
■ Long (high inertia) ; power is maintained on actuators				
-	-	X	-	-
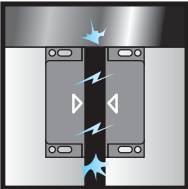

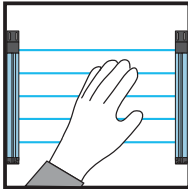

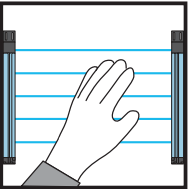

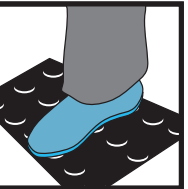

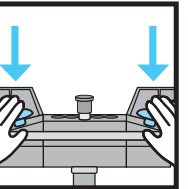

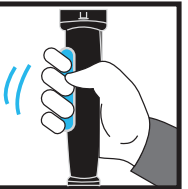

(1) in case of risk of ejection.

X	: The function provides the solution as long as the recommended use limits are complied with.
(X)	: The use of this function is possible but is not recommended.
-	: The function does not provide the solution.

Protection methods

The functions selected, as shown in the chart below, are based on two criteria:

1 persons may occasionally enter the hazardous zones or may work continuously within a hazardous zone,
2 the methods adopted to reduce the risks involve the use of defined functions.

			Starting and enabling of dangerous movements		
Coded magnetic switch	Light curtains		Safety mats	Two-hand control station	Enabling switch (grip switch)
	ESPE	ESPE with muting function			
-	X	X	X	X	-
X	(X)	(X)	(X)	(X)	X
X	X	X	X	X	X
X	X	X	X	X	X
-	-	-	-	-	-
-	-	-	-	-	-

Guards with guard locking device
Stop category 0   Stop category 1
Emergency stop function

Sub-elements of the emergency stop function

Emergency stop function

International standard EN/ISO 13850 (which replaces standard EN 418) specifies the functional requirements and design principles of emergency stop devices.
It applies to all machines, whatever type of energy is used to control this function.

When the emergency stop instruction ceases, the effect must be maintained until it is reset. Manual resetting must only be possible in the location where the instruction was given.
Resetting must not start the machine, but simply enable the starting cycle.
Restarting of the machine must not be possible until the emergency stop has been reset.

The standard allows two types of stop:
- category 0 : stopping by immediate cutting-off of power or mechanical disconnection between the dangerous components,
- category 1 stop: controlled stopping with power maintained to the actuator to achieve stopping (braking for example), then cut-off of power when standstill is reached.
The choice between these two stopping methods is determined by an evaluation of the machine-related risks.

This function includes several sub-functions but is generally represented by the drawings opposite.

The operator interface may be:
- a pushbutton equipped with a mushroom head,
- a cable actuated switch,
- a foot switch.

Guards without guard locking device

On a large number of potentially dangerous machines, the operator must be kept at a distance during operation, but needs to take action when the machine is stopped to position a part, remove a product or adjust a tool.

An effective means of protection is to install a guard which, according to the type of installation, will cut-off the power to the motor if an attempt is made to open it during the machine operating phase.
In all cases, it must not be possible to restart the machine until the guard is closed.

Depending on the level of protection required, the system will comprise two conventional limit switches or a combination of protected, actuator operated guard switches to prevent tampering.

Guards with guard locking device

This type of guard is necessary for potentially dangerous machines with high inertia (long rundown time).
The guard is interlocked (by a solenoid for example); it cannot be opened until the machine has come to a complete standstill.

Light curtain
Coded magnetic guard switch and system

A non-contact solution is often used on industrial machines fitted with a door or guards with imprecise guiding.
It is particularly suitable for machines subjected to frequent washing or splashing of liquids as well as small machines with a single guard for self-contained systems.

Depending on the models used, the sensing distance will be between 5 and 10 mm.

The reed contacts used for the coded magnetic switches cannot withstand short-circuits and the switches always incorporate a resistor in series. Their operation can therefore only be guaranteed with the associated processing module.

The Hall-effect self-contained systems with integral processing do not require any further processing of the signal.

The illustrations opposite show the functions of coded magnetic guard switches and of a system.

Safety light curtains

Safety light curtains are electro-sensitive systems (Electro-Sensitive Protective Equipment) designed to protect persons working in the vicinity of machinery, by stopping dangerous movements when a light beam is broken.

The absence of a door or guard reduces loading, inspection or tool changing times.

This type of system, defined by standards EN/IEC 61496-1 and EN/IEC 61496-2, is frequently used with machines such as:
- presses,
- machine tools,
- assembly lines, etc.

The machine must be designed so that it is impossible to gain access to dangerous movements without breaking one or more of the light beams.
In addition, the movement must be stopped whatever the entry speed of the operator into the hazardous zone.

The diagram opposite illustrates the operation of a light curtain.

Safety functions
Principal protective functions *(continued)*
Safety mats
Two-hand control stations

1

Safety mat

Example of a safety mat application

Safety mats

Safety mats are used to detect persons walking across or standing on the mat or objects falling onto the mat.
Standards EN 1760-1/ISO 13856 define their performance.

Any detection of an object on the mat initiates stopping of any dangerous machine movement.
Restarting can be controlled manually or automatically, depending on the configuration of the associated processing unit.

When pressure is applied, the mat distorts locally and the integrated sensors are short-circuited.
The special design of these sensors requires that the mat and the detection module be matched.

In general, several mats are used to cover the safety zone.
The safety distance **S**, defined by the standard, takes into account the speed at which a person can cross the safety zone to reach the hazardous zone.

Two-hand control stations

Standards ISO 13851 and EN 574 define this device.
It requires simultaneous operation by both hands in order to start and maintain operation of a machine.
It therefore provides protection exclusively for the person operating it.

A diagram representing the function is given opposite; it must meet the following requirements:
- concurrent, maintained operation of the two input controls for the same period of time,
- synchronous operation; the delay between the two signals must not exceed 0.5 s,
- prevention of accidental operation (mechanical guard),
- protection against tampering.

Safety functions
Principal protective functions *(continued)*
Enabling switch (grip switch)

Enabling switch
Marking identifying an enabling switch

Enabling switch

Enabling switches, allow authorised personnel to carry out maintenance, adjustment or programming operations within hazardous zones of machines, provided certain conditions are met.

These devices conform to standards EN/IEC 60947-5-8 and EN/IEC 60204-1.

In effect, to gain access, these operations, often performed at reduced speed, must be selected by authorised personnel using selectors with key or equivalent.

Important note: the enabling switch alone must not lead to the actuation of any dangerous movements associated with the machine; a secondary, intentional, control action is required from the operator.

All devices which conform to the standard must be identified by the marking scheme shown opposite.

Operating principle
The three possible states are:
- position 0: contact open (control operator at rest),
- position 1: contact closed (control operator depressed to normal enabling position),
- position 2: contact open (control operator fully depressed).

When the switch is depressed in position 1, it must return to position 0 when released.

The switch must change from position 1 to position 2 when pressed more firmly. When it is released from position 2 to position 0, the switching contact must not close.

1

The table below indicates the associated control solutions for each safety function.
The Schneider Electric range of safety control solutions comprises four product families:
- dedicated safety modules with one or two safety functions,
- configurable controllers managing several safety functions,
- safety monitors and interfaces dedicated to the AS-Interface system, allowing use of a single medium for control and safety,
- safety PLCs used within complex safety systems.

Product families

Application examples
Optimised compact machine

1

Typical application: compact packaging machine
Scheme of the safety-related part of a packaging machine control circuit
Functional representation of the scheme conforming to EN/ISO 13849-1

Optimised compact machine

To aid understanding, we are presenting three application examples covering typical cases encountered in machines.
These examples are extracts from the **Preferred Implementations** proposed by Schneider Electric.
For clarity, only the safety functions will be detailed and, in all cases, the calculation methods corresponding to the following two standards will be used:
- standard EN/ISO 13849-1, which has replaced EN 954-1 that cannot be used after November 2009, defines Performance Levels **PL**,
- standard EN/IEC 62061 defines Safety Integrity Levels **SIL**.
A detailed presentation of these two standards is given on page 6/10.

Typical applications

Compact and repetitive machines, hard wired. We will choose a packaging machine as an example.

Description of safety functions

This application uses several motors which must be stopped when the safety guard is opened.
The estimated level of risk reduction for this function of the machine requires a performance level **PL = d** or a safety integrity level **SIL = 2**.
It will therefore be necessary to use:
- an XCS A guard switch 2-pole N/C + N/C,
- an XPS AC safety module,
- two LC1 K contactors in series.
Connections are by means of conventional wiring.

Calculation and component selection for a PL = d

To achieve the required performance level, two redundant channels must be used, corresponding to category 3. The calculation is shown in the table below.

Cycle time (s)	60
Number of hours' operation per day (h)	24
Number of days' operation per year	365
Number of operations per year	525 600

		Requirement: PL = d	Channel 1	Channel 2

Printing machine

Safety-related *part of a printing machine scheme (the calculation is made on the portion of circuit surrounded in grey)*
Functional analysis of the scheme conforming to EN/ISO 13849-1

Upgradable compact machine

Typical applications

This type of machine is generally integrated into a manufacturing process and must be suited to the customer's process. To facilitate upgrading, a CanOpen fieldbus is used

Examples: woodworking machines, printing machines, packaging machines.

Description of safety functions

Protection systems will limit the possibility of access to hazardous areas.
As the risk for operators is high, a performance level **PL= e** or a safety integrity level **SIL = 3** will be required.
It will therefore be necessary to use protective systems (partially represented on the scheme) such as guards, light curtains, etc.

The complexity of the circuit leads to selection of a controller to provide all the emergency stop and safety functions. It offers the advantage of being able to communicate the operating states and diagnostics on the fieldbus.
Contactors in series cut-off the power in variable speed drives.
Safety connections are made by means of conventional wiring.
The control system is monitored via a CanOpen fieldbus.

Calculation and component selection for a PLr = e

The required Performance Level of safety necessitates the use of category 4 products (redundancy and self-monitoring).
In compliance with standard EN/ISO 13849-1, the functional analysis is performed by splitting into channels. The figure opposite represents channels 1 to 8 which ensure operation of the scheme.
It should be noted that the contactors are common to several channels:
- C1 is common to channels 1, 3, 5
- C2 is common to channels 2, 4, 6
- C3 is common to channels 3, 7
- C4 is common to channels 4, 8
For clarity, the calculation shown below only relates to channels 7 and 8.

Cycle time (s)	360
Number of hours' operation per day (h)	24
Number of days' operation per year	365
Number of operations per year	87600

		Requirement: PL = e	Channel 7	Channel 8
Input (sensors) XCS PA, XCS M	B_{10}		1 000 000	10 000 000
	% dangerous failures		20%	20%

Specification of SRECS and calculation and component selection for a SIL = 3

As in the previous calculation, **we will analyse the safety functions associated with motors M1**.
On the figure representing the break-down into sub-systems, the required level SIL= 3 necessitates a type **D** architecture for each sub-system: in addition to redundancy of the circuits, it includes a diagnostic function.

It should be noted that the diagnostic functions are provided by the XPS MC controller: it monitors operation of the sensors and contactors.

The calculation method is shown in the table below.
The result conforms to the SIL3 requirements.

Cycle time (s)				360	
Cycle time in hours (h)				**0.1**	
Number of cycles per hour				**10**	

		Type of sub-system	Require-ment	Element 1	Element 2
Input (sensors) XCS PA, XCS PM	B_{10} (operations)			1 000 000	10 000 000
	Proportion of dangerous failures %			20%	20%
	λ			$1.00E^{-06}$	$1.00E^{-07}$
	λ_D			$2.00E^{-07}$	$2.00E^{-08}$
	β			5%	
	Life expectancy in years			10	
	Life expectancy or test interval T1 (h)			87 600

Presentation

Preventa compact safety PLCs **XPS MF40●●** enable the monitoring of simple to complex safety functions for all industrial applications relating to the protection of personnel and machine safety.

Designed for use with numerous machine safety functions, these compact safety PLCs are intended for use in safety related parts of control systems.
They can manage up to:
- category 4 conforming to EN 954-1,
- performance level "e" conforming to EN/ISO 13849-1,
- SIL 3 (safety integrity level) conforming to EN/IEC 61508.

The compact safety PLC range **XPS MF40●●** comprises of 6 versions that are differentiated by their non safety related communication protocols.

Compact PLCs	Digital Inputs/Outputs	Line control outputs	Communication		On fieldbus
			On Ethernet network		
			Safety protocol	**Non safety protocol**	
XPS MF4000	24, configurable	8	SafeEthernet	–	–
XPS MF4002	24, configurable	8	SafeEthernet	Modbus TCP/IP Server	–
XPS MF4020	24, configurable	8	SafeEthernet	–	Modbus serial Slave (RTU)
XPS MF4022	24, configurable	8	SafeEthernet	Modbus TCP/IP Server	Modbus serial Slave (RTU)
XPS MF4040	24, configurable	8	SafeEthernet	–	PROFIBUS DP V0 slave
XPS MF4042	24, configurable	8	SafeEthernet	Modbus TCP/IP Server	PROFIBUS DP V0 slave

Safety PLCs

In order to meet safety requirements, the compact safety PLCs **XPS MF40●●** incorporate two essential functions (**Redundancy** and **Self-monitoring)** complying to category 4 conforming to EN 954-1 and performance level "e" conforming to EN/ISO 13849-1 in addition to the SafeEthernet safety communication protocol between the safety PLCs and the safety remote I/O modules (**Special Switch**).

■ **Redundancy**: the triple processor integrated in the compact safety PLCs analyses and compares the data received from the safety inputs and outputs. The incoming and outgoing data (programmed values and received values) are received in parallel by the three processors and compared in real-time.
■ **Self-monitoring ("Watchdog")**: the compact safety PLCs continuously monitor the data processing cycle and the execution of tasks, and intervenes if the cycle time does not conform to the predefined value.
■ **The integrated switch (Special Switch)** stores for a very short time and sends at very high speed the data provided by the inputs and outputs of the safety PLCs on the Ethernet network, whilst avoiding signal collisions and excessive amounts of data on the network.

Functional synoptics

Functional synoptics *(continued)*

Compact safety PLCs XPS MF4020/MF4022
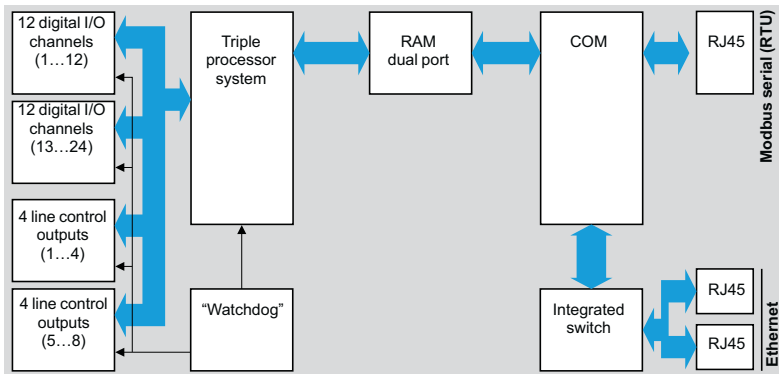

Compact safety PLCs XPS MF4040/MF4042
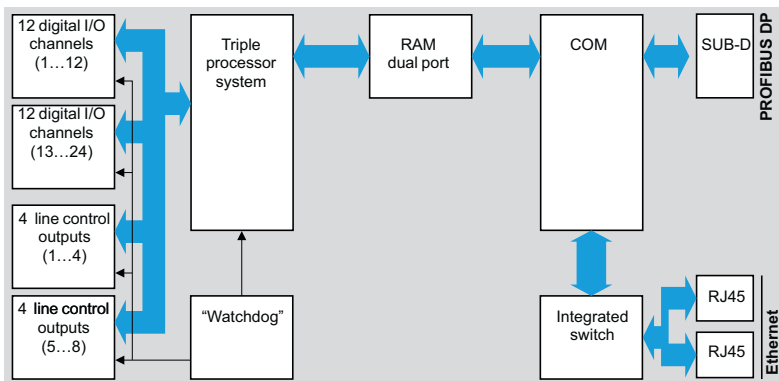

Line control for safety PLCs XPS MF40●●

Line control is a means of short-circuit and line break monitoring.
Using line control outputs enables SIL 3 (EN/IEC 61508) and category 4 (EN 954-1) safety to be achieved. The line control outputs send a high signal with a very short low signal, thus enabling a wiring fault (short-circuit, line break) to be seen at the inputs of the safety PLCs.

The line control outputs 1 to 8 are connected to the digital inputs of the same circuit.

Example: Emergency stop pushbutton with two normally closed (N/C) contacts that are supplied by two different line control outputs connected via these two normally closed contacts and fed into the inputs of the safety PLCs

Programming automated safety functions

Software **XPS MFWIN** (reference SSV1XPSMFWIN) running on a PC enables the programming of all safety remote I/O modules and safety PLCs, as well as configuration of the communication settings.

2

Compact safety PLCs **XPS MF40●●** incorporate:
■ 24 configurable I/O channels
□ digital inputs
□ or digital outputs
■ and 8 (2 x 4) line control output channels.

Digital inputs

Compact safety PLCs **XPS MF40●●** incorporate up to 24 digital inputs for the connection of safety related input devices, such as emergency stop contacts, magnetic switches, light curtains, etc.

Compact PLCs	Digital inputs		
	N°	Safety detection	Safety dialogue
XPS MF4000	24	Limit switches, Guard switches, with reset and with actuator, Safety light curtains type 2 and type 4, Safety mats and sensing edges…	Mushroom head Emergency stops, Enclosures for control and signalling units, Two-hand control stations…
XPS MF4002	24		
XPS MF4020	24		
XPS MF4022	24		
XPS MF4040	24		
XPS MF4042	24		

Digital outputs

Compact safety PLCs **XPS MF40●●** incorporate up to 24 digital outputs for the connection of safety related output devices, such as contactors, illuminated beacons, sirens, etc.

Compact PLCs	Digital outputs		
	N°	Safety actuators	Safety dialogue
XPS MF4000	24	Contactors-motors, Contactors-reversing, Variable speed drives...	Beacons and indicator banks, Rotating mirror beacons, Sirens…
XPS MF4002	24		
XPS MF4020	24		
XPS MF4022	24		
XPS MF4040	24		
XPS MF4042	24		

Line control outputs

Compact PLCs	Line control outputs N°	
XPS MF4000	8 (2 x 4)	Short-circuit and line break monitoring
XPS MF4002		
XPS MF4020		
XPS MF4022		
XPS MF4040		
XPS MF4042		

Remote inputs and outputs

In addition to the inputs/outputs integrated as standard, compact safety PLCs **XPS MF40●●** can be connected to safety remote input modules **XPS MF1** and/or safety remote output modules **XPS MF2** and/or safety remote mixed I/O modules **XPS MF3**.
The safety remote input, output and mixed I/O modules can be located within the vicinity of the machines to be monitored, thus reducing cabling.

Communication between these safety remote I/O modules and safety PLCs **XPS MF40●●** is performed on an Ethernet network using the SafeEthernet safety protocol, via the integrated RJ45 switched Ethernet communications ports.

Integrating safety PLCs XPS MF40 on a Premium automation platform

Designed for mechanical integration on a Premium automation platform, safety PLCs **XPS MF40●●** occupy 2 slots on the Premium rack **TSX RKY**.
There is interaction between the two programming environments (Unity and XPSMFWIN): the variables defined using software **XPSMFWIN** can be retrieved by Unity (platform programming software) by using a tool included in Safety Suite V2.
Example of mechanical integration of a compact safety PLC
XPS MF40 *on a Premium automation platform.*

Safety communication on Ethernet network

Communication between the PC, Magelis graphic terminals or automation platform (Premium) and the compact safety PLCs **XPS MF40●●** is achieved by **Ethernet** network connection via the integrated RJ45 switched Ethernet communication ports of the compact PLCs.
1 Premium automation platform: Modbus TCP/IP client.
2 Graphic terminal **XBT GT**: Modbus TCP/IP client.
3 Safety PLCs **XPS MF40●●**: Modbus TCP/IP servers.
4 Safety remote I/O modules **XPS MF1/2/3**. They communicate with safety PLCs **XPS MF40●2** using the SafeEthernet protocol.

Communication on Modbus serial (RTU) and PROFIBUS DP fieldbus

■ On **Modbus serial (RTU)**, safety PLCs **XPS MF4020** and **XPS MF4022** are slaves of the Premium automation platform and Magelis graphic terminal.
They are connected to the Modbus serial network via their RJ45 connector.
1 Graphic terminal **XBT GT**: Modbus serial (RTU) master.
2 Premium automation platform: Modbus serial (RTU) master.
3 Safety PLCs **XPS MF402●**: Modbus serial (RTU) slave, Modbus TCP/IP server.
4 Safety remote I/O modules **XPS MF1/2/3**. They communicate with safety PLCs **XPS MF402●** using the SafeEthernet protocol.
5 Graphic terminal **XBT GT**: Modbus serial (RTU) client.

■ On **PROFIBUS DP**, safety PLCs **XPS MF4040** and **XPS MF4042** are slaves of the Premium automation platform and Magelis graphic terminal.
They are connected to the PROFIBUS DP network via their SUB-D 9-pin connector.
1 Premium automation platform: PROFIBUS DP master.
2 Graphic terminal **XBT GT**: PROFIBUS DP master.
3 Safety PLC **XPS MF404●**: PROFIBUS DP slave, Modbus TCP/IP server.
4 Graphic terminal **XBT GT**: Modbus TCP/IP client.
5 Safety remote I/O modules **XPS MF1/2/3**. They communicate with safety PLCs **XPS MF404●** using the SafeEthernet protocol.

2
Description

Safety PLCs XPS MF4000/MF4002

On the front face of the enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 Two integrated RJ45 (type 10BASE-T/100BASE-TX) switched ports for programming, and for Safety and non-safety related communication on Ethernet (safety related using SafeEthernet protocol and Non-safety related using Modbus TCP/IP server protocol).
3 Process status LEDs.
4 One "Reset" button.
5 Six terminal blocks *(1)* for connection of configurable digital I/Os.
6 Two terminal blocks *(1)* for connection of line control outputs.
7 **On the rear face**: one removable plate with spring fixing for mounting on 35 mm ⊔ rail.
Safety PLCs XPS MF4020/MF4022

On the front face of the enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 Two integrated RJ45 (type 10BASE-T/100BASE-TX) switched ports for programming, and for Safety and non-safety related communication on Ethernet (safety related using SafeEthernet protocol and Non-safety related using Modbus server protocol).
3 Process status LEDs.
4 One "Reset" button.
5 Six terminal blocks *(1)* for connection of configurable digital I/Os.
6 Two terminal blocks *(1)* for connection of line control outputs.
7 One RJ45 connector for connection on Modbus serial (RTU), with 2 process status LEDs.
8 **On the rear face**: one removable plate with spring fixing for mounting on 35 mm ⊔ rail.
Safety PLCs XPS MF4040/MF4042

On the front face of the enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 Two integrated RJ45 (type 10BASE-T/100BASE-TX) switched ports for programming, and for Safety and non-safety related communication on Ethernet (safety related using SafeEthernet protocol and Non-safety related using Modbus TCP/IP server protocol).
3 Process status LEDs.
4 One "Reset" button.
5 Six terminal blocks *(1)* for connection of configurable digital I/Os.
6 Two terminal blocks *(1)* for connection of line control outputs.
7 One SUB-D (9-pin female) connector for connection on PROFIBUS DP, with 2 process status LEDs.
8 **On the rear face**: one removable plate with spring fixing for mounting on 35 mm ⊔ rail.

*(1) Removable Screw and Cage clamp terminals are provided with compact safety PLCs **XPS MF40**.*

LED details

Process status LEDs on safety PLCs XPS MF40●●

LED	Colour	Status	Meaning
1…24	Green	On	Channels configured as inputs: input signal being received. Channels configured as outputs: output signal being sent.
T1…T8	Green	On	Line control outputs active.
PWR	Green	On	⎓ 24 V voltage present.
		Off	No voltage.
PG	Yellow	On	The CPU is being loaded with a new configuration.
		Flashing	The FLASH ROM is being loaded with a new operating system.
		Off	No loading of configuration or operating system.
ERR	Red	On	Software error or hardware fault detected by the CPU.
			The monitoring program (Watchdog) has triggered the STOP state of the process because the programmed cycle time has been exceeded.
			The CPU has stopped the execution of the user application, ended all hardware and software tests and all outputs have been reset.
			The process can only be started again from the PC.
		Off	No errors detected.
FAU	Orange	On	Error display for line control.
			The user application has caused an error.
			The system configuration is defective.
			The loading of a new operating system was defective and the operating system is corrupt.
		Flashing	An error has occurred whilst writing to FLASH ROM memory (during updating of the operating system).
			One or more I/O errors have occurred.
		Off	None of the above errors have occurred.
RUN	Green	On	Normal service mode, loaded program running, the PLC receives I/O messages, communication and hardware/software tests carried out.
		Flashing	The CPU is in STOP and is not executing any user application. All the outputs are reset to a safe, de-energised state.
		Off	The CPU is in "ERROR" state (see ERR).
FOR	Green	On	The CPU is in RUN mode and force is active.
		Flashing	The system is not processing (STOP), but force is prepared and is activated if the triple processor is started.
		Off	Force mode not activated.
OSL	Orange	Flashing	Emergency loading of the operating system is active.
BL	Orange	Flashing	COM in INIT_Fail state.

Ethernet LEDs on safety PLCs XPS MF40●●

LED	Colour	Status	Meaning
LK/ACT external	Green	Off	No connection/link established.
		On	Connection established/link established.
		Flashing	External data exchange (speed 10…100 Mbps).
LK/ACT internal	Green	Off	No connection/link established.
		On	Connection established/link established.
		Flashing	Internal data exchange (speed 10…100 Mbps).

Modbus serial (RTU) LEDs on safety PLCs XPS MF4020/MF4022

LED	Colour	Status	Meaning
COM	Yellow	Off	No bus network signals being received or transmitted.
		On	Bus network signals being received or transmitted.
RDY	Green	Off	Transmission power not available.
		On	Equipment on.

PROFIBUS DP LEDs on safety PLCs XPS MF4040/MF4042

LED	Colour	Status	Meaning
RUN	Green	Off	Equipment not connected or not operational.
		On	Equipment operational.
ERR	Red	Off	Transmission power not available or the slave is exchanging data.
		On	Connection to other equipment is established but no data exchange is possible. Bus disconnected or bus Master not available.
		Flashing	A configuration error has occurred and no data exchange is possible.

Environment

Compact safety PLC type			XPS MF4000/4002, XPS MF4020/4022, XPS MF4040/4042
Products designed for max. use in safety related parts of control systems (conforming to EN 954-1, EN/ISO 13849-1 and EN/IEC 61508)			Category 4 (EN 954-1), Performance level "e" (EN/ISO 13849-1), Safety integrity level: SIL 3 (EN/IEC 61508)
Product certifications			IEC 61511 part 1-3: 2004, DIN VDE 0116: 1989, EN 50156-1: 2004, EN 12067-2: 2004, EN 298: 2003, EN 230: 2005, NFPA 85: 2001, EN/IEC 61131-2: 2003, EN 61000-6-2: 2001, EN 61000-6-4: 2001
Ambient air temperature conforming to EN/IEC 61131-2	Operating	°C	0…+ 60
	Storage	°C	- 40…+ 85
Relative humidity			95% (supply not connected)
Degree of protection	Enclosure		IP 20
Pollution			Degree of pollution II
Altitude		m	< 2000
Protection class			Class II, conforming to EN/IEC 61131-2
Electromagnetic compatibility			Conforming to EN/IEC 61131-2
Vibration resistance conforming to EN/IEC 61131-2	Operating		1 g, frequency 9…150 Hz
Shock resistance conforming to EN/IEC 61131-2	Operating		15 g (duration 11 ms), unit test whilst operating, 2 cycles per axis
Resistance to electrostatic discharges conforming to EN/IEC 61000-4-2		kV	4 contact, 8 air discharge
Immunity to high frequency interference conforming to EN/IEC 61000-4-3		V/m	10 (80 MHz…2 GHz), amplitude modulation 80%

Electrical characteristics

Supply	Voltage	V	--- 24 (external supply with separate protection conforming to EN/IEC 60950, SELV (Safety Extra Low Voltage) or PELV (Protection Extra Low Voltage) rated)
	Voltage limits		- 15…+ 20 %
Maximum consumption		A	8
Idle current		A	0.5
Immunity to momentary supply interruptions		ms	10
Protection			Internal fuse, 10 A
Response time		ms	Depending on size of application
Clock			Supplied by backup capacitor for 1 week following loss of supply
User memory	Application	kB	250
	Data	kB	250
LED display			Yes

Digital inputs

Number	Inputs not electrically isolated		24, configurable channels
Permissible current	At state 0	mA	1.5 max. at --- 24 V
	At state 1	mA	3.5 at --- 24 V, 4.5 at --- 30 V
Input supply			3 x --- 20 V/100 mA (on 24 V)
Input resistance		kΩ	< 7
Overvoltage protection		V	- 10, + 35
LED display			Yes, see page 2/9
Maximum distance of equipment		m	300

Digital outputs

Number	Outputs not electrically isolated		24, configurable channels
Output voltage		V	--- 24 ± 2
Output current	Channels 1 to 3, 5 to 7, 9 to 11, 13 to 15, 17 to 19, 21 to 23	A	0.5 at 60 °C
	Channels 4, 8, 12, 16, 20 and 24	A	1 at 60 °C, 2 at 50 °C
Minimum load		mA	2 per channel
Leakage current at state 0		mA	1 max. at 2 V
Response to overload			Shutdown of outputs concerned with cyclic reconnection
Total output current		A	7 max., shutdown of all outputs if exceeded with cyclic reconnection
LED display			Yes
Maximum distance of equipment		m	300

Line control outputs

Number	Outputs not electrically isolated		8 (2 x 4)
Output voltage		V	20, depending on the supply voltage
Output current		mA	60
Minimum load		mA	None
Response to overload			4 x ≥ 19.2 V/60 mA (on 24 V), short-circuit current
LED display			Yes

Communication

Ethernet network

Safety communication using SafeEthernet safety protocol

Compatibility			XPS MF4000/MF4002, XPS MF4020/MF4022, XPS MF4040/MF4042
Transmission	Communication ports		Integrated 2 RJ45 switched Ethernet communications ports
	Baud rate	**Mbps**	100 Half duplex, 10 Full duplex, Autonegotiation
Structure			10BASE-T/100BASE-TX
Medium			Dual twisted pair cable, category 5D or better (Ethernet)

Non safety communication using Modbus TCP/IP protocol

Compatibility			XPS MF4002, XPS MF4022, XPS MF4042
Connection ports	Number and type		Integrated 2 RJ45 switched Ethernet communications ports
	Baud rate	**Mbps**	100 Half duplex, 10 Full duplex, Autonegotiation
	Master/Slave		Server (slave)
Structure			10BASE-T/100BASE-TX
Medium			Dual twisted pair cable, category 5D or better (Ethernet)
Transparent Ready service	Class		A10
	Standard Ethernet TCP/IP communication services (supported by compact safety PLCs XPS MF40)		Modbus TCP/IP server. Modbus TCP/IP messaging (reading/writing of data words) Modbus identification requests
	TCP port		Standard 502
	Max. number of Modbus TCP/IP connections		1 to 20

Modbus serial (RTU)

Compatibility		XPS MF4020, XPS MF4022
Serial link ports	Number and type	1 x RJ45
	Master/Slave	Slave, V0
Addressing		122 slave addresses
Physical layer		RS 485
Medium		Shielded dual twisted pair cable

PROFIBUS DP

Compatibility		XPS MF4040, XPS MF4042
Serial link ports	Number and type	1 x SUB-D 9-pin female
	Master/Slave	Slave, V0
Physical layer		RS 485
Medium		Shielded dual twisted pair cable

Connections (1)

Presentation

Preventa compact safety PLCs **XPS MF31/30/35** enable the monitoring of simple to complex safety functions for all industrial applications relating to the protection of personnel and machine safety.

Designed for use with numerous machine safety functions, these compact safety PLCs are intended for use in safety related parts of control systems.
They can manage up to:
- category 4 conforming to EN 954-1,
- performance level "e" conforming to EN/ISO 13849-1,
- SIL 3 (safety integrity level) conforming to EN/IEC 61508.

The compact safety PLC range **XPS MF31/30/35** comprises 5 versions that are differentiated by their characteristics, detailed below.

Compact PLCs	Inputs			Outputs Digital	Communication	
	Digital	**Analogue**	**Counter**		**On Ethernet network**	**On fieldbus**
XPS MF31222	20	–	–	8 *(1)*	For all compact PLCs XPS MF31/30/35 using SafeEthernet safety protocol, and with non safety protocol Modbus TCP/IP server	–
XPS MF3022	20	–	–	8 *(1)*		Modbus serial Slave (RTU)
XPS MF3502	24	8	2	8		–
XPS MF3522	24	8	2	8		Modbus serial Slave (RTU)
XPS MF3542	24	8	2	8		PROFIBUS DP V0 slave

Safety PLCs

In order to meet safety requirements, the compact safety PLCs **XPS MF31/30/35** incorporate two essential functions (**Redundancy** and **Self-monitoring**) complying to category 4 conforming to EN 954-1 and performance level "e" conforming to EN/ISO 13849-1 in addition to the SafeEthernet safety communication protocol between the safety PLCs and the safety remote I/O modules (**Special Switch**).

■ **Redundancy**: the dual processor integrated in the compact safety PLCs analyses and compares the data received from the safety inputs and outputs.
The incoming and outgoing data (programmed values and received values) are received in parallel by the two processors and compared in real-time.

■ **Self-monitoring ("Watchdog")**: the compact safety PLCs continuously monitor the data processing cycle and the execution of tasks, and intervenes if the cycle time does not conform to the predefined value.

■ **The integrated switch (Special Switch)** stores for a very short time and sends at very high speed the data provided by the inputs and outputs of the safety PLCs on the Ethernet network, whilst avoiding signal collisions and excessive amounts of data on the network.

Functional synoptics

Functional synoptics *(continued)*

Compact safety PLC XPS MF3022
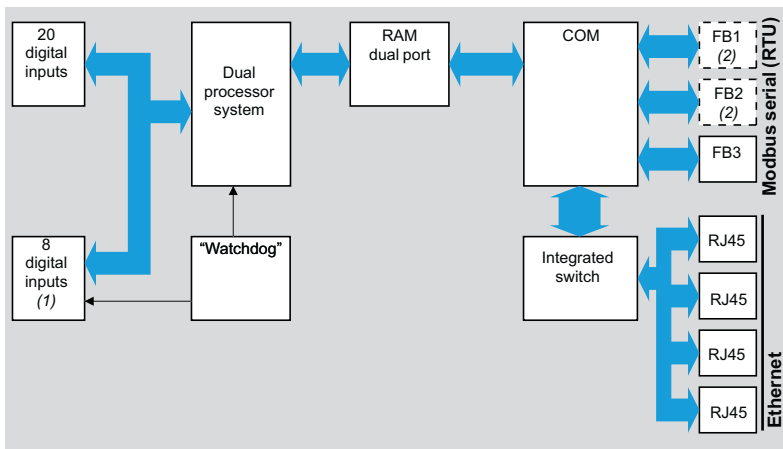

Compact safety PLCs XPS MF35●●
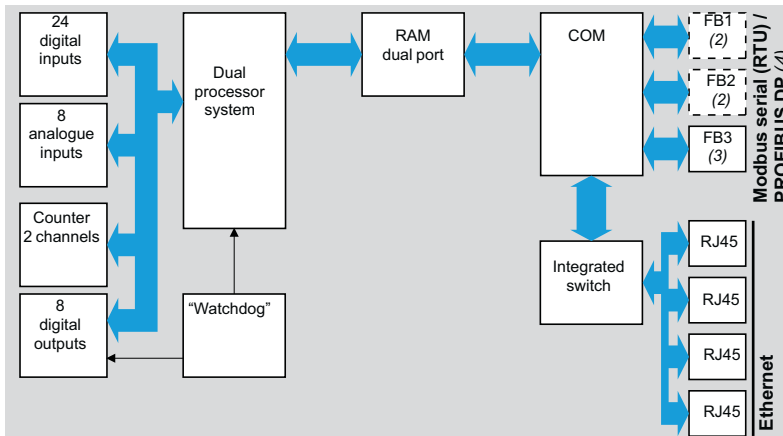

Line control for XPS MF31222 and XPS MF3022

Line control is a means of short-circuit and line break monitoring.
Using line control outputs enables SIL 3 (EN/IEC 61508) and category 4 (EN 954-1) safety to be achieved. The line control outputs send a high signal with a very short low signal, thus enabling a wiring fault (short-circuit, line break) to be seen at the inputs of the safety PLC inputs.

Digital outputs 1 to 8 are connected to the digital inputs of the same circuit.

Example: Emergency stop pushbutton with two normally closed (N/C) contacts that are supplied by two different line control outputs connected via these two normally closed contacts and fed into the inputs of the safety PLCs.

Programming automated safety functions

Software **XPSMFWIN** (reference SSV1XPSMFWIN) running on a PC enables the programming of all safety remote I/O modules and safety PLCs, as well as configuration of the communication settings.

(1) Digital outputs can be configured for line control.
(2) FB1 and FB2 not used.
(3) FB3 not available on safety PLC **XPS MF3502***.*
(4) Depending on model.

Safety automation system solutions
Preventa safety PLCs
Compact, XPS MF31/30/35

Digital inputs

Compact safety PLCs **XPS MF3••••** incorporate up to 24 digital inputs for the connection of safety related input devices.

Compact PLCs	Digital inputs		
	N°	Safety detection	Safety dialogue
XPS MF31222	20	Limit switches, Guard switches, with reset and with actuator, Safety light curtains type 2 and type 4, Safety mats and sensing edges…	Mushroom head Emergency stops, Enclosures for control and signalling units, Two-hand control stations…
XPS MF3022	20		
XPS MF3502	24		
XPS MF3522	24		
XPS MF3542	24		

Analogue inputs

Compact safety PLCs **XPS MF35••** incorporate 8 analogue measuring inputs that receive analogue safety related signals from the machines to be monitored *(1)*.

Compact PLCs	Analogue inputs with transmitter supply	
	N°	Functions
XPS MF3502	8	Closed circuit scanning of input channels, Single-pole measuring of 0 to 10 V voltages, Measuring 0 to 20 mA currents using shunt
XPS MF3522	8	
XPS MF3542	8	

Counter inputs

Compact safety PLCs **XPS MF35••** incorporate 2 independent and configurable counting channels:
- as a counting function, independent to the direction of counting,
- as a counting function, dependent to the direction of counting,
- or as a counting function via an absolute encoder with Gray code.

Compact PLCs	Counting inputs		
	N°	⎓ 5 V	⎓ 24 V
XPS MF3502	2	Incremental encoders	Sensors, 2/3-wire PNP/NPN
XPS MF3522	2		
XPS MF3542	2		

Digital outputs

All compact safety PLCs **XPS MF••••** incorporate 8 digital outputs for connection to signalling equipment and machines to be controlled *(1)*.

Compact PLCs	Digital outputs		
	N°	Safety actuators	Safety dialogue
XPS MF31222	8	Contactors-motors, Control relays, Variable speed drives.	Beacons and indicator banks, Rotating mirror beacons, Sirens…
XPS MF3022	8		
XPS MF3502	8		
XPS MF3522	8		
XPS MF3542	8		

Remote inputs and outputs

In addition to the inputs/outputs integrated as standard, compact safety PLCs **XPS MF31/30/35** can be connected to safety remote input modules **XPS MF1** and/or safety remote output modules **XPS MF2** and/or safety remote mixed I/O modules **XPS MF3**.

The safety remote input, output and mixed I/O modules can be located within the vicinity of the machines to be monitored, thus reducing cabling.

Communication between these safety remote I/O modules and compact safety PLCs **XPS MF31/30/35** is performed on an Ethernet network using the SafeEthernet safety protocol, via the Integrated RJ45 switched Ethernet communications ports.

(1) Use shielded dual twisted pair cables, maximum length 300 m, short-circuit unused analogue inputs.

Schneider Electric

Safety automation system solutions
Preventa safety PLCs
Compact, XPS MF31/30/35

Safety communication on Ethernet network

Communication between the PC, Magelis graphic terminal or automation platform (Premium) and the compact safety PLCs is achieved by **Ethernet** network connection via the Integrated RJ45 switched Ethernet communications ports of compact PLCs **XPS MF31/30/35**.
1 Premium automation platform: Modbus TCP/IP client.
2 Graphic terminal **XBT GT**: Modbus TCP/IP client.
3 Safety PLC **XPS MF31/30/35**: Modbus TCP/IP server.
4 Safety remote I/O modules **XPS MF1/2/3**. They communicate with safety PLCs **XPS MF31/30/35** using the SafeEthernet protocol.

Communication on Modbus serial (RTU) and PROFIBUS DP fieldbus

■ On **Modbus serial (RTU)**, safety PLCs **XPS MF3022** and **XPS MF3522** are slaves of the Premium automation platform and Magelis graphic terminals.
They are connected to the Modbus serial network via their SUB-D 9-pin connector (FB3).
1 Graphic terminal **XBT GT**: Modbus serial (RTU) master.
2 Premium automation platform: Modbus serial (RTU) master.
3 Graphic terminal **XBT GT**: Modbus serial (RTU) client.
4 Safety PLC **XPS MF3022** or **XPS MF3522**: Modbus serial (RTU) slave, Modbus TCP/IP server.
5 Safety remote I/O modules **XPS MF1/2/3**. They communicate with safety PLCs **XPS MF3●●2** using the SafeEthernet protocol.

■ On **PROFIBUS DP**, safety PLC **XPS MF3542** is a slave of the Premium automation platform and Magelis graphic terminal.
It is connected to the PROFIBUS DP network via its SUB-D 9-pin connector (FB3).
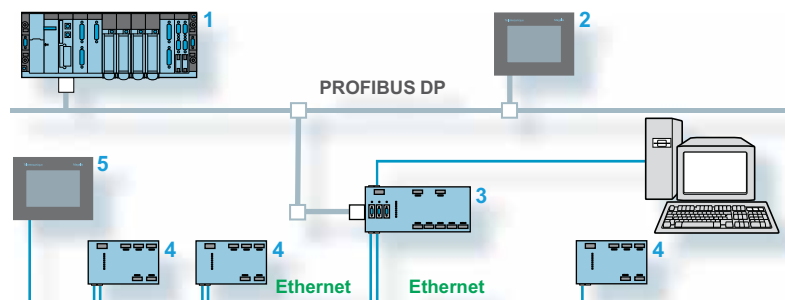

1 Premium automation platform: PROFIBUS DP master.
2 Graphic terminal **XBT GT**: PROFIBUS DP master.
3 Safety PLC **XPS MF3542**: PROFIBUS DP slave, Modbus TCP/IP server.
4 Safety remote I/O modules **XPS MF1/2/3**. They communicate with safety PLC **XPS MF3542** using the SafeEthernet protocol.
5 Graphic terminal **XBT GT**: Modbus TCP/IP client.

Description

Safety PLCs XPS MF31222 and XPS MF3022

On the front face of the metal enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 Two terminal blocks *(1)* for connection of digital outputs, with output status LED (four LEDs per terminal block).
3 Five terminal blocks *(1)* for connection of digital inputs, with input status LED (four LEDs per terminal block).
4 Eight process status LEDs.
5 Four integrated RJ45 (type 10BASE-T/100BASE-TX) switched ports for programming, and for Safety and non-safety related communication on Ethernet (safety related using SafeEthernet protocol and Non-safety related using Modbus TCP/IP server protocol).
6 On **XPS MF3022** only: two unused SUB-D connectors (FB1 and FB2).
7 On **XPS MF3022** only: one SUB-D 9-pin connector for connection on Modbus serial (RTU) (FB3).
8 One earth connection screw.
9 **On the top**: one "Reset" button.
10 **On the rear face**: one spring operated fixing device for mounting on 35 mm ⊏⊐ rail.

Safety PLCs XPS MF35●●

On the front face of the metal enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 One terminal block *(1)* for connection of digital outputs, with four digital output status LEDs.
3 Three terminal blocks *(1)* for connection of digital inputs, with input status LED (eight LEDs per terminal block).
4 One terminal block *(1)* for connection of 2 counting input channels.
5 Four terminal blocks *(1)* for connection of analogue inputs.
6 One plate for securing shielded analogue input connection cables.
7 Eight process status LEDs.
8 Two unused SUB-D connectors (FB1 and FB2).
9 Four integrated RJ45 (type 10BASE-T/100BASE-TX) switched ports for programming, and for Safety and non-safety related communication on Ethernet (safety related using SafeEthernet protocol and Non-safety related using Modbus TCP/IP server protocol).
10 One type SUB-D 9-pin connector (FB3) for connection on PROFIBUS DP (**XPS MF3542**) or Modbus serial (RTU) (**XPS MF3522**).
11 One earth connection screw.
12 **On the top**: one "Reset" button.
13 **On the rear face**: one spring operated fixing device for mounting on 35 mm ⊏⊐ rail.
*(1) Removable screw terminals are provided with compact safety PLCs **XPS MF31/30/35**.*

Status LED details

Compact safety PLCs XPS MF31222, XPS MF3022 and XPS MF35●●

LED	Colour	Status	Meaning
FB1, FB2	–	–	Not used.
FB3	Orange	On	Communication on Modbus serial or PROFIBUS DP *(1)* active.
Inputs 1 to 20	Orange	On	Inputs active.
Outputs 1 to 8	Orange	On	Outputs active.
24 VDC	Green	On	⎓ 24 V voltage present.
		Off	No voltage.
RUN	Green	On	Normal service mode, loaded program running, the PLC receives I/O messages, communication and hardware/software tests carried out.
		Flashing	The CPU is in STOP and is not executing any user application. All the outputs are reset to a safe, de-energised state.
		Off	The CPU is in "ERROR" state (see ERROR).
ERROR	Red	On	Software error or hardware fault detected by the CPU.
			The monitoring program (Watchdog) has triggered the STOP state of the process because the programmed cycle time has been exceeded.
			The CPU has stopped the execution of the user application, ended all hardware and software tests and all outputs have been reset.
			The process can only be started again from the PC.
		Off	No errors detected.
PROG	Orange	On	The CPU is being loaded with a new configuration.
		Flashing	The FLASH ROM is being loaded with a new operating system.
		Off	No loading of configuration or operating system.
FORCE	Orange	On	The CPU is in RUN mode and force is active.
		Flashing	The system is not processing (STOP), but force is prepared and is activated if the dual processor is started.
		Off	Force mode not activated.
FAULT	Orange	On	Error display for line control.
			The user application has caused an error.
			The system configuration is defective.
			The loading of a new operating system was defective and the operating system is corrupt.
		Flashing	An error has occurred whilst writing to FLASH ROM memory (during updating of the operating system).
			One or more I/O errors have occurred.
		Off	None of the above errors have occurred.
OSL	Orange	Flashing	Emergency loading of the operating system is active.
BL	Orange	Flashing	COM in INIT_Fail state.
RJ45	Green	On	Full duplex mode operation.
		Flashing	Signal collision.
		Off	Half duplex mode operation, no collision.
	Yellow	On	Connection established.
		Flashing	Interface active.

Preventa safety PLCs
Compact, XPS MF31/30/35

Environment

Compact safety PLC type			XPS MF31222	XPS MF3022	XPS MF3502, XPS MF3522, XPS MF3542
Products designed for max. use in safety related parts of control systems (conforming to EN 954-1, EN/ISO 13849-1 and EN/IEC 61508)			Category 4 (EN 954-1), Performance level "e" (EN/ISO 13849-1), Safety integrity level: SIL 3 (EN/IEC 61508)		
Product certifications			IEC 61511: 2004, DIN VDE 0116: 1989, EN 50156-1: 2004, EN 12067-2: 2004, EN 298: 2003, EN 230: 1990, NFPA 85: 2001, EN/IEC 61131-2: 2003, EN 61000-6-2: 2001, EN 61000-6-4: 2001		IEC 61511: 2004, DIN VDE 0116: 1989, EN 50156-1: 2004, EN 12067-2: 2004, EN 298: 2003, EN 230: 1990, NFPA 85: 2001, EN/IEC 61131-2: 2003, EN 61000-6-2: 2001, EN 61000-6-4: 2001, EN 54-2: 1997, NFPA 72: 2002
Ambient air temperature conforming to EN 61131-2	For operation	°C	0…+ 60		
	For storage	°C	- 40…+ 85		
Relative humidity			95% (supply not connected)		
Degree of protection	Enclosure		IP 20		
Pollution			Degree of pollution II		
Altitude		m	< 2000		
Protection class			Class II, conforming to EN/IEC 61131-2		
Electromagnetic compatibility			Conforming to IEC 61131-2		
Vibration resistance conforming to EN 61131-2	Operating		1 g, frequency 9…150 Hz		
Shock resistance conforming to EN 61131-2	Operating		15 g (duration 11 ms), unit test whilst operating, 2 cycles per axis		
Resistance to electrostatic discharges conforming to EN/IEC 61000-4-2		kV	4 contact, 8 air discharge		
Immunity to high frequency interference conforming to EN/IEC 61000-4-3		V/m	10 (80 MHz…2 GHz), amplitude modulation 80%		

Electrical characteristics

Supply	Voltage	V	$\overline{-}$ 24 (external supply with separate protection conforming to EN/IEC 60950, SELV (Safety Extra Low Voltage) or PELV (Protection Extra Low Voltage) rated)		
	Voltage limits		- 15…+ 20%		
Maximum consumption		A	8	8	9
Idle current		A	0.4	0.5	0.75
Immunity to momentary supply interruptions		ms	10		
Protection			Internal fuse		
Response time		ms	Depending on size of application		
Clock			Supplied by backup capacitor for 1 week following loss of supply		
User memory	Application	kB	250		
	Data	kB	250		
LED display			Yes		
Digital inputs					
Number	Inputs not electrically isolated		20		24
Permissible current	At state 0	mA	1.5 max., 1 mA at 5 V	1.5 max., 1.25 mA at 5 V	1.5 max., 1 mA at 5 V
	At state 1	mA	≥ 2 at $\overline{-}$ 15 V	> 2 at $\overline{-}$ 15 V	Approx. 3.5 at $\overline{-}$ 24 V Approx. 4.5 at $\overline{-}$ 30 V
Input supply			5 x 20 V/100 mA (on 24 V)		20 V/100 mA
Input protection			Protected against short-circuits, short-circuits to earth		
Overvoltage protection		V	500, conforming to IEC 61000-4-5		
Switching point		V	Typically 7.5		–
Current		mA	> 2 ($\overline{-}$ 15 V)		–
LED display			Yes		
Maximum distance of equipment		m	100		
Digital outputs					
Number	Outputs not electrically isolated		8, configurable for line control		8
Output voltage		V	$\overline{-}$ 24 ± 2		
Output current	Channels 1 to 3 and 5 to 7	A	0.5 at 60 °C		
	Channels 4 and 8	A	1 at 60 °C, 2 at 50 °C		
Minimum load		mA	2 per channel		
Leakage current at state 0		mA	1 max. at 2 V		
Response to overload			Shutdown of outputs concerned with cyclic reconnection		
Total output current		A	7 max., shutdown of all outputs if exceeded with cyclic reconnection		
LED display			Yes		
Distance maximale des équipements		m	100		

Schneider Electric

Electrical characteristics *(continued)*

Compact safety PLC type			XPS MF3502, XPS MF3522, XPS MF3542	
Analogue inputs				
Number	Inputs not electrically isolated		8, single-pole	
External shunt		Ω	250 or 500 depending on application	
Input values	Nominal value	**V**	--- 0…10	
		mA	0…20, with 500 Ω shunt	
	Service value	**V**	--- 0.1…11.5	
		mA	0/4…23, with 500 Ω shunt	
Input impedance		**MΩ**	1	
Maximum distance of equipment		**m**	300	
Internal resistance of signal source		Ω	≤ 500	
Overvoltage protection		**V**	+ 15, - 4	
Resolution (A/D converter)			12-bit	
Safety accuracy			± 2%	
LED display			Yes	
Counting inputs				
Number	Counter		2, not electrically isolated	
	Inputs		3 on each pole (A, B, Z)	
Input voltages	High threshold 5 V	**V**	4…6	
	High threshold 24 V	**V**	13…33	
	Low threshold 5 V	**V**	0…0.5	
	Low threshold 24 V	**V**	- 3…5	
Input currents		**mA**	1.4 at 5 V 6.5 at 24 V	
Input impedance		**kΩ**	3.7	
Maximum distance of equipment		**m**	500, with shielded dual twisted pair cable	
Up/down counting resolution			24-bit	
Input frequency		**kHz**	100, at 5 and 24 V	
Triggering			On falling edge	
Edge steepness		**V/μs**	1	
LED display			Yes	

Communication

Compatibility			XPS MF31222	XPS MF3022	XPS MF3502, XPS MF3522, XPS MF3542
Ethernet network: safety communication using SafeEthernet protocol					
Transmission	Communication ports		Integrated 4 RJ45 switched Ethernet communications ports		
	Baud rate	**Mbps**	100 Half duplex, 10 Full duplex, Autonegotiation		
Structure			10BASE-T/100BASE-TX		
Medium			Dual twisted pair cable, category 5D or better (Ethernet)		
Ethernet network: Non-safety related communication using Modbus TCP/IP protocol					
Connection Ports	Number and type		Integrated 4 RJ45 switched Ethernet communication ports		
	Baud rate	**Mbps**	100 Half Duplex, 10 Full Duplex, Autonegotiation		
	Master/Slave		Server (slave)		
Structure			10BASE-T/100BASE-TX		
Medium			Dual twisted pair cable, category 5D or better (Ethernet)		
Transparent Ready Services	Class		A10		
	Standard Ethernet TCP/IP communication services		Modbus TCP/IP Server		
			Modbus TCP/IP messaging (reading/writing of data words)		
			Modbus identification request		
	TCP port		Standard 502		
	Max. number of Modbus TCP/IP connections		1 to 20		
Modbus serial (RTU)					
Serial link ports	Number and type		–	1 x SUB-D 9-pin female (FB3)	
	Master/Slave		–	Slave	
Addressing			–	122 slave addresses	
Physical layer			–	RS 485	
Medium			–	Shielded dual twisted pair cable	
PROFIBUS DP					
Serial link ports	Number and type		–	–	1 x SUB-D 9-pin female
	Master/Slave		–	–	Slave, V0
Physical layer			–	–	RS 485
Medium			–	–	Shielded dual twisted pair cable

Configuration software

■ Reference **SSV1XPSMFWIN** is the full version of software **XPSMFWIN** version 4.1 and must be installed if no previous version of this software has been installed.
■ Reference **SSVXPSMFWINUP** is an update for software **XPSMFWIN** and can be used if **SSV1XPSMFWIN** has been installed using Safety Suite V1. An update from version 4.1 to version 4.1-6150 for the software **XPSMFWIN** will then be performed.

2
Modular safety PLC XPS MF60, fitted with 6 different "in rack" I/O cards

Presentation

Safety PLC **XPS MF60** offers a modular solution for monitoring simple to complex safety functions for all industrial applications relating to the protection of personnel and machine safety.

Designed for use with numerous machine safety functions, this modular safety PLC is intended for use in safety related parts of control systems.
It can manage up to:
- category 4 conforming to EN 954-1,
- performance level "e" conforming to EN/ISO 13849-1,
- SIL 3 (safety integrity level) conforming to EN/IEC 61508.

Modularity

The safety PLC **XPS MF60** is a modular system comprising a metal housing or rack, fitted with a power supply module, a CPU and "in rack" I/O cards.
■ Various types of "in rack" I/O cards are catalogue listed and are selected according to the application.
■ Mounting the "in rack" cards is a simple operation using the guide rails (6 slots). Electrical connection is automatic and assured by the back plane bus of the rack.
■ The mounting order of the "in rack" I/O cards is open to the user, but the order, however, must correspond to the programming software.
■ The removal of the "in rack" cards, performed with the supply switched-off, is facilitated by a grip at the base of the cards.
■ Covering plates for unused "in rack" I/O card slots are available to protect the system in polluted environments.

Composition of the modular safety PLC XPS MF60

Minimum basic equipment	Optional "in rack" I/O cards	
	Type	**Details**
Metal rack XPS MFGEH01 with back plane bus assuring electrical connection of components installed + metal securing plate for shielded cables (EMC), two cooling fans **+** **a power supply module ($\overline{\cdots}$ 24 V) XPS MFPS01**, **+** **a central processing unit XPS MFCPU22** with 4 x RJ45 integrated switched Ethernet ports for Programming, and for Safety and non-safety related communication on Ethernet (safety related using SafeEthernet protocol and Non-safety related using Modbus TCP/IP server protocol) and in addition a SUB-D (FB2) connector for communication on Modbus serial (RTU)	XPS MFAI801	8 single-pole analogue inputs or 4 2-pole analogue inputs
	XPS MFAO801	8 analogue outputs
	XPS MFCIO2401	2 counting inputs, 4 digital outputs
	XPS MFDI2401	24 digital inputs ($\overline{\cdots}$ 110 V / $\sim$ 127 V)
	XPS MFDI3201	32 digital inputs
	XPS MFDIO241601	24 digital inputs, 16 digital outputs
	XPS MFDO801	8 relay outputs ($\approx$ 6…250 V)

Safety PLCs

In order to meet safety requirements, the modular safety PLC **XPS MF60** incorporates two essential functions (**Redundancy** and **Self-monitoring**) complying to category 4 conforming to EN 954-1 and performance level "e" conforming to EN/ISO 13849-1 in addition to the SafeEthernet safety communication protocol between the safety PLCs and the safety remote I/O modules (**Special Switch**).
■ **Redundancy**: the 2 processors integrated in the modular safety PLC analyse and compare the data received from the safety inputs and outputs.
The incoming and outgoing data (programmed values and received values) are received in parallel by the two processors and compared in real-time.
■ **Self-monitoring ("Watchdog")**: the modular safety PLC continuously monitors the data processing cycle and the execution of tasks, and intervenes if the cycle time does not conform to the predefined value.
■ **The integrated switch (Special Switch)** stores for a very short time and sends at very high speed the data provided by the inputs and outputs of the safety PLC on the Ethernet network, whilst avoiding signal collisions and excessive amounts of data on the network.

Functional synoptics

Central processing unit XPS MFCPU22

Power supply module XPS MFPS01

Line control for "in rack" I/O card XPS MFDIO241601 and "in rack" input card XPS MFDI3201

Line control is a means of short-circuit and line break monitoring.
Using line control outputs enables SIL 3 (EN/IEC 61508) and category 4 (EN 954-1) safety to be achieved. The line control outputs send a high signal with a very short low signal, thus enabling a wiring fault (short-circuit, line break) to be seen at the inputs of the safety PLCs.
The digital outputs 1 to 16 of card **XPS MFDIO241601** are connected to the digital inputs of the same card or to the digital inputs of card **XPS MFDI3201**.

(1) FB1 not used.

Safety inputs and outputs (continued)

Programming automated safety functions

Software **XPSMFWIN** (reference SSV1XPSMFWIN) running on a PC enables the programming of all safety remote I/O modules and the modular safety PLCs, as well as configuration of the communication settings.

Safety inputs and outputs

The modularity of the PLC **XPS MF60** allows the user to select and install, in the six slots of the rack, various input, output and input/output cards to alter the number and type of safety inputs and/or outputs to be monitored.
6 identical cards can be installed in the same rack.
The cards listed (see below and next page) indicate the number of inputs and outputs available for connection to the machines to be monitored.

Digital input cards *(1)*

Cards	Digital inputs		
	Nº	Type	
		Safety detection	Safety dialogue
XPS MFDI2401	24	Limit switches, Guard switches, with reset and with actuator, Safety light curtains type 2 and type 4, Safety mats and sensing edges…	Mushroom head emergency stops, Enclosures for control and signalling units, Two-hand control stations…
XPS MFDI3201	32		

Analogue input card *(1) (2)*

| Card	Analogue measuring inputs	
	N°	Functions
XPS MFAI801	8 single-pole or 4 2-pole	Closed circuit scanning of input channels, Single-pole measuring of 0 to 10 V voltages, 2-pole measuring of -10 to +10 V voltages, Single-pole measuring of 0 to 20 mA currents

(1) Removable screw terminal blocks are provided with the power supply and "in rack" I/O cards.
(2) Use shielded dual twisted pair cables, maximum length 300 m, short-circuit unused analogue inputs.

Remote inputs and outputs

In addition to the inputs/outputs available as standard on the optional "in rack" cards, the modular safety PLC **XPS MF60** can be connected to safety remote input modules **XPS MF1** and/or safety remote output modules **XPS MF2** and/or safety remote mixed I/O modules **XPS MF3**.
The safety remote input, output and mixed I/O modules can be located within the vicinity of the machines to be monitored, thus reducing cabling.
Communication between these safety modules and the safety PLC **XPS MF60** is performed on an Ethernet network using the SafeEthernet safety protocol, via the integrated RJ45 switched Ethernet communications ports.

(1) Removable screw terminal blocks are provided with the power supply and "in rack" I/O cards.
(2) Use shielded dual twisted pair cables, maximum length 300 m, short-circuit unused analogue inputs.

Rack, power supply and CPU

Communication

Safety communication on Ethernet network

Communication between the PC, Magelis graphic terminals or automation platform (Premium) and the modular safety PLC is achieved by the **Ethernet** network connection via the integrated RJ45 switched Ethernet communications ports of the modular safety PLC.

Modular PLC	Communication protocols	
	safety	non safety
XPS CPU22	SafeEthernet	Modbus TCP/IP server (slave)
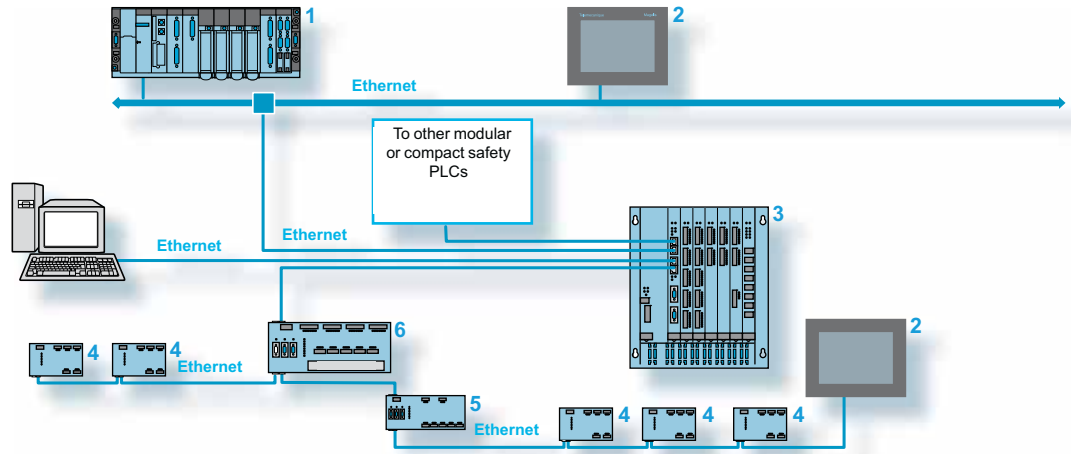

1 Premium automation platform: Modbus TCP/IP client.
2 Graphic terminal **XBT GT**: Modbus TCP/IP client.
3 Modular safety PLC: Modbus TCP/IP server.
4 Safety remote I/O modules **XPS MF1/2/3**. They communicate with compact and modular safety PLCs using the SafeEthernet protocol.
5 Compact safety PLC **XPS MF31/30**: Modbus TCP/IP server.
6 Compact safety PLC **XPS MF35●●**: Modbus TCP/IP server.

Communication on Modbus serial (RTU) fieldbus

On Modbus serial (RTU), the modular safety PLC is a slave of the Premium automation platform and Magelis graphic terminal.
It is connected to the Modbus serial network via its SUB-D 9-pin connector (FB2).
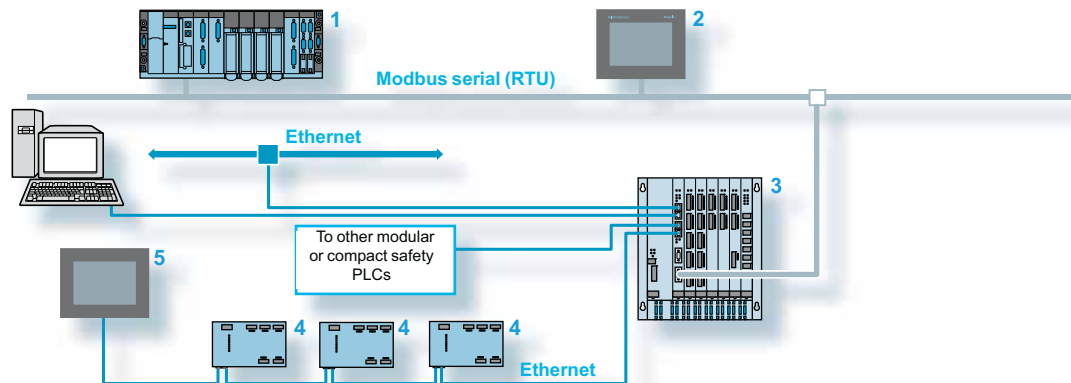

1 Graphic terminal **XBT GT**: Modbus serial (RTU) master.
2 Premium automation platform: Modbus serial (RTU) master.
3 Modular safety PLC: Modbus serial (RTU) slave, Modbus TCP/IP server.
4 Safety remote I/O modules **XPS MF1/2/3**. They communicate with the modular safety PLC using the SafeEthernet protocol.
5 Graphic terminal **XBT GT**: Modbus serial (RTU) client.

Schneider *Electric*

Safety automation system solutions
Preventa safety PLCs
Modular, XPS MF60
Rack, power supply and CPU
Description

Modular safety PLC

Modular assembly comprising:
1 A metal rack **XPS MFGEH01**.
2 A ⎓ 24 V power supply module **XPS MFPS01**.
3 A central processing unit **XPS MFCPU22**.
4 Six optional "in rack" I/O cards (back plane bus assures the electrical connection of "in rack" cards installed, the power supply module and the CPU).
5 A metal plate for securing shielded analogue input connection cables (EMC),
6 One earth connection screw.
7 Two cooling fans (beneath the metal rack).
8 Four Ø 14 mm elongated holes for mounting the rack on a vertical support.
Power supply module XPS MFPS01 and Central processing unit XPS MFCPU22 comprising:
1 Four voltage status LEDs (FAULT, 24 V, 3.3 V or 5 V).
2 A RESTART button (accessible using fine pointed tool).
3 A 3-pole terminal block (3 captive screws) for "Fault contact" function *(1)*.
4 A ⎓ 24 V supply terminal block, including earth connection *(2)*.
5 A grip to assist installation/removal of the power supply module.
6 Seven process status LEDs.
7 Four integrated RJ45 (type 10BASE-T/100BASE-TX) switched ports for Programming, and for Safety and non-safety related communication on Ethernet. (safety related using SafeEthernet protocol and Non-safety related using Modbus TCP server protocol).
8 Two process status LEDs.
9 A SUB-D 9-pin connector (FB2) for connection on Modbus serial (RTU) (FB1 not used), with process status LED.
10 A grip to assist installation/removal of the CPU.

*(1) "**Fault contact**" function: the power supply module incorporates a volt-free changeover contact. Operating errors occurring in the system are read and displayed by the LEDs. The errors are analysed on the programming PC:*

	Contact positions	Status
01 02 03 FAULT	1-2 closed (2-3 open)	Normal operation of the PLC.
	1-2 open (2-3 closed)	Absence of supply to the PLC or the CPU is in ERROR STOP mode.

(2) Removable screw terminal blocks are provided with the power supply and "in rack" I/O cards.

LED details *(continued)*

Central processing unit XPS MFCPU22

LED	Colour	Status	Meaning
RUN	Green	On	Program in operation: CPU in STOP or RUN mode.
		Flashing	A new programming system will be downloaded.
		Off	The CPU is in "ERROR" state (see ERROR).
ERR	Red	On	Software error or hardware fault detected by the CPU. The monitoring program (Watchdog) has triggered the STOP state of the process because the programmed cycle time has been exceeded. The CPU has stopped the execution of the user application, ended all hardware and software tests and all outputs have been reset. The process can only be started again from the PC.
		Flashing	In the event of all the LEDs being on, restarting has detected a system error, a new operating system (OS) must be loaded.
		Off	No error detected.
FB1	–	–	Not used.
FB2	Orange	On	Communication on Modbus serial link active.
RUN	Green	On	Normal service mode, loaded program running, the PLC receives I/O messages, communication and hardware/software tests carried out.
		Off	The CPU is in "ERROR" state (see ERROR).
STOP	Red	On	The CPU is in STOP mode and no program can be executed.
			The outputs are in the waiting state for the correct supply.
			The CPU has stopped the execution of the user application, ended all hardware and software tests and all outputs have been reset.
			The process can only be started again from the terminal.
		Off	CPU operating. A new programming system will be downloaded.
PROG	Orange	On	The CPU is being loaded with a new configuration.
		Flashing	CPU changing from INIT state to STOP state. The FLASH ROM is being loaded with a new operating system.
		Off	No loading of configuration or operating system.
FAULT	Orange	On	Program error.
			The loading of a new operating system was defective and the operating system is corrupt.
		Flashing	An error has occurred whilst writing to FLASH ROM memory (during updating of the operating system).
			One or more I/O errors have occurred.
		Off	None of the above errors have occurred.
FORCE	Orange	On	CPU in RUN mode and force is active.
		Flashing	Program in STOP mode, but force is prepared and activated if the program restarts.
		Off	Force not activated.
OSL	Orange	Flashing	Operating system and backup loading active.
BL	Orange	Flashing	COM in INIT_Fail state.
RJ45	Green	On	Full duplex mode operation.
		Flashing	Signal collision.
		Off	Half duplex mode operation, no collision.
	Yellow	On	Connection established.
		Flashing	Interface active.

Communication

Ethernet network: safety communication using SafeEthernet protocol

Compatibility			Central processing unit XPS MFCPU22
Transmission	Communication ports		Integrated 4 RJ45 switched Ethernet communications ports
	Baud rate	Mbps	100 Half duplex, 10 Full duplex, Autonegotiation
Structure			10BASE-T/100BASE-TX
Medium			Dual twisted pair cable, category 5D or better (Ethernet)
Functions	Control of:		Transmitted data: duplication, loss, bit changing. Addressing of transmitted and received messages. Data sequence: repetition, loss of data, change. Data reception time: delay, repetition, echo
	Diagnostics on:		CPU, user program, communication, operating voltage and temperature, inputs & outputs

Communication *(continuous)*

Compatibility			Central processing unit XPS MFCPU22
Ethernet network: Non-safety related communication using Modbus TCP/IP protocol			
Connection Ports	Number and type		Integrated 4 RJ45 switched Ethernet communication ports
	Baud rate	**Mbps**	100 Half duplex, 10 Full duplex, Autonegotiation
	Master/Slave		Server (slave)
Structure			10BASE-T/100BASE-TX
Medium			Dual twisted pair cable, category 5D or better (Ethernet)
Transparent Ready Services	Class		A10
	Standard Ethernet TCP/IP communication services		Modbus TCP/IP Server
			Modbus TCP/IP messaging (reading/writing of data words)
			Modbus identification requests
	TCP port		standard 502
	Max. number of Modbus TCP/IP connections		1 to 20
Modbus serial (RTU)			
Serial link ports	Number and type		1 x SUB-D 9-pin female (FB2)
	Master/Slave		Slave
Addressing			122 slave addresses
Physical layer			RS 485

Connections *(1)*

Power supply module			XPS MFPS01
Type of connection			Removable screw terminal blocks *(2)*
Supply connection	Number of terminal blocks		1
	For 1 cable without cable end		Solid or flexible 0.75…16 mm², AWG 19
	For 1 flexible cable with or without plastic cable end		0.5…16 mm², AWG 20
	For 2 cables of same diameter, without cable end		Solid or flexible 0.75…6 mm², AWG 19
	For 2 cables of same diameter, flexible without cable end		0.5…4 mm², AWG 20
	For 2 cables of same diameter, flexible with plastic cable end		0.5…6 mm², AWG 20
"In rack" I/O card			**XPS MFAI801, XPS MFAO801, XPS MFCIO2401, XPS MFDI2401, XPS MFDI3201, XPS MFDIO241601, XPS MFDO801**
Type of connection			Removable screw terminal blocks *(2)*
Digital input channel and output channel connection	Number of terminal blocks		Depending on "in rack" I/O card type
	For 1 cable without cable end		Solid or flexible: 0.14…1.5 mm², AWG 28-16
	For 1 flexible cable without cable end		0.25…1.5 mm², AWG 22-16
	For 1 flexible cable with plastic cable end		0.25…0.5 mm², AWG 22-20
	For 2 cables of same diameter, without cable end		Solid: 0.14…0.5 mm², AWG 28-20 Flexible: 0.14…0.75 mm², AWG 28-18
	For 2 cables of same diameter, flexible without cable end		0.25…0.34 mm², AWG 22
	For 2 cables of same diameter, flexible with plastic cable end		0.5 mm², AWG 20
Analogue input channel and output channel connection	Number of terminal blocks		Depending on "in rack" I/O card type
	For 1 cable without cable end		Solid or flexible: 0.14…1.5 mm², AWG 28-16
	For 1 flexible cable without cable end		0.25…1.5 mm², AWG 22-16
	For 1 flexible cable with plastic cable end		0.25…0.5 mm², AWG 22-20
	For 2 cables of same diameter, without cable end		Solid: 0.14…0.5 mm², AWG 28-20 Flexible: 0.14…0.75 mm², AWG 28-18
	For 2 cables of same diameter, flexible without cable end		0.25…0.34 mm², AWG 22
	For 2 cables of same diameter, flexible with plastic cable end		0.5 mm², AWG 20
Counting channel connection	Number of terminal blocks		Depending on "in rack" I/O card type
	For 1 cable without cable end		Solid or flexible: 0.14…1.5 mm², AWG 28-16
	For 1 flexible cable without cable end		0.25…1.5 mm², AWG 22-16
	For 1 flexible cable with plastic cable end		0.25…0.5 mm², AWG 22-20
	For 2 cables of same diameter, without cable end		Solid: 0.14…0.5 mm², AWG 28-20 Flexible: 0.14…0.75 mm², AWG 28-18
	For 2 cables of same diameter, flexible without cable end		0.25…0.34 mm², AWG 22
	For 2 cables of same diameter, flexible with plastic cable end		0.5 mm², AWG 20
Cable connection	Tightening torque	**Nm**	0.22…0.25
	Bared length	**mm**	9

(1) AWG: American Wire Gauge.
(2) Removable screw terminal blocks are provided with the power supply and "in rack" I/O cards.

"In rack" analogue input card
Presentation

The "in rack" analogue input card **XPS MFAI801** is designed to manage up to:
- category 4 conforming to EN 954-1,
- performance level "e" conforming to EN/ISO 13849-1,
- SIL 3 (safety integrity level) conforming to EN/IEC 61508.

■ It incorporates 8 analogue inputs:
□ electrically isolated from the back plane bus of rack **XPS MFGEH01**,
□ configured by choice of connection for managing eight single-pole or four 2-pole functions.

■ The card can be installed in rack **XPS MFGEH01** as many times as required in the six slots available.

Input values *(1)*

Number	Type	Voltage	Current	Value range	Example
8 inputs	Single-pole ± 10 V	–		± 1000	Single-pole measuring of 0 to 10 V voltages
		–	0...20 mA	0...1000 *(2)* 0...2000 *(3)*	Measuring 0 to 20 mA currents using shunt
4 inputs	2-pole	± 10 V	–	± 1000	Closed circuit scanning of input channels

Functional synoptic
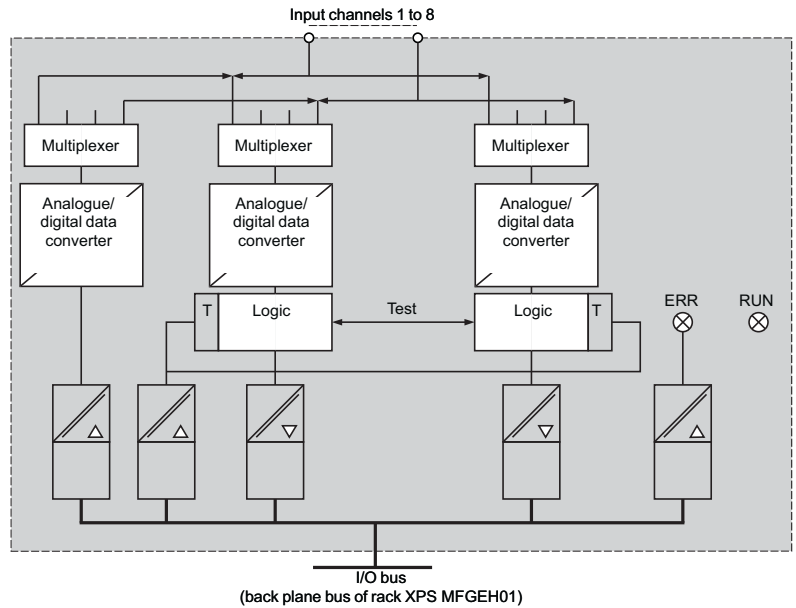

Input channels 1 to 8

I/O bus
(back plane bus of rack XPS MFGEH01)

Description

On the front face of the card:
1 Two process status LEDs (RUN, ERR).
2 Two removable screw terminal blocks (9 terminals per block) for connection of inputs *(4)*.
3 Grip to assist installation/removal.
4 **On the rear**: terminals for automatic electrical connection to the back plane bus of rack **XPS MFGEH01**.

LED details

LED	Colour	Status	Meaning
RUN	Green	On	Voltage present.
		Off	No voltage.
ERR	Red	On	Card defect or external error, diagnostics response.
		Off	No error regarding the card or on the channels.

(1) The unused input channels must be short-circuited on the reference pole (L-).
(2) With 250 Ω external shunt.
(3) With 500 Ω external shunt.
*(4) Removable screw terminals are provided with the "in rack" card **XPS MFAI801**.*

"In rack" analogue input card

Characteristics

Card type			XPS MFAI801
Number of analogue inputs			8 single-pole inputs (± 10 V / 0…20 mA) or 4 2-pole inputs (± 10 V), electrically isolated, configurable by choice of connection
Supply	Voltage	V	⎓ 24, supplied by rack XPS MFGEH01 incorporating power supply module XPS MFPS01
	Voltage limits		- 15…+ 20%
Signal	Usable range	V	± 10.25
		mA	0...+ 20.5 (with shunt)
	Nominal value	V	± 10
		mA	0...+ 20 (with shunt)
Maximum input signal		V	± 10.7
Shunt for current measurement		Ω	250 or 500
Overvoltage protection		V	⎓ - 15…+ 15 (30 V range)
Input resistance	d.c.	MΩ	1
Operational data			⎓ 24 V/380 mA ⎓ 3.3 V/150 mA
Ambient air temperature conforming to EN 61131-2	Operating	°C	0…+ 60
	Storage	°C	- 40…+ 85
Resolution	Effective		9-bit
	Maximum		12-bit
Output voltage			± 1% max.
Safety accuracy			± 1% max.
Transient deviation			± 1% max.
Value acquisition renewal			Once per CPU cycle
Processing time			Approximately 45 μs
Connections			See page 2/43

"In rack" analogue output card
Presentation

The analogue output card **XPS MFAO801** is designed to manage up to:
- category 4 conforming to EN 954-1,
- performance level "e" conforming to EN/ISO 13849-1,
- SIL 3 (safety integrity level) conforming to EN/IEC 61508.

■ It incorporates 8 configurable analogue outputs (0…20 mA, 0…+ 10 V or
- 10…+ 10 V):

□ For selection of the type of voltage/current measurement: a switch enables
selection of 6 functions for each output channel.

Switch position	Outputs	
	Voltage ± 10 V	Current 0…+ 20 mA
1	–	On
2	–	On
3	–	On
4	On	–
5	On	–
6	On	–

□ Selection of measuring scale using software **XPSMFWIN**: the "Properties" sub-
menu displays the scale options in the "Type" window (…FS1000 or …FS2000).

Configurable output values				
Type	Voltage	Current	Value range	
			Half scale (version FS1000)	Full scale (version FS2000)
8 analogue outputs	–	0…20 mA	0...+ 1000	0...+ 2000
	0…+ 10 V	–	0...+ 1000	0...+ 2000
	- 10...+ 10 V	–	- 1000...+ 1000	- 2000...+ 2000

"In rack" mixed card: counting inputs/digital outputs

Presentation

The mixed counting input and digital output card **XPS MFCIO2401** is designed to manage up to:
- category 4 conforming to EN 954-1,
- performance level "e" conforming to EN/ISO 13849-1,
- SIL 3 (safety integrity level) conforming to EN/IEC 61508.

■ It incorporates:
□ 2 24-bit independent and configurable counting channels (one channel for counting and one channel for increasing or decreasing counting direction). They are configured using software **XPSMFWIN**.
□ 4 digital outputs.

■ The card can be installed in rack **XPS MFGEH01** as many times as required in the six slots available.

Presentation

The digital input card **XPS MFDI3201** is designed to manage up to:
- category 4 conforming to EN 954-1,
- performance level "e" conforming to EN/ISO 13849-1,
- SIL 3 (safety integrity level) conforming to EN/IEC 61508.

■ It incorporates 32 digital inputs that are configurable using programming software **XPSMFWIN**.
■ The card can be installed in rack **XPS MFGEH01** as many times as required in the six slots available.

Functional synoptic

Digital inputs 1 to 32

ERR RUN

Test

I/O bus
(back plane bus of rack XPS MFGEH01)
Line control for card XPS MFDI3201

Line control is a means of short-circuit and line break monitoring.
Using line control outputs enables SIL 3 (EN/IEC 61508) and category 4 (EN 954-1) safety to be achieved. The line control outputs send a high signal with a very short low signal, thus enabling a wiring fault (short-circuit, line break) to be seen at the inputs of the safety PLCs.

Description

On the front face of the card:
1 Two process status LEDs (RUN, ERR).
2 Five removable terminal blocks (9 terminals per block) for connection of inputs *(1)*, with a status LED for each input terminal.
3 Grip to assist installation/removal.
4 **On the rear**: terminals for automatic electrical connection to the back plane bus of rack **XPS MFGEH01**.

Preventa safety PLCs
Compact and modular, XPS MF
Communication on network and bus

2

Presentation

To communicate, Preventa compact and modular safety PLCs **XPS MF** are fitted with:
■ Integrated 2 or 4 RJ45 Ethernet switched ports for transfer Safety and Non-safety related data (Safety Related using SafeEthernet protocol, Non-Safety Related using Modbus TCP/IP protocol),
■ and/or serial communication ports for transferring non safety related data.

Safety communication on a single network
The Ethernet network supports the SafeEthernet protocol: physically, a single network is possible for communication between:
□ safety products (SafeEthernet protocol),
□ non safety related products (Modbus TCP/IP and other protocols),
□ safety related and non safety related products (Modbus TCP/IP protocol).

Communication on more than one network: a minimum of two separate cabling systems are established.
□ An Ethernet network with Modbus TCP/IP protocol is used for communication between non safety related products and the safety PLCs.
□ An Ethernet network with SafeEthernet protocol is used for communication between the safety PLCs **XPS MF** and safety remote I/O modules **XPS MF1/2/3**.
□ A Modbus serial network with Modbus serial (RTU) protocol is used for communication between the safety PLCs **XPS MF** and non safety related products.
□ A PROFIBUS DP network with PROFIBUS protocol is used for communication between the safety PLCs **XPS MF** and non safety related products.

Connection on PROFIBUS DP
1 Graphic terminal connected to TER/AUX port of Premium automation platform: PROFIBUS DP master.
2 Connecting cable **XBT Z968** (RS 485) + adaptor **XBT ZG909**.
3 PROFIBUS module **TSX PBY 100** on Premium processor: PROFIBUS DP master.
4 Connecting cable **TSX PBS CA ●00**, lengths 100 and 400 m.
5 Connector **490 NAD 911 03** (SUB-D 9-pin male) on the FB3 connector of safety PLC **XPS MF3542** or on the "PROFIBUS" connector of safety PLC **XPS MF4040/MF4042**.
6 Compact safety PLC **XPS MF3542**: PROFIBUS DP slaves, Modbus TCP/IP server.
7 Compact safety PLCs **XPS MF4040/MF4042**: PROFIBUS DP slaves, Modbus TCP/IP server.
8 Graphic supervision terminal **XBT GT2130**: Modbus TCP/IP client.
9 Safety remote I/O modules **XPS MF1/2/3**.

Characteristics

Bus type	PROFIBUS DP	
Compatibility with compact safety PLCs	XPS MF3542	XPS MF4040, XPS MF4042
Serial port Number and type	1 x SUB-D 9-pin female (FB3)	1 x SUB-D 9-pin female (PROFIBUS)
Master/Slave	Slave, V0	
Physical layer	RS 485	
Topology	Linear, with line terminators at each end	
Medium	Shielded twisted pair cable	
Number of slaves	32 slaves on each segment, 126 slaves maximum with repeaters	
Data exchange speed	9.6 kbps…12 Mbps, depending on the length of the segment (1200 m…100 m)	

Safety automation system solutions
Programming software XPSMFWIN
for Preventa compact and modular
safety PLCs XPS MF

Presentation

Conforming to standard IEC 61131-3, programming software **XPSMFWIN** is
designed for programming all safety PLCs **XPS MF** and safety remote I/O modules.
This safety software is part of the Safety Suite V2 software pack.

To create a program the user can use predefined function blocks, such as the
elementary logic functions and certified function blocks, by dragging the blocks into
the software programming area.
The "drag and drop" operation of the Windows programming environment enables
quick and simple creation of configurations.

Using the **XPSMFWIN** software, it is possible to program complete systems
comprising several safety PLCs and safety remote I/O modules.
The conditions detailed in the software manual must be adhered to and a complete
report accompanying the certificate should be established.

Reference

■ Reference **SSV1XPSMFWIN** is the full version of software **XPSMFWIN** version 4.1 and must be installed if no previous version of this software has
been installed.
■ Reference **SSVXPSMFWINUP** is an update for software **XPSMFWIN** and can be used if **SSV1XPSMFWIN** has been installed using Safety
Suite V1. An update from version 4.1 to version 4.1-6150 for the software **XPSMFWIN** will then be performed.

Description	Operating system	Composition	Language	Reference	Weight kg
Configuration software XPSMFWIN for programming compact XPS MF40●●, XPS MF3● and modular XPS MF60 safety PLCs	Windows 2000, Windows XP	CD-ROM + user manual	English, German, French	**SSV1XPSMFWIN** *Available with Safety Suite V2 software pack for safety systems*	0.520
XPSMFWIN software update	Windows 2000, Windows XP	CD-ROM + user manual	English, German, French	**SSVXPSMFWINUP** *Software update available on Safety Suite V2 software pack*	0.520

Installation
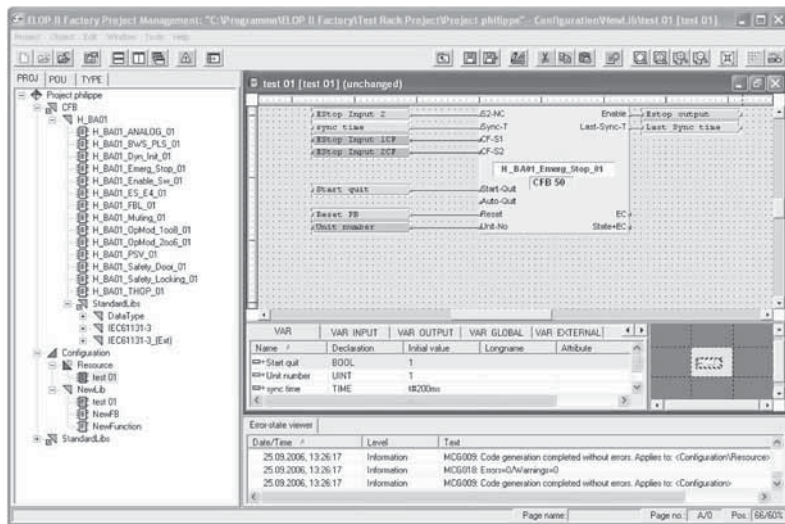

Software XPSMFWIN: project management

Software **XPSMFWIN** uses an electronic key (dongle)
for protection against unauthorised use.

A USB dongle is available. It must be connected to the
PC before the software is installed.
Drivers must also be installed on the computer to
recognise the dongle. These drivers are included with
software **XPSMFWIN** and are automatically installed
during installation.
To install software **XPSMFWIN**:
□ Connect the dongle.
□ Insert the **SSV1XPSMFWIN** software CD-ROM into
the computer.
□ Launch installation.
□ Select the preferred language from the configuration
menu.
□ Follow the guided installation procedure for the
software.
□ Restart the computer.
□ Launch the software by clicking on the Safety Suite
icon on the desktop.

**The computer hardware requirements are as
follows:**
■ Processor (Intel Pentium II 400 MHz minimum, Intel
Pentium III 800 MHz recommended).
■ RAM (128 Mb minimum, 256 Mb recommended).
■ Graphics card (2 Mb XGA, 1024 x 768, 256 colours
minimum, 8 Mb XGA, 1280 x 1024 True colour
recommended).
■ Hard disk (1 Gigabyte minimum).
■ Operating system:
□ Windows 2000 Professional with Service Pack 1 or
higher.
□ Windows XP with Service pack 1.

Electric

Safety automation system solutions
Programming software XPSMFWIN
for Preventa compact and modular
safety PLCs XPS MF

Safety related communication

Safety related communication for the safety systems is performed using SafeEthernet protocol.
SafeEthernet is a TCP/IP based protocol that uses highly intelligent switches to provide extremely reliable deterministic communication.
Connection is made automatically between the master and slaves when assigning the slaves to the corresponding masters. Transmission speeds of up to 100 Mbps in Half duplex mode and 10 Mbps in Full duplex mode can be achieved and using Autonegotiation ensures the correct baud rates for the connection.
Each safety PLC can manage up to 64 safety connections. These 64 connections can comprise safety remote I/Os and other safety PLCs.
Communication between two safety PLCs is established via a Peer-Peer link. This Peer-Peer communication enables data between two or more safety PLCs to be communicated safely.
The connectivity of all the equipment enables centralised or decentralised networks to be established. It also enables safety PLCs and safety remote I/O modules to be connected anywhere on the network with only the assigning of an IP address, to each module, in the software.

Interface

XPSMFWIN features two distinct windows, one for internal configuration and one for hardware management.

■ Project management
This window enables creation, archiving and recalling of all the user programs. It contains all the logic functions and predefined certified function blocks.
■ Hardware management
This window enables all hardware specific data, inputs and outputs and signal transfer between safety controllers to be defined, as well as the various safety PLCs being used or safety remote I/O modules.

Items included in the XPSMFWIN interface

■ Menu and title bar
■ Toolbar and status bar
■ Windows layout, structure window and work space
■ Error display window

XPSMFWIN is a program offering numerous functions and features intuitive, Windows style, operation, making it a very user-friendly programming environment.

Project Management window layout

On launching software **XPSMFWIN**, the standard screen shown below opens.
This screen generally includes the following items:
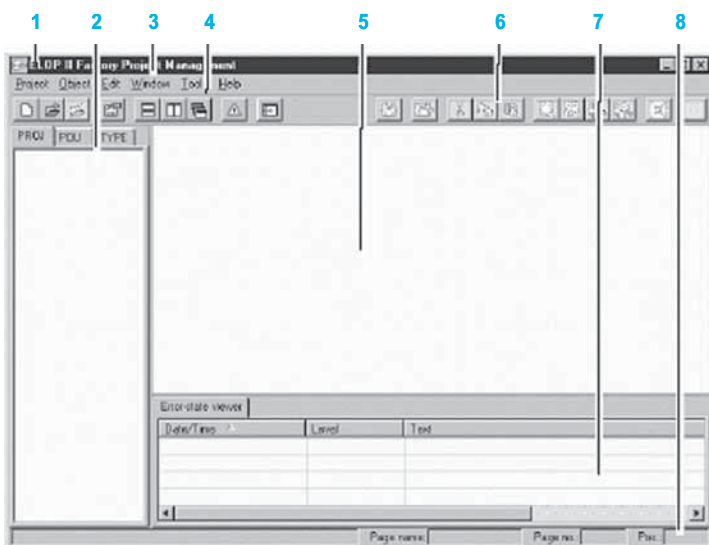

1 Title bar.
2 Structure window.
3 Menu bar.
4 Project management toolbar.
5 Work space.
6 FBD (Function Block Diagram) editor toolbar.
7 Error display window.
8 Status bar with coordinate information of the function plan editor.

Safety automation system solutions
Programming software XPSMFWIN
for Preventa compact and modular
safety PLCs XPS MF

Programming

Software **XPSMFWIN** enables programming of the entire range of Preventa safety PLCs **XPS MF**.
The powerful and easy to use methodology of this software enables users to quickly and simply familiarise themselves with the product. The Windows based look and user-friendliness provides users with trouble free operation of the software.

On launching the software, the program's start-up assistant opens simultaneously. This assistant enables the user to easily open a new or existing file, delete a file or archive a file. Once a new or existing file is opened, the user quickly accesses the working environment.

Configuration

The user can begin creating a configuration as soon as a personal library is set-up, that will contain the user configuration(s).
Once the personal library is opened, the user can use the standard library function blocks (And, Or, Not, Flip-Flop, etc.) to create exactly what is required.

The user drags the function blocks into the configuration environment and places them where required. Once the function blocks are placed, the user can define specific signals or variables for the inputs and outputs.

The Hardware menu enables assigning of all the signals to the relevant inputs and outputs.

From within the Hardware menu the relevant safety PLCs are selected using the pull-down menu of each resource.
To add additional safety PLCs a new resource is easily created and assigned with the type of safety PLC.

Up to 64 remote inputs/outputs can be assigned to each safety PLC.
Once all the safety PLCs and remote I/Os have been selected, the signals can be simply connected to the relevant safety modules.
The "drag and drop" function enables defining of the inputs and outputs.

Therefore, configuration is very quick and simple.
Once all the inputs and outputs have been defined the user can compile the entire program, which is performed in the configuration menu.
Compilation must be performed twice and the results of both compilations printed and compared. If both results match, the program can be downloaded via the Ethernet RJ45 communication port on any of the safety PLCs.

Program execution

The program will automatically be stored in all the safety PLCs.
The safety PLCs can then execute the configuration and full diagnostics can be viewed on screen.
The software incorporates various diagnostic options that can be used to quickly identify the presence of errors. Some of these diagnostic options are "On-line test": which displays the logic condition of all the I/Os. Others allow the user to view the status of the transmission line, the cycle time and errors that have occurred on the communication line.

The programming tool enables the user to create and design to suit their needs. Other certified function blocks are available, which enable the overall configuration time to be further reduced. Included in these additional blocks are "Muting" and "Emergency stop" functions, together with 12 other certified functions.

Modbus TCP/IP, Modbus serial (RTU) and PROFIBUS DP protocols are included in software **XPSMFWIN**. They can be used for non safety related data transfer.

Safety automation system solutions
Programming software XPSMFWIN
for Preventa compact and modular
safety PLCs XPS MF

Non safety related communication protocols

Modbus TCP/IP server (slave)

The **XPS MF** range of safety PLCs (**XPS MFCPU22**, **XPS MF40●2**, **XPS MF35●2**, **XPS MF3022** and **XPS MF31222**) allow the communication of non safety related data on an Ethernet network via a Modbus TCP/IP link.
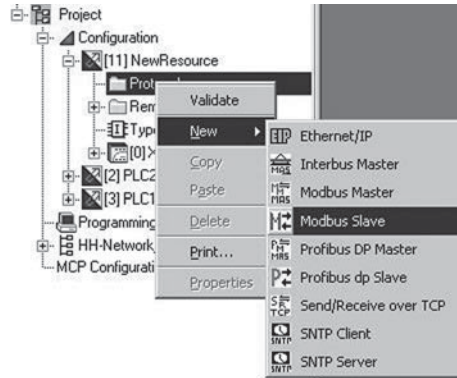

On the Ethernet network, several masters (clients) can read data provided by several slaves (servers).

Creation of Modbus TCP/IP servers is quick and simple: Select Protocols / New / Modbus Slave.

Modbus serial (RTU)

The **XPS MF** range of safety PLCs (**XPS MFCPU22**, **XPS MF402●**, **XPS MF352●** and **XPS MF3022**) allow the communication of non safety related data on a Modbus serial (RTU) link.
On the Modbus serial network, a master can read the data provided by several slaves on a network segment.
Creation of Modbus (RTU) servers is quick and simple: Select Protocols / New / Modbus Slave.
Select the serial option in the properties window to activate, then select the signals to send and receive from your standard automation system equipment.

Schneider
Electric

Safety automation system solutions
Programming software XPSMFWIN
for Preventa compact and modular
safety PLCs XPS MF

Non safety related communication protocols
PROFIBUS DP

To create a PROFIBUS DP slave on a resource (PLC), a project must be created.
Safety PLCs **XPS MF404●** and **XPS MF3542** are PROFIBUS DP V0 slaves.
Within hardware management, assignment of PROFIBUS DP slaves is simple:
Select Protocols / New / PROFIBUS DP slave from the protocol tag of a resource.
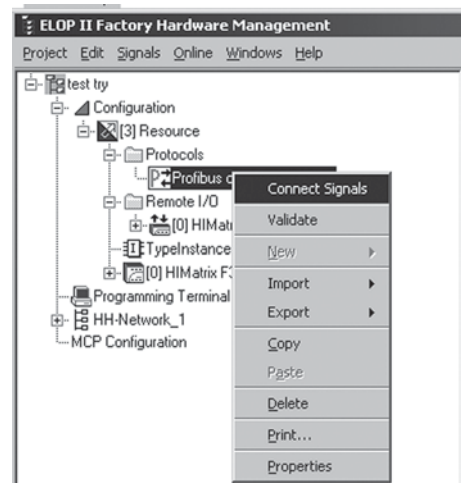

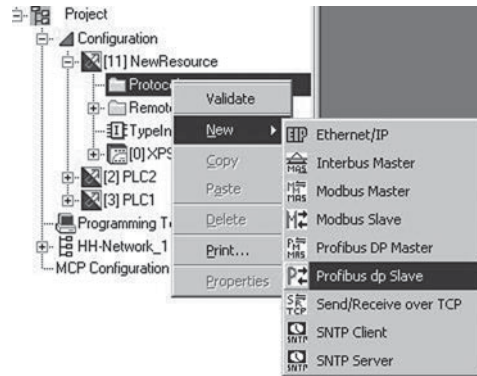

The PROFIBUS DP Slave menu contains the following fields:
□ Connect signals tab: for connecting the inputs and outputs to and from the safety
PLC, and predefined signals for diagnostics.
□ Import and Export tool: used for importing and exporting the signal list to/from a
.CSV format file (format that can be imported into a standard automation PLC).
□ Properties tab: enabling setting of the station address, interface, baud rate and
data refresh rate.

XPS MF1DI1601

*This product, referenced **XPS MF1DI1601**, is marked **HIMatrix F1DI** (manufactured by Hima, sold by Schneider Electric).*

Presentation

XPS MF1DI1601 is a compact safety remote input module which is designed to extend the input capacity of safety PLCs **XPS MF,** either compact or modular, to which it is associated.

The communication with either the compact or modular safety PLCs is managed via one of its' integrated 2 RJ45 switched Ethernet communications ports.

The safety remote input module **XPS MF1DI1601** does not have a user program: it receives its' instructions from its' parent safety PLC.

4	Short-circuit and line break monitoring

Line control

Line control is a means of short-circuit and line break monitoring.

Using line control outputs enables SIL 3 (EN/IEC 61508) and category 4 (EN 954-1) safety to be achieved. The line control outputs send a high signal with a very short low signal, thus enabling a wiring fault (short-circuit, line break) to be seen at the inputs of the safety modules.

Example: The line control outputs 1 to 4 are connected to the digital inputs 1 to 16.

Safety PLCs

In order to meet safety requirements, the safety remote input module **XPS MF1DI1601** incorporates two essential functions (**Redundancy** and **Self-monitoring)** complying to category 4 conforming to EN 954-1 and performance level "e" conforming to EN/ISO 13849-1 in addition to the SafeEthernet safety communication protocol between this safety remote input module and the safety PLCs (**Special Switch**).

■ **Redundancy**: the dual processor integrated in the safety remote input module **XPS MF1DI1601** analyses and compares the data received from the safety inputs and outputs. The incoming and outgoing data (programmed values and received values) are received in parallel by the two processors and compared in real-time.

■ **Self-monitoring ("Watchdog")**: the safety remote input module **XPS MF1DI1601** continuously monitors the data processing cycle and the execution of tasks, and intervenes if the cycle time does not conform to the predefined value.

■ **The integrated switch (Special Switch)** stores for a very short time and sends at very high speed the data provided by the inputs of the safety module on the Ethernet network, whilst avoiding signal collisions and excessive amounts of data on the network.

Functional synoptic
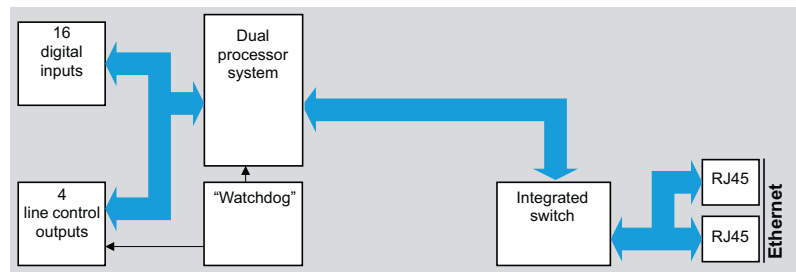

Safety communication on Ethernet network

The safety input module **XPS MF1DI1601** incorporates two RJ45 (type 10BASE-T/100BASE-TX) integrated switched ports, that enable communication on the Ethernet network using SafeEthernet communication protocol and therefore, data exchange with compact or modular safety PLCs **XPS MF**.

Description

Safety remote input module XPS MF1DI1601

On the front face of the metal enclosure:
1. One terminal block *(1)* for ⎓ 24 V supply.
2. Four terminal blocks *(1)* for connection of digital inputs, with input status LED (four LEDs per terminal block).
3. One terminal block *(1)* for connection of digital line control outputs, with four digital output status LEDs.
4. Two RJ45 (type 10BASE-T/100BASE-TX) integrated switched ports, for connection on Ethernet network and for configuring IP address.
5. Eight process status LEDs.
6. One earth connection screw.
7. **On the top**: one "Reset" button.
8. **On the rear face**: one spring operated fixing device for mounting on 35 mm ⊐⌐ rail.

Status LED details

Safety remote input module XPS MF1DI1601

LED	Colour	Status	Meaning
Inputs 1…16	Orange	On	Inputs active.
Outputs 1…4	Orange	On	Outputs active.
24 VDC	Green	On	⎓ 24 V voltage present.
		Off	No voltage.
RUN	Green	On	Normal service mode, loaded program running, the PLC receives I/O messages, communication and hardware/software tests carried out.
		Flashing	The CPU is in STOP and is not executing any user application. All the outputs are reset to a safe, de-energised state.
		Off	The CPU is in "ERROR" state (see ERROR).
ERROR	Red	On	Software error or hardware fault detected by the CPU.
			The monitoring program (Watchdog) has triggered the STOP state of the process because the programmed cycle time has been exceeded.
			The CPU has stopped the execution of the user application, ended all hardware and software tests and all outputs have been reset.
			The process can only be started again from the PC.
		Off	No errors detected.
PROG	Orange	On	The CPU is being loaded with a new configuration.
		Flashing	The FLASH ROM is being loaded with a new operating system.
		Off	No loading of configuration or operating system.
FORCE	Orange	On	The CPU is in RUN mode and force is active.
		Flashing	The system is not processing (STOP), but force is prepared and is activated if the dual processor is started.
		Off	Force mode not activated.
FAULT	Orange	On	Error display for line control.
			The user application has caused an error.
			The system configuration is defective.
			The loading of a new operating system was defective and the operating system is corrupt.
		Flashing	An error has occurred whilst writing to FLASH ROM memory (during updating of the operating system).
			One or more I/O errors have occurred.
		Off	None of the above errors have occurred.
OSL	Orange	Flashing	Emergency loading of the operating system is active.
BL	Orange	Flashing	COM in INIT_Fail state.
RJ45	Green	On	Full duplex mode operation.
		Flashing	Signal collision.
		Off	Half duplex mode operation, no collision.
	Yellow	On	Connection established.
		Flashing	Interface active.

Safety remote input modules XPS MF1

Characteristics

Safety remote input module type			XPS MF1DI1601
Supply voltage		**V**	--- 24 (external supply with separate protection conforming to EN/IEC 60950, SELV (Safety Extra Low Voltage) or PELV (Protection Extra Low Voltage) rated)
Voltage limits		**V**	- 15…+ 20%
Ambient air temperature	For operation	**°C**	0…+ 60
	For storage	**°C**	- 40…+ 85
Degree of protection			IP 20
Response time		**ms**	Depending on size of application
Current consumption		**A**	0.8 max.
Backup battery			None
Digital inputs			
Number			16, not electrically isolated
Permissible current	At state 1	**mA**	⩾ 2 at --- 15 V
	At state 0	**mA**	1.5 max., 1 mA at 5 V
Switching point		**V**	Typically 7.5
Switching time		**μs**	250
Input supply			4 x 19.2 V/40 mA (on 24 V), protected against short-circuits
Line control outputs			
Number			4, not electrically isolated
Output voltage		**V**	20 (approximately, depending on the supply voltage)
Output current		**mA**	60
Minimum load			None
Response to overload			4 x ⩾ 19.2 V, short-circuit current 60 mA at 24 V
Connections			See page 2/26

Communication

Ethernet network: safety communication using SafeEthernet protocol

Transmission	Communication ports		Integrated 2 RJ45 switched Ethernet communications ports
	Baud rate	**Mbps**	100 Half duplex, 10 Full duplex, Autonegotiation
Structure			10BASE-T/100BASE-TX
Medium			Dual twisted pair cable, category 5D or better (Ethernet)

*Products referenced **XPS MF2●●●●●●** are marked **HIMatrix F2 DO...** (manufactured by Hima, sold by Schneider Electric).*

Presentation

XPS MF2DO●●●● are compact safety remote output modules which are designed to extend the output capacity of safety PLCs **XPS MF**, either compact or modular, to which they are associated.

The communication with either the compact or modular safety PLCs is managed via one of its' integrated 2 RJ45 switched Ethernet communications ports.

Safety modules **XPS MF2DO●●●●** do not have a user program: they receive their instructions from its' parent safety PLC.

Safety remote output modules XPS MF2DO●●●●

Safety output modules	Remote outputs		
	Nb	**Type**	
XPS MF2DO401	4	Digital power outputs	**Safety actuators:** Contactors-motors, Control relays, Variable speed drives…
XPS MF2DO1601	16	Digital outputs	
XPS MF2DO801	8	Relay outputs	**Safety dialogue:** Beacons and indicator banks, rotating mirror beacons, sirens…
XPS MF2DO1602	16	Relay outputs	

Safety PLCs

In order to meet safety requirements, the safety remote output modules **XPS MF2DO●●●●** incorporate two essential functions (**Redundancy** and **Self-monitoring**) complying to category 4 conforming to EN 954-1 and performance level "e" conforming to EN/ISO 13849-1 in addition to the SafeEthernet safety communication protocol between these safety remote output modules and the safety PLCs (**Special Switch**).

■ **Redundancy**: the dual processor integrated in the safety remote output modules **XPS MF2** analyses and compares the data received from the safety inputs and outputs. The incoming and outgoing data (programmed values and received values) are received in parallel by the two processors and compared in real-time.

■ **Self-monitoring ("Watchdog")**: the safety remote output modules **XPS MF2** continuously monitor the data processing cycle and the execution of tasks, and intervenes if the cycle time does not conform to the predefined value.

■ **The integrated switch (Special Switch)** stores for a very short time and sends at very high speed the data provided by the outputs of the safety modules on the Ethernet network, whilst avoiding signal collisions and excessive amounts of data on the network.

Presentation

XPS MF3DIO/AIO are compact safety remote input/output modules which are designed to extend the I/O capacity of safety PLCs **XPS MF**, either compact or modular, to which they are associated.
The communication with either the compact or modular safety PLCs is managed via one of its' integrated 2 RJ45 switched Ethernet communications ports.
Safety modules **XPS MF3DIO/AIO** do not have a user program: they receive their instructions from its' parent safety PLC.

Safety remote mixed I/O modules XPS MF3DIO/AIO

Mixed I/O safety modules	Remote inputs		Remote outputs	
	N°	Type	N°	Type
XPS MF3DIO8801	8	Digital	8 DO+ / 2 DO-	Digital
			2	Line control
XPS MF3DIO16801	16	Digital	8 2-pole or 16 single-pole	Digital
			2	Line control
XPS MF3DIO20802	20	Digital	8	Digital
XPS MF3AIO8401	8	Analogue	4	Analogue (non safety outputs)

Examples of remote inputs of safety modules XPS MF3●IO●●●●●

■ **Digital inputs**

Safety actuators	Safety detection	Safety dialogue
Contactors-motors, Control relays, Variable speed drives…	Limit switches, Guard switches, with reset and with actuator, Safety light curtains type 2 and type 4, Safety mats and sensing edges…	Mushroom head Emergency stops, Enclosures for control and signalling units, Two-hand control stations…

■ **Analogue inputs**

Closed circuit scanning of input channels,
Single-pole measuring of 0 to 10 V voltages,
Measuring, using shunt, 0/4 to 20 mA currents (with 500 Ω external resistor).

Examples of remote outputs of safety modules XPS MF3●IO●●●●●

■ **Digital outputs**

Safety actuators	Safety dialogue
Contactors-motors, Control relays, Variable speed drives…	Beacons and indicator banks, Rotating mirror beacons, Sirens…

■ **Line control outputs**

Short-circuit and line break monitoring

■ **Analogue outputs**

Closed circuit scanning of output channels,
Single-pole measuring of 0 to 10 V voltages,
Measuring, using shunt, 0/4 to 20 mA currents (with 500 Ω external resistor).

Compact and modular
Safety remote mixed I/O modules XPS MF3

Safety PLCs

In order to meet safety requirements, the safety remote mixed I/O modules
XPS MF3●IO●●●●● incorporate two essential functions (**Redundancy** and
Self-monitoring) complying to category 4 conforming to EN 954-1 and performance
level "e" conforming to EN/ISO 13849-1 in addition to the SafeEthernet safety
communication protocol between these safety remote mixed I/O modules and the
safety PLCs (**Special Switch**).

■ **Redundancy**: the dual processor integrated in safety modules
XPS MF3●IO●●●●● analyses and compares the data received from the safety inputs
and outputs. The incoming and outgoing data (programmed values and received
values) are received in parallel by the two processors and compared in real-time.
■ **Self-monitoring ("Watchdog")**: the safety remote mixed I/O modules
XPS MF3●IO●●●●● continuously monitor the data processing cycle and the
execution of tasks, and intervenes if the cycle time does not conform to the
predefined value.
■ **The integrated switch (Special Switch)** stores for a very short time and sends at
very high speed the data provided by the inputs and outputs of the safety modules on
the Ethernet network, whilst avoiding signal collisions and excessive amounts of
data on the network.

Line control

Line control is a means of short-circuit and line break monitoring.
Using line control outputs enables SIL 3 (EN/IEC 61508) and category 4 (EN 954-1) safety to be achieved. The line control outputs send a high signal with a very short low signal, thus enabling a wiring fault (short-circuit, line break) to be seen at the inputs of the safety modules.

Examples

□ For **XPS MF3DIO8801** and **XPS MF3DIO16801**, the line control outputs 1 and 2 are connected to the digital inputs of the same circuit.
□ For **XPS MF3DIO20802**, the digital outputs 1 to 8 are connected to the digital inputs of the same circuit.

Safety communication on Ethernet network

The safety remote mixed I/O modules **XPS MF3●IO●●●●** incorporate two RJ45 (type 10BASE-T/100BASE-TX) integrated switched ports, that enable communication on the Ethernet network using SafeEthernet communication protocol and therefore, data exchange with compact or modular safety PLCs **XPS MF**.

Description

Remote mixed I/O module XPS MF3DIO8801

On the front face of the metal enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 One terminal block *(1)* for connection of line control outputs, with four line control output status LEDs.
3 Two terminal blocks *(1)* for connection of digital outputs, with output status LED (four LEDs per terminal block).
4 Two terminal blocks *(1)* for connection of digital inputs, with input status LED (four LEDs per terminal block).
5 Eight process status LEDs.
6 Two RJ45 (type 10BASE-T/100BASE-TX) integrated switched ports, for connection on Ethernet network and for configuring IP address.
7 One earth connection screw.
8 One "Reset" button (on the top).
9 **On the rear face:** One spring operated fixing device for mounting on 35 mm ⊔ rail.
Remote mixed I/O module XPS MF3DIO16801

On the front face of the metal enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 Three terminal blocks for connection of digital output channels.
3 One terminal block *(1)* for connection of line control outputs.
4 Four terminal blocks *(1)* for connection of digital inputs, with input status LED (four LEDs per terminal block).
5 Sixteen digital output status LEDs.
6 Eight process status LEDs.
7 Two RJ45 (type 10BASE-T/100BASE-TX) integrated switched ports, for connection on Ethernet network and for configuring IP address.
8 One earth connection screw.
9 One "Reset" button (on the top).
10 **On the rear face:** One spring operated fixing device for mounting on 35 mm ⊔ rail.
Remote mixed I/O module XPS MF3DIO20802

On the front face of the metal enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 Two terminal blocks *(1)* for connection of digital outputs, with output status LED (four LEDs per terminal block)
3 Five terminal blocks *(1)* for connection of digital inputs, with input status LED (four LEDs per terminal block).
4 Eight process status LEDs.
5 Two RJ45 (type 10BASE-T/100BASE-TX) integrated switched ports, for connection on Ethernet network and for configuring IP address.
6 One earth connection screw.
7 One "Reset" button (on the top).
8 **On the rear face:** One spring operated fixing device for mounting on 35 mm ⊔ rail.
Remote mixed I/O module XPS MF3AIO8401

On the front face of the metal enclosure:
1 One terminal block *(1)* for ⎓ 24 V supply.
2 Four terminal blocks *(1)* for connection of analogue inputs.
3 One terminal block *(1)* for connection of analogue outputs.
4 One metal plate for securing shielded analogue input/output connection cables (EMC).
5 Eight process status LEDs.
6 TwTwo RJ45 (type 10BASE-T/100BASE-TX) integrated switched ports, for connection on Ethernet network and for configuring IP address.
7 One earth connection screw.
8 One "Reset" button (on the top).
9 **On the rear face**: one spring operated fixing device for mounting on 35 mm ⊔ rail.

(1) Removable screw terminals are provided with the safety remote mixed I/O modules XPS MF3DIO/AIO.

Status LED details
Safety remote mixed I/O modules XPS MF3●IO●●●●●

LED	Colour	Status	Meaning
24 VDC	Green	On	⎓ 24 V voltage present.
		Off	No voltage.
RUN	Green	On	Normal service mode, loaded program running, the PLC receives I/O messages, communication and hardware/software tests carried out.
		Flashing	The CPU is in STOP and is not executing any user application. All the outputs are reset to a safe, de-energised state.
		Off	The CPU is in "ERROR" state (see ERROR).
ERROR	Red	On	Software error or hardware fault detected by the CPU.
			The monitoring program (Watchdog) has triggered the STOP state of the process because the programmed cycle time has been exceeded.
			The CPU has stopped the execution of the user application, ended all hardware and software tests and all outputs have been reset.
			The process can only be started again from the PC.
		Off	No errors detected.
PROG	Orange	On	The CPU is being loaded with a new configuration.
		Flashing	The FLASH ROM is being loaded with a new operating system.
		Off	No loading of configuration or operating system.
FORCE	Orange	On	The CPU is in RUN mode and force is active.
		Flashing	The system is not processing (STOP), but force is prepared and is activated if the dual processor is started.
		Off	Force mode not activated.
FAULT	Orange	On	Error display for line control.
			The user application has caused an error.
			The system configuration is defective.
			The loading of a new operating system was defective and the operating system is corrupt.
		Flashing	An error has occurred whilst writing to FLASH ROM memory (during updating of the operating system).
			One or more I/O errors have occurred.
		Off	None of the above errors have occurred.
OSL	Orange	Flashing	Emergency loading of the operating system is active.
BL	Orange	Flashing	COM in INIT_Fail state.
RJ45	Green	On	Full duplex mode operation.
		Flashing	Signal collision.
		Off	Half duplex mode operation, no collision.
	Yellow	On	Connection established.
		Flashing	Interface active.

Presentation

Operating principle

Preventa safety controller modules XPS MP are designed to conform with category 4 of the standard EN 954-1/ISO 13849-1.
They enable two independent safety functions (selected from a choice of 15 pre-defined configurations) to be performed using the same product. Configuration selection is easily made using 3 buttons on the front face of the module.

These 15 pre-programmed safety functions provide a solution for the majority of safety applications up to level 4 conforming to the standard EN 954-1/ISO 13849-1, for example: monitoring Emergency stops, limit switches, safety mats and sensing edges, enabling switches, coded magnetic switches, type 4 relay output safety light curtains conforming to EN/IEC 61496-1 (for example, light curtains type XUS L. Safety controllers XPS MP incorporate 6 safety outputs (3 per function) and 3 solid-state signalling outputs for signalling to the process PLC.

To aid diagnostics, the modules have LEDs on the front face which provide information on the monitoring circuit status. They also indicate and assist selection of the 2 required configurations.

	Configuration	Synchronisation time	Type of start *(1)*		Start test	Notes
			Automatic or unmonitored	**Monitored**		
Functions disabled	0	–	–	–	–	Factory setting
Emergency stop monitoring, 1-channel wiring (category 2)	1	–	X	–	–	–
	2	–	–	X	–	–
Emergency stop monitoring, 2-channel wiring, or guard monitoring (category 4)	3	Unlimited	X	–	X	–
	4	Unlimited	–	X	X	–
	5	1.5 s	X	–	X	–
	6	1.5 s	–	X	X	–
	7	Unlimited	X	–	–	–
	8	Unlimited	–	X	–	–
Guard monitoring for injection press or blowing machine (category 4)	9	1.5 s	–	X	X	Uses both safety outputs *(2)*
Enabling grip switch monitoring (3 position switch) (category 4)	10	–	X	–	X	The start button acts as start-up preparation
Sensing mat and edges monitoring (category 3)	11	–	X	–	–	Mats with circuit making contacts
	12	–	–	X	–	
Relay output safety light curtain monitoring (category 4)	13	0.5 s	–	X	X	–
Coded magnetic switch monitoring (category 4)	14	1.5 s	X	–	–	Magnetic switches with 2 contacts, 1 N/O and 1 N/C
	15	1.5 s	–	X	–	

(1) Automatic start: there is no start contact or it is shunted.
Unmonitored start: the output is activated on closing of the start contact.
Monitored start: the start input is monitored so that there is no start-up in the event of the start contact being shunted or the start circuit being closed for more than 10 seconds.
Start-up is triggered following activation of the start button (push-release function) on opening of the contact.
(2) Tool zone guard with 3rd switch.
Additional rear guard (optional) with automatic start. The opening of the guard cuts all outputs.

Characteristics

Module type			XPS MP11123	XPS MP11123P
Conformity to standards			EN/IEC 60204-1, DIN V VDE 801 + A1, EN/IEC 60947-1 + A11, EN/IEC 60947-5-1	
Product certifications			UL, CSA, BIA	
Product designed for max. use in safety related parts of control systems (conforming to EN 954-1/ISO 13849-1)			Category 4 max.	
Supply		V	$\overline{\cdots}$ 24	
Voltage limits			- 20…+ 20%	
Consumption		W	⩽ 5	
Module inputs fuse protection			Internal, electronic	
Start button monitoring			Yes/No (depending on configuration selected)	
Control unit voltage Between input terminals C1-I1, C2-I2, C3-I3, C4-I4, C5-I5 or C6-I6		V	24 (at nominal supply voltage)	
Calculation of wiring resistance RL between input terminals		Ω	100 max. Maximum cable length: 2000 m	
Synchronisation time between inputs		s	0.5, 1.5 or unlimited, depending on configuration selected	
Outputs	Voltage reference		Volt-free	
	Number and type of safety circuits		3 N/O per function (6 N/O total) (13-14, 23-24, 33-34, 43-44, 53-54, 63-64)	
	Number and type of additional circuits		3 solid-state	
	Breaking capacity in AC-15	VA	C300: inrush 1800, maintained 180	
	Breaking capacity in DC-13		24 V/1.5 A L/R = 50 ms	
	Breaking capacity of solid-state outputs		24 V/20 mA	
	Max. thermal current (Ithe) for each group of 3 outputs		3.3 A for all 3 outputs, or 6 A for 1 output and 2 A for the other 2 outputs, or 2 A for 1 output and 4 A for the other 2 outputs	
	Max. total thermal current	A	20	
	Output fuse protection		4 gG or 6 fast acting, conforming to EN/IEC 60947-5-1, DIN VDE 0660 part 200	
	Minimum current	mA	10	
	Minimum voltage	V	17	
Electrical durability			See page 2/172	
Response time on input opening		ms	< 30	
Rated insulation voltage (Ui)		V	300 (degree of pollution 2 conforming to EN/IEC 60947-5-1, DIN VDE 0110 parts 1 & 2)	
Rated impulse withstand voltage (Uimp.)		kV	4 (overvoltage category III, conforming to EN/IEC 60947-5-1, DIN VDE 0110 parts 1 & 2)	
LED display			12	
Operating temperature		°C	- 10…+ 55	
Storage temperature		°C	- 25…+ 85	
Degree of protection conforming to IEC 60529	Terminals		IP 20	
	Enclosure		IP 40	
Connections	Type		Captive screw clamp terminals	Captive screw clamp terminals, removable terminal block
	1-wire connection, without cable end		Solid or flexible cable: 0.14… 2.5 mm²	Solid or flexible cable: 0.2… 2.5 mm²
	1-wire connection, with cable end		Without bezel, flexible cable: 0.25…2.5 mm²	
			With bezel, flexible cable: 0.25…1.5 mm²	With bezel, flexible cable: 0.25…2.5 mm²
	2-wire connection, without cable end		Solid or flexible cable: 0.14…0.75 mm²	Solid cable: 0.2…1 mm² Flexible cable: 0.2…1.5 mm²
	2-wire connection, with cable end		Without bezel, flexible cable: 0.25…1 mm²

Presentation

Configurable safety controllers XPS MC●●Z● are designed to provide a solution for safety applications requiring conformity to category 4 of standard EN 954-1/EN/ISO 13849-1 and SIL 3 requirements of standard IEC 61508.
The range of configurable safety controllers comprises 6 products, each with different technical characteristics.

Configurable controllers	Safety inputs	Safety outputs *(1)*	Communication via		
			CANopen bus	Profibus bus	Modbus serial link
XPS MC16Z	16	6 + 2 x 2	–	–	Yes, slave
XPS MC16ZC	16	6 + 2 x 2	Yes, slave	–	Yes, slave
XPS MC16ZP	16	6 + 2 x 2	–	Yes, slave	Yes, slave
XPS MC32Z	32	6 + 2 x 2	–	–	Yes, slave
XPS MC32ZC	32	6 + 2 x 2	Yes, slave	–	Yes, slave
XPS MC32ZP	32	6 + 2 x 2	–	Yes, slave	Yes, slave

Line control

The safety inputs are supplied by the various control outputs *(2)*, in such a manner so as to monitor for short-circuits between the inputs, short-circuits between each input and earth or the presence of residual voltages.
The controller, assisted by the control outputs, continuously tests all the connected inputs. As soon as an error is detected on an input, all the outputs associated with this input are disconnected. Safety outputs associated with other inputs remain active.

Configuration

Safety controllers XPS MC●●Z● are configurable and addressable using software XPS MCWIN running on a PC. Connection accessories required: see page 2/125.

Connections

For connection of safety inputs and outputs, safety controllers XPS MC●●Z● can be fitted with a choice of:
□ screw connectors type XPS MCTS●●, or
□ spring clip connectors type XPS MCTC●●.
These connectors are to be ordered separately, see page 2/124.

(1) 8 independent safety outputs = 6 solid-state safety outputs + 2 x 2 relay outputs (4 relay outputs with guided contacts).
(2) 8 control outputs are available but they are not safety outputs.

Schneider Electric

Safety automation system solutions
Preventa configurable safety controllers
type XPS MC

2

Safety functions

Configuration of the safety functions is carried out using software XPSMCWIN which is available on the Safety Suite V2 CD-ROM.

30 certified safety functions are available with this software and they are easily assignable to the safety outputs. The safety functions have multiple combination possibilities and various starting conditions.

The safety functions are:
□ certified in accordance with EN 954-1/EN/ISO 13849-1 and IEC 61508,
□ configurable in controller XPS MC using software XPSMCWIN which is available on the Safety Suite V2 software pack.

All 8 safety outputs are suitable for use in safety related parts of control systems conforming to category 4 of EN 954-1/EN/ISO 13849-1 and each output can disconnect one of its safety circuits.

Main safety functions

- Emergency stop monitoring, with or without time delay, 1 or 2-channel wiring
- Two-hand control (type III-C conforming to EN 574/ISO 13851)
- Guard monitoring with 1 or 2 limit switches
- Guard monitoring for injection presses and blowing machines
- Magnetic switch monitoring
- Sensing mat monitoring
- Light curtain (type 4 conforming to EN/IEC 61496, relay or solid-state output) monitoring
- Zero speed detection
- Dynamic monitoring of hydraulic valves on linear presses
- Monitoring safety stop at top dead centre on eccentric press
- Safety time delays
- "Muting" function of light curtains
- Enabling switch monitoring, 2 or 3 contact
- Hydraulic press
- Eccentric press
- Foot switch monitoring
- Chain shaft breakage monitoring
- Position selector

Communication

CANopen fieldbus

Configurable safety controllers XPS MC●●ZC incorporate a SUB-D 9-pin male connector for direct connection on CANopen bus.

CANopen bus is an open bus that ensures deterministic and reliable access to the real-time data of automation equipment. The bus uses a shielded dual twisted pair on which a maximum of 127 devices can be connected by chaining. The data rate varies between 10 Kbps and 1Mbps depending on the length of the bus (5000 m to 20 m).

Profibus bus

Configurable safety controllers XPS MC●●ZP incorporate a SUB-D 9-pin female connector for connection on Profibus bus.
Configurable safety controllers XPS MC●●ZP are slaves on the Profibus bus.

Profibus bus is a fieldbus that meets industrial communication requirements. The topology of the Profibus bus is of the linear type with a centralised master/slave type access procedure. The physical link is a single shielded twisted pair.
Modbus serial link

Configurable safety controllers XPS MC●●Z● MC incorporate a Modbus communication interface (RJ45 connector) for configuration and diagnostics.
This interface enables connection of the controllers to:
□ a PC (configuration),
□ a PLC (diagnostics), or
□ an operator dialogue terminal (diagnostics).

The Modbus serial link comprises a master station (Premium automation platform) and slave stations (configurable controllers XPS MC16/32Z●).
Two exchange mechanisms are possible:
■ **Question/response:** the questions from the master are addressed to a given slave. The response is expected by return from the interrogated slave.
■ **Distribution:** the master distributes a message to all the stations of the Modbus serial link. The latter execute the order without transmitting a reply.

Description

Safety automation system solutions
Preventa configurable safety controllers
type XPS MC

2
*Configurable safety controller XPS MC●●Z●,
with screw connectors*
Illuminated display

Configurable safety controllers XPS MC●●Z●

Front face of controllers:

1 LED display and system diagnostics.
2 Two LEDs for CANopen or Profibus *(1)* connection status.
3 SUB-D 9-pin male connector for connection on CANopen bus (**XPS MC16ZC/ MC32ZC**)
or SUB-D 9-pin female connector for connection on Profibus bus (**XPS MC16ZP/ MC32ZP**).
4 Solid-state safety output and "muting" indicator light terminals.
5 Power supply ($=\!\!=$ 24 V) and relay safety output terminals.
6 Control output terminals for power supply to safety inputs and safety input terminals.
7 RJ45 connector for connection on Modbus serial link.
8 RESET button (resetting of controller).

Rear face of controllers:
9 Fixing plate for mounting on rail.

(1) Depending on controller model.

LED details

LED		Colour	Status	Meaning
1	PWR	Green	On	Supply voltage present.
2	CNF	Yellow	On	In configuration mode.
			Flashing	Not configured, initial power-up.
3	E In	Red	On	Internal error: all safety outputs deactivated.
4	E Ex	Red	On	External error: all safety outputs associated with the defective circuit are deactivated.
5	COM	Green	On	Controller communicating via the TER (RJ45) connection.
6	R1, R2	Green	On	Relay outputs 13/14, 23/24, 33/34 and 43/44 activated.
			Flashing	Fault on these outputs.
7	RUN	Green	Off	Hardware OK for the Profibus bus or the CANopen bus.
			On	Communicating on Profibus bus or on CANopen bus. Normal status.
8	ERR	Red	On	Communication impossible, configuration error, damaged cabling or absence. Bus deactivated
			Off	Communicating on CANopen or Profibus bus. Normal status.
			Flashing (x 1)	Warning limit reach.
			Flashing (x 2)	Control event error on CANopen bus.
			Flashing (x 3)	Synchronisation error on CANopen bus.
9	1…16 1…32	Green	On	Input circuit closed.
			Flashing	Error detected on input relating to LED.
10	o1…o6	Green	On	Solid-state output activated.
			Flashing	Short-circuit, fault on output.
11	RUN	Green	On	Run mode.
			Flashing	Changing from run mode to stop mode.

Characteristics

Configurable safety controller type		XPS MC16Z and MC32Z, XPS MC16ZC and MC32ZC, XPS MC16ZP and MC32ZP
Conformity to standards		EN/IEC 60204-1, EN 1760-1/ISO 13856-1, EN/IEC 60947-5-1, EN/IEC 61496-1, EN 574/ISO 13851, EN 954-1/EN/ISO 13849-1, IEC 61508
Product certifications		UL, CSA, TÜV
Products designed for max. use in safety related parts of control systems (conforming to EN 954-1/EN/ISO 13849-1 and IEC 61508)		Category 4 max. (EN 954-1/EN/ISO 13849-1), SIL 3 max. (IEC 61508)
Supply voltage	V	$\overline{}$ 24 ± 20%
Maximum consumption	W	12
Fuse protection	A	16 gL max.
Start button monitoring		Configurable
Control circuit voltage		28.8 V/13 mA (between input terminals C1-I1 to C8-I16, resp. I32)
Calculation of wiring resistance RL	Ω	100 max, maximum cable length: 2000 m (Between input terminals)
Synchronisation time between inputs	s	Depending on configuration selected
Outputs	Relay	Voltage reference		Volt-free
		Safety circuit		2 N/O per function (4 N/O total) (13-14, 23-24, 33-34, 43-44)
		Breaking capacity in AC-15	VA	C300: inrush 1800, maintained 180
		Breaking capacity in DC-13		24 V/1.5 A L/R = 50 ms
		Thermal current (Ithe) for each group of 2 outputs	A	6 for 1 output and 2 for the other, **or** 4 for both outputs.
		Current limit	A	Ith ≤ 16 (with several relay output circuits simultaneously loaded)
		Output fuse protection	A	4 gL or 6 quick blow
		Minimum current	mA	10 *(1)*
		Minimum voltage	V	17 *(1)*
	Solid-state	Breaking capacity		24 V/2 A
		Safety circuit		6 solid-state (O1, O2, O3, O4, O5, O6)
		Current limit	A	Ith ≤ 6.5 (with several solid-state output circuits simultaneously loaded)
Electrical durability		See page 2/172
Response time on input opening	ms	Response time = 20 or 30, configurable using software XPSMCWIN □ if 20 for controllers XPS MC●●Z●: 30 for a safety mat □ if 30 for controllers XPS MC●●Z●: 45 for a safety mat
Rated insulation voltage (Ui)	V	300 (degree of pollution 2 conforming to IEC 60647-5-1, DIN VDE 0110 part 1)
Rated impulse withstand voltage (Uimp.)	kV	4 (overvoltage category III, conforming to IEC 60647-5-1, DIN VDE 0110 part 1)
LED display		30 (XPS MC16Z), 46 (XPS MC32Z) 32 (XPS MC16ZC/MC16ZP, 48 (XPS MC32ZC/MC32ZP)
Temperature	Operating	°C	- 10…+ 55
	Storage	°C	- 25…+ 85
Degree of protection		IP 20 conforming to EN/IEC 60529 (connector and enclosure)

(1) The controller is also capable of switching low power loads (17 V/10 mA minimum) provided that the contact has not been used for switching high power loads (possible contamination or wear of the gold layer on the contact tips).

Communication

Modbus serial link

Compatibility			XPS MC16Z, XPS MC32Z, XPS MC16ZC, XPS MC32ZC, XPS MC16ZP, XPS MC32ZP
Serial link ports	Number and type		1 x RJ45
	Status		Slave
Data exchange			14 words
Addressing			1 …247
Baud rate		bps	1200, 2400, 4800, 9600 or 19200
Parity			Even, odd, none
Fixed parameters			RTU (Remote Terminal Unit) mode 1 start bit / 8 data bits 1 stop bit stop with "even" or "odd" parity 2 stop bits without parity
Functions supported			01: 8-bit output data / 32-bit input data (0 = OFF, 1 = ON) 02: 32-bit input data / 8-bit output data (0 = OFF, 1 = ON) 03: information and errors

CANopen bus

Compatibility			XPS MC16ZC, XPS MC32ZC	
Serial link ports	Number and type		1 x SUB-D 9-pin male	
	Status		Slave	
Data exchange			14 words By included dual port memory: only data addresses, diagnostics, but no baud rates	
Parameters (adjustable using software XPSMCWIN)	Baud rate	Kbps	20, 50, 125, 250, 500, 800	
		Mbps	1	
	Address		1…127	

Profibus bus

Compatibility			XPS MC16ZP, XPS MC32ZP
Serial link ports	Number and type		1 x SUB-D 9-pin female
	Status		Slave
Data exchange			14 words By included dual port memory: only data addresses
Parameters	Baud rate	Mbps	12
	Address		1…125

Connections

Type			Separate plug-in screw connector XPS MCTS●● (1)	Separate plug-in spring clip connector XPS MCTS●● (1)
Power supply and relay output terminals				
1 conductor	Without cable end		Solid or flexible cable: 0.2…2.5 mm², AWG 24-12	
	With cable end	mm²	Without bezel, flexible cable: 0.25…2.5	
		mm²	With bezel, flexible cable: 0.25…2.5	
2 conductors	Without cable end	mm²	Solid or flexible cable: 0.2…1.5	–
	With cable end	mm²	Without bezel, flexible cable: 0.25…1.5	–
		mm²	Double, with bezel, flexible cable: 0.5…1.5	Double, with bezel, flexible cable: 0.5…1
Tightening torque of screw terminals		Nm	0.5…0.6	–
Wire stripping length		mm	10	
Other terminals				
1 conductor	Without cable end		Solid or flexible cable: 0.14…1.5 mm², AWG 28-16	
	With cable end	mm²	Without bezel, flexible cable: 0.25…1.5	
		mm²	With bezel, flexible cable: 0.25…0.5	
2 conductors	Without cable end	mm²	Solid cable: 0.14…0.5 Flexible cable: 0.14…0.75	–
	With cable end	mm²	Without bezel, flexible cable: 0.25…0.34	–
		mm²	Double, with bezel, flexible cable: 0.5	–
Enclosure fixing (conforming to DIN EN 50022)			Metal adaptor for fixing on ⌐ 35 mm metal rail

Configuration software

■ Reference XPS MCWIN is the full version of configuration software XPSMCWIN version 2.10 and must be installed if no previous version of this software has been installed.

■ Reference SSVXPSMCWINUP is an update for software XPSMCWIN and can be used if SSVXPSMCWINUP has been installed using Safety Suite V1. An update from version 2.0 to version 2.10 for the software XPSMCWIN will then be performed.

Light curtain monitoring, solid-state output type

Category 4 conforming to standard EN 954-1.

Application scheme

ESC = external start conditions
ESPE = electro-sensitive protection equipment
OSSD1/OSSD2 = output signal switching device

(1) Technical characteristics for maximum rating of fuses, see page 2/122.
(2) Only applicable to XPS MC32Z●.

Type XPS MC

Zero speed detection
Category 4 conforming to standard EN 954-1.

Application scheme
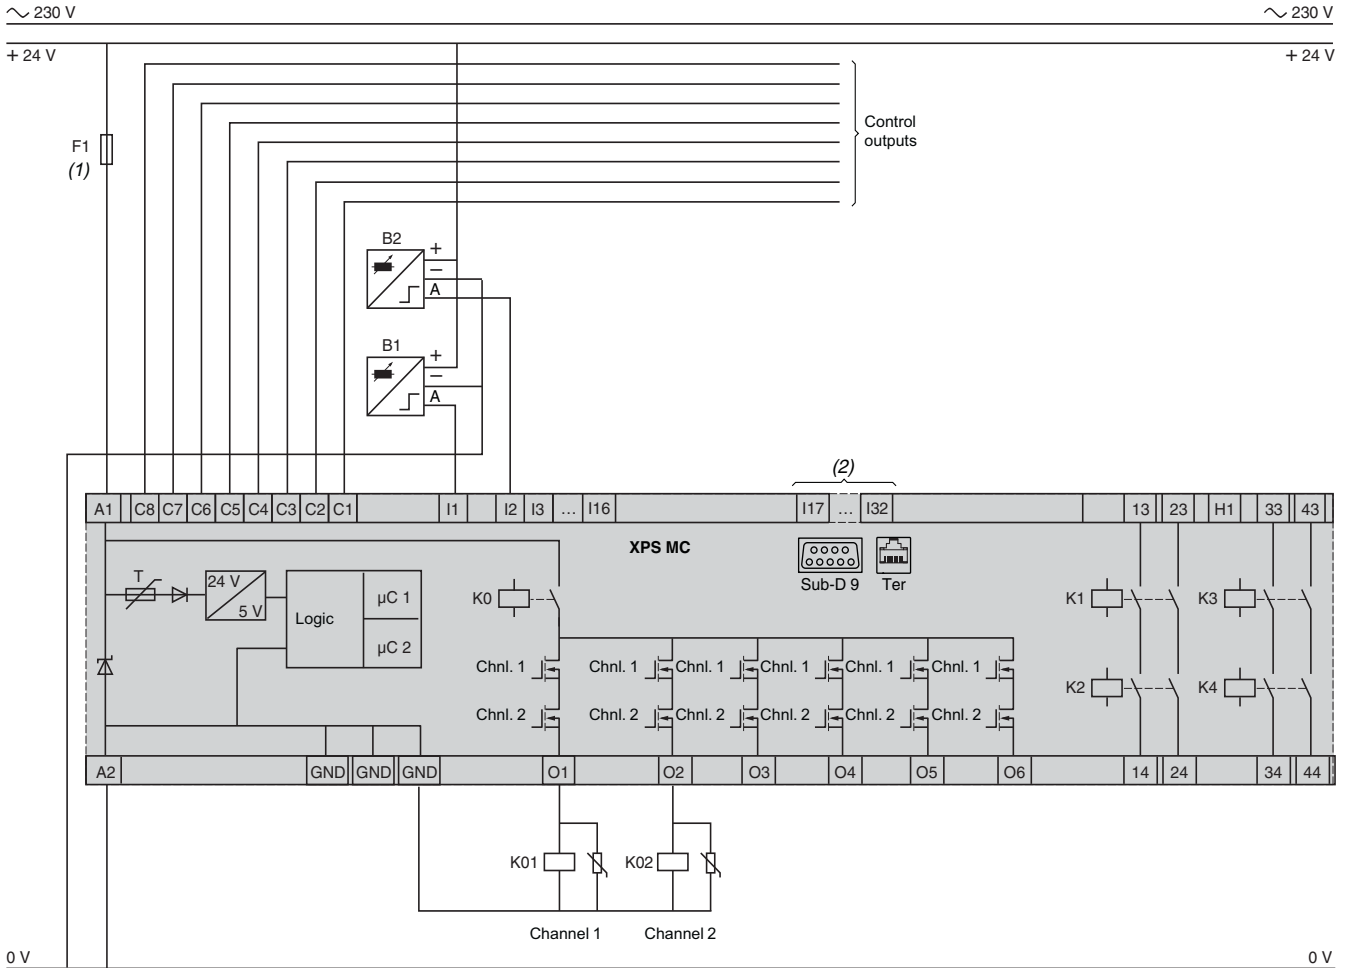

The zero speed signal (validation of the output) will be activated only if:
1: one input is in a high state,
2: the other input is in a low state,
3: the frequency of the two inputs is less than the stated value.

(1) Technical characteristics for maximum rating of fuses, *see page* 2/122.
(2) Only applicable to XPS MC32Z●.
(3) Only one "Zero speed detection" function can be connected to an XPS MC controller, and only to the inputs i1 and i2.

Type XPS MC

2

Monitoring safety stop at top dead centre on eccentric press

■ Category 4 conforming to standard EN 954-1.
■ This function comprises several monitoring modes including:
□ Safety stop at top dead centre *(1)*,
□ monitoring braking travel,
□ as an option, dynamic monitoring of doubled-bodied solenoid valves *(2)*.

Application scheme
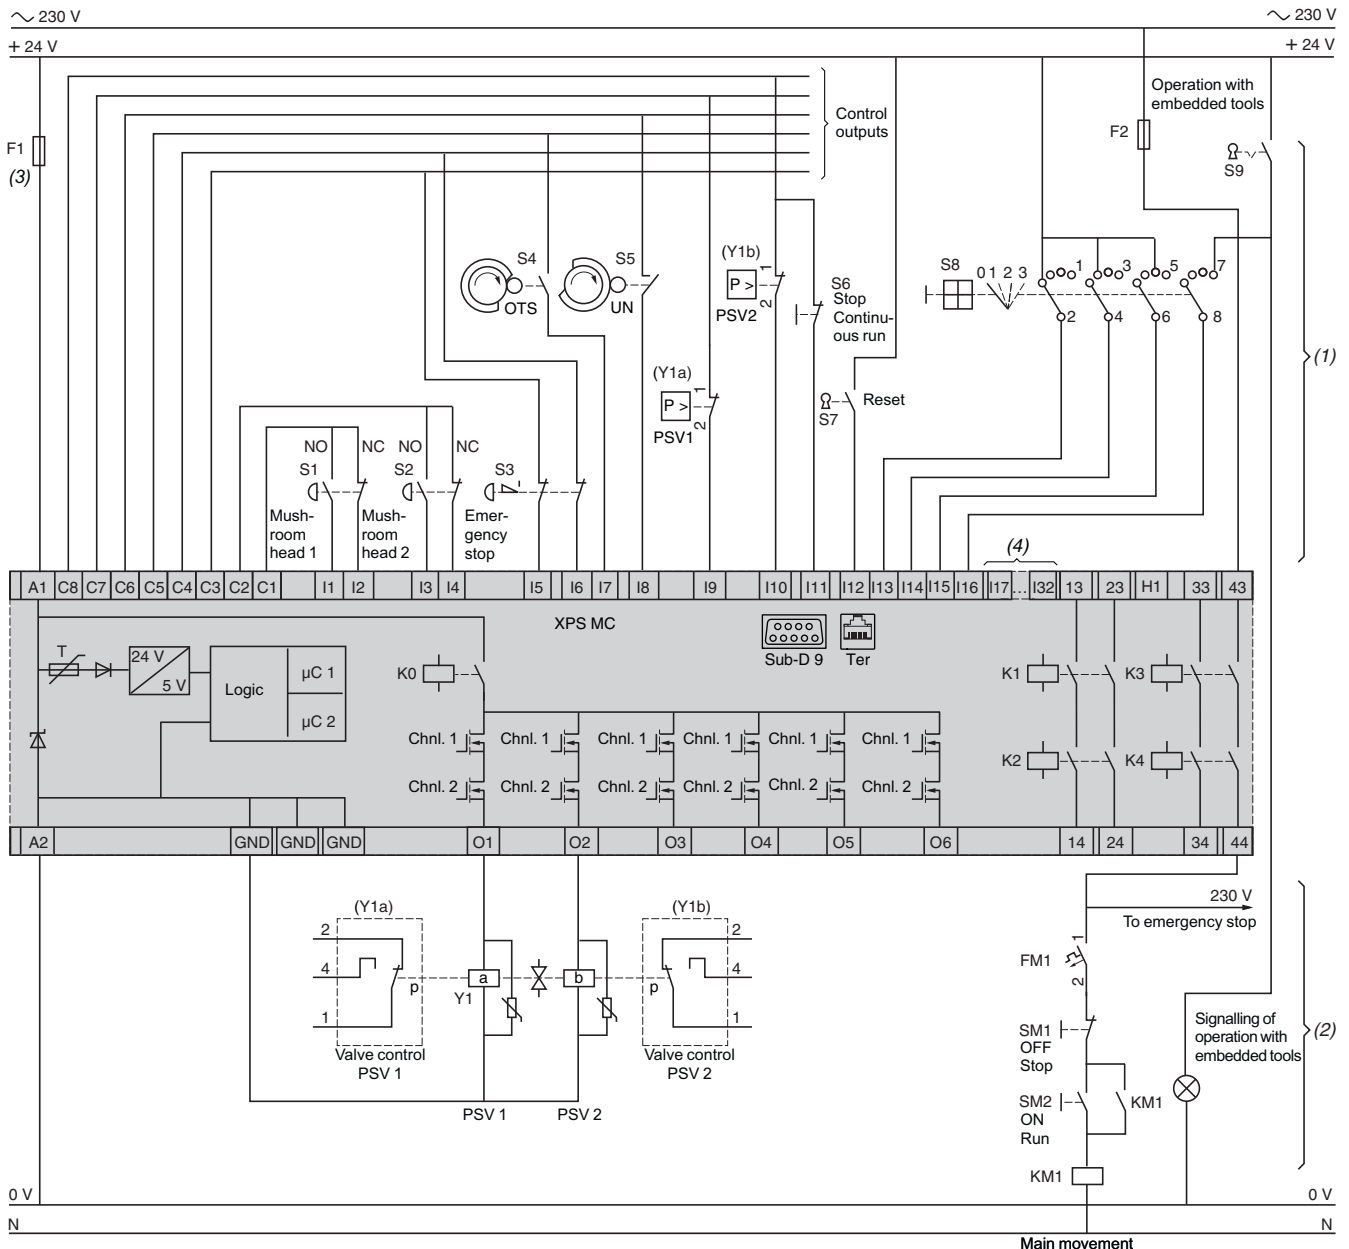

S8: Operating modes:
0 - stop,
1 - adjust,
2 - jog,
3 - automatic continuous run.
OTS = Limit switch associated with top dead centre (TDC)
UN = Limit switch associated with bottom dead centre (BDC)
PSV = safety valve

(3) Technical characteristics for maximum rating of fuses, see page 2/122.
(4) Only applicable to XPS MC32Z●.

Electrical durability (continued)

Definition of tests

Determination of electrical durability conforming to EN 60947-5-1 (table C2)

Type of current	Utilisation category	Start-up			Breaking		
		Current	Voltage	Cos φ	Current	Voltage	Cos φ
a.c. supply	AC-15	10 x Ie	Ue	0.7	Ie	Ue	0.4

Type of current	Utilisation category	Start-up			Breaking		
		Current	Voltage	T0.95	Current	Voltage	T0.95
d.c. supply	DC-13	Ie	Ue	50 ms	Ie	Ue	50 ms

Ie: operational current measured.
Ue: operational voltage measured.
Cos φ: power factor.
T0.95: time taken to reach 95% of nominal current.

The tests are carried out with a frequency of 6 switching operations per minute and with no additional protection of the components connected to the safety outputs. The use of additional protection for the components connected to the safety outputs significantly increases the durability of the safety outputs.

Determination of the breaking capacity conforming to EN 60947-5-1 (table 4)

Utilisation category	Start-up			Breaking			Total number of switching operations	Switching operations per minute for 1…1000 switching operations	Switching operations per minute for 1001…6050 switching operations	Minimum duration of switching operation
	Current	Voltage	Cos φ	Current	Voltage	Cos φ				
AC-15	10 x Ie	Ue	0.3	Ie	Ue	0.3	6050	60	6	50 ms

Utilisation category	Start-up			Breaking			Total number of switching operations	Switching operations per minute for 1…1000 switching operations	Switching operations per minute for 1001…6050 switching operations	Minimum duration of switching operation
	Current	Voltage	T0.95	Current	Voltage	T0.95				
DC-13	Ie	Ue	50 ms	Ie	Ue	50 ms	6050	60	6	50 ms

Ie: operational current measured.
Ue: operational voltage measured.
Cos φ: power factor.
T0.95: time taken to reach 95% of nominal current.

Notes:
The maximum values for the breaking capacity of the safety outputs in the various utilisation categories are not fixed and depend on the power factor and on the switching frequency. The test definition for the "breaking capacity" and "durability" tables in the European standard EN 60947-5-1 uses different values for the power factor and the switching frequency.

The power factor (cos φ) in the "breaking capacity" table (0.3) is greater than that in the "durability" table (0.7).

In the "breaking capacity" table, the switching frequency of the safety outputs is higher for the first 1000 switching operations (60 per minute) than that for 1001 to 6050 switching operations (6 per minute).

Consequently, the maximum breaking capacity values determined using the "breaking capacity" table are lower than those in the "durability" table.

Safety automation system solutions
Preventa safety modules type XPS AC
For Emergency stop and switch monitoring

2

Operating principle

Safety modules XPS AC are used for monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN 60204-1 and also meet the safety requirements for the electrical monitoring of switches in protection devices conforming to standard EN 1088/ISO 14119. They provide protection for both the machine operator and the machine by immediately stopping the dangerous movement on receipt of a stop instruction from the operator, or on detection of a fault in the safety circuit itself.

To aid diagnostics, the modules have LEDs which provide information on the monitoring circuit status.

The XPS AC module has 3 safety outputs and a solid-state output for signalling to the PLC.

Safety automation system solutions
Preventa safety modules types XPS AV, XPS ATE
For Emergency stop and switch monitoring

2

Operating principle

Safety modules XPS AV and XPS ATE are used for monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN/IEC 60204-1 and also meet the safety requirements for the electrical monitoring of switches in protection devices conforming to standard EN 1088/ISO 14119.

They provide protection for both the machine operator and the machine by immediately stopping the dangerous movement on receipt of a stop instruction from the operator, or on detection of a fault in the safety circuit itself.

In addition to the stop category 0 instantaneous opening safety outputs (3 for XPS AV and 2 for XPS ATE), the modules incorporate stop category 1 time delay outputs (3 for XPS AV and 3 for XPS ATE) which allow for controlled deceleration of the motor components until a complete stop is achieved (for example, motor braking by variable speed drive).

At the end of the preset delay, the supply is disconnected by opening the time delay output circuits.

For module XPS AV, the time delay of the 3 output circuits is adjustable, in 15 preset values, between 0 and 300 seconds using selector buttons.

For module XPS ATE, the time delay of the 3 output circuits is adjustable between 0 and 30 seconds using a 12-position selector switch.

Module XPS AV also incorporates 3 solid-state signalling outputs for signalling to the process PLC. Module XPS ATE incorporates 4 solid-state signalling outputs for signalling to the process PLC.

To aid diagnostics, the modules have LEDs which provide information on the monitoring circuit status.

The Start button monitoring function is configurable depending on the wiring.

(1) Auxiliary terminal (to be used to separate the feedback loop from the wiring to the start button).

Monitoring an Emergency stop button with 1 N/C contact

S1: Emergency stop button with 1 N/C contact.
Not all faults are detected: a short-circuit on the Emergency stop button is not detected.

Operating principle, characteristics

Safety automation system solutions
Preventa safety modules type XPS AF
For Emergency stop and switch monitoring

2

Operating principle

Safety modules XPS AF are designed to conform with category 4 of the standard EN 954-1/ISO 13849-1.
They are used for:
■ Monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN/IEC 60204-1.
■ Electrical monitoring of switches activated by protection devices conforming to standard EN 1088/ISO 14119.

Housed in a compact enclosure, the modules have 3 safety outputs.
Preventa safety modules XPS AF●●●P incorporate removable terminal blocks, thus optimising machine maintenance.
To aid diagnostics, the modules have 3 LEDs on the front face which provide information on the monitoring circuit status.
The Start button monitoring function is configurable depending on the wiring.

Characteristics

Module type				XPS AF5130	XPS AF5130P
Product designed for max. use in safety related parts of control systems (conforming to EN 954-1/ISO 13849-1)				Category 4 max.	
Conformity to standards				EN/IEC 60204-1, EN 1088/ISO 14119, EN/IEC 60947-5-1, EN/ISO 13850, EN 50082-2	
Product certifications				UL, CSA, BG	
Supply	Voltage		**V**	$\sim$ and $=$ 24

Safety automation system solutions
Preventa safety modules type XPS AFL
For Emergency stop, switch and safety light curtain monitoring

2

Operating principle

Safety modules XPS AFL are designed to conform with category 3 of the standard EN 954-1.
They are used for:
■ Monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN/IEC 60204-1.
■ Electrical monitoring of switches activated by protection devices conforming to standard EN 1088/ISO 14119.

They can also be used for monitoring type 4 light curtains conforming to EN/IEC 61496-1 which have solid-state safety outputs with test function (for example, light curtains type XUS L, see page 3/113. This system would be conforming to category 4 of standard EN 954-1/EN/ISO 13849-1.

Housed in a compact enclosure, the modules have 3 safety outputs.
Preventa safety modules XPS AFL●●●P incorporate removable terminal blocks, thus optimising machine maintenance.
To aid diagnostics, the modules have 3 LEDs on the front face which provide information on the monitoring circuit status.
The Start button monitoring function is configurable depending on the wiring.

Preventa safety modules type XPS AR
For Emergency stop, switch or safety light curtain monitoring

2

Operating principle

Safety modules XPS AR meet the requirements of category 4 of the standard EN 954-1/EN/ISO 13849-1 and are designed for the following safety applications:
■ Monitoring Emergency stop circuits conforming to EN/ISO 13850 and EN/IEC 60204-1.
■ Electrical monitoring of switches activated by protection devices conforming to standard EN 1088/ISO 14119.
■ Monitoring type 4 safety light curtains conforming to EN/IEC 61496-1 which have solid-state safety outputs with test function (for example, light curtains type XUS L, conforming to category 4 of standard EN 954-1/ISO 13849-1.
In addition to 7 safety outputs, modules XPS AR incorporate 2 relay signalling outputs and 4 solid-state signalling outputs for signalling to the process PLC.
Safety modules XPS AR●●●●●●P incorporate removable terminal blocks, thus optimising machine maintenance.
To aid diagnostics, the modules have 4 LEDs on the front face which provide information on the monitoring circuit status.
The Start button monitoring function is configurable depending on the wiring.

Safety automation system solutions
Preventa safety modules type XPS AK
For Emergency stop, switch, sensing mat/edges or safety light curtain monitoring

Operating principle

Safety modules XPS AK are designed to conform with category 4 of the standard EN 954-1/ISO 13849-1.

They are used for:

■ Monitoring Emergency stop circuits conforming to standards EN/ISO 13850 and EN/IEC 60204-1.

■ Electrical monitoring of switches activated by protection devices, with optional selection of synchronisation time between signals.

■ Monitoring 4-wire sensing mats or edges.

■ Monitoring type 4 light curtains conforming to EN/IEC 61496-1 which have solid-state safety outputs with test function (for example, light curtains type XUS L, conforming to the category 4 of standard EN 954-1/ISO 13849-1.

Housed in a compact enclosure, the modules have 3 safety outputs, a relay signalling output and 4 solid-state signalling outputs for signalling to the process PLC.

Preventa safety modules XPS AK●●●P incorporate removable terminal blocks, thus optimising machine maintenance.

To aid diagnostics, the modules have 4 LEDs on the front face which provide information on the monitoring circuit status.

The Start button monitoring function is configurable depending on the wiring.

Characteristics

Module type				XPS AK3●1144	XPS AK3●1144P
Product designed for max. use in safety related parts of control systems (conforming to EN 954-1/ISO 13849-1)				Category 4 max.	
Conformity to standards				EN/IEC 60204-1, EN 1088/ISO 14119, EN/IEC 60947-5-1, EN/ISO 13850, EN/IEC 60947-1 + A11	
Product certifications				UL, CSA, BG	
Supply	Voltage		V	$\sim$ and $\overline{}$ 24, $\sim$ 48, $\sim$ 110 and $\overline{}$ 24, $\sim$ 120 and $\overline{}$ 24, $\sim$ 230 and $\overline{}$ 24	
	Voltage limits			- 15…+ 10%	
	Frequency		Hz	50/60	
Consumption	24 V version		VA	≤ 5	
	110/120/230 V versions			≤ 6	
Module inputs fuse protection				Internal, electronic	
Start button monitoring				Yes/No (configurable by terminal connections)	
Control unit voltage and current between terminals S21-S22, S31-S32				$\overline{}$ 24 V/30 mA approx. (at nominal supply voltage)	
Maximum wiring resistance RL between terminals S21-S22, S31-S32			Ω	28	
Synchronisation time between inputs A and B (terminals S21-S22, S31-S32)			s	Automatic start: 2 or 4 depending on wiring Manual start (start button between S33 and S34): unlimited	
Outputs	Voltage reference			Volt-free	
	Number and type of safety circuits			3 N/O (13-14, 23-24, 33-34)	
	Number and type of additional circuits			1 N/C (41-42) + 4 solid-state	
	Breaking capacity in AC-15		VA	C300: inrush 1800, maintained 180	
	Breaking capacity in DC-13			24 V/1.5 A - L/R = 50 ms	
	Breaking capacity of solid-state outputs			24 V/20 mA, 48 V/10 mA	
	Max. thermal current (Ithe)		A	6	
	Max. total thermal current		A	18	
	Output fuse protection		A	4 gG or 6 fast acting, conforming to EN/IEC 60947-5-1, DIN VDE 0660 part 200	
	Minimum current		mA	10	
	Minimum voltage		V	17	
Electrical durability				See page 2/172	
Response time on input opening			ms	≤ 40	
Rated insulation voltage (Ui)			V	300 (degree of pollution 2 conforming to EN/IEC 60947-5-1, DIN VDE 0110 parts 1 & 2)

Safety automation system solutions
Preventa safety modules type XPS VC
For enabling switch monitoring

2

Operating principle

The enabling grip switch system, comprising an enabling switch XY2 AU and a monitoring module XPS VC, enables authorised personnel to carry out adjustment, programming or maintenance operations within hazardous zones of machines providing certain conditions are met.

To be accessible, such operations are often carried out at reduced speed, and must be intentionally selected by authorised persons by means of a selector switch or key switch. Once the selection is made, the enabling switch system temporarily takes over from the hazardous zone's usual protection measures. Caution: The enabling switch system alone must not cause dangerous movements of the machine to be activated; a second intentional control action on the part of the operator is required. In addition, each person remaining in the hazardous zone must be provided with an individual enabling switch to ensure their own safety.

Safety automation system solutions
Preventa safety modules types XPS BA, XPS BC, XPS BF
For electrical monitoring of two-hand control stations

2

Operating principle

Two-hand control stations are designed to provide protection against hand injury. They require machine operators to keep their hands clear of the dangerous movement zone.

The use of two-hand control is an individual protective measure, which can safely protect only one operator. Separate two-hand control stations must be provided for each operator in a multiple-worker environment.

Safety modules XPS BA, BC and BF for two-hand control stations comply with the requirements of European standard EN 574/ISO 13851 for two-hand control systems.

The control stations must be designed and installed such that they cannot be activated involuntarily or easily rendered inoperative. Depending on the application, the requirements of type C standards specific to the machinery involved must be met (additional personal protection methods may have to be considered).

To initiate a dangerous movement, both operators (two-hand control pushbuttons) must be activated within an interval ≤ 0.5 s (synchronous activation). If one of the two pushbuttons is released during a dangerous operation, the control sequence is cancelled. Resumption of the dangerous operation is possible only if both pushbuttons are returned to their initial position and reactivated within the required time interval.

The safety distance between the control units and the hazardous zone must be sufficient to ensure that when only one operator is released, the hazardous zone cannot be reached before the dangerous movement has been completed or stopped.

Selection

Standard EN 574/ISO 13851 defines the selection of two-hand controls according to the control system category.
The following table details the three types of two-hand control conforming to EN 574/ISO 13851.
For each type, it lists the operating characteristics and minimum requirements.

Requirements of standard EN 574/ISO 13851	Type I	Type II	Type III A	B	C
Use of both hands (simultaneous action)					
Link between input and output signals					
Output signal inhibited					
Prevention of accidental operation					
Tamper-proof					
Output signal reinitialised					
Synchronous action (specified time limit)					
Use of proven components (Category 1 conforming to EN 954-1/ISO 13849-1)			XPS BA●●		
Redundancy with partial error detection (Category 3 conforming to EN 954-1/ISO 13849-1)				XPS BC XPS BF	
Redundancy + Self-monitoring (Category 4 conforming to EN 954-1/ISO 13849-1)					XPS BC XPS BF
Two-hand control station	XY2 SB●●				

■ Meets the requirements of standard EN 574/ISO 13851

■ Conforming to standard EN 954-1/ISO 13849-1

Safety automation system solutions
Preventa safety module XPS LCD
for monitoring 2 to 4 safety light curtains type 2 and type 4

Operating principle

The safety monitoring module XPS LCD1141 enables independent monitoring of 2 to 4 light curtains type 2 and type 4.

Each output of the light curtain is separately connected to the inputs of the safety monitoring module, which either authorises or prevents activation of its two safety outputs.

The module manages starting and EMD/MPCE functions and therefore, the light curtains connected to it must be configured for automatic start and the EDM/MPCE function deactivated. The safety monitoring module XPS LCD1141 provides the supply and also manages, in addition to its own auxiliary outputs (1 PNP and 1 NPN), the auxiliary outputs of the light curtains.

At the slightest intrusion through one or more light beams of any of the light curtains, the outputs of the safety monitoring module open. This also applies in the event of any internal fault or output relay(s) fault (subject to the EDM/MPCE configuration on the module).

The light curtain system conforms to the standard EN/IEC 61496-1 (type 4).

The Preventa safety monitoring module XPS LCD1141 incorporates removable terminal blocks, thus optimising machine maintenance.

To aid diagnostics, the safety monitoring module has 9 LEDs and a 2-digit display on the front face which provide information on the monitoring circuit status.

Environmental characteristics

Safety monitoring module type		XPS LCD1141
Certifications		CE, TÜV, CSA, UL
Ambient air temperature	**°C**	Operation: 0…+ 55; storage: - 25…+ 75
Relative humidity		95% maximum, without condensation
Degree of protection		IP 20
Shock and vibration resistance — Conforming to EN/IEC 61496-1		Shock resistance: 10 gn, impulse 16 ms. Vibration resistance: 5…55 Hz max. on all 3 axes
Materials		ABS thermoplastic enclosure
Mounting		35 mm rail

Electrical characteristics

Power supply	**V**	$=$ 24 ± 10%
Current	**A**	10 max.
Response time	**ms**	< 1
Safety outputs		2 solid-state PNP outputs (N/O), 625 mA on $=$ 24 V
Alarm or auxiliary output		1 solid-state PNP (N/O), 500 mA on $=$ 24 V, and 1 solid-state NPN (N/O),100 mA on $=$ 24 V, output
Monitoring activation of output switching devices (EDM/MPCE)	**mA**	50 ± 20% on $=$ 24 V
Signalling		9 LEDs plus 2-digit display
Functions		- Auto/Manual, manual 1st cycle, - Monitoring of external switching devices (EDM: External Devices Monitoring), - Restart request indicator light, - Display of operating modes and alarm by 9 LEDs and 2-digit display. Selection of Auto/Manual, blanking relay monitoring, floating/blanking and blanking + floating/ blanking relay monitoring using configuration switches behind front face of module. - Independent monitoring of 2 to 4 safety light curtains.
Monitoring of external switching devices (EDM = External Devices Monitoring)		Monitoring of the function (open or closed) as well as the response time of the power components. Parameterable using configuration switches.
Start input	**mA**	50 at 24 V
Connection — Type		Captive screw clamp terminals, removable terminal block
1-wire connection — Without cable end		Solid cable: 4 mm²
1-wire connection — Without cable end		Flexible cable: 0.14...1.5 mm²
1-wire connection — With cable end		Without bezel, flexible cable: 0.14…1.5 mm²
2-wire connection — Without cable end		Solid cable: 0.14...1.5 mm²
2-wire connection — Without cable end		Flexible cable: 0.14...7.5 mm²

Safety automation system solutions
Safety monitoring module
Preventa XPS LCM
for the "muting" function of type 2 and type 4 safety light curtains

2

Operating principle

Safety modules XPS LCM are used with type 4 light curtains conforming to EN/IEC 61496-1 to provide a system inhibiting the light curtain protection, i.e. "muting". This function enables the automatic passage of parts for machining or loaded pallets, without interrupting the transportation movement within the zone protected by the electro-sensitive protection equipment (ESPE) system. In addition to the electro-sensitive protection and safety modules XPS LCM, the system comprises 4 to 8 inhibition sensors, 2 indicator lights and a key switch to reset the system to the initial state in the event of a sequence error.

When the system is switched on by the start command and the light curtain protection not interrupted, the main circuit is closed by the safety outputs of the XPS LCM modules (solid-state safety outputs). In addition to safety outputs, the modules incorporate signalling outputs for sending system status information to the PLC. Either 5 or 14 LEDs and a 2-digit display, mounted on the front face of the module, provide information on the safety circuit status.

An interruption of the protection field monitored by the electro-sensitive protection equipment causes instantaneous opening of the safety outputs; the process PLC receives a stop command and the LED display mounted on the front face indicates the change of state of the safety circuits. The "open" state is maintained until the module is restarted using the Start button.

The "muting" function cannot be activated by supplying the inhibition sensors unless the safety outputs have been switched on beforehand. To trigger the "muting" function, the inhibition devices must be activated within the 3 second time interval. During the activated "muting" phase, materials can be transported through the protection field without deactivating the safety outputs. In the event of intrusion into the hazardous zone, a person cannot activate the inhibition sensors in the same way and the system stops.
Whilst the "muting" function is activated, a "muting" status indicator light is controlled by the XPS LCM module. A fault at indicator light level (short-circuit, open circuit) is immediately recognised and deactivates the "muting" function. The indicator light only illuminates when a "muting" signal is generated and indicates the inhibition of the protection function.
ESPE: electro-sensitive protection equipment (light curtain).
A, B, D, C: "muting" sensors.
m: trolley length and dM = distance between A, B and D, C.

Conditions to be observed for the "muting" function

■ The "muting" sensors must either be thru-beam type XUB 0BPSNL2 + XUB 0BKSNL2T, polarised reflex type XUB 0BPSNL2 + XUC Z50 or mechanical limit switches with contacts.
■ dM ≤ m to obtain continuous validation of the "muting" function.
■ Avoid the intrusion of persons during the "muting" phase. This phase is indicated by the indicator light connected to the "muting" indicator output of the XPS LCM module.
■ A materials trolley must provide the "muting" signal before entering the protection field and cease it once it has cleared all the sensors of the protection field on exiting.

Safety automation system solutions
Preventa safety modules types XPS TSA, XPS TSW
For safety time delays
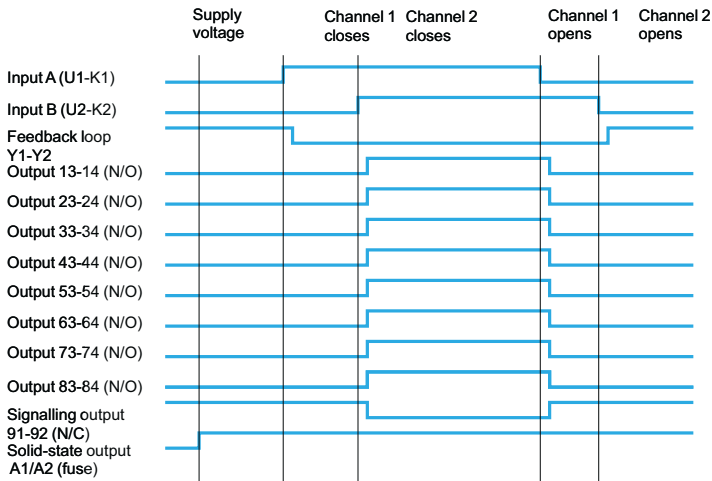

Operating principle

Safety modules XPS TSA and XPS TSW are used in applications requiring safety time delays:
■ modules XPS TSA in applications with interlocking on high inertia machines with long rundown time (guards unlocked after safety time delay has elapsed),
■ modules XPS TSW in applications with a safety switchover contact (shunting contact in association with XPS VN modules for zero speed detection, solenoid valve monitoring, etc.).
The time delay of safety circuits can be set to 16 preset values, using 2 selectors located on the front face of the modules.

To aid diagnostics, the modules have LEDs which provide information on the monitoring circuit status and 2 solid-state outputs for signalling to the process PLC.

In addition, their removable terminal blocks optimise machine maintenance.

Safety automation system solutions
Preventa safety modules types XPS DMB, XPS DME
For coded magnetic switch monitoring

Operating principle

Safety modules XPS DMB and XPS DME are specifically designed for monitoring coded magnetic safety switches. They incorporate two safety outputs and two solid-state outputs for signalling to the process PLC.

Conforming to category 4 of EN 954-1/ISO 13849-1, modules XPS DMB can monitor two independent sensors and modules XPS DME can monitor up to six independent sensors.

To monitor a higher number of magnetic switches using these safety modules, the magnetic switches can be connected in series, while meeting the requirements of category 3 of EN 954-1/ISO 13849-1.

Safety modules XPS DM●●●●●P incorporate removable terminal blocks, thus optimising machine maintenance.

To aid diagnostics, the modules have LEDs on the front face which provide information on the monitoring circuit status.

Operating principle

Safety automation system solutions
Preventa safety modules type XPS VNE
For zero speed detection

2

Operating principle

Preventa safety modules XPS VNE for zero speed detection are used to detect the stop condition of electric motors. Their most common applications include: providing the unlock signal for electrically interlocked sliding or removable machine guards, controlling rotation direction signals for reversing motors and engaging locking brakes after a motor has come to a standstill.

As electric motors run down, a remanent voltage is produced in the windings of the motor due to residual magnetism. This voltage is proportional to the speed of the motor and, therefore, decreases as the motor comes to a standstill.
This remanent voltage is measured in a redundant manner so as to detect the stop condition of the motor. The cabling between the motor windings and the inputs of the XPS VNE module is also monitored to prevent a cabling breakage or fault being seen as a stopped motor.
A transformer should not be used to connect the motor to terminals Z1, Z2 and Z3 since there is no monitoring of the connection with the motor winding via the resistance monitoring.

Modules XPS VNE are suitable for detecting the stop condition of all types of a.c. or d.c. motor driven machines which, when the motor runs down, produce a remanent voltage in the windings due to residual magnetism. These machines can be controlled by electronic devices, such as variable speed drives or d.c. injection brakes.
The input filters for standard XPS VNE modules are designed for a frequency of up to 60 Hz.
For motors operating at a frequency higher than 60 Hz, which therefore produce a high frequency remanent voltage, special modules XPS VNE●●●●HS should be used.

Modules XPS VNE have 2 potentiometers mounted on the front face of the module which allow independent adjustment of the switching threshold for each input circuit. This allows adjustment for different types of motors and application requirements.

To aid diagnostics, modules XPS VNE have 4 LEDs and 2 solid-state outputs to provide information on the status of the zero speed detection circuit.

Operating principle

Cabin

Cabin doors

Door unlocking zone

Landing doors

+ 0,2 m
- 0,2 m

Landing

Landing indicator (stop reference point)

When the cabin is parked at a landing, with the doors open, some lifts automatically correct their level (isolevelling) in relation to the landing in order to compensate for any differences generated by modification of the load in the cabin.
During this operation, European standard EN-81 recommends that the presence of the cabin be checked within a zone of +/- 0.2 m around the landing (door unlocking zone), by means of a safety circuit which will cause the cabin to stop if it moves out of the specified zone.

The use of a safety module XPS DA, which checks the presence of the cabin in the specified zone at two points, meets this requirement.
The module incorporates two safety outputs and two solid-state outputs for signalling functions. Four LEDs on the front face of the module provide visual indication of the status of the safety circuit.
The position of the cabin in relation to the landing is detected by two limit switches in the lift shaft. It is also possible to use non-contact sensors (magnetic sensors with reed contact).
When the cabin reaches the preset position and when it is within the permissible tolerances in relation to the landing, the two safety circuits in safety module XPS DA close and allow isolevelling of the cabin with the doors open. Any change in one of the input signals (cabin outside the specified zone) or detection of a fault (break in the wiring, short-circuit, etc.) causes immediate opening of the safety outputs in the XPS DA module and subsequent stopping of the cabin.

For dynamic monitoring of hydraulic valves on linear presses

Operating principle

Safety module XPS PVT is specifically designed for monitoring hydraulic safety system valves which control the movements of potentially dangerous machines. The operating principle of this module is explained in the circuit diagram of a hydraulic safety system for linear presses (see below).

This hydraulic safety system features a 3 position piston which controls the up and down stroke of the operating cylinder. The circuit is equipped with a safety valve, to complete the redundant system. This circuit must be activated to enable the up and down stroke of the cylinder.
If either of the 2 pistons becomes defective (for example, due to a broken spring or to oil contamination), and the valve piston shifts from its normal position towards the open position, the XPS PVT module will detect it and prevent resumption of the piston stroke.
Proximity sensors integrated in the valve to detect the piston positions and connected to the XPS PVT module must be damped when the valve coils are in the de-energised state (zero position).
The sensor circuits of the XPS PVT module are designed to allow connection of NPN and PNP proximity sensors or sensing components. Either 2-wire or 3-wire types can be used.
The wiring diagram on page 2/252 shows how to connect proximity sensors.

Safety automation system solutions
Preventa safety modules type XPS PVK
For dynamic monitoring of double-bodied solenoid valves

2

Operating principle

Safety module XPS PVK is specially designed for dynamic monitoring of the safety valves in eccentric presses, conforming to European standard EN 692.
This standard establishes the specifications related to safety control systems for presses equipped with friction clutches.
To meet the requirements of this standard, the clutch/brake control must be monitored dynamically.

This function is provided by a double-bodied solenoid valve (safety valve for presses) which performs the functions of two valves mounted in one body.
The position of the two valve pistons can be monitored by proximity sensors, mechanical limit switches or pressure switches.
Module XPS PVK checks for the correct operation of the double-bodied safety valves at 3 points in the cycle.
■ Start at top dead centre: checks the rest position of the two valves.
■ Take-on point (transfer function): checks that the two valves are in the "activated" (energised) position.
■ Press stop trigger point: checks that the two valves return to the rest position. Return must be simultaneous for both valves within a defined time period.
To set up an automatic disconnect of the XPS PVK module at the first machine stroke, a N/C auxiliary contact mounted on the main control contactor or on another contactor/relay, activated at the same time, can be wired to terminals 7 and 8 in parallel with the RESET button.
If a fault is detected during the cycle, the XPS PVK module will stop the slide stroke and will also inhibit the start of another cycle.

Safety automation system solutions
Preventa safety modules type XPS OT
For safety stop with automatic overtravel monitoring and control

2

Operating principle

Safety module XPS OT is used on eccentric presses to monitor overtravel and ensure that the press slide stops in a non-dangerous position, that is, top dead centre (TDC) during normal (non-emergency) operation. Use of this module, designed in accordance with standard EN 692 relating to mechanical press safety, makes it possible to create a redundant, self-monitoring control system.

The two essential functions of this safety module are to:
■ **Trigger the end of cycle stop sequences slightly before top dead centre (at point A) so as to come to complete stop at TDC.**
After TDC, the permissible overtravel is approximately 10°. The safety module immediately detects any overtravel. Overtravel is indicative of braking device deterioration and, in this case, jog mode must be used to move the slide back to TDC. The next cycle will be inhibited to allow maintenance to be performed on the braking device (cam 1).

■ Take over control monitoring during the dangerous part of the cycle (slide downstroke). Any stop instruction issued between TDC (0°) and point C (approximately 150° after TDC) causes an immediate stop of the press. **This approximate value of 150° corresponds to the 8 mm tool closure dimension (safety point)**.
When a stop instruction is issued after this safety point, the press completes the cycle and comes to a complete stop at TDC (cam 2).

Control of the dangerous part of the cycle (generally the slide downstroke) is usually activated from a two-hand control station associated with a safety module (type XPS BC) monitoring this station to qualify as a category 4 control system according to standard EN 954-1/ISO 13849-1.

Overtravel monitoring is performed **on each cycle** by safety module XPS OT.

Control cams diagram

TDC Stop and overtravel monitoring

Restart + Stop
1 Permissible overtravel zone.
2 Dangerous zone (usually slide downstroke).
3 Non-dangerous zone (usually slide upstroke).

S Permissible overtravel.
A Stop instruction trip point.
B Point at which permissible overtravel is exceeded (a stop instruction issued after point **B** will lock up the press).
C Takeover point, beyond which the press will complete its cycle up to **TDC**.
TDC Top dead centre, actual stopping zone of the press.
BDC Bottom dead centre.

Cam operation
Cam 1 is associated with the **OTS** limit switch (LS), cam 2 with the **UN** limit switch (the limit switches must be located on different cams for safety reasons).
The **OTS** limit switch is deactivated at TDC, at which point the **UN** limit switch is activated.
Point A1 of **cam 1** is located approximately 300° after TDC and, when reached, the press stops and comes to a standstill: **A1 is the press stop trigger point.**
Point B1, located approximately 10° after TDC, constitutes the end of cam 1: **If B1 is exceeded during stopping**, the overtravel is abnormally long, **the press locks up** and the next cycle is inhibited.
Point A2 of cam 2 functions like point A1 on cam 1 (contact state of the **UN** limit switch reversed in relation to the state of the **OTS** limit switch).
Point C2, located approximately 150° after TDC, corresponds to the 8 mm tool closing dimension. Stop instructions issued after C2 is reached are not executed until point A2 is reached.

Operating principle

Safety automation system solutions
Safety solutions on AS-Interface cabling system
AS-Interface "Safety at work" monitors

Operating principle
AS-Interface, the recognised cabling system for sensors and actuators, has evolved. Standard process information and information relating to safety can now be transmitted over the same cable. Capable of managing safety functions up to level 4 of standard EN-954-1/ISO 13849-1 and conforming to standard IEC 61508 (2000), the AS-Interface "Safety at work" system meets the needs of the most common safety applications, such as:
■ monitoring of Emergency stops with instantaneous break contacts (stop category 0),
■ monitoring of Emergency stops with delayed break contacts (stop category 1),
■ monitoring of switches with and without interlocking,
■ monitoring of light curtains, etc.

Parameters for options relative to the selected safety function (for example, start button monitoring) may be set for all pre-defined, certified functions.
Safety is incorporated into the AS-Interface cabling system by adding a safety monitor and safety interfaces connected together with other standard AS-Interface components on the yellow cable.
Safety information is exchanged only between the safety monitor, the AS-Interface line master and the safety interfaces. This is transparent for the other standard AS-Interface components.
Based on this principle, AS-Interface cabling systems that are already installed can be updated with safety functions without having to replace the existing components (masters, I/O interfaces, power supplies, etc.). Safety circuits are diagnosed readily, and with no additional wiring, by the standard AS-Interface cabling system master communicating with the safety monitor(s) via the yellow cable.

The ASI SWIN2 configuration software is included on the "Safety Suite V2" CD-ROM.
The AS-Interface "Safety at work" system is configured using software ASI SWIN2 running on Windows. A library of pre-defined and certified safety functions is made available by the software and the user can graphically select the desired safety functions, even at the last minute, by using the "Drag and drop" method in the configuration software. Knowledge of a programming language or specific tools is not necessary to parameter the system. The configuration is loaded into the safety monitor(s) by means of a PC by carrying out a secure serial transmission and using the parameter setting connector on the front face of the monitor.

To meet various safety requirements, the AS-Interface "Safety and work" monitor is available in two versions:
■ monitors for basic monitoring of safety devices,
■ monitors for enhanced monitoring of safety devices.
AS-Interface "Safety at work" monitors for basic and enhanced monitoring are available with:
■ 1 safety output with 2 contacts, or
■ 2 independent safety outputs with 2 x 2 contacts.

In addition to safety outputs with volt-free contacts, AS-Interface "Safety at work" safety monitors are equipped, depending on the model, with one or two solid-state signalling outputs and LEDs on the front face to indicate the status of the system and of the monitoring circuits. To monitor more safety functions simultaneously or to stop several safety circuits at different locations, an increased number of safety monitors can be used in an AS-Interface cabling system.
The safety interfaces are connected directly on the yellow cable via an insulation displacement connector (IDC). Their addressing is carried out using self-addressing via the AS-Interface cabling system master or manually, using addressing terminal ASISTERV2.
The compactness of the safety interfaces enables their direct attachment to control devices such as Emergency stop buttons or switches. In addition to interfaces that can be attached to products, versions with 1 or 2 M12 connectors are also available.

	Safety	Volt-free N/O contacts, max. contact load
Fuse protection		External, with max. of 4 A MT
Operating temperature	°C	- 20…+ 60
Storage temperature	°C	- 30…+ 70
Enclosure	Material	Polyamide PA66
	Mounting	Clip-on fixing on ⌐ rail conforming to EN 50022

Note: The impedance of a safety monitor must be taken into account when selecting the number of interfaces on the AS-Interface cabling system, even if it is used in "watchdog" mode.
The technical details of the system are described in the Schneider Electric AS-Interface guide, in the safety monitor hardware and software manuals and in the configuration software on "*www.schneider-electric.com*".

2

Operating principle

Safety is incorporated into the AS-Interface cabling system by adding a safety monitor and safety interfaces connected together with other standard AS-Interface components on the yellow cable.

Safety information is exchanged only between the safety monitor, the AS-Interface line master and the safety interfaces. This is transparent for the other standard AS-Interface components. Based on this principle, AS-Interface cabling systems that are already installed can be updated with safety functions without having to replace the existing components (master, I/O interfaces, power supplies, etc.).

Safety circuits are diagnosed readily, and with no additional wiring, by the standard AS-Interface cabling system master communicating with the safety monitor via the yellow cable.

2

Solution with safety relay and separate PLC

Simplification using the safety module integrated in the PLC

Presentation

The TSX DPZ 10D2A Emergency stop monitoring module integrated into the TSX Micro PLC combines:

■ The ease of use of Preventa safety modules.
■ PLC diagnostics performance.

It also maintains all the advantages of a standard PLC (extended choice of I/O, ease of installation, flexibility of hardware and software developments, etc).

The TSX DPZ 10D2A Emergency stop monitoring module combines a Preventa (XPS) hard-wired safety relay and a discrete acquisition function in a half-slot, for full diagnostics of input contacts and the state of safety circuit outputs.

The TSX DPZ 10D2A safety module is used to interrupt one or more Emergency or safety stop control circuits in complete safety, in accordance with EN/IEC 60204-1.

The proven safety of hard-wired technology and the capacity of the TSX Micro PLC make module TSX DPZ 10D2A the optimum solution for making machines more reliable, safer, more compact and more cost-effective.

Application developments requiring safety systems and PLC diagnostics

LModule TSX DPZ 10D2A is suitable for Emergency stop and limit switch monitoring applications, requiring a level of safety up to category 3 *(1)* according to EN 954-1/ ISO 13849-1 (safety related parts of control systems).

(1) For more information on control system safety categories, please consult the chapter 6 of this catalogue.

Description

Emergency stop monitoring module TSX DPZ 10D2A comprises:

1 A metal casing with a locking system for fixing the module in its slot. This system is only accessible when the screw terminal block is removed.

2 A removable screw terminal block for connecting sensors and preactuators.

3 A cover giving access to the screw terminal block, which also holds the marker legend.
Schneider Electric

Functions

Safety automation system solutions
Modicon TSX Micro automation platform
Preventa safety module type TSX DPZ

2
Safety module TSX DPZ 10D2A provides the following functions:
■ Monitoring of 1 to 4 dual (or single), N/C (normally closed) contacts in pushbuttons, Emergency stops or limit switches on safety guards for an Emergency stop or immediate safety stop system (category 0 Emergency stop conforming to EN/ISO 13850).
■ Hard-wired safety module identical to Preventa safety module XPS:
□ 2 N/O safety output circuits,
□ category 3.
■ Safety module independent of the TSX Micro PLC processor: **the PLC does not affect the safety module.**
■ 10 LEDs on the TSX Micro PLC display panel: power supply failure and full diagnostics of the safety system.
■ Electronic data acquisition units for full diagnostics of the safety system:
□ reading the state of the 8 pushbutton or limit switch inputs,
□ reading the enable input and the feedback loop,
□ reading the control signal of the 2 safety outputs,
□ monitoring the external power supply for the module.

This electronic data acquisition is designed so that the first failure will not adversely affect the safety function.
If the safety system uses more sensors, it is possible to daisy-chain several TSX DPZ 10D2A modules.

Schematic diagram
To ensure correct operation of the safety function whatever the first failure, the following must be used :
■ At the inputs: Emergency stop pushbuttons or safety limit switches with dual contacts.
■ At the outputs: if relaying is required, use relays with guided contacts.
■ Module power supply: use an F1 protection fuse (see characteristics on page 2/278).
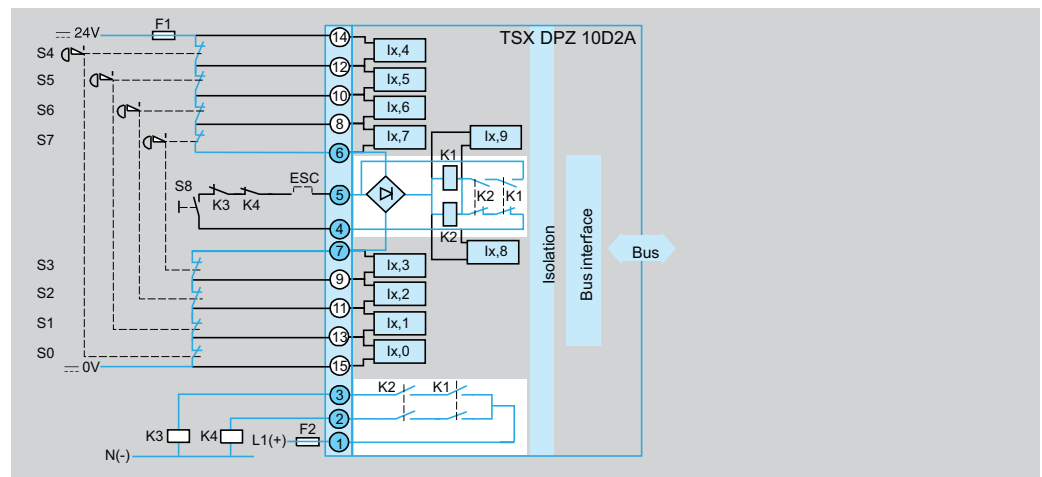

6-7	Control of the safety system.
1-2 et 1-3	Safety outputs, volt-free.
4-5	Feedback loop and run enable (ESC: additional enable conditions).
14-15	Monitoring of module ⎓ 24 V external power supply.

Category 3 wiring diagrams (redundant inputs and outputs): recommended applications
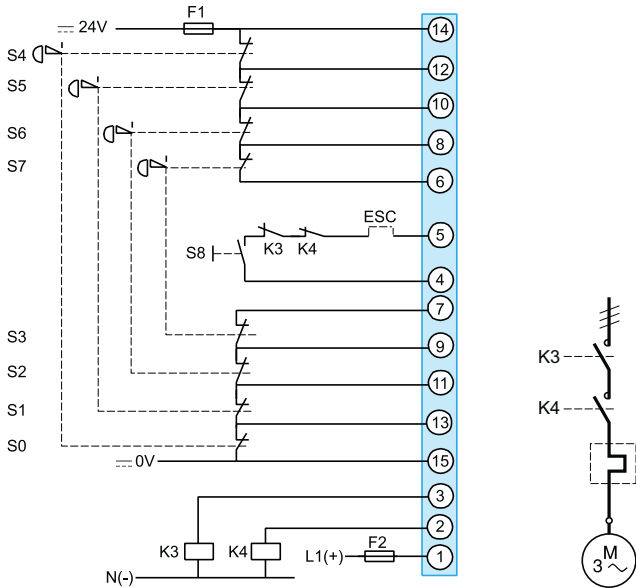

Connection of 4 sensors with dual contacts
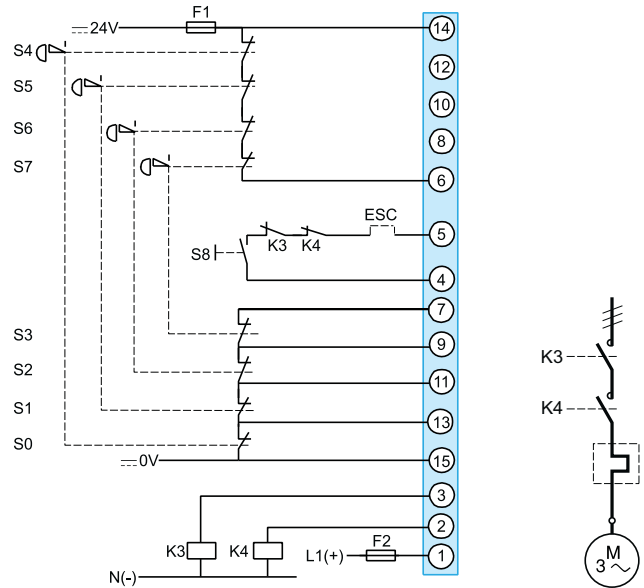

The states of all the contacts in the input circuit are read by the PLC. The consistency test carried out by the PLC program on the input contacts enables it to signal and locate precisely the faulty contact(s).
When using less than 4 dual contacts, the input terminals not in use must be linked. For example, if contacts S0 and S4 are not in use, a bridge is required between terminals 14 and 12 and terminals 13 and 15.

Connection of 4 sensors with dual contacts for existing installations

Suitable for use with existing wiring; with one contact on the safety module and one contact for diagnostics, this wiring enables global reading of the state of contacts S4 to S7 and individual reading of contacts S0 to S3.
The consistency test carried out by the PLC program on the inputs enables it to signal any inconsistency with partial location of the fault.

Wiring diagram with single contacts

Connection of 4 sensors with dual contacts

Not all faults are detected. A short-circuit on a pushbutton or limit switch is not detected.
When using less than 4 single contacts, the input terminals not in use must be linked.
For example, if contact S5 is not in use, a bridge is required between terminals 10 and 12.

Connecting TSX DPZ 10D2A modules in series

Connection of 4 sensors with dual contacts for existing installations

The connection of safety relay outputs in series enables diagnostics for up to 32 single or dual contact pushbuttons or limit switches. The number of modules connected in series is limited by the number of slots available on the TSX Micro PLC.

Safety automation system solutions
Modicon Premium automation platform
Preventa safety modules type TSX PAY

Premium + TSX PAY

Presentation

TSX PAY safety modules integrated in the Premium PLC combine :
□ the simplicity of use of Preventa safety modules
□ the high performance of PLC diagnostics
in addition to the advantages of a standard PLC (extended choice of I/O, simplicity of setup, flexibility for hardware and software developments, etc).

TSX PAY safety modules incorporate in a single module, a Preventa (XPS) hard-wired safety block and an electronic data acquisition unit for complete diagnostics of input contacts and the state of outputs in the safety system.

TSX PAY safety modules are used to safely interrupt one or more Emergency stop or safety stop control circuits according to the standards EN/IEC 60204-1 and EN/ISO 13850.

The proven safety of hard-wired technology and the performance of Premium PLCs make the TSX PAY modules the optimum solution for creating machines which are more available, safer, more compact and lower in cost.

Solution for applications requiring safety systems and high-performance diagnostics

The solution, integrated safety modules, enables complete diagnostics on the entire safety system. This diagnostics quickly locates the faulty contact, pushbutton cables, or limit switch, without additional contacts on the inputs and without any additional wiring.

TSX PAY safety modules have their own power supplies and operate independently of the PLC processor.

TSX PAY modules are suitable for Emergency stop and limit switch monitoring applications, demanding a level of safety up to category 4 according to standard EN 954-1/ISO 13849-1 (parts of control systems relating to safety).
Functions

TSX PAY modules offer the following functions:

■ Monitoring of 1 to 12 double or single pushbutton contacts, Emergency stop and limit switches for safety guards for an Emergency stop or immediate stop safety system (Emergency stop category 0 according to standard EN/ISO 13850).
■ Hard-wired safety block identical to Preventa XPS safety modules:
□ 2 or 4 N/O (normally open) safety outputs,
□ 12 double contact inputs.
■ Safety block independent of the Premium PLC processor: the PLC does not operate on the safety module.
■ 28 LEDs on the module display block: for complete diagnostics of the safety system.
■ Electronic data acquisition units for complete diagnostics of the safety system:
□ read the status of the 24 inputs (image of the status of the 12 pushbuttons or limit switches)
□ read the enable input,
□ read the feedback loop,
□ read the safety outputs control,
□ monitor the external power supply of the module.

This electronic data acquisition is designed so that the safety function is not compromised by any failure. If the safety system uses more sensors, it is possible to connect several TSX PAY modules.

Schneider Electric

Operation

2

TSX PAY 262 module schematic
To ensure the safety function irrespective of the first failure, it is compulsory to use:
- For the inputs: Emergency stop pushbuttons or safety limit switches with double contacts
- For the outputs: if relaying is necessary, use a guided contact relay
- On the module power supply : an F1 protection fuse (see page 2/283 characteristics).

Schneider Electric

Safety automation system solutions
Modicon Premium automation platform
Preventa safety modules type TSX PAY
Description

TSX PAY safety modules comprise on the front panel :

1 A rigid IP 20 casing to hold and protect the electronic card.

2 A display block (32 LEDs) showing operating modes, faults and the status of the safety system.

3 A high density 44-way SUB-D connector for connecting the safety system.

4 A 6-way removable screw terminal block for connecting the safety outputs.

5 Marking for labelling the safety outputs.

6 Marking for the external power supply of the module.

Connection principle

Two types of connection for TSX PAY safety modules are available:

Standard wiring
A TSX CPP 301 three metre cable is fitted with a 44-way SUB-D moulded, elbow connector at one end, and flying leads differentiated by a colour code at the other end.

This wiring system conforms to the standard EN 954-1/ISO 13849-1.

Fast wiring

Using the Telefast 2 pre-wired system facilitates the installation of TSX PAY safety modules by giving access to inputs on the safety system via screw terminals.

Connection is carried out using TSX CPP ●02 cables fitted with 44-way SUB-D moulded, elbow connectors at both ends.

The Telefast ABE 7CPA13 sub-base enables the connection of 12 double or single contact inputs, the power supply, reset inputs and the feedback loop.

This wiring system conforms to the standard EN 954-1/ISO 13849-1.

Standards	Machine	Machine electrical equipment		EN/IEC 60204-1, EN/ISO 12100	
		Emergency stop equipment		EN/ISO 13850	
	Product	Machine safety-parts of control systems relating to safety		EN 954-/ISO 13849-11 category 4, EN 1088/ISO 14119 pr IEC 61508 (SIL 3)	
	PLC	Specific requirements		IEC 61131-2 (EN 61131-2), CSA 22-2, UL 508	
Product certifications				BG, UL, CSA	

General characteristics

Power supply	Nominal voltage		V	⎓ 24	
	Operating voltage limit		V	⎓ 19,2…30	
	Fault indication		V	⎓ < 20	
	Maximum consumption		mA	200	
Protection by external F1 fuse	Conforming to IEC 947-5-1		A	1 gG	
Consumption on internal 5 V			mA	< 150	
Isolation			kV	4 (overvoltage category III, degree of pollution 2)	

Characteristics of discrete inputs

Modularity	Emergency stop or limit switch discrete inputs			12 double or single contacts	
	Reset PB input			1	
	Feedback loop input			1	
	Reset PB monitoring input			1	
	Double or single contact selection input			1	
Logic				Positive	
IEC 1131 conformity				Type 1	
Courant d'appel	Maximum		A	0,5	
Isolation between input and earth			V eff	500 - 50/60 Hz for 1 min	
Power	Dissipated in the module		W	< 5	

Characteristics of safety relay outputs

Modularity				2 volt-free outputs		4 volt-free outputs	
Operating voltage limit	a.c		V	∿ 19…250			
	d.c		V	⎓ 17…127			
Maximum thermal current (Ithe)			A	2,5			
Minimum current			mA	30			
a.c. load	Inductive AC-15 duty	Voltage	V	∿ 24	∿ 48	∿ 110	∿ 220
		Power	VA	60	120	280	550
d.c. load	Inductive DC-13 duty (L/R = 100 ms)	Voltage	V	⎓ 24			
		Power	VA	60			
Response timee			ms	< 10			
Type of contact				AgCdO gold plated			
External protection of outputs by F2 fuse	Conforming to IEC 947-5-1		A	4 gG			
Cross-section of connecting cables	Without cable end		mm²	0.2…2.5			
	With cable end		mm²	1,5			
Isolation between input and earth	Insulation voltage conforming to DIN VDE 0110 part 2		V	300			
	Test voltage		V eff	1500 - 50/60 Hz for 1 min			

Environment

Temperature	Operation	°C	0 °C …+ 60 °C	
	Storage	°C	- 25 °C …+ 70 °C	
Degree of protection	Conforming to IEC 529		IP 20

Input channel connection schemes

Wiring 1 input channel: single contact
Single contact wiring is not suitable for applications which require a category 3 or 4 safety level.
Not all faults are detected, a short-circuit on a contact is not detected.
When using less than 12 single contacts, connect the input terminals which are not being used.
For applications with more than 12 single contacts, it is possible to use several TSX PAY modules by wiring the outputs in series.

Double contact wiring of the inputs is necessary for creating applications which require a category 3 or 4 safety level.
When prompted, all the first faults are detected and located. A short-circuit between the 2 inputs is detected.
When using less than 12 double contacts, connect the input terminals which are not being used.
For applications with more than 12 double contacts, it is possible to use several TSX PAY modules by wiring the outputs in series.

Wiring 2 input channels: double contacts

Safety output connection schemes
The design of a category 3 or 4 immediate stop system requires redundancy and checking, on request, of the power supply breaker devices.

The wiring of N/C contacts (K3 and K4) enables this check on each request.
Relays K3 and K4 must be mechanically linked contact relays.

When TSX PAY modules cut the power directly, it is necessary to connect the terminals Y1 and Y2/S33.

Safety detection solutions
Guard switches

Refer to standards EN/ISO 12100-2 and EN 1088/ISO 14119

Removable or moveable protective guards for potentially dangerous machine functions must be used in conjunction with locking or interlocking devices.
Application requiring an interlocking device: high inertia (long rundown time) machines.
An interlocking device must be used when the rundown time is greater than the time it takes for a person to reach the danger zone.
This device ensures that the guard remains locked until the potentially dangerous movement has stopped.

Guard switches

The mechanical actuator guard switches, specifically designed for machine guarding applications, provide an ideal solution for the locking or interlocking of movable guards associated with industrial machinery. They meet the requirements of standards EN/ISO 12100, EN 294/ISO 13852, EN 1088/ISO 14119 and IEC/EN 60204-1.
They contribute to the protection of operators working on potentially dangerous machines by breaking the start control circuit of the machine when a protective guard is opened or removed, using **positive opening operation contacts**, thus stopping the dangerous movement of the machine.
The removal/opening of the guard (after the dangerous movement has stopped) can either be:
   - at the time the machine is switched-off for low inertia machines (machines where the rundown time is less than the time it takes for the operator to access the hazardous zone), or
   - delayed for high inertia machines (machines where the rundown time is greater than the time it takes for the operator to access the hazardous zone).

Control circuit categories

Guard switches used in conjunction with a PREVENTA safety module enable designers, with reference to EN 954-1/ISO 13849-1, to establish category 4 control systems.
Safety related parts of control systems should be developed taking into account the results of an appropriate Risk Assessment (EN 1050/ISO 14121 - EN/ISO 12100 - 1 and 2).

Safety of personnel

The start command for the machine can only be initiated following correct operation of the guard switch.
On its release, the N/C safety contacts are opened by **positive action** or, for coded magnetic switches, change state **(must be monitored using a PREVENTA safety module)**.

Safety of operation

Guard switches incorporate slow break or snap action contacts with **positive opening operation** (except for coded magnetic switches where this is not possible).
For mechanical actuator guard switches, on closing of the guard the actuator fitted to it enters the head of the switch, operates the multiple interlock device and closes the N/C contacts. For coded magnetic switches, the presence of the magnet causes the contacts to change state.

Safety in use

All guard switches are designed to accept a few millimetres of misalignment between the actuator and the switch in order to compensate for mechanical play, vibration, etc.

Design to minimise defeat

Both mechanically and magnetically actuated guard switches are designed to be operated by specific actuators so that they cannot be defeated in a simple manner using common tools, rods, metal plates, simple magnets, etc. When loosening the fixing screws for re-orientation of the turret head on mechanical actuator guard switches, the head itself remains attached to the switch body and the contact states remain unchanged.
All guard switches and safety limit switches are designed in such a manner that it is virtually impossible to adjust the head setting, remove the switch or gain access to the contacts without using the appropriate tool.
There are various methods for obtaining a higher level of tamper proofing, for example:
   - using a cage device to prevent the insertion of a spare actuator or magnet, or any other foreign body,
   - fixing the actuator or coded magnet to the guard by means that make it very difficult to remove (riveting or welding).

Schneider Electric

Metal case guard switches with mechanical actuator

Without locking of actuator
Metal case guard switches for use on machines **with low inertia** and operating in normal conditions (no vibration or shock and guard mounted vertically, without risk of rebound on closing), thus eliminating unintentional opening of the guard.

With locking of actuator and manual unlocking
Metal case guard switches for use on heavy machines **with low inertia** and operating in **arduous conditions** (shock or vibration exist), whereby the guard could open unintentionally.
A key operated lock or a pushbutton enables the positive locking of the guard and its subsequent unlocking.

With interlocking and locking of actuator by solenoid
Metal case guard switches for use on machines **with high inertia** or necessitating a controlled opening of the protective guard.
The locking of the moving guard can either be on de-energisation or energisation of the solenoid.
A key operated lock enables manual unlocking of the guard in the event of an interlocking circuit malfunction, and also provides extra safety for maintenance personnel likely to be working on the machine.
The switches incorporate 2 LEDs: one indicating guard "open/closed" and the other, guard "locked/unlocked".

Plastic case guard switches with mechanical actuator

Without locking of actuator
Plastic case guard switches for use on light machines **with low inertia.**
For use in arduous conditions (shock or vibration exist, guard not vertical or risk of rebound on closing) where the guard could open unintentionally, a **guard retaining device (XCS PA or XCS TA)** is available as an accessory.

With interlocking and locking of actuator by solenoid
Plastic case guard switches for use on machines **with high inertia** or necessitating a controlled opening of the protective guard.
The locking of the moving guard can either be on de-energisation or energisation of the solenoid.
A special tool enables manual unlocking of the guard in the event of an interlocking circuit malfunction, and also provides extra safety for maintenance personnel likely to be working on the machine.

3

Safety detection solutions
Guard switches, safety limit switches and coded magnetic systems

Rotary lever and spindle operated guard switches for hinged guards	**With head for rotary movement (lever or spindle)**
Plastic case guard switches with straight or elbowed operating lever or spindle operator.
Specifically designed for small industrial machines fitted with small sized **hinged doors, covers or protective guards**.
They protect the operator by immediately stopping the dangerous movement of the machine as soon as the rotary lever or spindle displacement reaches an angle of 5°.

Safety limit switches	**With head for linear movement (plunger) or rotary movement (lever)**
Metal or plastic case limit switches.
For use on machines with low inertia and also on machines with high inertia, when used in conjunction with actuator operated guard switches, for monitoring access doors and/or guards. When used on their own, they are always installed in "positive mode" or combined in pairs, with one switch being in "positive mode" and the other in "negative mode".

Coded magnetic guard switches	**With an associated coded magnet**
Plastic case guard switches for use on machines with low inertia.
Specifically designed for industrial machines fitted with **doors, covers or guards with imprecise guiding**.
They are ideally suited for machines subjected to frequent washing or liquid spray.
They protect the operator by immediately stopping any dangerous movement, as soon as the distance between the switch and its magnet is greater than 8 or 5 mm, depending on the switch model.

Coded magnetic systems	**With dedicated transmitter**
Plastic case system for use on machines with low inertia.
Specifically designed for industrial machines fitted with **one or more doors, covers or guards with imprecise guiding**.
They are ideally suited for machines subjected to frequent washing or liquid spray and that are not necessarily equipped with an enclosure or control cabinet.
These self-contained category 3 (SIL 2) or 4 (SIL 3) systems protect the operator by immediately stopping any dangerous movement, as soon as the distance between the transmitter and receiver is greater than 10 mm.

Schneider Electric

Safety detection solutions
Metal case guard switches

Actuators

The actuators are common to all metal case guard switches
Play

Play

10° 10°

Play

Play

Their oblong fixing holes enable simple adjustment when mounting on moving guards.

A pivoting actuator (both horizontally and vertically) is available when using guard switches in conjunction with hinged guards or guards with imprecise guiding.

Straight actuators are supplied with an adaptor shank for simple replacement of an **XCK J** guard switch by an **XCS** switch, without the need to drill additional fixing holes for the switch or actuator.

Turret head

All metal case guard switches are fitted with a square turret head which can be rotated through 360° in 90° steps

0°

90°

270°

180°
8 directions of actuation are possible for the actuator:
- 4 in the horizontal plane,
- 4 from above the switch (4 alternative positions of the actuator slot, depending on the orientation of the head).

When loosening the fixing screw for re-orientation of the operating head, the head itself remains attached to the body and the contact states remain unchanged.

Safety contacts

Metal case guard switches incorporate a **3-pole contact block** with positive opening operation, which is actuated by insertion or withdrawal of the actuator attached to the guard.
The withdrawal of the actuator opens the N/C safety contact(s), even in the event of the contact sticking or welding.

The 3-pole contact block enables redundant safety circuits to be established (for example: N/C + N/C or N/C + N/O) and also, to provide signalling (for example: PLC, illuminated beacon, etc.).

LED indicators

An orange LED (optional for guard switches type XCS A, XCS B and XCS C, standard for guard switches type XCS E) **indicates the position of the machine guard:**

LED illuminated: actuator not inserted in head of switch, N/C contact(s) open, guard open.

LED not illuminated: actuator inserted in head of switch, N/C contact(s) closed, guard closed.

A green LED (incorporated on guard switches type XCS E) **indicates the locking of the machine guard:**

LED not illuminated: actuator not inserted in head of switch: the machine cannot be operated,

LED illuminated: actuator inserted in head of switch **and actuator locked**. The machine is either ready for starting, running or decelerating to a standstill.

3

Manual locking/unlocking by pushbutton or key operated lock on XCS B and XCS C

The pushbutton or key operated lock fitted to guard switches type XCS B and XCS C allows manual locking/unlocking of the machine guard
Their use is not necessary for the normal operation of the guard switch.
For ease of access, the pushbutton or lock may be mounted on the right or the left of the guard switch head.
For guard switches type XCS C, when the machine guard is locked (key in position "LOCK"), the resistance to forcible withdrawal of the actuator fitted to the guard is **150 daN**.
The key is removable from the locking device in the "LOCK" position.

Locking/unlocking by solenoid on XCS E

Guard switches type XCS E incorporate a solenoid for locking/unlocking of the machine guard
With the machine guard closed and locked, the resistance to forcible withdrawal of the actuator fitted to the guard is **200 daN**.

In addition to the 3-pole contact block, positively operated by the actuator fitted to the guard, XCS E guard switches incorporate a **N/C + N/O or N/C + N/C contact block mechanically linked to the solenoid**.
The N/C contact(s) are for use in the safety circuit of the machine and the N/O contact for signalling the status of the solenoid.

Key operated lock on XCS E

Guard switches type XCS E are fitted with a key operated lock allowing the unlocking of the machine guard whilst being held in the lock position by the solenoid (for use by authorised personnel only)
The manual unlocking of the guard using the key operated lock is useful in the following cases:
 - whilst the machine is undergoing maintenance (with the key turned to the "UNLOCK" position and then removed, the level of protection is higher in preventing an accidental machine start. The safety for maintenance personnel is thus improved),
 - in the event of a power failure,
 - in the event of an interlocking circuit malfunction (interlocked condition maintained: positive safety). The electrical supply providing the unlocking via the solenoid always takes priority over manual unlocking using the key operated lock.
The lock fitted to standard guard switches has key withdrawal from the "LOCK" and "UNLOCK" positions.

Schneider
Electric

Safety detection solutions
Plastic case guard switches

Actuators

The actuators are common to all plastic case guard switches
Their oblong fixing holes enable simple adjustment when mounting on moving guards.

A pivoting actuator (both horizontally and vertically) is available when using guard switches in conjunction with hinged guards or guards with imprecise guiding.

Straight actuators are supplied with an adaptor shank for simple replacement of an **XCK P** guard switch by an **XCS PA** switch, or an **XCK T** guard switch by an **XCS TA** switch, without the need to drill additional fixing holes for the switch or the actuator.

Turret head

Guard switches XCS PA, XCS TA and XCS TE are fitted with a square turret head which can be rotated through 360° in 90° steps. Guard switches XCS MP have a fixed head
8 directions of actuation are possible for the actuator:
- 4 in the horizontal plane (1 for **XCS MP**),
- 4 from above the switch (1 for **XCS MP**)

(4 alternative positions of the actuator slot, depending on the orientation of the head).

When loosening the 2 fixing screws for re-orientation of the operating head, the head itself remains attached to the body and the contact states remain unchanged **(XCS PA, XCS TA, XCS TE)**.

Safety contacts

The guard switches incorporate either a 2-pole contact block (XCS MP, XCS PA and XCS TE) or a 3-pole contact block (XCS MP, XCS PA and XCS TA), with positive opening operation, which is actuated by insertion or withdrawal of the actuator attached to the guard

XCS PA, XCS TE

or **XCS PA, XCS TA**

or **XCS MP**
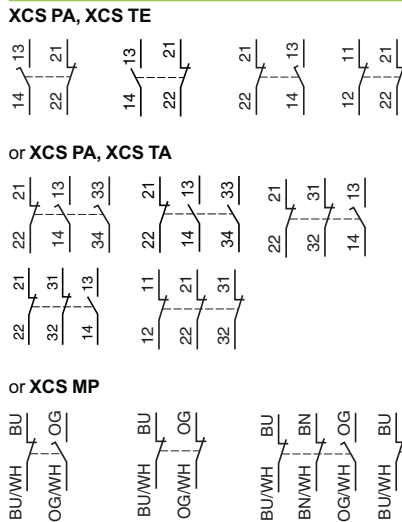

In addition, guard switches type XCS TE incorporate a N/C contact block (with positive opening operation) actuated by the solenoid. The N/C contact is for use in the safety circuit of the machine. The withdrawal of the actuator opens the N/C safety contact(s), even in the event of the contact sticking or welding.

The 2-pole N/C + N/C or 3-pole N/C + N/C + N/O or N/C + N/C + N/C (XCS TA/MP only) contact block enables category 3 control circuits to be established conforming to
EN 954-1/ISO 13849-1 by using both N/C safety contacts in redundancy, or a category 1 control circuit by using one N/C contact in the safety circuit and the other N/C contact for signalling (for example: PLC, illuminated beacon, etc.). Alternatively, these guard switches used in conjunction with a **PREVENTA XPS** safety module establish a category 4 control circuit. Designers should follow the relevant recommendations for validation of control systems.

Guard retaining device

The guard retaining device XCS Z21 can be used with all plastic case guard switches type XCS PA and XCS TA that are used in conjunction with either the wide (XCS Z12) or pivoting (XCS Z13) actuator
It assists in holding the guard closed by providing an extra retaining force of 5 daN.

It is specially suited for use with light machines operating in arduous conditions (vibration, mechanical shock, guard not vertical, risk of guard rebound on closing, etc.).

It can be used for horizontal actuator actuation directions as well as those from above.

Schneider Electric

3

Locking/unlocking by solenoid on XCS TE

Guard switches type XCS TE incorporate a solenoid for locking/unlocking of the machine guard
With the machine guard closed and locked, the resistance to forcible withdrawal of the actuator fitted to the guard is **50 daN**.
In addition to the 2-pole contact block, positively operated by the actuator fitted to the guard, XCS TE guard switches incorporate a **N/C contact block mechanically linked to the solenoid**.
The N/C contact is for use in the safety circuit of the machine.

Unlocking by special tool for XCS TE

Guard switches type XCS TE are supplied with a special tool 1 that enables unlocking of the machine guard whilst being held in the locked position by the solenoid (for use by authorised personnel only)
The manual unlocking of the guard using the tool 1 is useful in the following cases:
- whilst the machine is undergoing maintenance (with the tool turned to the "UNLOCK" position and then removed, the level of protection is higher in preventing an accidental machine start. The safety for maintenance personnel is thus improved),
- in the event of a power failure,
- in the event of an interlocking circuit malfunction (interlocked condition maintained: positive safety). The electrical supply providing the unlocking via the solenoid always takes priority over manual unlocking using the special tool.

Example of operation for an XCS TE guard switch with locking on de-energisation of solenoid

Safety detection solutions
Rotary lever and spindle operated guard switches

Presentation

Turret head
Guard switches for hinged covers or guards, featuring a hinged lever or spindle operator, incorporate a turret head that can be rotated through 360° in 90° steps.
Two additional self-locking screws are included with each switch for positive fixing of the head.

2 types of body

XCS PL   *XCS TR*
■ Plastic case, narrow, with 1 cable entry for **XCS PL** and **XCS PR**.
■ Plastic case, wide, with 2 cable entries for **XCS TL** and **XCS TR**.

2 types of operating lever, 2 spindle lengths
■ **Levers**
Straight or elbowed (flush with rear of switch), making the lever switches suitable for use with all types of hinged guards, whether:
  - flush with the machine framework (use a switch with an elbowed flush lever),
  - overhanging in relation to the machine framework (use a switch with a straight lever).
3 alternative operating lever positions allow the switches to be used with guards that open to the left, centre or right.
■ **Spindle operators**
2 spindle lengths: 30 or 80 mm.

Safety contacts
Guard switches **XCS PL** and **XCS PR** incorporate a 2-pole or 3-pole contact block, with positive opening operation. The contact arrangements can be: N/C **+ N/O (N/O staggered)**, N/C + N/C, N/C + N/O + N/O (2 N/O staggered) or N/C + N/C + N/O (N/O staggered).
Guard switches **XCS TL** and **XCS TR** incorporate a 3-pole contact, with positive opening operation. The contact arrangements can be: N/C + N/O + N/O (2 N/O staggered) or N/C + N/C + N/O) (N/O staggered).
Opening of the N/C safety contact(s) occurs when the operating lever or spindle is displaced by an angle equal to or greater than 5°.

Applications

These guard switches provide a solution for monitoring **hinged protective guards** with small opening radius on machines with low inertia (no rundown time).
They are specially suitable for existing machines which need to be brought in-line with the latest standards and directives since they can be used in conjunction with existing covers, including those whose mounting is somewhat imprecise.
Mounting of the guard switch improves the machine operator's level of safety by limiting the opening of the protective guard and reducing the risk of touching any moving parts before they have come to a stop.
Presentation

Coded magnetic switches
3 types of case
■ PBT plastic body
■ Compact rectangular, **XCS DMC**
■ Standard rectangular, **XCS DMP**
■ Cylindrical Ø 30, **XCS DMR**
■ Pre-cabled, length 2 m, 5 m or 10 m
■ Connector on flying lead connection:
  - M8: DMC
  - M12: DMP, DMR

Contacts
Coded magnetic switches are fitted with 2-pole
(XCS DMC/XCS DMR/XCS DMP) or 3-pole
(XCS DMP) Reed type contacts and are available with
or without a "guard closed" LED indicator.
The N/C and N/O contacts change state as soon as the
magnet is at a distance from the sensor of
approximately 8 mm for types **XCS DMP** and
XCS DMR and approximately 5 mm for type
XCS DMC.

Connection
When used in safety circuits, the Reed technology
contacts must always be used in conjunction with a
Preventa safety module.

Coded magnetic systems with dedicated transmitter
1 type of case
■ PBT plastic body
■ Self-contained range: category 3 (SIL 2) **XCS DM3**
and category 4 (SIL 3) **XCS DM4**.
■ Pre-cabled, length 2 m, 5 m or 10 m
■ Flying lead with M12 connector

Technology
Coded "Hall effect" detection
PNP safety outputs
Integrated self-monitoring using micro-processors.
Detection distance from 0 to 10 mm obtained on
approach of dedicated transmitter XCS DMT.

Functions
■ Dynamic EDM (External Device Monitoring) only for
XCS DM4,
■ Fault and short-circuit detection,
■ Output diagnostics (non safety related) only for
XCS DM4
■ LED indicator
■ Possible chaining of up to a maximum of 32 systems
for **XCS DM3** only.

Applications
These switches provide a solution for monitoring
moveable machine guards fitted to machines with
quick rundown times.
They are particularly suitable for guards without
accurate guidance and for use in difficult environments
(dust, liquids, etc.).
Installing self-contained systems provides an optimum
solution (no control system required).
They enable
- monitoring of one or several guards (opening, closing)
on small machines,
- savings in space and the elimination of enclosures
and/or control cabinets.

Safety detection solutions
Safety limit switches

Presentation

With head for linear movement (plunger) or rotary movement (lever)
■ Narrow metal case.
■ Compact **XCS M**
■ With protective plate, preventing both access to the fixing screws or adjustment of the head by non authorised personnel.
■ Torx fixing screws.
■ A removable cable entry to facilitate wiring.

Contacts

XCS M3 limit switches are fitted with 3-pole contacts and **XCS M4** switches are fitted with 4-pole contacts.
4 versions of complete switches are available incorporating these contacts:
- metal end plunger,
- roller plunger,
- thermoplastic roller lever,
- diameter 19 mm steel roller lever.

Connection

Pre-cabled switches, either 7 x 0.5 mm² or 9 x 0.34 mm².

Applications

These switches provide a solution for monitoring covers, guards or grilles on machines with low inertia (quick rundown time), either in conjunction with actuator operated guard switches or not.
When used on their own, they are always installed in "positive mode" or combined in pairs, with one switch being in "positive mode" and the other in "negative mode", and can, when connected to Preventa safety modules, establish a category 4 safety control system.

Safety detection solutions

Safety switches
Plastic, double insulated, fixed head, type XCS MP
Pre-cabled, length 2 m, 5 m or 10 m

Connections

Wiring to category 1 conforming to EN 954-1/ ISO 13849-1

Example with 3-pole N/C + N/C + N/O contact and protection fuse to prevent shunting of the N/C contact, either by cable damage or by tampering.
Wiring to category 3 conforming to EN 954-1/ISO 13849-1

Example with 2-pole N/C + N/O contact with mixed redundancy of the contacts and the associated control relays.
Operating key withdrawal and re-insertion necessary on power-up, in order to activate K1.
(1) Signalling contact

Wiring to category 4 conforming to EN 954-1/ISO 13849-1. Wiring method used in conjunction with Preventa safety module
(the key operated safety switch is generally used in conjunction with a standard limit switch)

Method for machines with quick rundown time (low inertia)
Locking or interlocking mechanism uses the principles of redundancy and autocheck.
The safety modules ensure these functions.

XCS MP

XCS M

XPS
Locking by operating key and actuation in positive mode associated with a safety module

Safety detection solutions
Guard switches
Plastic, turret head *(1)*, types XCS PA,
XCS TA and XCS TE
1 or 2 cable entries M16 x 1.5 *(2)*

Type of switch	Without locking of actuator	

References of switches without actuator ($\ominus$ N/C contact with positive opening operation)

2-pole N/C + N/O *(3)* break before make slow break	13 14 / 21 22	**XCS PA592**	$\ominus$	–	
2-pole N/C + N/O *(3)* snap action	13 14 / 21 22	**XCS PA192**	$\ominus$		
2-pole N/O + N/C *(3)* make before break slow break	21 22 / 13 14	**XCS PA692**	$\ominus$	–

3-pole N/C + N/C + N/O *(3)* (N/O staggered) slow break	21 22 / 31 32 / 13 14	**XCS PA992**	$\ominus$	**XCS TA792**	$\ominus$
3-pole N/C + N/C + N/O *(3)* snap action	21 22 / 31 32 / 13 14	**XCS PA492**	$\ominus$	–	
3-pole N/C + N/C + N/C *(3)* slow break	11 12 / 21 22 / 31 32	–		**XCS TA892**	$\ominus$
Weight (kg)		0.110		0.160	

Complementary characteristics not shown under General characteristics (page 3/19)

Actuation speed	Maximum: 0.5 m/s, minimum: 0.01 m/s
Resistance to forcible withdrawal of actuator	**XCS PA**, **XCS TA**: 10 N (50 N using actuators **XCS Z12** or **XCS Z13** together with guard retaining device **XCS Z21**) **XCS TE**: 500 N
Mechanical durability	**XCS PA, XCS TA**: > 1 million operating cycles **XCS TE**: 1 million operating cycles
Maximum operating rate	For maximum durability: 600 operating cycles per hour
Minimum force for positive opening	≥ 15 N
Cable entry	**XCS PA**, **XCS TE**: 1 entry tapped M16 x 1.5 for ISO cable gland **XCS TA**: 2 entries tapped M16 x 1.5 for ISO cable gland
	Clamping capacity 7 to 10 mm
Materials	Body: zamak. Head: zamak. Safety screws: 5-lobe torque. Protective plate: steel..

References of accessories

XCS Z91 *XCS Z200*

Description	For use with	Unit reference	Weight kg
Blanking plugs for operating head slot (Sold in lots of 10)	XCS PA, XCS TA, XCS TE	**XCS Z28**	0.050
Tool for forced opening of interlocking device (Sold in lots of 10)	XCS TE	**XCS Z100**	0.050
Padlocking device to prevent insertion of actuator, for up to 3 padlocks (padlocks not included)	XCS PA, XCS TA, XCS TE	**XCS Z91**	0.053
Centreur de clé-languette *(4)* (Vis de fixation fournis)	XCS PA, XCS TA, XCS TE	**XCS Z200**	0.022

(1) Head adjustable in 90° steps throughout 360°. Blanking plug for operating head slot included with switch.
(2) For cable entries tapped for n° 11 (Pg 11) cable gland, replace the last number in the reference (2) by 1 (see page 3/38)
   *Example: XCS PA592 becomes **XCS PA591**.*
(3) Schematic diagrams shown represent the contact states whilst the actuator is inserted in the head of the switch.
(4) Do not use with XCS Z91.

Schemes
Note: These schemes are given as examples only, the designer must refer to the relevant safety standards for guidance

Wiring to category 1 conforming to EN 954-1/ ISO 13849-1

Example with 3-pole N/C + N/O + N/O contact and protection fuse to prevent shunting of the N/C contact, either by cable damage or by tampering.
(1) Signalling contact

Wiring to category 3 conforming to EN 954-1/ ISO 13849-1

Example with 2-pole N/C + N/O contact with mixed redundancy of the contacts and the associated control relays. To activate K1, it is necessary to remove and re-insert the actuator when the supply is switched on.

Wiring to category 4 conforming to EN 954-1/ISO 13849-1
Wiring method used in conjunction with safety module
(The guard switch should be used in conjunction with a safety limit switch to give electrical/mechanical redundancy)

Method for machines with quick rundown time (low inertia)
Locking or interlocking device based on the principle of redundancy and self-monitoring. The safety modules ensure these functions.
Locking of actuator and operation in positive mode associated with a safety module.

Method for machines with long rundown time (high inertia)
Interlocking device for actuator fitted on guard and zero speed detection.

Product certifications		UL, CSA, BG
Protective treatment		Standard version: "TC" and "TH"
Ambient air temperature	For operation	- 25…+ 70 °C
	For storage	- 40…+ 70 °C
Vibration resistance		50 gn (10…500 Hz) conforming to IEC 60068-2-6
Shock resistance		50 gn (duration 11 ms) conforming to IEC 60068-2-27
Electric shock protection		Class 2 conforming to IEC 60536
Degree of protection		**IP 67 conforming to IEC 60529**
Cable entry		Depending on model, either: 1 tapped entry for n° 11 (Pg 11) cable gland, tapped M16 x 1.5 or tapped 1/2" NPT
Materials		Polyamide PA66 fibre glass impregnated case Stainless steel lever and fixings

Contact block characteristics

Rated operational characteristics	2 and 3 contact versions slow break	**XCS PL, XCS TL, XCS PR, XCS TR**: $\sim$ AC-15, A300: Ue = 240 V, Ie = 3 A or Ue = 120 V, Ie = 6 A All models: $---$ DC-13, Q300: Ue = 250 V, Ie = 0.27 A or Ue = 125 V, Ie = 0.55 A conforming to IEC/EN 60947-5-1
Rated insulation voltage	2 and 3 contact versions	**XCS PL, XCS TL, XCS PR, XCS TR** : Ui = 500 V conforming to IEC/EN 60947-1 Ui = 300 V conforming to UL 508, CSA C22-2 n° 14
	3 contact version	**XCS PL, XCS PR**: Ui = 400 V degree of pollution 3 conforming to IEC 60947-1 Ui = 300 V conforming to UL 508, CSA C22-2 n° 14
Rated impulse withstand voltage	2 and 3 contact versions	**XCS PL, XCS TL, XCS PR, XCS TR**: Uimp = 6 kV conforming to IEC/EN 60947-5-1
	3 contact version	**XCS PL, XCS PR**: Uimp = 4 kV conforming to IEC/EN 60947-5-4
Positive operation		N/C contacts with positive opening operation conforming to EN/IEC 60947-5-1 Section 3
Resistance across terminals		$\leqslant 30$ mΩ conforming to EN/IEC 60947-5-4
Short-circuit protection	2 and 3 contact versions	**XCS PL, XCS TL, XCS PR, XCS TR**: 10 A cartridge fuse type gG (gl)
	3 contact version	**XCS PL, XCS PR**: 6 A cartridge fuse type gG (gl)
Connection	2 contact version	**XCS PL, XCS TL, XCS PR, XCS TR**: Clamping capacity, min: 1 x 0.5 mm^2, max: 2 x 1.5 mm^2 with or without cable end
	3 contact version	**XCS PL, XCS PR**: Clamping capacity, min: 1 x 0.34 mm^2, max: 1 x 1 mm^2 or 2 x 0.75 mm^2
Minimum actuation speed	3 contact version	0.01 m/second

Electrical durability

Conforming to EN/IEC 60947-5-1 Appendix C.
Utilisation categories AC-15 and DC-13.
Maximum operating rate: 3600 operating cycles/hour.
Load factor: 0.5

a.c. supply
$\sim$ 50/60 Hz
inductive circuit

2 and 3 slow break contact versions
3 slow break contact version (XCS PL/TR)
d.c. supply $---$
Power broken in W for 1 million operating cycles

Voltage	**V**	**24**	**48**	**120**
	W	13	9	7

Wiring schemes

Category 1 to EN 954-1/ISO 13849-1

Example with cable short-circuit protection fuse

Category 3 to EN 954-1/ISO 13849-1

Example with 3-pole N/C + N/O + N/O contact with mixed redundancy of the contacts and the associated control relays.

To activate K1, the lever or spindle must be rotated when the supply is switched on. **H1: "lever or spindle displaced from initial position"** indicator. When used in conjunction with an XPS safety module and another safety switch, the rotary lever or spindle operator guard switch can provide a category 3 or 4 control and monitoring system for moving guards to EN 954-1/ISO 13849-1.

Product certifications			$C\epsilon$, UL, CSA, TÜV	
Ambient air temperature	For operation	°C	-25...+70°C	
	For storage	°C	-40...+85°C	
Vibration resistance	Conforming to IEC 60068-2-6		10 gn (10…500 Hz)	
Shock resistance	Conforming to IEC 60068-2-7		30 gn, 11 ms	
Sensitivity to magnetic fields		mT	≤ 0,5	
Electric shock protection	Conforming to IEC 61140		Class III	
Degree of protection	Conforming to IEC 60529		Pre-cabled version: IP 66, IP 67 Connector version: IP 67	
	Conforming to DIN 40050		Pre-cabled version: IP 69K	
Materials			Thermoplastic case (PBT); PVC cable	
Characteristics				
Rated operational characteristics			Ub : --- 24 V + 10% - 20%	
Rated insulation voltage (Ui)			Ui : --- 36V	
Rated impulse withstand voltage (U imp)	Conforming to EN 60947-5-1	kV	2,5	
Integrated output protection			Overload and short-circuit protection	
Connection	Conforming to IEC 60947-5-2-A3 and IEC 61076		Pre-cabled, 6 x 0.25 mm², length: 2, 5 or 10 m depending on model or M12 connector (A coding)	Pre-cabled, 8 x 0.25 mm², length: 2, 5 or 10 m depending on model or M12 connector (A coding)
Cable diameter		mm	6,1 +/-0,3	
Cable resistance		mΩ/m	90	
Safety outputs (OSSD) (Output Signal Switching Devices)			2 PNP type (NO) solid-state outputs, 1.5 A (2 A up to 60°C), --- 24 V (short-circuit protected)	
Alarm output			–	1 solid-state output, 0.5 A, --- 24 V, PNP
Signalling			LED (green/red/orange)	
Maximum switching frequency		Hz	3	
Activation delay		ms	100	
Discordance time		s	2	
HFT (Hardware Fault Tolerance)			1	
			Test interval: 12 months	
Tightening torque		Nm	1,8 maxi.	
Chaining in series			32 maximum with 2 m long cable	–
Functions				
Functions			- LED status signalling	- Auto/Manual start via "Start"input - Monitoring of external switching devices (EDM: External Devices Monitoring) - Display of operating modes (LED) - Monitoring of the function (open or closed) as well as the response time of the power components.

Presentation

Zone protection

The equipment comprises category 3 safety mats, installed in front of or around potentially dangerous machines and/or robots. They provide a protection zone between machine operators and any dangerous movements.
They form protection zones that are mainly designed to ensure the safety of personnel.
They thus supplement safety devices by enabling free access for the loading/ unloading of machines.
The safety mats are used either in conjunction with safety modules or combined with other zone protection systems. They are particularly suited for use in polluted environments (dust, oil, etc.).
"Protect Area Design" configuration software *(1)* enables design and setting-up of the installation.

Applications

Safety mats are mainly used in:
□ assembly and packaging lines,
□ conveying and handling lines,
□ warehousing and storage systems.

Description

□ A safety mat comprises:
- a sensing zone **1**,
- a border comprising aluminium rails **2**
- and rail corners which secure the assembly **3**.
□ Safety mats can be butt mounted in order to define the safety zone.
□ Mats are electrically interconnectable, without loss of sensitivity.
Operating principle

Safety modules type XPS AK and safety controllers type XPS MP/MC used in conjunction with safety mats XY2 TP establish a category 3 safety device conforming to standard EN 954-1/ISO 13849-1.
■ The hazardous zone **1** is defined by the dangerous movement of a machine.
■ The safety zone **2**, defined in accordance with standard EN 999/ISO 13855, comprises one or several butt mounted safety mats **3** (10 maximum for XPS AK and 30 maximum for XPS MP/MC).

■ Safety mats are used for detecting persons stepping onto the mat or falling objects in accordance with standard EN 1760-1/ISO 13856;
- weight > 20 kg for a single mat,
- weight > 35 kg for a group of mats.
■ Any detection of movement on the safety mat immediately instigates the stopping of the dangerous movement of the machine to be made safe. The resetting of the machine can be performed manually or automatically, depending on the wiring configuration of the safety module within the process.
■ The safety mats can also be used for detection applications not related to safety.

Directives and standards

■ The safety mats conform to the following standards:
□ EN/ISO 12100,
□ EN 1050/ISO 14121,
□ EN/IEC 60947-5-1,
□ EN 954-1/ISO 13849-1,
□ EN 1760-1/ISO 13856-1,
□ EN/IEC 60204-1,
□ UL 508,
□ CSA C22-2 n° 14.
■ The safety mats are c UL us and BG (when used in conjunction with safety modules XPS AK and safety controllers type XPS MP/MC) certified and approved.

(1) See pages 3/92 to 3/94.

Schneider Electric

Safety detection solutions
Preventa safety mats
Type XY2 TP
S = minimum distance between the hazardous zone and the detection limit.
━━━ Safety zone

Installation precautions

Standard EN 999/ISO 13855 defines:
■ the minimum distance between the hazardous zone and the detection limit of the device furthest away from the hazardous zone, see calculation below,
■ the body approach speed.

Standard EN 1760-1/ISO 13856-1 states the following requirements:
■ surface layout drawing,
■ surface preparation,
■ handling and connection,
■ starting and testing.

Safety rules

Detection of failures liable to compromise safety and stopping of the machine
The design of the machine and its control system must be to the same level of safety as that of the safety mat system in order to ensure the immediate stopping of the machines dangerous movement as soon as the hazardous zone is entered.
It must not be possible to enter the protected zone without tripping the protection system. Therefore, safety mats must be installed in such a way that they cannot be avoided.
The machine can only be restarted if no danger exists and no personnel are present in the hazardous zone.

Calculation of the minimum safety distance according to the application

Standard EN 999/ISO 13855 states the following calculation of distance:
■ Safety mat installed on a flat surface:
$S = (1600 \text{ mm/s} \times (t1 + t2)) + 1200 \text{ mm}$.
■ Safety mat installed on a step:
$S = (1600 \text{ mm} \times (t1 + t2)) + (1200 \text{ mm} - 0.4H)$.

S = minimum distance in mm, in a horizontal plane, between the hazardous zone and the detection limit of the device furthest away from the hazardous zone.
T = overall response time = t1 + t2.
t1 = maximum time in seconds between activation of the detection function (safety mat) and the changeover of the output signal switching devices to the inhibited state (e.g. safety module type XPS AK).
t2 = response time of machine in seconds. Time required to stop the dangerous movement of the machine.
H = distance above reference plane (e.g. height of step in mm).

Note: in all cases S > 750 mm.

Example of an application processed using "Protect Area Design" software (1)
■ Unintentional access to the hazardous zone of a machine must be detected by a safety device.
■ The estimated risk combined with a very dusty environment indicates that a floor mounted sensing device (safety mat) would be appropriate.
■ The stopping time of the machine is 300 ms and the response time of the sensing device is ≤ 40 ms.

Calculation formula: $S = (1600 \text{ mm/s} \times T) + (1200 \text{ mm} - 0.4 \times H) = (1600 \times 0.34) + (1200 - 0) = 1744 \text{ mm}$.

Protect Area Design
Software configurator for safety installations
incorporating light curtains or safety mats

Presentation

Preparation and standards

Before using the configurator, it is necessary to perform the following 2 procedures: risk assessment in accordance with EN 1050/ISO 14121 and risk reduction in accordance with EN/ISO 12100-1, in order to decide the contribution of the risk from the light curtain or safety mat and to select the appropriate control system category.

The Protect Area Design software

Protect Area Design software is a configurator that enables selection of the zone protection device (sensing mats, light curtains) required for safety applications.
This software enables the user, via a graphic interface, to create, test or modify a safe working area in the vicinity of a potentially dangerous machine.
Having established the predefined fields (desired control system category, dimensions of the machine, etc.), the Protect Area Design software calculates the safety distance in relation to the reaction time of the machine, the light curtain and the approach direction to the hazardous zone. It then displays a recommended safety protection solution and creates the list of products (references, quantities and accessories to be used).
Protect Area Design software is user-friendly and compatible with Windows 98, NT, 2000 and XP.

Main functions of the software

The software enables creation of an application using the procedures stated below or selection from applications previously established:
■ assisted procedure for light curtains,
■ unassisted or assisted procedure for sensing mats.

List of products

Graphical representation of the light curtain configuration

Configuration of light curtains

The Protect Area Design software enables selection of the type of application depending on the approach movement (at right-angles, parallel to, at an angle) into the hazardous zone.

■ For configuration in "Assisted procedure" mode the software enables access to the following menus:

□ selection of the control system category and object to detect,

□ description of the machine and its reaction time,

□ selection of a type of application depending on the approach direction into the hazardous zone,

□ calculation and selection of the following parameters:
  - detection capability: finger, hand or whole body
  - type of output: alarm/auxiliary,
  - protection: Lexan cover *(1)* or IP 67 tube *(1)*,
  - monitoring modules options: 2 to 4 light curtains,
  - muting modules option: 1 light curtain and 1 or 2 light curtains,
  - light curtain options: EDM *(2)*, MTS *(1)*, Blanking *(2)*,

Floating blanking *(2)* (1 or 2 light beams).

On-screen results

Following calculation of the safety distance, the software displays the following results:

■ component selection (description of products),

■ graphical representation of the configuration,

■ list of selected components (references and quantities),

■ configuration of products.

Presentation

Protection of personnel

Safety light curtains are electro-sensitive protection equipment (ESPE) designed for the protection of persons operating or working in the vicinity of machinery, by stopping the dangerous movement of parts as soon as one of the light beams is broken.

In particular, they provide protection to ensure the **safety of personnel** operating dangerous machinery (annex IV of 98/37/EC) but they are equally suitable for use with many other types of machines. They make it possible to protect personnel whilst allowing free access to machines.

The absence of a door or guard reduces the time required for loading, inspection or adjustment operations as well as making access easier.

Directives and standards

Conformity to standards

These light curtains conform to:
■ European Machinery Safety Directive 98/37/EC and European Work Equipment Directive 89/655/EEC,
■ Low Voltage Directives 73/23/EEC and 93/68/EEC and also, the Electromagnetic Compatibility Directive 89/336/EEC,
■ Standard EN/IEC 61496-1, EN/IEC 61496-2 (electro-sensitive protection equipment: ESPE),
■ Standard EN 60825 (emission power),
■ Standard EN 999/ISO 13855 (installation positioning),

These light curtains are UL, CSA and TÜV certified.

Application sectors

Main applications

■ Application sectors for type 2 products:
  - assembly and packaging lines,
  - conveying and handling lines,
  - warehousing and storage systems,
  - waste disposal skips.

■ Types of machine requiring the use of type 4 products:
  - presses (all types), shears and trimmers,
  - hoisting equipment,
  - saws (all types),
  - machine tools (lathes, milling machines, machining centres),
  - woodworking machines (planing machines, lathes, spindle moulding machines, side and face milling cutters),
  - textile machinery (carding machines, weaving looms, steam rooms),
  - assembly machines,
  - assembly robots.

Safety rules

Detection of failures

Detection of failures liable to compromise safety and stopping of the machine

The design of the machine and its control system must be to the same level of safety as that of the safety light curtain in order to ensure the immediate stopping of the machines dangerous movement as soon as the hazardous zone, protected by the light curtain, is entered.

It must not be possible to enter the protected zone without breaking the protective light beams. The safety light curtain must therefore be installed in such a manner that the light beams cannot be avoided.
The machine can only be restarted if no danger exists and no personnel are present in the hazardous zone. The risk that persons might be inside the protected zone but out of the protective light beams must be addressed.

3

Schneider Electric

Safety detection solutions
Safety light curtains

Installation rules

Transmitter | Light curtain beams | Receiver
These are defined in standard **EN 999. In particular:**
- the safety distance between the light curtain and the hazardous zone,
- the body approach speed,
- multiple single-beam devices,
- multi-beam light curtains.

Calculation of minimum safety distance S between the light curtain and the hazardous zone

S = K (t1 + t2) + C (general formula)

S = minimum distance in mm
K = body approach speed (or of part of the body) in mm/s
t1 = response time of protection device in s
t2 = stopping time of machine (dangerous movements) in s
C = additional distance in mm

■ For single-beam light curtains:
K = 1600 mm/s
C = 1200 mm for a single beam
C = 850 mm for several beams
The heights protected are as follows:

Number of beams	Heights protected (mm)
4	300, 600, 900, 1200
3	300, 700, 1100
2	400, 900
1	750

■ For multi-beam light curtains:
K = 2000 mm/s
C = 8 (d - 14) where **d** = detection capacity of the light curtain

Special rules for presses

The use of safety light curtains and mechanical protectors on metal working presses is governed by specific standards and rules.
The standards specify that only safety light curtains or mechanical protectors must be used as safety devices so that, if a person enters the protective field whilst the dangerous movement is in progress, the machine stops as quickly as possible. "Quick stopping" means stopping of the ram before the operator can reach the hazardous zone, taking into account their speed of movement.

The continuous self-monitoring function of safety light curtains is essential for metal working press applications. If a fault occurs in the safety device, the potentially dangerous machine must be stopped automatically.

Once the protected zone is clear, the movement which was started and then interrupted by entry into the zone must not resume its normal travel, even after a Reset button has been pressed. Resetting must restart the movement from the beginning of the cycle. **The safety light curtain must allow starting of a dangerous movement only if its correct operation has been proved** (by pushing a test rod into the hazardous zone, or by means of an automatic device) and if a Reset button (start interlock) has been reactivated.

The safety distance S is calculated in a special way for:
- mechanical presses: refer to **EN 692**,
- hydraulic presses, pneumatic folding machines, shears, bending and shaping machines: refer to **prEN 693**.

3

Safety detection solutions
Safety light curtains

Prevention of access over top of light curtain
Without additional safety device:
insufficient degree of protection

With additional safety device:
light beam(s) broken, the machine
stops

Prevention of access from beneath the light curtain
Without additional safety device:
insufficient degree of protection

With additional safety device:
light beam(s) broken, the machine
stops

Prevention of access from rear of light curtain
Without additional safety device:
insufficient degree of protection

With additional safety device:
light beam(s) broken, the machine
stops
Addition of solid protection to the light curtain when using channel
selection

Additional safety devices

Safety light curtains can only be used on machines on which the movement of
working components can be **stopped at any time during a hazardous phase**.

These light curtains provide a stop signal, not a control instruction. This stop signal
must be stored.

Clearing of the light curtain must not result in restarting of moving parts.

Subsequent restarting must only be possible by means of deliberate operation of the
appropriate control device, after having checked that there is no longer any danger.

**Electrical interfacing between the light curtain and the machine circuits must
correspond to the machine standard specifications.**

Where safety light curtains do not provide an adequate degree of protection due to
their location, additional suitable safety devices or additional light curtains must be
used in order to prevent operators from entering the protective light curtain and
reaching the hazardous zone (EN 294/ISO 13852, EN 811/ISO 13853, or from
remaining in the area between the hazardous zone and the safety light curtain
(EN 999/ISO 13855).

The position and size of these additional safety devices must be such that it is
impossible for operators to reach the hazardous zone in any way whatsoever
(over the top, from beneath, from behind or from the side) **without breaking the
beams of the light curtain**.

These additional safety devices must be:
■ either fixed
(if possible, screwed or welded to the machine),
■ or moving
(with continuous monitoring of their position if they have to open).

It must be impossible for operators to disconnect or cut-out the switching circuits for
these additional safety devices.

Protection for "blanking" or "floating blanking" functions
The "blanking" (inhibition of light beams) or "floating blanking" (floating inhibition of
light beams) functions create non protected areas in the detection field. These non
protected areas are required for some applications. If an obstruction does not
completely fill these unprotected areas, one of two actions must be implemented:
- an increase of safety distance to take into account a larger opening in the light
curtain,
- the area not filled by an obstruction must be guarded by a solid protection method
(mechanical barrier: metal plate or unfolded structure).

Schneider Electric

Safety detection solutions
Safety light curtains

Installation precautions

Reflective surface
Reflective surface

The devices must be installed such that the transmitter and associated receiver are mounted facing each other and correctly aligned for both height and angle.

The aperture angle of the optics and transmitter/receiver alignment tolerance are ± 2.5°.

Reflective surfaces located alongside the optical axis could result in stray reflections interfering with the beams which are the furthest away from the axis and, in consequence, prevent detection of an object entering the hazardous zone. The direct beam could then be joined by a stray reflected beam and this latter beam would not be broken when the object is in the axis.

For this reason, prEN 50100-1 and 2 and EN/IEC 61496-1 specify a minimum distance **D** whereby:
- for 0 < **L** < 3 m, **D = 131 mm**,
- for **L** > 3 m, **D = (0.035 x L) + 5** (with a minimum limit value of 131 mm).

D = minimum distance between the light curtain and reflective surface in mm
L = sensing distance of the light curtain in mm

Mutual interference

Certain installation configurations may require the installation of 2 (or more) safety light curtains side by side.

In this case, setting-up as indicated below is recommended.
Environments subject to interference

Industrial applications sometimes place products in extreme operating conditions, mainly due to:

■ **Electromagnetic interference** generated by the proximity of variable speed drives, welding machines or walkie-talkies.
The products in the XUS L range are designed to be immune to such interference. They conform to:
- level 3 according to EN/IEC 61496-1,
- resistance to interference caused by variable speed drives.

■ **Light interference** (conformity to standard EN/IEC 61496-2).

3

Safety detection solutions
Safety light curtains

Definitions
Detection capacity (d)

This is the smallest diameter (object) that a type 4 safety light curtain is capable of detecting with absolute certainty.

d = P + e

P: distance between the axis of 2 adjacent beams
e: diameter of the beams

XUS L range	P (mm)	e (mm)	d (mm)
XUS L● Finger protection	10.7	3.3	14
XUS L● Hand protection	21	9	30

Protected height (Hp)

According to prEN 50100-2, this is the zone (or height) within which an object of equal diameter to the detection capacity **d** is detected with absolute certainty.
Response time

European standard EN 999/ISO 13855 fully incorporates the various aspects of "response time" in the formula for calculating the minimum safety distance (see page 3/99):

S = K (t1 + t2) + C

with, in particular:
  - t1: response time of the protection device (in s). This is the time indicated for the XPS CE and XUS L ranges. It is the total time between detection by the device and switching of the output component.

  - t2: stopping time of the machine and, in particular, of its dangerous movements (in s). This information is supplied by the machine manufacturer. It is the time between the stop instruction and the actual stop of the dangerous mechanical components.

Schneider Electric

Safety detection solutions
Safety light curtains

Functions

Protection mode
AUTO/MAN (automatic/manual): this is what standard EN/IEC 61496 calls start (or restart) interlock of the safety light curtain:
■ in AUTO mode: on power-up or after the beams have been cleared, the light curtain resets itself automatically (closing of the OSSD output safety circuits),
■ in MANUAL mode: on power-up or after the beams have been cleared, the light curtain keeps its output safety circuits in the "open" position. Pressing (and releasing) the reset button will cause actual resetting of the light curtain (and closing of its OSSD output safety circuits).

Note: in all cases, a general start instruction for the machine will trigger its actual start-up.

Monitoring of external switching devices
Also called EDM (External Devices Monitoring) by standard EN/IEC 61496, this consists of monitoring the function (open or closed), together with the time taken to reach that condition, of the machines power switching components.

Auxiliary output
This is a low power solid-state output for signalling, when configurable (XUS LM/ XUS LP), to the automation system. This output closes when the light curtain switches to run mode.

Alarm
This is a low power solid-state output for signalling to the automation system. This output closes when the light curtain switches to alarm mode.

Signalling
LED display of operating modes and alarm.

Alignment aid
Display by visible infrared LED of each beam broken.

Muting (inhibition)
When activated, the "muting" function inhibits the detection function of the light curtain.
Activation (or deactivation) is achieved by means of standard sensors (photo-electric or other). When activated, a signal is sent to the automation system. This function is used to allow objects to access the hazardous zones during the process.
Signalling informs the operator or operators that they are not protected.

Blanking
This function makes it possible to inhibit detection by a selected group of light beams in the light curtain (and not all the beams as with muting). This function (adapted to the size of the objects) allows the presence of objects during process operations. Caution when using: the detection capacity changes. This imposes a greater safety distance. In addition, the use of additional protection each side of the object present must be included, in order to prevent any intrusion into the free areas.

Floating blanking
This function makes it possible to inhibit one or two light beams (adjacent or otherwise), anywhere in the light curtain. This configuration is used, for example, for metal plate feeding applications on folding presses or shears.

Blanking plus floating blanking
The Blanking (fixed inhibition of light beams) and Floating Blanking (moving inhibition of one or two light beams) functions can be combined. Caution, these applications require complementary safety measures.

Light curtain type			XUS LTQ6●●●● (14 mm)	XUS LTR5●●●●● (30 mm)	XUS LTY5●●●●● (30 mm)
Environmental characteristics					
Conformity to standards			ANSI/RIA R15.06, ANSI B11:19-1990, OSHA 1910.217(C), OSHA 1910.212, EN/IEC 61496-1 and EN/IEC 61496-2 (Type 4)		
Certifications			C€, TUV, UL, CSA		
European directives			Machinery directive 98/37/EC, Work equipment directive 89/655/EEC and EMC directive 89/336 EEC		
Ambient air temperature	Operating	°C	0…+ 55		
	For storage	°C	- 25…+ 75		
Relative humidity			95% maximum, without condensation		
Degree of protection			IP 65		
Shock and vibration resistance	Conforming to IEC 61496-1		Shock resistance: 10 gn, impulse 16 ms, Vibration resistance: 10…55 Hz, amplitude: 0.35 ± 0.05 mm		
Materials			Casing: aluminium with electrostatically applied red (RAL 3000) polyester paint finish; end caps: 20% fibreglass impregnated polycarbonate.		
Fixings			End brackets (included)		
Optical characteristics					
Minimum detection capacity		mm	14 (finger)	30 (hand)	
Nominal sensing distance (Sn)		m	0.3…7.5	0.3…9	0.3…20
Height protected		mm	260…1390	350…2095	
Effective aperture angle (EAA)			2.5° at 3 m (3° when used with IP 67 protection tube)		
Light source			GaAIAs LED, 850 nm		
Immunity to ambient light			Conforming to IEC/EN 61496-2		
Electrical characteristics					
Response time		ms	20…40	20…35	
Power supply			$\overline{\cdots}$ 24 V ± 20% 2 A conforming to EN/IEC 61496 and EN/IEC 60204-1		
	Transmitter	mA	285		
	Receiver	A	1.4 (with maximum load)		
Maximum current consumption (no-load)	Transmitter	mA	285		
	Receiver	mA	300		
Immunity to interference			Conforming to EN 61496-1		
Safety outputs OSSD (Output Signal Switching Devices)			2 solid-state PNP (N/O) outputs ≤ 500 mA, $\overline{\cdots}$ 24 V (Short-circuit protected)		
Alarm output			1 solid-state output 100 mA, $\overline{\cdots}$ 24 V, PNP or NPN depending on model		
Monitoring activation of output switching devices (MPCE/EDM)			50 mA, $\overline{\cdots}$ 24 V		
Signalling	Transmitter		1 LED (power supply)		
	Receiver		4 LEDs (stop, run, interlock, ECS/B Blanking or FB Floating Blanking)		
Connections (1)	Transmitter		M12, 5-pin, male connector on 0.25 m flying lead		
	Receiver		M12, 8-pin, male connector on 0.25 m flying lead		
Conductor c.s.a.	Transmitter	mm²	0.34. Tinned wires.		
	Receiver	mm²	Power supply and output signals: 0.5 (white, orange and yellow wires); 0.34 (grey, pink and violet wires). Tinned wires.		
Cable resistance	Transmitter	Ω	0.056 per metre for 0.34 mm² c.s.a. cable		
	Receiver	Ω	0.040 per metre for 0.5 mm² c.s.a. cable		
Cable lengths		m	Pre-wired connectors with screened (60% coverage) cable lengths of 5, 10, 15 and 30 m are available separately. The maximum cable length is 60 m, depending on the load current and power supply.		
Tightening torque			Receiver end cap assembly screw: 0.9 Nm		
Functions					
Functions			- Auto/Manual, manual 1st cycle, - Monitoring of external switching devices (EDM: External Devices Monitoring), - Test (MTS: Monitoring Test Signal), - Blanking (ECS/B), - Floating Blanking (FB), - Alignment aid by display of each light beam broken, - LED display of operating modes and alarm. Selection of Auto/Manual, blanking relay monitoring, floating/blanking and blanking + floating/blanking relay monitoring by configuration switches.		
Monitoring of external switching devices (EDM = External Devices Monitoring)			Monitoring of the function (open or closed) as well as the response time of the power components. Parameterable using configuration switches.		
"Test" function			Instigates the stop instruction of the light curtain by opening the contact (simulated intrusion)		
"Muting" function (inhibition)			Possible with external module **XPS LCM1150**		

(1) Pre-wired female connectors to be ordered separately, see page 3/106.

1390	40	128	PNP	**XUS LTQ6A1390**	8.050

(1) Supplied with a test rod, 2 sets of 2 brackets with fixings and a user guide with certificate of conformity and 1 arc suppressor set.
  Pre-wired female connectors to be ordered separately, see page 3/107.
*(2) To order a transmitter-receiver pair with an NPN alarm output, replace the letter **A** by the letter **B** in the reference.*
  *Example: reference XUS LTQ6A0260 becomes **XUS LTQ6B0260**, with an NPN alarm output.*
*(3) To order a receiver only, add the letter **R** to the end of the reference for the corresponding transmitter-receiver pair.*
  *Example: reference XUS LTQ6A0260 becomes **XUS LTQ6A0260R** for the receiver only.*
  *To order a transmitter only, replace the letter A or B by **E** and add the letter **T** to the end of the reference for the corresponding transmitter-receiver pair.*
  *Example: reference XUS LTQ6A0260 becomes **XUS LTQ6E0260T** for the transmitter only.*

Transmitter-receiver pairs for hand protection *(1)*
Detection capacity 30 mm. Sensing distance 0.3 to 9 m.

■ 2 PNP safety outputs

Height protected	Response time	Number of light beams	Alarm output	Reference *(2) (3)*	Weight
mm	ms				kg
350	20	16	PNP	**XUS LTR5A0350**	4.270
520	20	24	PNP	**XUS LTR5A0520**	4.800
700	20	32	PNP	**XUS LTR5A0700**	5.330
870	20	40	PNP	**XUS LTR5A0870**	5.860
1045	25	48	PNP	**XUS LTR5A1045**	6.990
1215	25	56	PNP	**XUS LTR5A1215**	7.520
1390	25	64	PNP	**XUS LTR5A1390**	8.050
1570	30	72	PNP	**XUS LTR5A1570**	8.580
1745	30	80	PNP	**XUS LTR5A1745**	9.110
1920	35	88	PNP	**XUS LTR5A1920**	9.640
2095	35	96	PNP	**XUS LTR5A2095**	10.160

Detection capacity 30 mm. Sensing distance 0.3 to 20 m.

■ 2 PNP safety outputs
To order a transmitter-receiver pair with a sensing distance 0.3 to 20 m, replace the letter **R** by **Y**.
Example: reference XUS LTR5A0350 becomes **XUS LTY5A0350**, with a sensing distance 0.3 to 20 m.

(1) Supplied with a test rod, 2 sets of 2 brackets with fixings and a user guide with certificate of conformity and 1 arc suppressor set.
  Pre-wired female connectors to be ordered separately, see page 3/107.
*(2) To order a transmitter-receiver pair with an NPN alarm output, replace the letter **A** by the letter **B** in the reference.*
  *Example: reference XUS LTR5A0350 becomes **XUS LTR5B0350**, with an NPN alarm output.*
*(3) To order a receiver only, add the letter **R** to the end of the reference for the corresponding transmitter-receiver pair.*
  *Example: reference XUS LTR5A0350 becomes **XUS LTR5A0350R** for the receiver only.*
  *To order a transmitter only, replace the letter A or B by **E** and add the letter **T** to the end of the reference for the corresponding transmitter-receiver pair.*
  *Example: reference XUS LTR5A0350 becomes **XUS LTR5E0350T** for the transmitter only.*

Safety light curtains, type 4
Compact light curtains XUS LT with solid-state output

3

Direct connection with XUS LT●●●
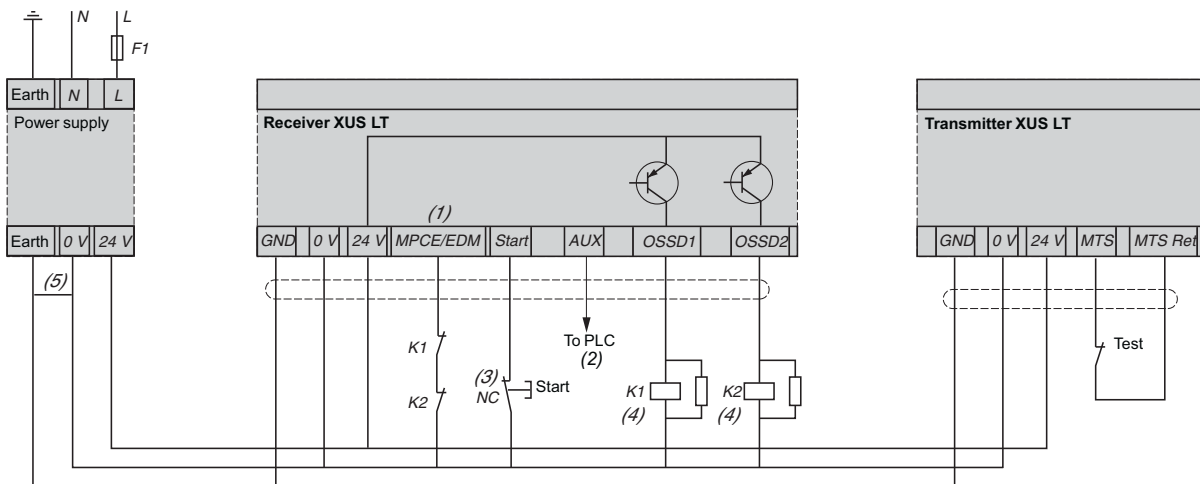

(1) For testing prior to installation, the user can select MPCE/EDM OFF (default factory setting). In this case, the MPCE/EDM line must be connected to the 0 V line of the system.
(2) The auxiliary output connects to a PLC (optional).
(3) If remote start is not used, connect the start line to the 0 V line.
(4) The MPCE/EDM coils must be protected using the arc suppressors included in the documentation kit.
(5) Connect the 0 V terminal to earth.

Note: There must not be an unscreened connection exceeding 1 m in length (for example: start button, auxiliary outputs, power supply, MPCE/EDM, OSSD1 and OSSD2). Relays K1 and K2 must have mechanically linked contacts.

Connection via a Preventa XPS AFL module
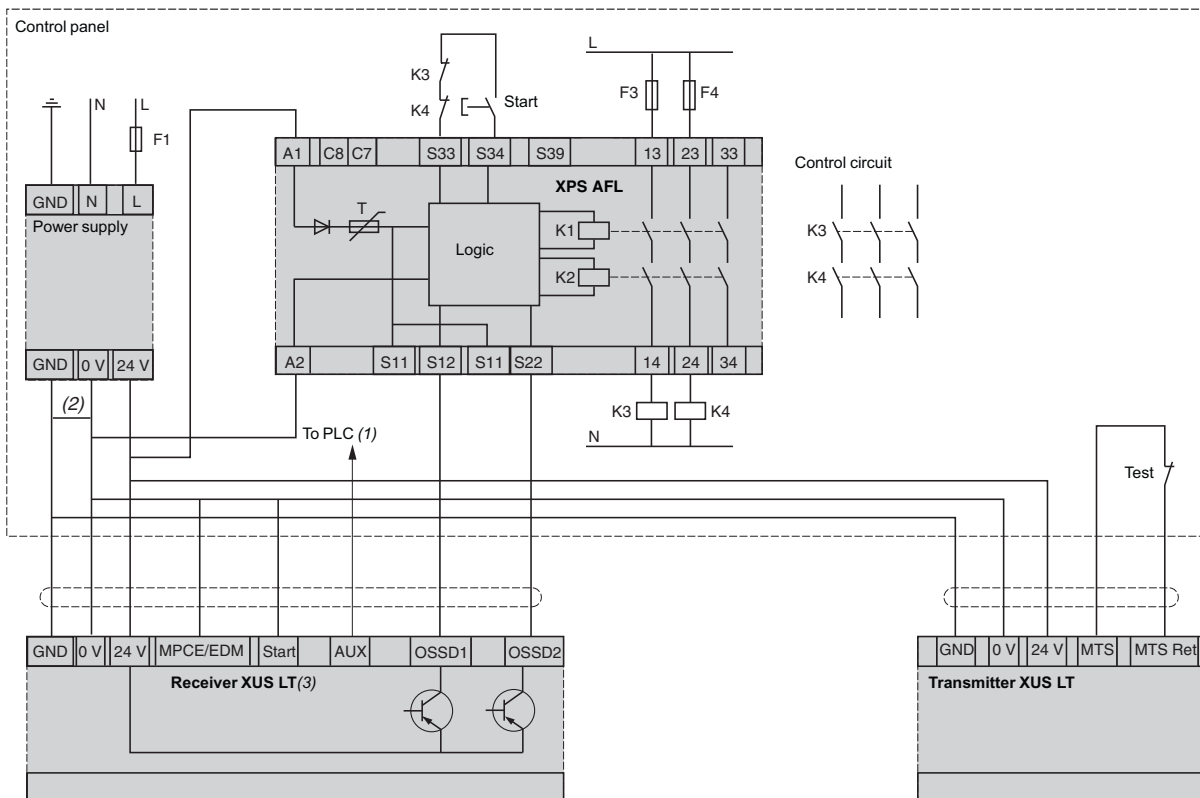

(1) The auxiliary output connects to a PLC (optional).
(2) Connect the 0 V terminal to earth.
(3) The light curtain must be configured with MPCE/EDM OFF and with automatic start.

Note: There must not be an unscreened connection exceeding 1 m in length (for example: start button, auxiliary outputs, power supply, MPCE/EDM, OSSD1 and OSSD2). Relays K1 and K2 must have mechanically linked contacts.

Direct connection with XUS LP●●●

(1) For testing prior to installation, the user can select MPCE/EDM OFF (default factory setting). In this case, the MPCE/EDM line must be connected to the 0 V line of the system.
(2) The auxiliary output connects to a PLC (optional).
(3) If remote start is not used, connect the start line to the 0 V line.

Connection via a Preventa XPS AFL module
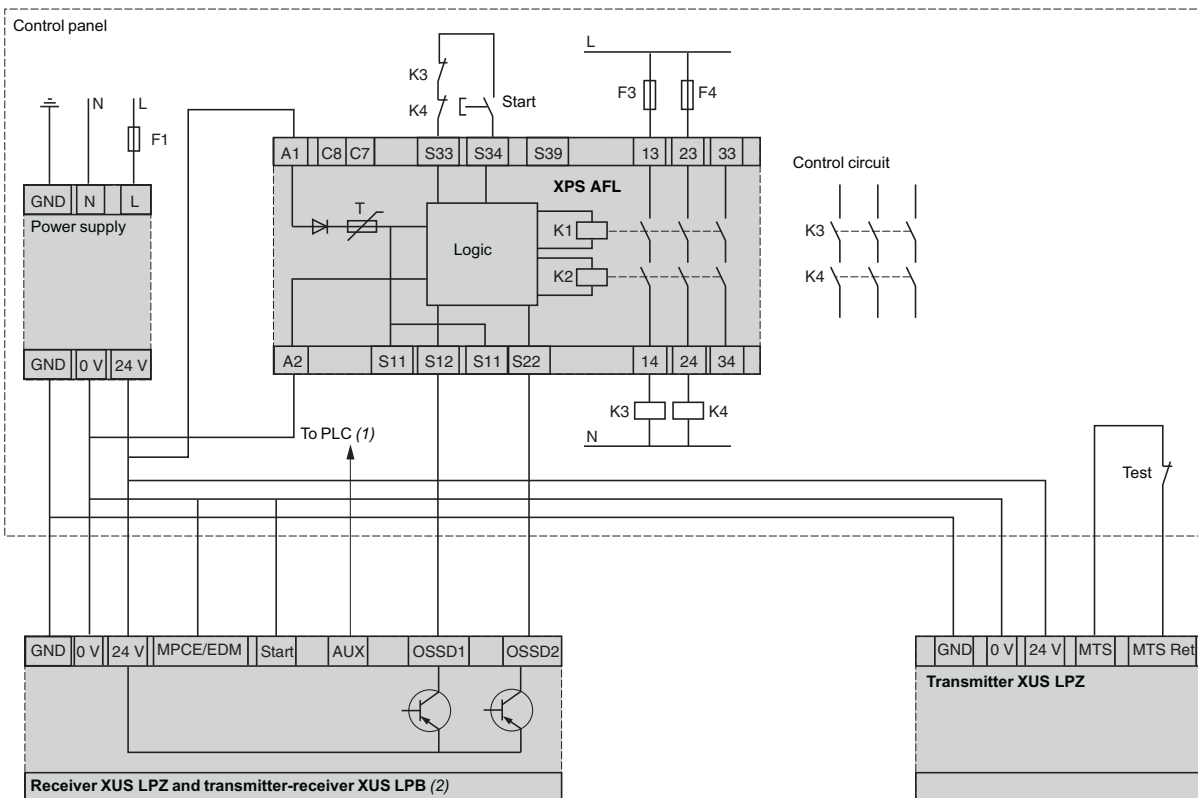

(1) The auxiliary output connects to a PLC (optional).
(2) The light curtain must be configured with MPCE/EDM OFF and with automatic start.

Light curtain type			XUS LNG●●●● (30 mm)
Environmental characteristics			
Conformity to standards			IEC 61496-1 and IEC 61496-2 (Type 2 ESPE)
Certifications			C€, TUV, UL, CSA
European directives			Machinery directive 98/37/EC, Work equipment directive 89/655/EEC and EMC directive 89/336 EEC
Ambient air temperature	Operating	°C	0…+ 55
	For storage	°C	- 25…+ 75
Relative humidity			95% maximum, without condensation
Degree of protection			IP 65
Shock and vibration resistance	Conforming to IEC 61496-1		Shock resistance: 10 gn, impulse 16 ms, Vibration resistance: 10…55 Hz, amplitude: 0.35 ± 0.05 mm
Materials			Casing: aluminium with electrostatically applied red (RAL 3000) polyester paint finish; end caps: 30% fibreglass impregnated nylon; front face: acrylic.
Fixings			End brackets (included)
Optical characteristics			
Minimum detection capacity		mm	30 (Hand)
Nominal sensing distance (Sn)		m	0.3…15
Height protected		mm	150…1500
Effective aperture angle (EAA)			5° at 3 m conforming to IEC 61496-1 and IEC 61496-2 (Type 2 ESPE)
Light source			GaAlAs LED, 880 nm
Immunity to ambient light			Conforming to IEC/EN 61496-2
Electrical characteristics			
Response time		ms	14…24
Power supply			--- 24 V ± 20% 2 A conforming to IEC 61496 and IEC 60204-1 (- 10% using the EDM function)
	Transmitter	mA	50
	Receiver	A	1.09 (with maximum load)
Maximum current consumption (no-load)	Transmitter	mA	50
	Receiver	mA	90
Immunity to interference			Conforming to EN 61496-1 and EN 61496-2
Safety outputs OSSD (Output Signal Switching Devices)			2 solid-state PNP (N/O) outputs ≤ 500 mA, --- 24 V (Short-circuit protection)
Signalling	Transmitter		2 LEDs (power supply and diagnostic)
	Receiver		4 LEDs (stop, run, top alignment and bottom alignment)
Connections (1)	Transmitter		M12, 4-pin, male connector
	Receiver		M12, 5-pin, male connector
Pre-wired connectors c.s.a.	Transmitter/Receiver	mm²	0.25. Tinned wires.
Cable resistance	Transmitter/Receiver	Ω	0.093 per metre for 0.25 mm² c.s.a. cable
Cable lengths		m	Pre-wired connectors with cable lengths of 3, 10 and 30 m are available separately. The maximum cable length is 50 m, depending on the load current and power supply.
Functions			
Functions			■ Start: □ Automatic: model **XUSLNG5C** □ Manual: model **XUSLNG5D** ■ Alignment aid using 2 LEDs ■ LED display of operating modes ■ Monitoring of external switching devices EDM/MPCE
"Muting" function (inhibition)			Possible with external module **XPS LCM1150**

(1) Pre-wired female connectors to be ordered separately, see page 3/121.

Safety detection solutions
Preventa safety modules and single-beam
photo-electric sensors
With a test input associated with a built-in "muting"
function

Operating principle
XPS CM safety modules form, with XU2 S single-beam photo-electric sensors
(periodically tested), a category 2 light curtain conforming to standards IEC/EN 61496
parts 1 and 2 and EN 60825-1.
The connection of 1 to 4 pairs of XU2 S photo-electric sensors makes it possible to
create a protected space up to 1200 mm high conforming to EN 999/ISO 13855 and
8 m long.

The built-in "muting" function allows for the automatic passage of parts to be
machined or loaded pallets without interrupting the transportation movement.
When the system is engaged by the operating control (in series with the main circuit
feedback loop) and the light protection is not interrupted, the main circuit is closed by
the two safety relays of the XPS CM module.

An interruption of the protection field causes the safety outputs to open
instantaneously, and the process PLC receives a stop command. The LED on the
XPS CM front panel changes from green to red. The "open" state is maintained until
the module is restarted using the start button.

The "muting" function allows the light protection to be inhibited. This possibility allows
a trolley transporting materials to pass through without triggering the main circuit.
The "muting" function cannot be activated by supplying the inhibition devices unless
the safety outputs have been switched on beforehand.

To trigger the "muting" function, the inhibition devices must be activated within the
3-second time interval. This synchronisation time for the two inhibition inputs can be
deactivated by connecting two configuration terminals. The "muting" cycle has a
maximum duration of 60 seconds. During this period, materials can be transported
through the protection field without deactivating the safety outputs. The 60 second
limit value of the "muting" cycle may be made infinite by connecting two configuration
terminals.

During the "muting" operation process, a light indicating the "muting" state is
controlled by the XPS CM module. An error at the level of the indicator light
(short-circuit, open-circuit) will be recognized straight away, and will deactivate the
"muting" function. The indicator light comes on when a "muting" signal is generated
and indicates the inhibition of the protection function.
D1, D2, D3, D4: monitoring photo-electric sensors.
MA1, MB1, MA2, MB2: "Muting" photo-electric sensors.
m = trolley length
dM = distance between MA1, MB1 and MA2, MB2.

Conditions to be observed for the "muting" function
■ "Muting" sensors must be of the XU2 M18PP340 thru-beam or XU9 M18PP340
polarised reflex type or mechanical limit switches with contacts.
■ dM ≤ m to obtain continuous validation of the "muting" function.
■ Avoid the intrusion of persons during the "muting" phase. This phase is indicated
by an indicator light on the "muting" indicator output of the XPS CM module.
■ A materials transportation trolley must generate the "muting" signal before it
enters the protection field and interrupt the signal when it is once again released
from all the sensors of the protection field.

Safety detection solutions
Preventa safety modules and single-beam photo-electric sensors
With a test input associated with a built-in "muting" function

Characteristics of safety modules

Module type			XPS CM1144	XPS CM1144P
Products designed for max. use in safety related parts of control systems conforming to EN 954-1			Category 2 (type 2) conforming to IEC/EN 61496-1	
Ambient air temperature		°C	Operation: -10...+ 55 °C. Storage: - 25...+ 85	
Degree of protection conforming to IEC 529			Terminals: IP 20, enclosure: IP 40	
Supply	Voltage	V	⎓ 24, voltage limits: - 20…+ 20 %	
Maximum consumption		W	< 15, with thru-beam photoelectric sensors and "muting" signalling	
Module fuse protection			Internal, electronic	
Rated insulation voltage (Ui)		V	300 (degree of pollution 2 conforming to EN/IEC 60947-5-1, DIN VDE 0110 parts 1 and 2)	
Rated impulse withstand voltage (Uimp)		kV	4 (overvoltage category 3, conforming to EN/IEC 60947-5-1, DIN VDE 0110 parts 1 and 2)	
Inputs for sensors	Number of inputs to be monitored		4 (terminals Z1, Z2, Z3, Z4)	
	Input voltage	V	⎓ 24	
	Supply voltage of sensors	V	⎓ 24 (terminal U+/U-)	
	Supply current of sensors	mA	< 200	
Inputs for the "muting" function	Number of "muting" inputs		2 (terminals MA, MB)	
	Input voltage	V	⎓ 24 (terminal U+/U-)	
	Maximum current	mA	< 200	
	Synchronisation time for the activation of the MA/MB "muting" signal	s	3 (+/- 20 %)	
	"Muting" maximum duration	s	60 (- 10…+ 30 %)	
Single-beam thru-beam photo-electric sensors for input monitoring Z1-Z2-Z3-Z4				
- sensors authorised for the protection field (max. 4)			XU2 S18PP340●●● (infrared)	
- "muting" sensors			XU2 M18PP340●●● or XU9 M18PP340●●● photo-electric sensors or XC limit switches	
- Sensor supply resistivity		Ω	10 max.	
Safety outputs				
- number and type			2 N/O (terminals 13-14, 23-24), volt-free	
- solid-state output breaking capacity			4 N/O 24 V/20 mA, (Y33-Y34, Y33-Y44, Y33-Y54, Y33-Y64)	
- breaking capacity in AC-15		VA	C300: inrush 1800, maintained 180	
- breaking capacity in DC-13			24 V/1.5 A, L/R = 50 ms	
- maximum thermal current (Ithe)		A	5.6	
- sum of maximum thermal current		A	11	
- minimum current (volt-free contact)		mA	10	
- minimum voltage (volt-free contact)		V	17	
- short-circuit protection		A	4 gG or 6 fast-acting fuse cartridge, conforming to EN/IEC 60947-5-1 and DIN VDE 0660 part 200	
"Muting" signalling sensors for incandescent lamp			Number 1 (terminal H1), maximum power: 6.5 W/⎓ 24 V, maximum power: 4 W/⎓ 24 V	
Response time on input change of state		ms	< 25	
Electrical durability			See page 38610/6	
Display			4 LEDs	
Connection	Type		Captive screw clamp terminals	Captive screw clamp terminals, separate removable terminal block
- 1-wire connection	Without cable ends		Solid or flexible cable: 0.14…2.5 mm²	Solid or flexible cable: 0.2…2.5 mm²
	With cable ends		Without bezel, flexible cable: 0.25…2.5	Without bezel, flexible cable: 0.25…2.5
	With cable ends		With bezel, flexible cable: 0.25…1.5 mm²	With bezel, flexible cable: 0.25…2.5 mm²
- 2-wire connection	Without cable ends		Solid or flexible cable: 0.14…0.75 mm²	Solid cable: 0.2…1 mm², flexible cable: 0.2…1.5 mm²
	With cable ends		Without bezel, flexible cable: 0.25…1 mm²	Without bezel, flexible cable: 0.25…1 mm²
	With cable ends		Double with bezel, flexible cable: 0.5…1.5 mm²	Double with bezel, flexible cable: 0.5…1.5 mm²

Characteristics of photo-electric sensors

Product certification			C€, conforming to EN/IEC 61496-1/-2 and EN/IEC 60825-1
Ambient air temperature		°C	Operation: - 25…+ 55 (infrared transmission sensors), Storage: - 40…+ 70
Vibration resistance			7 gn (f = 10…55 Hz), conforming to EN/IEC 60068-2-6
Shock resistance			30 gn, 3 axes: 3 times, conforming to EN/IEC 60068-2-27
Degree of protection			IP 67 conforming to EN/IEC 60529
Connection	Pre-cabled		PVC cable, diameter 5 mm, length 5 m, wire c.s.a.: 4 x 0.34 mm2 (3 x 0.34 mm2 for thru-beam transmitter)
	Connector		M12 male connector, 4-pin (suitable jumper cables and female connectors M12, 4-contact, see our catalogue "Global detection")
Materials			Case: nickel-plated brass (infrared transmission sensors). Lenses: PMMA
Nominal sensing distance		m	8 (infrared transmission sensors)
Rated supply voltage		V	⎓ 12…24 (with protection against reverse polarity)
Voltage limits		V	⎓ 10…30 V (including ripple)
Switching capacity (sealed)		mA	≤ 100 mA (with overload and short-circuit protection)
Voltage drop, closed state		V	≤ 1.5
Current consumption, no-load		mA	≤ 35
Maximum switching frequency		Hz	500
Delays		ms	Response: ≤ 1; recovery: ≤ 1

Presentation

Emergency stop trip wire switches

Emergency stop trip wire switches are designed to:
- avert hazards (dangerous phenomena) at the earliest possible moment, or to reduce risks which could cause injury to persons or damage either to machines or work in progress,
- be tripped by a single human action when a normal Emergency stop function is not available,
- trip in the event of the trip wire breaking.

Emergency stop trip wire switches are essential in premises and on machines that are potentially dangerous when in operation. The operator must be able to trigger the stop instruction at any point within their working area.

Application examples: woodworking machines, shears, conveyor systems, transfer machines, printing machines, textile machines, rolling mills, test laboratories, paint shops, surface treatment works.
Installation

Typical installation
1 Fixing support	**4** Pulley supports and pulleys	**7** Switch adjustment
2 First cable support	**5** End spring	**8** Emergency stop
3 Turnbuckle	**6** Cable grips	

Notes regarding installation
- All XY2 CH/CE/CB trip wire switches can be fitted with a pilot light to indicate their tripped condition.
- Cable tension adjustment can be performed using:
- □ a turnbuckle (to be ordered separately, see page 4/11),
- □ a tensioner (integrated in certain XY2 CH models, see page 4/11),
- □ a tensioner (to be ordered separately, see page 4/11) for mounting on XY2 CE models.
- This adjustment is simplified by:
- □ a cable tension indicator that is available on all models XY2 CH,
- □ the availability of versions with a "cable tension indicator" window by stating its reference on the order form (see page 4/10). Example: reference XY2 CE1A250 becomes XY2 CE1**D**250.
- The use of an end spring is strongly advised for conveyor system applications to ensure operation of the Emergency stop in the event of the cable being pulled towards the switch.
- It is essential that pulleys be used with trip wires that deviate from a straight run, i.e. angled to form a protected zone.
- Important: switches XY2 CB must not be used if the installation requires that the trip wire be angled. Switches XY2 CH and XY2 CE can be used if the installation requires that the trip wire be angled. In this case, the total sum of the angles through which the trip wire bends must not exceed 180° (For further information on instructions to be adhered to, please refer to the installation manual).

Schneider Electric

Safety dialogue solutions
Emergency stop trip wire switches, type XY2 C

Main features
Positive operation: running condition	**1**	The switches incorporate positive opening operation contacts, the tripping of the switch being made with positive action.	
Latching: stop instruction given (tripped)	**2**	The switch latches in the tripped position (N/C safety contact(s) open). The function of the N/O contact is purely for signalling.	
Resetting: stop condition (awaiting reset/restart)	**3**	The switches incorporate a reset button, which re-closes the safety contact(s). Restarting of the machine must only be achieved by manual operation of a control device within the machine start circuit, remote to the trip wire switch.	

Trip wire expansion and contraction: d

Temperature variations likely to be encountered in the protected zone will obviously cause the trip wire to expand or contract.
To enable instant verification that the trip wire is at its correct tension (and for making any necessary adjustments), trip wire switches XY2 CH and XY2 CE incorporate a trip wire tension indicator.
Tripping force: F1
Tripping deflection: f

The tripping force **F1** is the force necessary on the trip wire to cause the switch to trip.
The tripping deflection **f** is the distance that the trip wire has to be deflected from its taut position to the point at which the switch trips.
Adjustment values (with end spring)

For Emergency stop trip wire switches type XY2 CE: the adjustment values depend on the positions of the cam located inside the switch. Adjustment is made by rotating the cam after the switch has been installed.
Each notched position of the cam is referenced by the letters A to F, and the selected letter is visible through a viewing port.
Temperature range: < 25 °C.

Type	Position of cam	Max. length of cable	End spring	Average tripping deflection values f and tripping forces F1 for a distance of 5 m between cable supports and cable used							
				Force F1 (daN)				**Deflection f (mm) for:**

XY2 CB	–	100 m	XY2 CZ702	4.5	–	–	–	325	–	–	–

Standards

Trip wire switches XY2 CH, XY2 CE and XY2 CB meet all the requirements of the harmonised European standard **EN/ISO 13850:2006**, relating to Emergency stop devices.
All the trip wire switches are CE marked and supplied with an EC declaration of conformity.

Presentation

Foot switches type XPE are an ideal solution for providing start and stop instructions for many types of industrial machines, running in various operating modes: normal (pulsed) start, inching, hold to run.

The range comprises metal case foot switches (heavy duty, high risk) complying to very strict regulations, and plastic case foot switches (light duty, low risk).
Fitted with a protective cover, the foot switches are for applications where, for each issuing of the start instruction, a high level of danger exists **(high risk)**.
Foot switches **without a protective cover** are suitable for applications where the issuing of the start instruction presents a **reduced level of danger**.

Contact

Switches incorporate snap action contacts with positive opening operation

The foot switches can incorporate **one or two N/C + N/O contact blocks**.

Positive opening operation on release of pedal: the hold down or return to the rest position of the pedal (machine stop) is positive acting.

Terminology

Positive opening operation

A switch meets this requirement when all its N/C contacts can be switched to the open position with certainty, i.e. there are no flexible links between the moving contacts and the actuator to which the operating force is applied.

All pedal operated foot switches incorporate a snap action N/C + N/O contact block with positive opening operation, and conform fully to standard IEC 60947-5-1 Section 3.

Snap action contact (quick break)

The displacement speed of the moving contacts is not related to the speed at which the contact actuator is operated. This feature gives consistent electrical performance, even when the contact actuator device is operated at low speeds.

Safety dialogue solutions
Foot switches, Harmony type XPE

Start instructions

Foot switches XPE with protective cover are ideally suited for issuing a safety "Start" instruction for potentially dangerous machines.

metal

plastic
toe plate

The protective cover over the operating pedal avoids the risk of accidental operation, either by human action or by falling objects, which could result in unintentional starting of the machine.

A trigger mechanism **(toe plate)** enables locking of the pedal in the rest (released) position.

1

2

Stop/rest **Start**

Positive action is required on the toe plate **1** before the pedal **2** can be depressed to start the machine.

On releasing the pedal to stop the machine, the trigger mechanism re-engages and locks the pedal in the rest position.

4

Normal stop instructions

All foot switches of the XPE range can be used for issuing a normal stop instruction to a machine.
Never use the protective cover nor the trigger mechanism for this type of application. Access to the stop control must be as unrestricted as possible and without any constraints.

For machine stop instructions, use the N/C contact(s).

Pedal latching device when depressed

Foot switches with pedal latching device are particularly suited for the control of "hold to run" machines and also, for adjustment operations.
Pressing the pedal issues the machine start instruction and, when the pedal reaches its stop, it latches in the operated position.

Removing the foot from the pedal will not stop the "machine" cycle **(hold to run)**, the pedal remains latched.

For issuing a normal stop instruction, the foot is replaced on the pedal and the toe plate operated: this returns the pedal to the rest position.

Switches with 2 step contact operation

Foot switches featuring 2 step contact operation are ideal for applications involving 2-speed machines.
Examples:
■ **First speed: low (used for setting-up, adjustment or tool maintenance).**
■ **Second speed: fast (normal machine operating speed).**

6 mm
2 daN.
1st step

9,5 mm
2,5 daN.
The first step, at 6 mm pedal travel and light foot pressure (2 daN), actuates a N/C + N/O contact block.

12 mm
1 daN.
2nd step

16,5 mm
7 daN.

The second step, at maximum pedal travel (12 mm) and required foot pressure (9 daN), actuates a second N/C + N/O contact block.

Applications

Many types of machines are fitted with foot switches

■ Bending machine
■ Dosing machine
■ Assembly station
■ Packaging machines
■ Cutting presses, stamping presses
■ Machine tools (numerical control, lathes, milling machines, grinders, machining centres)
■ Guillotines, cutters, folders, saws
■ Forging machines, rolling machines, cold metal forming machines

Schneider Electric

Foot switches used in conjunction with two-hand control stations	Foot switches XPE can be mounted directly on the baseplate (without drilling additional fixing holes) of the pedestal XY2 SB90 for two-hand control stations XY2 SB7●.
The baseplate of the two-hand control station pedestal XY2 SB90 is pre-drilled with fixing holes to suit the mounting of either:

■ One XPE foot switch, with or without protective cover.
■ Two XPE R foot switches, each with its own protective cover or fitted with a common (double) cover.

Ergonomic	The protective cover is very strong and is sufficiently dimensioned to accommodate all types of footwear (large size, safety boots, etc.).
The foot switch is designed such that the operating pedal is close to the ground and at a comfortable angle.
Various accessories improve the working comfort for machine operators and help to avoid discomfort in the base of the spine due to unbalanced positioning of the pelvis:

■ Heel rest (metal XPE).
■ Hand grip for mounting on protective cover.

Enabling switches
For safety circuits

Operating principle

Enabling switches, comprising an XY2 AU grip and an XPS VC monitoring module, allow authorised personnel to undertake adjustment, programming or maintenance operations near machine equipment hazardous zones, providing certain conditions are met.

In effect, to gain access, these operations, often performed at reduced speed, must be selected by authorised personnel using selectors, with or without keys. Once selection is made, the enabling switch temporarily assumes control of the hazardous zone's usual protection measures. Important note: the enabling switch alone must not lead to the actuation of any dangerous movements associated with the machine; a secondary, intentional control action is required from the operator. In addition, each person in the hazardous zone must be provided with an enabling switch to ensure their own safety.

Presentation
The design of the control station incorporates features to significantly reduce occupational illnesses associated with repetitive movements of the hands, particularly "carpal tunnel syndrome".

The health and comfort of the machine operator is assured by:
■ the numerous alternative hand positions for operating the 2 pushbutton actuators, see diagrams to left,
■ a hand rail,
■ simple and fast adjustments of control station position.

This two-hand control station protects machine operators against both industrial accidents and illnesses related to their occupation.

It conforms to the following European safety standards:
■ EN 574 (two-hand control),
■ EN 999 (approach speeds of parts of the human body and positioning of safety devices).

The control station can be mounted:
■ directly on the machine housing,
■ on a pedestal, enabling 3 directional adjustment:
□ height,
□ rake,
□ skew.

The use of a two-hand control station in conjunction with a safety module type XPS BC or XPS BF provides type IIIC two-hand control conforming to EN 574, i.e. category 4 conforming to EN 954.

The two-hand control station + safety module XPS BC combination has an EC examination of type certificate issued by BERUFSGENOSSENSCHAFT of Germany (1996), n° 007052001181295.

The range comprises:
■ two-hand control stations with or without pre-wired terminal blocks,
■ kits (control station + pedestal), with or without pre-wired terminal blocks.

The products are supplied with an installation manual, which is also available as a separate item.

Schneider Electric

Safety dialogue solutions

Two-hand ergonomic control stations
With Harmony XB4 B control units

Description

The control station **1** has five cut-outs (Ø 22 mm) **2** as standard. Five additional cut-outs are possible **3**.

Its pedestal **5** enables the following quick and simple adjustments:

■ Control station rake (± 30°) using handle **4**.

■ Control station skew (± 180°) using handle **6**.

■ Control station height (835 to 1170 mm) using handle **6**.
■
The baseplate **8** can be fitted with safety foot switches XPE R **9**, together with their protective covers **7**. See page 4/19.

Beacons and indicator banks Ø 70 mm
Harmony type XVB Universal
Beacons and indicator banks type XVB are visual or audible signalling units used for indicating, throughout 360° and at a distance, the various states or operation sequences of a machine or installation. Examples: start, stop machine, no material, call technical staff, fault signalling, etc.

Illuminated beacon

Complete product XVB L

Ready assembled **1** with a single illuminated signalling unit:
□ steady light (with incandescent bulb or LED),
□ flashing light (with incandescent bulb or LED),
□ or "flash" (with discharge tube).

The **XVB L** beacon comprises:
■ A base unit with a removable terminal block and bottom or side cable entry.
■ One coloured illuminated unit (green, red, orange, blue, clear or yellow).

Indicator bank

Customer assembled product XVB C

Variable composition assembly of 1 to 5 illuminated or audible units which are supplied as separate items (assembly by user). Maximum configuration: 5 units or 4 units + 1 "flash" unit.

The indicator bank **XVB C** comprises:
■ A base unit with a removable terminal block and bottom or side cable entry **2**.
■ 1 to 5 coloured illuminated units (green, red, orange, blue, clear or yellow):
□ with integral LED **3**,
□ with integral LED and diffuser **4** *(1)*,
□ for incandescent bulbs or base mounted LEDs **5**.
■ 1 or 2 audible units **6**.
■ A maximum of 1 "flash" discharge unit (5 Joule or 10 Joule) **7**, for mounting on top of the bank.
■ A top cover **8** (except when using a "flash" discharge tube).

■ The illuminated or audible units stack vertically and are easily locked and unlocked using an integral clamping ring. Electrical connections between each unit are made automatically.
■ A light diffuser, pre-fitted in illuminated units XVB C2B●D with a base mounted LED, distributes the light evenly over the lens surface. When using the indicator banks in bright ambient light conditions, remove the diffuser to improve contrast.
■ Connection on the AS-Interface cabling system is possible by ordering a dedicated base unit. Please refer to our "Industrial communication in machines and installations" catalogue.

Accessories

For beacons XVB L and indicator banks XVB C

■ Fixing base comprising a support tube glued into a plastic fixing plate, for a height beneath the base unit of 80, 380 or 780 mm **9**.
■ Fixing plate for mounting on vertical support **10**.
■ Support tube concealment cover, height 100, 400 or 800 mm **11**.
■ Coloured markers **12** (2).
■ Legend holder with legend **13** (2).
■ Legends that attach to locking ring of each signalling unit for identification **14**.
■ Adaptor and 13P cable gland **15**.
■ Base mounted LED **16** or incandescent bulb **17**.
■ Diffuser **18** *(1)*.

Installation

Mounting

■ Base unit fixed directly onto panel using 2 screws.
■ Fixed using a fixing base comprising an aluminium support tube glued into a plastic fixing plate.

Cabling

By means of removable terminal block incorporated in base unit (simplified wiring). The screw and captive cable clamp terminals are protected to prevent any accidental contact with live parts.

(1) The diffuser can only be used with LED illuminated units. Not compatible with units fitted with an incandescent bulb or "flash" discharge tube.
(2) These enable the position of the various units (illuminated or audible) to be identified in the event of dismantling the bank.

Characteristics

Safety dialogue solutions
Beacons and indicator banks Ø 70 mm
Harmony type XVB Universal

Environment characteristics

Product certifications	Standard version		CSA C22-2 n°14, UL 508, CCC, GOST
Conformity to standards			EN/IEC 60947-5-1
Protective treatment	Standard version		"TC"
Ambient air temperature	For storage	**°C**	- 40…+ 70
	For operation (1)	**°C**	**Illuminated units with steady light signalling:** - 25…+ 70, with 7 W incandescent bulb - 25…+ 50, with LED
		°C	**Illuminated units with flashing light signalling:** - 25…+ 50, with 7 W incandescent bulb - 25…+ 50, with LED
		°C	**Illuminated units with "flash" discharge tube:** - 25…+ 50
		°C	**Audible units:** - 25…+ 50, with buzzer
Electric shock protection Conforming to IEC 61140	Mounted on support tube		Class I
	Mounted on base unit		Class II
Degree of protection	Conforming to IEC 60529		IP 65 (mounted on fixing base XVB Z0●) IP 66 (mounted directly on base unit)
	Conforming to UL 508		Type 4X NEMA "Indoor"
Material	Illuminated units		Polycarbonate
	Base unit and cover		Glass-reinforced polyamide and polycarbonate
	Support tube		Painted aluminium
	Fixing plate for use on vertical support		Zamak
	Fixing plate for use on horizontal support		Polyamide 66
	Support tube concealment cover		ABS

(1) Warning: illuminated units with incandescent bulbs must not be combined with LED illuminated units, due to the risk of overheating.
Also, when different units (e.g. steady, flashing…) are combined, the maximum temperature is limited to that of the weaker unit.

## Rotating mirror beacons, type XVR

General

These rotating beacons are designed for long distance signalling applications.

Characteristics

Conformity to standards			IEC/EN 60947-1, IEC/EN 60947-5-1, UL 508, CSA C22-2-14
Protective treatment	Standard version		"TC"
Ambient air temperature	For storage	°C	- 40…+ 70
	For operation	°C	- 20…+ 50
Electric shock protection	Conforming to IEC/EN 61140 and NF C 20-030		Class I
Degree of protection	Conforming to IEC 60529 and NF C 20-010		IP 65
	Conforming to UL 508 and CSA 22		Type 4X Nema "INDOOR"
Material	Base unit		Glass-reinforced polyamide 6
	Domed lens unit		Polycarbonate
Rated insulation voltage (Ui)	Conforming to IEC/EN 60947-1	V	250
Consumption	Halogen bulbs	mA	$\approx$ 24 V: < 3100
	Incandescent bulbs	mA	$\approx$ 24 V: < 1050
			$\sim$ 120 V: < 210
			$\sim$ 230 V: < 110
Rated impulse withstand voltage	Conforming to IEC/EN 60947-1	kV	U imp = 4
Light source	Halogen bulbs		Bulbs with H1 base fitting: maximum power 70 W
	Incandescent bulbs		Bulbs with BA 15d base fitting: maximum power 25 W
Service life of motor		H	> 2000
Mounting position			Horizontal
Flash frequency		Hz	3
Connection	Maximum clamping capacity	mm²	1 x 1.5 mm²
Cable entry			For ISO M20 x 1.5 cable gland (included)

Dimensions

Panel cut-out

M20 x 1.5 cable gland included

Safety control and protection solutions

Mini-VARIO and VARIO switch disconnectors

Applications	Mini-Vario and Vario rotary switch disconnectors from 12 to 175 A are suitable for on-load making and breaking of resistive or mixed resistive and inductive circuits where frequent operation is required. They can also be used for direct switching of motors in utilisation categories AC-3 and DC-3 specific to motors. Vario switch disconnectors are suitable for isolator applications with fully visible breaking (since the handle cannot indicate the "open" position unless all the contacts are actually open and separated by the appropriate isolating distance) and it is possible to padlock the handles in the open position.

Application	Standard applications

GV2 ME (image caption)

Thermal-magnetic motor circuit breakers GV2 ME with built-in auxiliary contact block

With instantaneous auxiliary contact block:
- **GV AE1**, add suffix **AE1TQ** to the motor circuit breaker reference selected above. Example: **GV2 ME01AE1TQ**.
- **GV AE11**, add suffix **AE11TQ** to the motor circuit breaker reference selected above. Example: **GV2 ME01AE11TQ**.
- **GV AN11**, add suffix **AN11TQ** to the motor circuit breaker reference selected above. Example: **GV2 ME01AN11TQ**.

These motor circuit breakers with built-in contact block are sold in lots of 20 parts in a single pack.

(1) As a % of Icu.
*(2) To use **GV2 ME** in enclosures, please consult your Regional Sales Office.*
*(3) For the maximum rating which can be installed in **GV2 MC** or **MP** enclosures, please consult your Regional Sales Office.*
★ > 100 kA.

Safety of personnel and equipment

6

Safety and process reliability

Introduction

Safety has become a key issue for businesses.
Social developments in association with technological progress have had a profound impact on legislation and on regulations for the use of building electrical automation equipment.

Social issues

The safety-conscious nature of our western societies has led the legislature to increase the number of requirements and establish stricter rules, while the high cost of accidents has prompted companies to make efforts in the same direction.

Technological issues

■ Increasing levels of automation have led to new restrictions. In some case it is difficult, if not dangerous, to stop a machine suddenly and it is necessary to perform a safe shut down sequence before allowing personnel to enter into a production cell.

■ The increasingly widespread use of electronics and software has required a different approach to the solutions adopted; empirical rules are no longer enough. Selection includes a reliability calculation to determine the behaviour of the system.

In this context, the specification and design phase are crucial. Studies show that more than 2/3rds of incidents are due to bad design and inadequate specifications. At this stage it is therefore necessary to estimate potential risks and select the most appropriate solutions to reduce their consequences. Standards are available to assist and guide the designer.
Manufacturers of components and solutions help their customers by offering complete, ready-to-use functions which, when combined in accordance with the regulations, satisfy the customer's needs and meet legislative requirements.

In this chapter, we will present a simplified process. To make a choice, the customer will then be able to refer to the safety functions chapter and to the safety products chapters.

European legislation

European legislation requires that preventive action be taken to preserve and protect the quality of the environment and human health. To achieve these objectives, European Directives have been prepared which must be applied by plant operators and by manufacturers of equipment and machines. It also assigns responsibility for possible accidents.

■ Notwithstanding the constraints, machine safety has the following positive repercussions:
- prevention of industrial accidents,
- protection of workers and personnel by means of suitable safety measures that take into account the machine's application and the local environment.

■ This makes it possible to reduce direct and indirect related costs:
- by reducing physical harm,
- by reducing insurance premiums,
- by reducing production losses and possible delay penalties,
- by limiting damages and costs for maintenance.

■ Safe operation involves two principles: safety and reliability of the process:
- safety is the ability of a device to keep the risk incurred by persons within acceptable limits,
- reliability of operation is the ability of a system or device to perform its function at any moment in time and for a specified duration.

■ Safety must be taken into account right from the beginning of the design stage and kept in place throughout all stages of a machine's life cycle: transport, installation, commissioning, maintenance, dismantling.

Industrial accidents

An industrial accident occurs through work or in the workplace and causes minor to serious injury to a person using a machine, feeding it or carrying out special work on it (fitter, operator, maintenance personnel, etc.).

Causes of accidents in the workplace	■ Human-related factors (designers, users): - poor grasp of machine design, - over-familiarity with danger through habit and failure to take dangerous situations seriously, - underestimation of hazards, causing people to ignore safe working procedure, - loss of concentration on tasks to be performed (e.g. fatigue), - failure to comply with procedures, - stressful working conditions (noise, work rates, etc.), - uncertainty of employment which can lead to inadequate training, - inadequate or bad maintenance, generating unsuspected hazards. ■ Machine-related factors: - inadequate guards, - inherent machine hazards (e.g. reciprocal motion of a machine, unexpected starting or stopping), - machines not suited to the application or environment (e.g. sound alarms deadened by the noise of surrounding machinery). ■ Plant-related factors: - movement of personnel from machine to machine (automated production line), - machinery from different manufacturers and using different technologies, - flow of materials or products between machines.
Consequences	- Risk of varying degrees of physical injury to the user, - stoppage of the machine involved, - stoppage of similar machine installations for inspection, for example by health and safety inspectors, - if necessary, modifications to make machinery safe, - change of personnel and training new personnel for the job, - damage to the company brand image.
Conclusion	Damages for physical injuries are equivalent to about 20 thousand million euro paid out each year in the European Union. Decisive action is required to reduce the number of accidents in the workplace. The first essentials are adequate company policies and efficient organisation. Reducing the number of industrial accidents and injuries depends on the safety of machines and equipment.
Types of potential hazard	The potential hazards of a machine can be classified into three main groups, as illustrated below:
Mechanical hazards

Puncturing, cutting, shearing, fractures, severing	*Catching, entanglement, drawing in, trapping*	*Impact*	*Crushing*
Electrical hazards **Physical and chemical hazards**

Electric shock, electrocution, burns	*Discharge of dangerous substances*	*Burns*

6

European legislation and the standards

The main purpose of the Machinery Directive 98/37/EC is to compel manufacturers to guarantee a minimum safety level for machinery and equipment sold within the European Union. A new version of the Machinery Directive 2006/42/EC will be effective at the end of 2009.

To allow free circulation of machinery within the European Union, the CE marking must be applied to the machine and an EC declaration of conformity is issued to the purchaser. This directive came into effect in January 1995 and has been enforced since January 1997 for all machines.

The user has obligations defined by the Use of Work Equipment directive 89/655/EEC which can in most cases be met by using machinery compliant with relevant standards.
These standards are complex. After a brief presentation of the structure of the standards system, we will provide the reader with a practical guide to the typical standards to be applied according to the selected control system design.

Standards

The harmonised European safety standards establish technical specifications which comply with the minimum safety requirements defined in the related directives. Compliance with all applicable harmonised European standards **can be assumed to ensure** compliance with the related directives. The main purpose is to guarantee a minimum safety level for machinery and equipment sold within the EU market and allow the free circulation of machinery within the European Union.

The 3 groups of European standards

■ Type **A** standards
Basic safety standards which specify the basic concepts, design principles and general aspects valid for all types of machine: e.g. EN/ISO 12100.

■ Type **B** standards
Standards relating to specific aspects of safety or to a particular device that can be used on a wide range of machines.

□ Type **B1** standards
Standards relating to specific safety aspects of machines: e.g. EN/IEC 60204-1 Electrical equipment of machines.

□ Type **B2** standards
Standards relating to specific products such as two-hand control stations (EN 574), guard switches (EN 1088), emergency stops (EN/ISO 13850), etc.

■ Type **C** standards
Standards relating to various families or groups of machines (e.g.: hydraulic presses EN 693, robots, ...) and giving detailed applicable requirements.

Reduction of risk to an acceptable level

Residual risk | Acceptable risk | Initial risk

Level of risk

Risk reduction necessary

Actual risk reduction

Achieved by design measures, safety-related systems and by external risk reduction devices
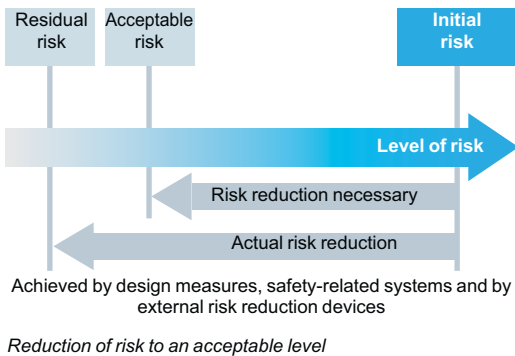

Standards to be applied (continued)
Risk and safety

Safety is the absence of risks which could cause injury to or damage the health of persons. Functional safety is a part of safety that depends on the correct operation of safety functions.

According to the requirements of standard EN/ISO 12100-1, the machine designer's job is to reduce all risks to a value lower than the acceptable risk.
For more details concerning the sources of accidents and risk prevention, the reader is referred on page 6/3.

This standard recognises two sources of hazardous phenomena:
- moving parts of machines,
- moving tools and/or workpieces.

It gives guidelines for the selection and installation of devices which can be used to protect persons and identifies those measures that are implemented by the machine designer and those dependent on its user.

The measures taken by the machine designer may be:
- inherent in the design,
- selection of guards and additional measures, including control systems,
- information for the user.

The measures taken by the user may be (non-exhaustive list):
- organisation, procedures, etc.,
- personal protective equipment,
- training.

Moving transmission components

Moving parts of work equipment (for example: tools)

Can these elements be made completely inaccessible while working?

Yes | No

Fixed guards or interlocking movable guards with or without guard locking

Fixed guards or fixed guards associated with an interlocking device or protective device

Fixed or movable guards in zones where persons do not work and adjustable guards in work zones

Selection of the protection system (EN/ISO 12100-2)

6

Definition of risk

Assessment of machinery related risk
European legislation

■ Machines are sources of potential risk and the Machinery Directive requires a risk assessment to ensure that any potential risk is reduced to less than the acceptable risk.

Standard EN/ISO 14121 defines risk as follows: risk is the severity multiplied by the possibility of occurrence. It defines an iterative process for achieving machine safety, which states that the risks for each potential hazard can be determined in four stages. This method provides the basis for the requisite risk reduction.

Risk assessment

Risk assessment consists of a series of logic steps which make it possible to systematically analyse and evaluate machinery-related risks.

Risk assessment is followed, whenever necessary, by a reduction of the risk. This definition taken from standard EN/ISO 14121-1 is based on an iterative process represented in the diagram opposite.

Determination of machine limits

Risk assessment starts by determining the limits of the machine at all stages of its life cycle:
- transport, assembly, installation,
- commissioning,
- use,
- de-commissioning, dismantling.

The use limitations must then be specified:
- operating modes,
- level of training required,
- space limits (amplitude, movement...),
- time limits (life cycle, frequency of maintenance...).

Identification of the potential hazard

If a potential hazard exists, a hazardous phenomenon will cause harm if measures are not taken. All the tasks associated with the machine's life cycle must be identified, such as:
- assembly, transport and installation,
- adjustment, testing,
- learning, programming,
- tool changing,
- feeding, removal of product from the machine,
- starting, stopping,
- emergency stops, restarting after an unexpected stop,
- maintenance, cleaning, etc.
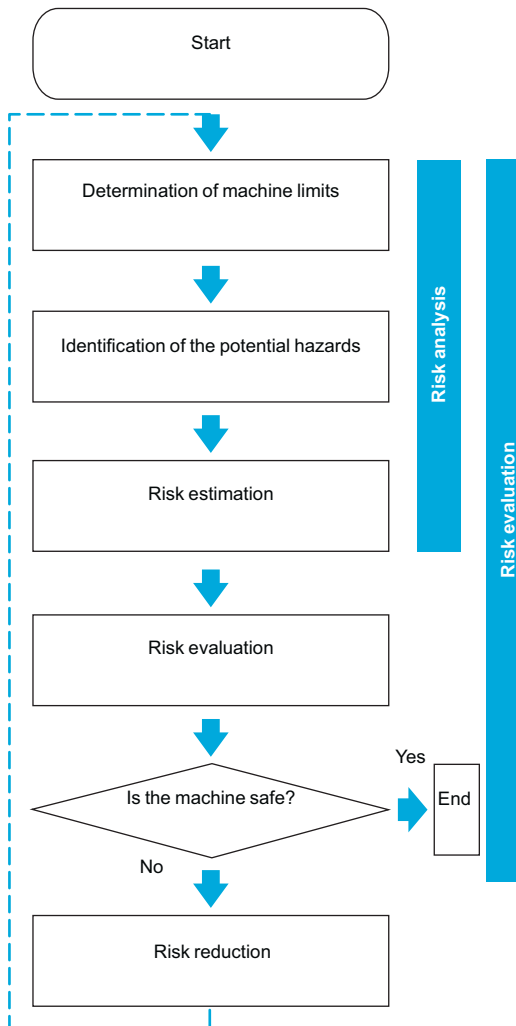

Logic steps for risk analysis

Schneider Electric

version: 3.0   38816-EN_Ver3.0_050508 .indd
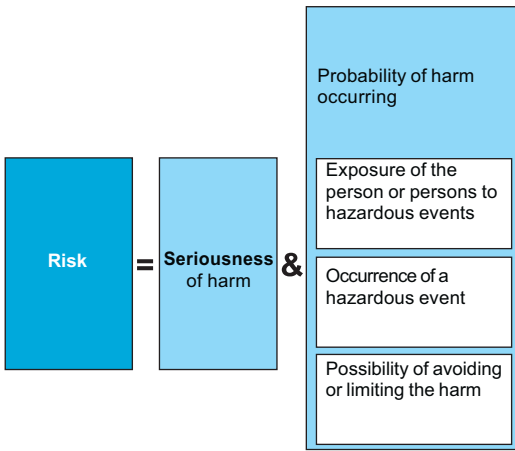

Elements of the risk

Assessment of machinery related risk (continued)
Risk assessment (continued)
Risk estimation

The risk is a function of the severity of the harm and the probability that this harm will occur.

■ The severity of the harm takes into account:
- the severity of injuries (slight, serious, death),
- the extent of the harm (number of persons).

■ The probability of the harm occurring takes into account:
- exposure to the hazard (nature of access, time spent in the hazardous zone, number of persons exposed, frequency of access...),
- the occurrence of a hazardous event (accident history, comparison of risks, ...),
- the possibility of avoiding or limiting the harm (experience, awareness of the risk, ...).

Risk evaluation

On the basis of the risk assessment, the designer has to define the safety related control system. To achieve that, the designer will chose one of the two standards appropriate to the application:
- either standard EN/ISO 13849-1, which defines performance levels (**PL**),
- or standard EN/IEC 62061, which defines safety integrity levelS (**SIL**).
λ rate of control system failures

λ_D rate of dangerous failures

λ_{DU} rate of undetected dangerous failures

λ_{DD} rate of detected dangerous failures

λ_S rate of safe failures

λ_S rate of undetected safe failures

λ_S rate of detected safe failures

Breakdown of the probability of failures

Risk reduction

The process of risk reduction for dangerous events starts by:
- intrinsic prevention (inherently safe design),
- definition of the appropriate protective means (guards, cover, fix fences, ...),
- personal training.

If the selected preventive measure depends on a safety related control system, the designer has to perform an iterative process for the design of the safety relative control system.

■ The first stage is to define the necessary safety-related control functions:
- either through the choice of components,
- or by adapting the control system architecture. Redundancy (double circuit components), for example, significantly increases the reliability of the solution.

■ Once the limits of available technologies have been reached, it will not be possible to further reduce the rate of dangerous failures. To achieve the required level of safety, it will be necessary to use a diagnostic system that allows dangerous failures to be detected.

6

General

Safety of personnel and equipment
Standard to be applied according to the design selected for the machine control system

Based on the generic definition of the risk the standards classify levels of risk reduction using different calculation methods, which we will explain in the paragraphs specific to each of these standards.

Two definitions coexist:
- standard EN/ISO 13849-1: PL (Performance Level),
- standard EN/IEC 62061: SIL (Safety Integrity Level).

The table below gives **relations** between these two definitions.

Standard	Definition	Relations				
EN/ISO 13849-1	PL	a	b	c	d	e
EN/IEC 62061	SIL	x	1	1	2	3

In order to be able to select the applicable standard, a common table in both standards gives indications which are summarised in the table below:

Technology used	EN/ISO 13849-1 max. PL	EN/IEC 62061 max. SIL
Non electric only, for example hydraulic	e	Not covered
Including some electromechanical, for example relays and/or non complex electronics	e (1)	3
Including complex electronics, for example programmable	e	3

(1) For designated architectures only.

For building specific complex sub-systems or for higher level requirements including software, standard EN/IEC 61508 relating to systems must be used.

General

Safety of personnel and equipment
Standard to be applied according to the design selected for the machine control system
(continued)

Standard to be applied according to the design selected for the machine control system *(continued)*

Designing a control system taking into account the requirements of safety standards may seem rather complex. We will guide the reader through this process by presenting:
■ the basis and development of the standards,
■ the safety standards to be applied according to the type of architecture selected,
■ machine equipment and wiring.

Basis and development of the standards

In a complex system, such as a refinery, it is no longer sufficient to consider only the sub-systems to ensure protection; failure of a sub-system could be catastrophic for persons and the environment.
The approach is therefore more global. Taking into account the whole safety life cycle standard EN/IEC 61508 deals with control systems, and includes safety rules, technical specifications, management and training of personnel.

The use of more complex control systems based on electronics and software highlights the weaknesses of standard EN 954-1:
- the reliability of components is not taken into account,
- insufficient requirements for programmable products,
- combining components with a category certification is not enough to "guarantee" the required level of risk reduction.

Based on experience gained with systems, the standards body has, in line with standard EN/IEC 61508, developed standard EN/IEC 62061 which applies the principles of functional safety to the design of control systems for machinery.
This standard offers two important advantages:
- it incorporates the new electronic and electronic programmable technologies to provide the safety functions,
- it is consistent with the basic standard EN/IEC 61508 and is therefore being specified more and more for machines by users.

At the same time, standard EN/ISO 13849-1 will totally replace the standard EN 954-1 in November 2009, which brings several improvements and, above all, is consistent with safety standards in general.

6

General

Safety of personnel and equipment
Standard EN/ISO 13849-1
Machinery safety - Safety-related parts of
control systems (SRP/CS)

Application example selected

Standard EN/ISO 13849-1
Machinery safety - Safety-related parts of control systems

Standard EN/ISO 13849-1 is a development of standard EN 954-1. For clarity, only a simplified analysis of this new version will be presented here.

Field of application of the standard

This standard gives safety requirements and advice relating to principles for the design and integration of safety-related parts of control systems (SRP/CS), including software design. For these parts, it specifies the characteristics, including the performance level, needed to achieve these safety functions. It applies to the SRP/CS of all types of machine, regardless of the technology and type of energy used (electric, hydraulic, pneumatic, mechanical, etc.).

Process

Risk assessment as defined in standard EN/ISO 14121 (see page 6/6) leads to decisions on risk reduction measures. If these measures depend on a control system, then EN/ISO 13849-1 can apply. It defines a 6-stage design process.
1 - Selection of the essential safety functions that SRP/CS must perform. For each safety function, specify the required characteristics.
2 - Determine the required performance level (PLr).
3 - Design and technical creation of safety functions: identify the parts that perform the safety function.
Determine the performance level (PL) for all safety-related parts, taking into account all the other criteria.
4 - Evaluate the performance level PL for each safety-related part.
5 - Check that the performance level PL achieved is greater than or equal to the required level (PLr).
6 - Validate to ensure that all requirements are satisfied.
We will now illustrate these stages, taking as an example a safety function that stops operation of a machine motor when a safety guard is opened. The machine is potentially dangerous, there is a risk of the operator's arm being amputated if there is no guard.

6

Representation of the safety function

Stage 1 - Selection of safety functions
The diagram opposite shows a safety function which consists of several parts:
- the input actuated by opening of the guard (SRP/CS*a*),
- the control logic, limited in this example to opening or closing of a contactor coil (SRP/CS*b*),
- the power output that controls the motor (SRP/CS*c*),
- the connections (I*ab*, I*bc*).

Stage 2 - Estimation of required performance level (PLr)
For our safety function, this is estimated using the risk graph.

The parameters to be considered are:
□ **S** severity of the injury
- **S1** slight injury, normally reversible,
- **S2** Serious, normally irreversible, including death.
□ **F** frequency and/or duration of exposure to the hazardous phenomenon.
- **F1** rare to fairly frequent and/or short duration of exposure,
- **F2** frequent to permanent and/or long duration of exposure.
□ **P** possibility of avoiding the hazardous phenomena or limiting the harm.
- **P1** possible under certain circumstances,
- **P2** virtually impossible.

As a failure of the safety function could result in a serious injury, the estimate (in blue on the drawing on the next page) gives a required performance level PLr = e.

Standard EN/ISO 13849-1
Machinery safety - Safety-related parts of control systems
(continued)

Process *(continued)*

Stage 3

Design and creation of the safety functions
At this point, we need to describe the PL calculation method.
The PL is defined in terms of the probability of a dangerous failure per hour:

PL	Probability of a dangerous failure per hour
a	$\geqslant 10^{-5} \dots < 10^{-4}$
b	$\geqslant 3 \times 10^{-6} \dots < 10^{-5}$
c	$\geqslant 10^{-6} \dots < 3 \times 10^{-6}$
d	$\geqslant 10^{-7} \dots < 10^{-6}$
e	$\geqslant 10^{-8} \dots < 10^{-7}$

It comprises the following main elements:
- the category of the components used,
- the reliability of the components ($MTTF_d$: mean time to dangerous failure),
- the diagnostic capability DC.

■ Category of components used
The table below summarises system behaviour in the event of a failure, for the 5
categories defined:

	System behaviour	Principles to achieve safety
B	A fault can lead to loss of the safety function	Selection of appropriate component
1	As for category B but greater reliability of the safety function required.	Selection of appropriate component
2	A fault can lead to loss of the safety function between two periodic inspections and loss of the safety function is detected by the control system at the next test.	Self-monitoring
3	For a single fault, the safety function is always ensured. Only some faults will be detected. The accumulation of undetected faults can lead to loss of the safety function.	Redundancy
4	When faults occur, the safety function is always ensured. Faults will be detected in time to prevent loss of the safety function	Redundancy + Self-monitoring

■ Reliability of the components
The $MTTF_d$ is the Mean Time To dangerous Failure of the component.
Without going into the suggested calculation methods, we can decide to use the
three ranges suggested below:

Reliability levels of components	
Index	**Range**
Low	3 years $\leqslant MTTF_d < 10$ years
Medium	10 years $\leqslant MTTF_d < 30$ years
High	30 years $\leqslant MTTF_d < 100$ years

A $MTTF_d$ of less than 3 years should never be found, because this would mean that
after one year in operation, 30% of all those components in use would have failed to
a dangerous state. The maximum value is limited to 100 years because devices
dealing with a significant risk should not depend on the reliability of a single
component. Additional measures such as redundancy and tests are required.

6

control systems (SRP/CS) *(continued)*

Standard EN/ISO 13849-1
Machinery safety - Safety-related parts of control systems
(continued)

Process *continued)*

Stage 3- *(continued)*

■ Diagnostic capability: this term is expressed as a percentage and quantifies the ability to diagnose a dangerous failure.

For example, in the event of welding of a N/C contact in a relay, the state of the N/O contact could incorrectly indicate the opening of the circuit, unless the relay has mechanically linked N/O and N/C contacts, when the fault can be detected.

The standard recognises four ranges:

Diagnostic capability categories	
Index	**Range**
Nil	DC < 60%
Low	60% ≤ DC < 90%
Medium	90% ≤ DC < 99%
High	99% ≤ DC

■ Summary table for the designer: to help the designer make their choice, the following table summarises the elements of the **PL**.

Category	B	1	2	2	3	3	4
DC	nil	nil	low	medium	low	medium	high

MTTF$_d$ □ low □ medium ■ high
□ In our example, to reach the PL = e, the solution will therefore have to correspond to category 4 with redundant circuit; the function scheme is shown opposite with two channels in parallel,

□ a high diagnostic capability,

□ a high MTTF$_d$.

For our application, we could suggest a redundant relay scheme but it is nowadays easier to use safety function blocks.

The solution is illustrated below.
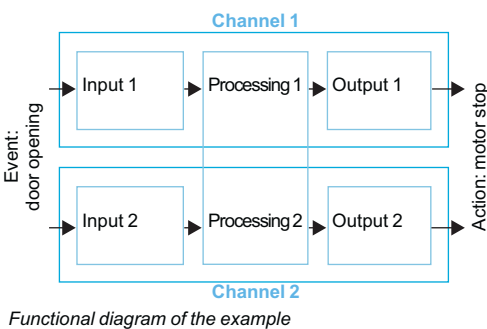

Application scheme of the example

The process suggested by the standard is iterative and a few estimations are therefore necessary in order to obtain the expected result. In view of the required performance level, we have chosen a solution with redundant circuit.

6

Machinery safety - Safety-related parts of
control systems (SRP/CS) *(continued)*

Standard EN/ISO 13849-1
Machinery safety - Safety-related parts of control systems
(continued)

Process *(continued)*

Stage 4 - Evaluate the performance level PL for each safety-related part
Based on the information in the supplier's catalogue and Annex E of the standard,
we obtain the following values:

Example	B_{10} (number of operations) / % dangerous failure	$MTTF_d$	DC
SRP/CS$_a$: Safety limit switches	10.000.000 / 20% dangerous failure	7102	99%
SRP/CS$_b$: XPS AK safety module	-	191.5	99%
SRP/CS$_c$: LCK contactor	1.000.000 / 73% dangerous failure	194	99%

For electromechanical products,
the $MTTF_d$ is calculated on the basis of the total number of operations that the
product can perform, using B_{10d} values:
In our case, the machine operates for 220 days per year, 8 hours per day with a cycle
of 90 s.
N = 220 x 8 x (3600 / 90) = 70 400 operations/year
$MTTF_d = B_{10d} / (0.1 \times N)$ and $B_{10d} = B_{10}$ / % dangerous failure.

For the safety switches,
the $MTTF_d$ = (1 / 0.20 x 10 000 000) / (0.1) x 70 400 = 284 years
For the contactors,
the $MTTF_d$ = (1 / 0.73 x 1 000 000) / (0.1) x 70 400 = 194 years
The $MTTF_d$ for each channel will then be calculated using the formula:

$$\frac{1}{MTTF_d} = \frac{1}{MTTF_{da}} + \frac{1}{MTTF_{db}} + \frac{1}{MTTF_{dc}}$$

i.e. 95.2 years for each channel.
A similar formula is used to calculate the diagnostic capability

$$DC_{avg} = \frac{\dfrac{DC_a}{MTTF_{da}} + \dfrac{DC_b}{MTTF_{db}} + \dfrac{DC_c}{MTTF_{dc}}}{\dfrac{1}{MTTF_{da}} + \dfrac{1}{MTTF_{db}} + \dfrac{1}{MTTF_{dc}}}$$

The result of the calculation in our example gives a value of 99%

Stage 5 - Checking that required performance level is achieved
The result of the above calculations is summarised below:
☐ a redundant architecture: category 4,
☐ a mean time to failure > 30 years: high $MTTF_d$,
☐ a diagnostic capability of 99%: high DC.

Looking at this table, we confirm that **PL** level **e** is achieved:

Checking the PL
Stage 6 - Validation of the required performance level
The design of SRP/CS must be validated and must show that the combination of
SRP/CS performing each safety function satisfies all the applicable requirements of
EN/ISO 13849.

6

General

Safety of personnel and equipment
Standard EN/IEC 62061
Machinery safety - Safety-Related Electrical Control systems (SRECS)

Standard EN/IEC 62061
Machinery safety - Safety-Related Electrical Control systems (SRECS)

Functional Safety of safety-related electrical, electronic and electronic programmable control systems

Field of application of the standard

Safety-related electrical control systems in machines (**SRECS**) are playing an increasing role in ensuring the overall safety of machines and are more and more frequently using complex electronic technology.

This standard is specific to the machine sector within the framework of EN/IEC 61508. It gives rules for the integration of sub-systems designed in accordance with EN/ISO 13849. It does not specify the operating requirements of non-electrical control components in machines (for example: hydraulic, pneumatic).

Functional approach to safety

As with EN/ISO 13849-1, the process starts with analysis of the risks (EN/ISO 14121) in order to be able to determine the safety requirements. **A particular feature of this standard is that it prompts the user to make a functional analysis of the architecture, then split it into sub-functions and analyse their interactions before deciding on a hardware solution for them (the SRECS).**

■ A functional safety plan must be drawn up and documented for each design project. It must include:
□ a specification of the safety requirements for the safety functions (**SRCF**) that is in two parts:
- a description of the functions and interfaces, operating modes, function priorities, frequency of operation, etc.
- specification of the safety integrity requirements for each function, expressed in terms of **SIL** (Safety Integrity Level).
The table below gives the target maximum failure values for each level.

SIL	Probability of a dangerous failure per hour (PFHd)
3	$\geqslant 10^{-8}...< 10^{-7}$
2	$\geqslant 10^{-7}...< 10^{-6}$
1	$\geqslant 10^{-6}...< 10^{-5}$

□ The structured and documented design process for electrical control systems (**SRECS**),
□ the procedures and resources for recording and maintaining appropriate information,
□ the process for management and modification of the configuration, taking into account organisation and authorised personnel,
□ the verification and validation plan.

■ Functional safety
The decisive advantage of this approach is that of being able to offer a failure calculation method that incorporates all the parameters that can affect the reliability of electrical systems, whatever the technology used.
The method consists of assigning a SIL to each function, taking into account the following parameters:
- the probability of a dangerous failure of the components (**PFH**d),
- the type of architecture; with or without redundancy, with or without diagnostic device making it possible to avoid some of the dangerous failures,
- common cause failures (power cuts, overvoltage, loss of communication network, etc.) (**CCF**),
- the probability of a dangerous transmission error where digital communication is used,
- electromagnetic interference (**EMC**).

Standard EN/IEC 62061
Machinery safety - Safety-Related Electrical
Control systems (SRECS) *(continued)*

Standard EN/IEC 62061
Machinery safety - Safety-Related Electrical Control systems (SRECS) *(continued)*

Process

Designing a system is split into 5 stages after having drawn up the functional safety plan:

1 - based on the safety requirements specification (**SRS**), assign a safety level (**SIL**) and identify the basic structure of the electrical control system (**SRECS**), describe each related function (**SRCF**),

2 - break down each function into a function block structure (**FB**),

3 - list the safety requirements for each function block and assign the function blocks to the sub-systems within the architecture,

4 - select the components for each sub-system,

5 - design the diagnostic function and check that the specified safety level (**SIL**) is achieved.

We will retain the previous example which consists of stopping the operation of a motor when the safety guard is opened. In the event of an incident, there is a risk of an harm being amputated or fracture of a limb.

■ **Stage 1** - Assign a safety integrity level (**SIL**) and identify the structure of the **SRECS**

Based on the risk assessment performed in accordance with standard EN/ISO 14121, estimation of the required **SIL** is performed for each hazardous phenomenon and is broken down into parameters, see illustration opposite.

□ Severity **Se**
The severity of injuries or damage to health can be estimated by taking into account reversible injuries, irreversible injuries and death.
The classification is shown in the table below.

Consequence	Severity Se
Irreversible: death, loss of an eye or an arm	4
Irreversible: shattered limb, loss of a finger	3
Reversible: requires the attention of a medical practitioner	2
Reversible: requires first aid	1

□ Probability of the harm occurring
Each of the three parameters **Fr**, **Pr**, **Av** must be estimated separately using the most unfavourable case. It is strongly recommended that a task analysis model be used in order to ensure that estimation of the probability of the harm occurring is correctly taken into account.

- Frequency and duration of exposure **Fr**
The level of exposure is linked to the need to access the hazardous zone (normal operation, maintenance, ...) and the type of access (manual feeding, adjustment, ...). It must then be possible to estimate the average frequency of exposure and its duration.
The classification is shown in the table below:

Frequency of dangerous exposure	Fr
≤ 1 hour	5
>1 hour... ≤ 1 day	5
> 1 day... ≤ 2 weeks	4
2 weeks... ≤ 1 year	3
> 1 year	2

- Probability of occurrence of a hazardous event **Pr**.
Two basic concepts must be taken into account:
- the predictability of the dangerous components in the various parts of the machine in its various operating modes (normal, maintenance, troubleshooting), paying particular attention to unexpected restarting,
- behaviour of the persons interacting with the machine, such as stress, fatigue, inexperience, etc.

Probability of occurrence of a dangerous event	Pr
Very high	5
Probable	4
Possible	3
Almost impossible	2
Negligible	1
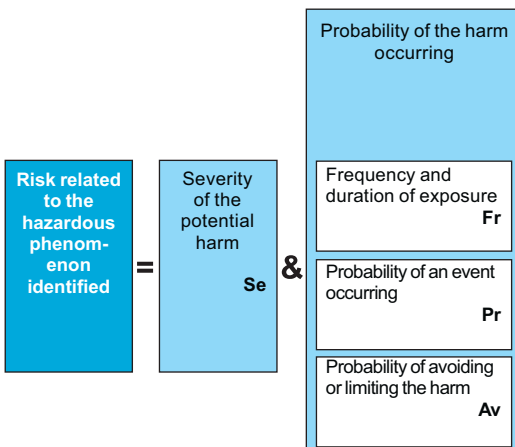

Risk assessment parameters

SRECS
Safety-related control system
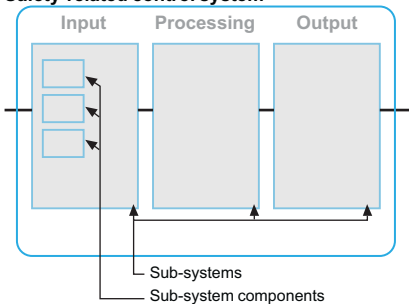

Stage 1: *Basic structure of the electrical control system*

6

General

Safety of personnel and equipment
Standard EN/IEC 62061
Machinery safety - Safety-Related Electrical
Control systems (SRECS) *(continued)*

Standard EN/IEC 62061
Machinery safety - Safety-Related Electrical Control systems
(SRECS) *(continued)*

Process *(continued)*

■ **Stage 1 -***(continued)*
- Probability of avoiding or limiting the harm **Av**.
This parameter is linked to the design of the machine. It takes into account the suddenness of the occurrence of the hazardous event, the nature of the dangerous component (cutting, temperature, electrical) and the possibility for a person to identify a hazardous phenomenon.

Probability of avoiding or limiting the harm	Av
Impossible	5
Almost impossible	3
Probable	1

□ Assignment of the **SIL**
Estimation is made with the help of the table below.
In our example, the degree of severity is 3 because there is a risk of a finger being amputated; this value is shown in the first column of the table.
All the other parameters must be added together in order to select one of the classes (vertical columns in the table below), which gives us:
Fr = 5 accessed several times a day
Pr = 4 hazardous event probable
Av = 3 probability of avoiding almost impossible
Therefore a class CI = 5 + 4 + 3 = 12
A level of SIL 2 must be achieved by the safety-related electrical control system(s) (**SRECS**) on the machine.

Estimation of the SIL					
Se	Class CI				
	3-4	5-7	8-10	11-13	14-15
4	SIL 2	SIL 2	SIL 2	SIL 3	SIL 3
3	-	-	SIL 1	SIL 2	SIL 3
2	-	-	-	SIL 1	SIL 2
1	-	-	-	-	SIL 1

□ Basic structure of the **SRECS**
Without going into detail about the hardware components to be used, the system is broken down into sub-systems. In our case, we find the 3 sub-systems that will perform the input, processing and output functions. The figure opposite illustrates this stage, using the terminology given in the standard.

■ **Stage 2** - Break down each function into a function block structure (**FB**)
A function block (**FB**) is the result of a detailed break down of a safety-related function.
The function block structure gives an initial concept of the SRECS architecture. The safety requirements of each block are deduced from the specification of the safety requirements of the system's function.

■ **Stage 3** - List the safety requirements for each function block and assign the function blocks to the sub-systems within the architecture

Each function block is assigned to a sub-system in the SRECS architecture. A failure of any sub-system will lead to the failure of the safety-related control function. More than one function block may be assigned to each sub-system. Each sub-system may include sub-system elements and, if necessary, diagnostic functions in order to ensure that anomalies can be detected and the appropriate action taken.
These diagnostic functions (D) are considered as separate functions; they may be performed within the sub-system, by another internal or external sub-system.

Types of sub-system architecture
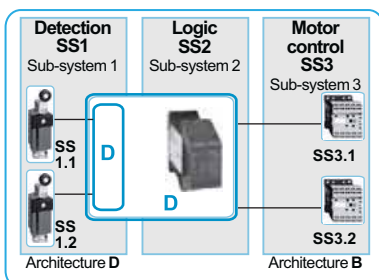

***Stage 5**: Design of the diagnostic function*

Standard EN/IEC 62061
Machinery safety - Safety-Related Electrical Control systems (SRECS) *(continued)*

Process *(continued)*

■ **Stage 4** - Select the components for each sub-system
The products shown in the illustration opposite are selected. If the sensors and contactors are the same as in the previous example, a safety module XPS AK will be chosen. The cycle in this example is 450s which means the duty cycle **C** is 8 operations per hour.

As the safety integrity level required for the entire system is SIL 2, each of the components must achieve this level.
The manufacturer's catalogue gives the following values:
Safety limit switches 1 and 2: B_{10} = 10 000 000 operations, the proportion of dangerous failures is 20%, lifetime is 10 years.
- Safety module: PFH_d = 5.96 10^{-9}
- Contactors 1 and 2: B_{10} = 1 000 000 operations, the proportion of dangerous failures = 73%, lifetime is 20 years.

■ **Stage 5** - Design the diagnostic function
The SIL of the sub-system depends not only on the components, but also on the architecture selected. For our example, we will choose architectures B and D of the standard.
In our architecture, the safety module performs diagnostics not only on itself, but also on the safety limit switches.

We have three sub-systems for which the safety levels must be determined:
□ SS1: two redundant safety limit switches in a sub-system with a type D architecture,
□ SS2: a SIL 3 safety module (obtained on the basis of the PFH provided by the manufacturer),
□ SS3: two redundant contactors built in accordance with a type B architecture.

The calculation method is quite complex, so we will only give the final result. This method takes into account the following parameters:
- B_{10}: number of operations at which 10% of the population fail
- **C**: Duty cycle (number of operations per hour)
- λ_D: rate of dangerous failures ($\lambda_D = \lambda$ x portion of dangerous failures in %)
- β: common cause failure coefficient, which is 10 % here and 10% is the worst case: see Annex F.
- **T1**: Proof Test Interval or life time whichever is smaller, as provided by the supplier
- **T2**: diagnostic test interval
- **DC**: Diagnostic coverage rate = λ_{DD}/λ_D, ratio between the rate of detected failures and the rate of dangerous failures.

We obtain:
- for SS1 PFH_d = 1.6 E^{-9}
- for SS3 PFH_d = 1.07 E^{-7}

The total probability of dangerous failures per hour is:
- $\mathbf{PFH_{DSRECS}} = PFH_{DSS1} + PFH_{DSS2} + PFH_{DSS3}$
- $\mathbf{PFH_{DSRECS}}$ = 1.6 E^{-9} + 5.96 10^{-9} + 1.07 E^{-7} = 1.14 E^{-7}

Which corresponds to the expected result (table below) of a SIL = 2 .
Comment: A level of SIL 3 could have been achieved by using mirror contacts to create a feedback loop on the contactors, i.e. a sub-system architecture type D.

Checking the required SIL	
SIL	**Probability of dangerous failures per hour (PFHd)**
3	⩾ 10^{-8} ... < 10^{-7}
2	**⩾ 10^{-7} ... < 10^{-6}**
1	⩾ 10^{-6} ... < 10^{-5}

6

Certification and CE marking

There are 6 stages in the process for certification and affixing of the CE marking on machines:
1 - apply all the relevant directives,
2 - conform to the essential health and safety requirements,
3 - draw up the technical documentation,
4 - if applicable proceed with the conformity examination,
5 - draw up the Declaration of Conformity,
6- affix the CE marking.

The Machinery Directive

The Machinery Directive is an example of the "New approach" for the harmonisation of products in terms of technical specifications and standards. It is based on:
- essential health and safety requirements which must be complied with before the machine is put on the market,
- a voluntary harmonisation process of standards undertaken by the European Standards Committee (CEN) and the European committee for electro-technical standardisation (CENELEC).
- conformity of evaluation procedures adapted to the types of risk and associated with machine types,
- the CE marking, affixed by the manufacturer to indicate that the machine conforms to the applicable directives; machines bearing this marking can circulate freely within the European Union.

The directive has considerably simplified the multiple national legislations which were in force and has therefore removed many barriers which made trading difficult in the European Union. This has also made it possible to reduce the social cost of accidents. The directives do not apply to pre-existing machines within the EU unless they are substantially modified.
A list of the machines requiring special attestation procedures can be found in the Machinery Directive Annex 4.

The essential requirements

Annexe I of the Machinery Directive groups together the essential health and safety requirements, for putting machines and safety components on the market and into service in Europe.
It follows that:
- if all the requirements of the directive are complied with, no member state of the European Union can oppose circulation of this product.
- if the requirements of the directive are not complied with, putting the product on the market may be prohibited or withdrawal of the product from the market may be required.

In the European Union, this concerns not only manufacturers or their distributors, but also importers and resellers who import these machines or put them into service. Second-hand machines within the EU are not covered, but used machines that have been modified or refurbished can be considered to be new machines.

The harmonised standards

The simplest way to demonstrate conformity with the directives is to conform to the European Harmonised Standards. When, for a product listed in Annex 4 of the Machinery Directive, there is no harmonised standard, or the existing standards are not relevant to cover the essential health and safety requirements, or if the manufacturer considers that these standards are not applicable to their product, they can apply for approval by an outside Notified Body.

These bodies are approved by the Member States after having shown that they have the recognised expertise to give such an opinion (TÜV, BGIA, INRS, BSI Product Services, etc.).

Although the Notified Body has a certain number of responsibilities under the Directive, it is always the manufacturer or their representative who remain responsible for conformity of the product.

6

Certification and $\mathsf{C}\mathsf{E}$ marking *(continued)*

Declaration of conformity

In accordance with Article 1 of the Machinery Directive, the manufacturer or their authorised representative established in the European Union must draw up a European Declaration of Conformity for each machine (or safety component). This is in order to certify that the machine or safety component conforms to the Directive.
Before putting a product on the market, the manufacturer or their representative must be able to prepare a technical file.

$\mathsf{C}\mathsf{E}$ marking

Finally, the $\mathsf{C}\mathsf{E}$ mark must be affixed to the machine by the manufacturer or their authorised representative in the European Union. This marking has been obligatory since 1st January 1995 and can only be affixed if the machine conforms to all the applicable directives, such as:
- the Machinery Directive 98/37/EC,
- the Electromagnetic Compatibility (EMC) directive 2004/108/EC,
- the Low Voltage Directive 2006/95/EC.

There are other directives such as the protection of persons, lifts, medical equipment, etc., which may also be applicable.

The $\mathsf{C}\mathsf{E}$ marking is the machine's passport in the European Union, which allows it to be marketed in all countries within the Union without taking into account regulations in each individual country.

$\mathsf{C}\mathsf{E}$ marking procedure

Machine			Manufacturer	Notified Body		Manufacturer
	Not listed in Annex 4		Prepare file according to Annex 5			Draw up EC declaration of conformity and affix the $\mathsf{C}\mathsf{E}$ marking
	Listed in Annex 4	Only partly conforming to the standards	Submit example and file according to Annex 6	Proceed with conformity examination of the sample	Draw up the conformity examination certificate	Draw up EC declaration of conformity and affix the $\mathsf{C}\mathsf{E}$ marking
		Manufactured according to harmonised standards	Forward file according to Annex 6	Register the file	Acknowledge receipt	
			Submit file according to Annex 6	Verify correct application of the standards	Draw up a certificate of adequacy	
			Submit example and file according to Annex 6	Proceed with conformity examination of the sample	Draw up the conformity examination certificate	

6

Technical information

7

General

Technical information
Protective treatment of equipment
according to climatic environment

Depending on the climatic and environmental conditions in which the equipment is placed, Schneider Electric can offer specially adapted products to meet your requirements.

In order to make the correct choice of protective finish, two points should be remembered:
■ the prevailing climate of the country is never the only criterion,
■ only the atmosphere in the immediate vicinity of the equipment need be considered.

All climates treatment "TC"
This is the standard treatment for Telemecanique brand equipment and is suitable for the vast majority of applications. It is the equivalent of treatments described as "Klimafest", "Climateproof".
In particular, it meets the requirements specified in the following publications:
■ Publication UTE C 63-100 (method I), successive cycles of humid heat at:
+ 40 °C and 95 % relative humidity.
■ DIN 50016 - Variations of ambient conditions within a climatic chamber:
+ 23 °C and 83 % relative humidity,
+ 40 °C and 92 % relative humidity.

It also meets the requirements of the following marine classification societies:
BV-LR-GL-DNV-RINA.

Characteristics
■ Steel components are usually treated with zinc. When they have a mechanical function, they may also be painted.
■ Insulating materials are selected for their high electrical, dielectric and mechanical characteristics.
■ Metal enclosures have a stoved paint finish, applied over a primary phosphate protective coat, or are galvanised (e.g. some prefabricated busbar trunking components).

Limits for use of "TC" (All climates) treatment
■ "TC" treatment is suitable for the following temperatures and humidity:

Temperature (°C)	Relative humidity (%)
20	95
40	80
50	50

"TC" treatment is therefore suitable for all latitudes and in particular tropical and equatorial regions where the equipment is mounted in normally ventilated industrial premises. Being sheltered from external climatic conditions, temperature variations are small, the risk of condensation is minimised and the risk of dripping water is virtually non-existent.

Extension of use of "TC" (All climates) treatment
In cases where the humidity around the equipment exceeds the conditions described above, or in equatorial regions if the equipment is mounted outdoors, or if it is placed in a very humid location (laundries, sugar refineries, steam rooms, etc.), "TC" treatment can still be used if the following precautions are taken:
■ The enclosure in which the equipment is mounted must be protected with a "TH" finish (see next page) and must be well ventilated to avoid condensation and dripping water (e.g. enclosure base plate mounted on spacers).
■ Components mounted inside the enclosure must have a "TC" finish.
■ If the equipment is to be switched off for long periods, a heater must be provided (0.2 to 0.5 kW per square decimetre of enclosure), that switches on automatically when the equipment is turned off. This heater keeps the inside of the enclosure at a temperature slightly higher than the outside surrounding temperature, thereby avoiding any risk of condensation and dripping water (the heat produced by the equipment itself during normal running is sufficient to provide this temperature difference).
■ Special considerations for "Operator dialog" and "Detection" products:
for certain pilot devices, the use of "TC" treatment can be extended to outdoor use provided their enclosure is made of light alloys, zinc alloys or plastic material. In this case, it is also essential to ensure that the degree of protection against penetration of liquids and solid objects is suitable for the applications involved.

7

Schneider Electric

Technical information
Protective treatment of equipment according to climatic environment

"TH" treatment for hot and humid environments

This treatment is suitable for hot and humid atmospheres where installations are regularly subject to condensation, dripping water and the risk of fungi.

In addition, plastic insulating components are resistant to attacks from insects such as termites and cockroaches. These properties have often led to this treatment being described as "Tropical Finish", but this does not mean that all equipment installed in tropical and equatorial regions must systematically have undergone "TH" treatment. On the other hand, certain operating conditions in temperate climates may well require the use of "TH" treated equipment (see limitations for use of "TC" treatment).

Special characteristics of "TH" treatment
■ All insulating components are made of materials which are either resistant to fungi or treated with a fungicide, and which have increased resistance to creepage (Standards IEC 60112, NF C 26-220, DIN 5348).
■ Metal enclosures receive a top-coat of stoved, fungicidal paint, applied over a rust inhibiting undercoat. Components with "TH" treatment may be subject to a surcharge *(1)*. Please consult your Regional Sales Office.

Protective treatment selection guide

Surrounding environment	Duty cycle	Internal heating of enclosure when not in use	Type of climate	Protective treatment	
				of equipment	of enclosure
Indoors					
No dripping water or condensation	Unimportant	Not necessary	Unimportant	"TC"	"TC"
Presence of dripping water or condensation	Frequent switching off for periods of more than 1 day	No	Temperate	"TC"	"TH"
			Equatorial	"TH"	"TH"
		Yes	Unimportant	"TC"	"TH"
	Continuous	Not necessary	Unimportant	"TC"	"TH"
Outdoors (sheltered)					
No dripping water or dew	Unimportant	Not necessary	Temperate	"TC"	"TC"
			Equatorial	"TH"	"TH"
Exposed outdoors or near the sea					
Frequent and regular presence of dripping water or dew	Frequent switching off for periods of more than 1 day	No	Temperate	"TC"	"TH"
			Equatorial	"TH"	"TH"
		Yes	Unimportant	"TC"	"TH"
	Continuous	Not necessary	Unimportant	"TC"	"TH"

These treatments cover, in particular, the applications defined by methods I and II of guide UTE C 63-100.

Special precautions for electronic equipment

Electronic products always meet the requirements of "TC" treatment. A number of them are "TH" treated as standard.

Some electronic products (for example: programmable controllers, flush mountable controllers CCX and flush mountable operator terminals XBT) require the use of an enclosure providing a degree of protection to at least IP 54, as defined by standards IEC 60664 and NF C 20 040, for use in industrial applications or in environmental conditions requiring "TH" treatment.

These electronic products, including flush mountable products, must have a degree of protection to at least IP 20 (provided either by their own enclosure or by their installation method) for restricted access locations where the degree of pollution does not exceed 2 (a test booth not containing machinery or other dust producing activities, for example).

Special treatments

For particularly harsh industrial environments, Schneider Electric is able to offer special protective treatments. Please consult your Regional Sales Office.

(1) A large number of the Telemecanique brand products are "TH" treated as standard and are, therefore, not subject to a surcharge.

7

Standardisation

Conformity to standards

Telemecanique brand products satisfy, in the majority of cases, national (for example: BS in Great Britain, NF in France, DIN in Germany), European (for example: CENELEC) or international (IEC) standards. These product standards precisely define the performance of the designated products (such as IEC 60947 for low voltage equipment).

When used correctly, as designated by the manufacturer and in accordance with regulations and correct practices, these products will allow users to build equipment, machine systems or installations that conform to their appropriate standards (for example: IEC 60204-1, relating to electrical equipment used on industrial machines).

Schneider Electric is able to provide proof of conformity of its production to the standards it has chosen to comply with, through its quality assurance system.

On request, and depending on the situation, Schneider Electric can provide the following:
- a declaration of conformity,
- a certificate of conformity (ASEFA/LOVAG),
- a homologation certificate or approval, in the countries where this procedure is required or for particular specifications, such as those existing in the merchant navy.

Code	Certification authority		Country
	Name	Abbreviation	
ANSI	American National Standards Institute	ANSI	USA
BS	British Standards Institution	BSI	Great Britain
CEI	Comitato Elettrotecnico Italiano	CEI	Italy
DIN/VDE	Verband Deutscher Electrotechniker	VDE	Germany
EN	Comité Européen de Normalisation Electrotechnique	CENELEC	Europe
GOST	Gosudarstvenne Komitet Standartov	GOST	Russia
IEC	International Electrotechnical Commission	IEC	Worldwide
JIS	Japanese Industrial Standard	JISC	Japan
NBN	Institut Belge de Normalisation	IBN	Belgium
NEN	Nederlands Normalisatie Institut	NNI	Netherlands
NF	Union Technique de l'Electricité	UTE	France
SAA	Standards Association of Australia	SAA	Australia
UNE	Asociacion Española de Normalizacion y Certificacion	AENOR	Spain

European EN standards

These are technical specifications established in conjunction with, and with approval of, the relative bodies within the various CENELEC member countries (European Union, European Free Trade Association and many central and eastern European countries having «member» or «affiliated» status). Prepared in accordance with the principle of consensus, the European standards are the result of a weighted majority vote. Such adopted standards are then integrated into the national collection of standards, and contradictory national standards are withdrawn.

European standards incorporated within the French collection of standards carry the prefix NF EN. At the 'Union Technique de l'Electricité' *(Technical Union of Electricity)* (UTE), the French version of a corresponding European standard carries a dual number: European reference (NF EN …) and classification index (C …).

Therefore, the standard NF EN 60947-4-1 relating to motor contactors and starters, effectively constitutes the French version of the European standard EN 60947-4-1 and carries the UTE classification C 63-110.

This standard is identical to the British standard BS EN 60947-4-1 or the German standard DIN EN 60947-4-1.

Whenever reasonably practical, European standards reflect the international standards (IEC). With regard to automation system components and distribution equipment, in addition to complying with the requirements of French NF standards, Telemecanique brand components conform to the standards of all other major industrial countries.

Regulations

European Directives

Opening up of European markets assumes harmonisation of the regulations pertaining to each of the member countries of the European Union.

The purpose of the European Directive is to eliminate obstacles hindering the free circulation of goods within the European Union, and it must be applied in all member countries. Member countries are obliged to transcribe each Directive into their national legislation and to simultaneously withdraw any contradictory regulations. The Directives, in particular those of a technical nature which concern us, only establish the objectives to be achieved, referred to as "essential requirements".

The manufacturer must take all the necessary measures to ensure that his products conform to the requirements of each Directive applicable to his production.

As a general rule, the manufacturer certifies conformity to the essential requirements of the Directive(s) for his product by affixing the CE mark.

The CE mark is affixed to Telemecanique brand products concerned, in order to comply with French and European regulations.

Significance of the CE mark
- The CE mark affixed to a product signifies that the manufacturer certifies that the product conforms to the relevant European Directive(s) which concern it; this condition must be met to allow free distribution and circulation within the countries of the European Union of any product subject to one or more of the E.U. Directives.
- The CE mark is intended solely for national market control authorities.
- The CE mark must not be confused with a conformity marking.

Schneider
Electric

European Directives (continued)

For electrical equipment, only conformity to standards signifies that the product is suitable for its designated function, and only the guarantee of an established manufacturer can provide a high level of quality assurance.

For Telemecanique brand products, one or several Directives are likely to be applicable, depending on the product, and in particular:

■ the Low Voltage Directive 73/23/EEC amended by Directive 93/68/EEC: the CE mark relating to this Directive has been compulsory since 1st January 1997.

■ the Electromagnetic Compatibility Directive 89/336/EEC, amended by Directives 92/31/EEC and 93/68/EEC: the CE mark on products covered by this Directive has been compulsory since 1st January 1996

ASEFA-LOVAG certification

The function of ASEFA (Association des Stations d'Essais Française d'Appareils électriques - *Association of French Testing Stations for Low Voltage Industrial Electrical Equipment)* is to carry out tests of conformity to standards and to issue certificates of conformity and test reports. ASEFA laboratories are authorised by the French authorisation committee (COFRAC).

ASEFA is now a member of the European agreement group LOVAG (Low Voltage Agreement Group). This means that any certificates issued by LOVAG/ASEFA are recognised by all the authorities which are members of the group and carry the same validity as those issued by any of the member authorities.

Quality labels

When components can be used in domestic and similar applications, it is sometimes recommended that a "Quality label" be obtained, which is a form of certification of conformity.

Code	Quality label	Country
CEBEC	Comité Electrotechnique Belge	Belgium
KEMA-KEUR	Keuring van Electrotechnische Materialen	Netherlands
NF	Union Technique de l'Electricité	France
ÖVE	Österreichischer Verband für Electrotechnik	Austria
SEMKO	Svenska Electriska Materiel Kontrollanatalten	Sweden

Product certifications

In some countries, the certification of certain electrical components is a legal requirement. In this case, a certificate of conformity to the standard is issued by the official test authority.

Each certified device must bear the relevant certification symbols when these are mandatory:

Code	Certification authority	Country
CSA	Canadian Standards Association	Canada
UL	Underwriters Laboratories	USA
CCC	China Compulsory Certification	China

Note on certifications issued by the Underwriters Laboratories (UL). There are two levels of approval:

"Recognized" (℞)
The component is fully approved for inclusion in equipment built in a workshop, where the operating limits are known by the equipment manufacturer and where its use within such limits is acceptable by the Underwriters Laboratories.

The component is not approved as a "Product for general use" because its manufacturing characteristics are incomplete or its application possibilities are limited.

A "Recognized" component does not necessarily carry the certification symbol.

"Listed" (UL)
The component conforms to all the requirements of the classification applicable to it and may therefore be used both as a "Product for general use" and as a component in assembled equipment. A "Listed" component must carry the certification symbol.

Marine classification societies

Prior approval (= certification) by certain marine classification societies is generally required for electrical equipment which is intended for use on board merchant vessels.

Code	Classification authority	Country
BV	Bureau Veritas	France
DNV	Det Norske Veritas	Norway
GL	Germanischer Lloyd	Germany
LR	Lloyd's Register	Great Britain
NKK	Nippon Kaiji Kyokaï	Japan
RINA	Registro Italiano Navale	Italy
RRS	Register of Shipping	Russia

Note

For further details on a specific product, please refer to the "Characteristics" pages in this catalogue or consult your Regional Sales Office.

7

Degrees of protection against the penetration of solid bodies, water and personnel access to live parts

The European standard EN 60529 dated October 1991, IEC publication 529 (2nd edition - November 1989), defines a coding system (IP code) for indicating the degree of protection provided by electrical equipment enclosures against accidental direct contact with live parts and against the ingress of solid foreign objects or water. This standard does not apply to protection against the risk of explosion or conditions such as humidity, corrosive gasses, fungi or vermin.

Certain equipment is designed to be mounted on an enclosure which will contribute towards achieving the required degree of protection (example : control devices mounted on an enclosure).

Different parts of an equipment can have different degrees of protection (example : enclosure with an opening in the base).

Standard NF C 15-100 (December 2002 edition), section 512, table 51 A, provides a cross-reference between the various degrees of protection and the environmental conditions classification, relating to the selection of equipment according to external factors.

Practical guide UTE C 15-103 shows, in the form of tables, the characteristics required for electrical equipment (including minimum degrees of protection), according to the locations in which they are installed.

IP ●●● code

The IP code comprises **2 characteristic numerals** (e.g. **IP 55**) and may include **an additional letter** when the actual protection of personnel against direct contact with live parts is better than that indicated by the first numeral (e.g. IP 20C).
Any characteristic numeral which is unspecified is replaced by an X (e.g. IP XXB).

1st characteristic numeral:
corresponds to protection of the equipment against penetration of solid objects and protection of personnel against direct contact with live parts.
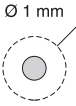

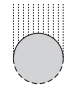

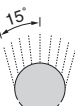

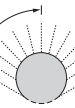

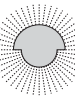

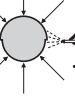

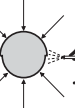

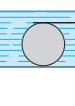

2nd characteristic numeral:
corresponds to protection of the equipment against penetration of water with harmful effects.

Additional letter:
corresponds to protection of personnel against direct contact with live parts.

	Protection of the equipment		Protection of personnel
0	Non-protected		Non-protected
1	Ø 50 mm	Protected against the penetration of solid objects having a diameter greater than or equal to 50 mm	Protected against direct contact with the back of the hand (accidental contacts).
2	Ø 12,5 mm	Protected against the penetration of solid objects having a diameter greater than or equal to 12.5 mm.	Protected against direct finger contact.
3	Ø 2,5 mm	Protected against the penetration of solid objects having a diameter greater than or equal to 2.5 mm.	Protected against direct contact with a Ø 2.5 mm tool.
4	Ø 1 mm	Protected against the penetration of solid objects having a diameter > 1 mm.	Protected against direct contact with a Ø 1 mm wire.
5		Dust protected (no harmful deposits).	Protected against direct contact with a Ø 1 mm wire.
6		Dust tight.	Protected against direct contact with a Ø 1 mm wire.

0	Non-protected	
1		Protected against vertical dripping water, (condensation).
2	15°	Protected against dripping water at an angle of up to 15°.
3	60°	Protected against rain at an angle of up to 60°.
4		Protected against splashing water in all directions.
5		Protected against water jets in all directions.
6		Protected against powerful jets of water and waves.
7	1 m / 15 cm min	Protected against the effects of temporary immersion.
8	m	Protected against the effects of prolonged immersion under specified conditions.

	Additional letter:
A	With the back of the hand.
B	With the finger.
C	With a Ø 2.5 mm tool.
D	With a Ø 1 mm wire.

7

Degrees of protection against mechanical impact
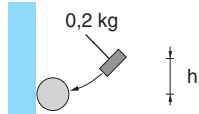

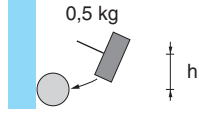

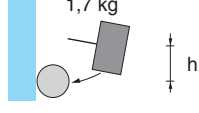

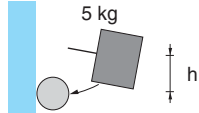

The European standard EN 62262 dated February 2002 defines a coding system (IK code) for indicating the degree of protection provided by electrical equipment enclosures against external mechanical impact.
Standard NF C 15-100 (December 2002 edition), section 512, table 51 A, provides a cross-reference between the various degrees of protection and the environmental conditions classification, relating to the selection of equipment according to external factors.
Practical guide UTE C 15-103 shows, in the form of tables, the characteristics required for electrical equipment (including minimum degrees of protection), according to the locations in which they are installed.

IK ●● code

The IK code comprises **2 characteristic numerals** (e.g. **IK 05**).

2 characteristic numerals:

corresponding to a value of impact energy.

		h (cm)	Energy (J)
00	Non-protected		
01	0,2 kg	7.5	0.15
02		10	0.2
03		17.5	0.35
04		25	0.5
05		35	0.7
06	0,5 kg	20	1
07		40	2
08	1,7 kg	30	5
09	5 kg	20	10
10		40	20
