Zelio Logic
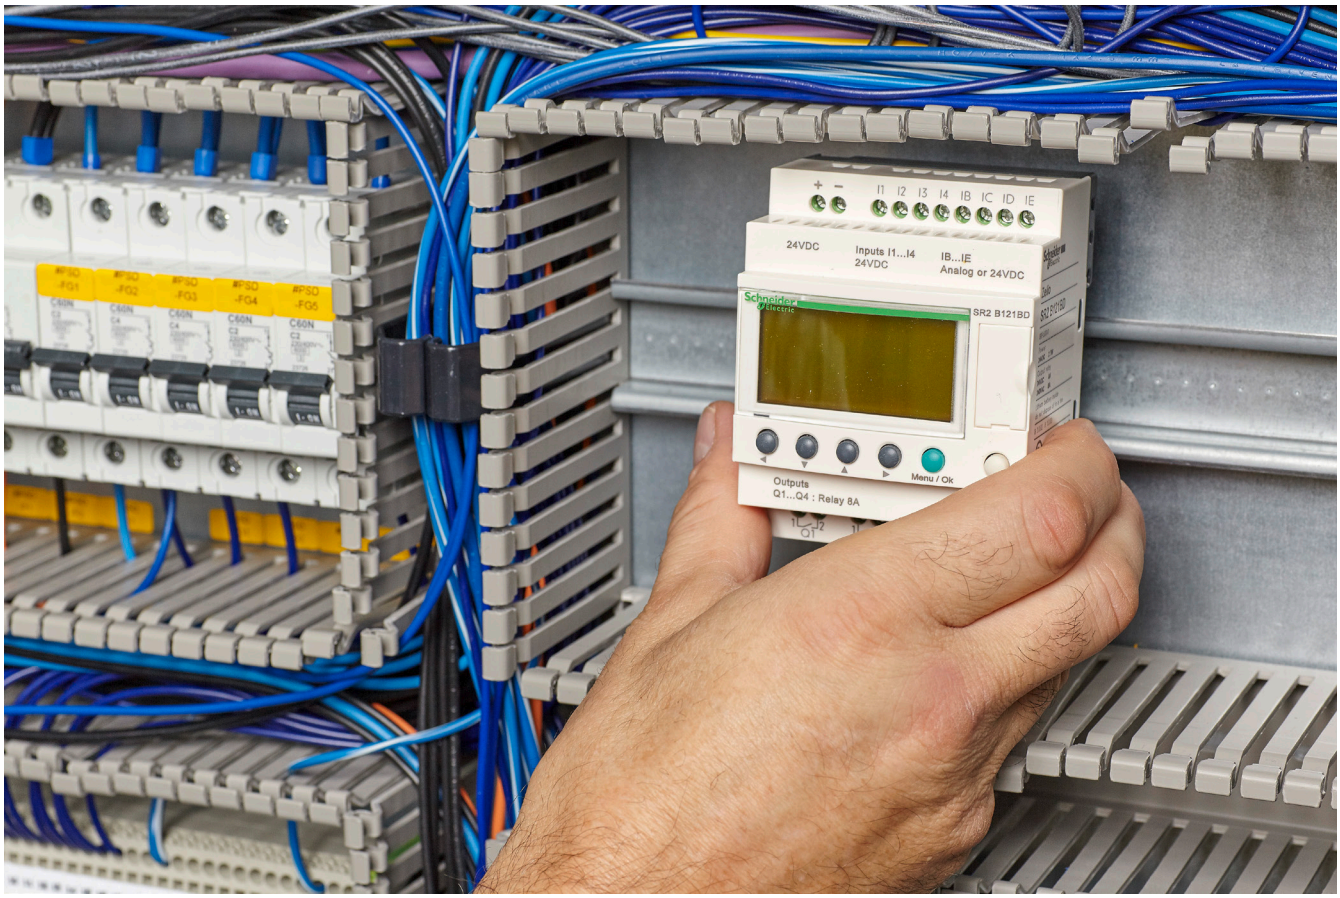
Smart relays for simple automation solutions

Step into an intuitive world!



Designed for the management of simple automation systems, Zelio Logic smart relays, with their unique combination of value for money and ease of use, provide a real alternative to solutions based on hard-wired logic or dedicated cards.

Simple to select, install, and program, Zelio Logic is suitable for all your applications.

Zelio Logic is a flexible solution, offering you the choice of two ranges:

> Compact versions with fixed configurations

> Modular versions that allow the use of extension modules with two programming languages (FBD or ladder).

Life Is On Schneider Electric

Zelio Logic
Smart relays for simple automation solutions

Advantages

Higher performance

> Two times more programming memory and more function blocks by simply updating the firmware

Greater functionality

> PID function for HVAC applications and 2G/3G modems

> 24 VDC module inputs compatible with NTC temperature probes (programmable in FBD language)

Greater efficiency, less engineering time

> Free software and firmware downloadable from the Schneider Electric website

> Get to grips with the software in less than an hour, simplified tool-free programming in ladder, FBD, and SFC languages for small applications

> Access to the program and modification of settings on integrated display

More flexibility - Easy design, maintenance, and commissioning

> Range of compact and modular smart relays and extension modules

> Programmable logic: a smart alternative to hard-wired logic or dedicated cards

System components

Color HMI

Zelio Logic
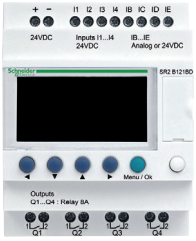
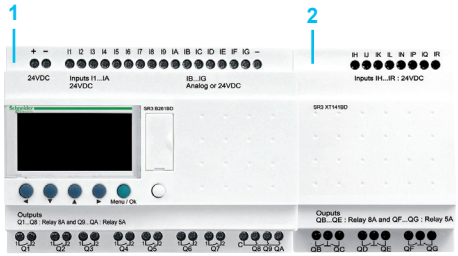
Compact and modular smart relays

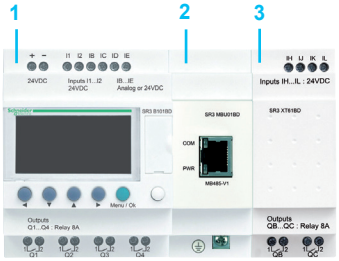


Zelio Logic compact smart relay

Combination of modular smart relays and extension modules



1 Modular Zelio Logic smart relay (10 or 26 I/O)
2 Discrete (6, 10, or 14 I/O) or analog (4 I/O) I/O extension module



1 Modular Zelio Logic smart relay (10 or 26 I/O)
2 Modbus serial link or Ethernet Modbus/TCP network communication extension modules
3 Discrete (6, 10, or 14 I/O) or analog (4 I/O) I/O extension module

⚠ *Observe the order of assembly above when using a Modbus server or Ethernet server network communication extension module and a discrete or analog I/O extension module.*
An I/O extension module cannot be inserted before a network communication extension module.

Presentation

Zelio Logic smart relays are designed for use in small automated systems. They are used in both the industrial and commercial sectors.

■ **For industry:**
- automation of small finishing, production, assembly, or packaging machines
- small automated systems operating at 48 V ∿ (hoisting application, etc.)
- decentralized automation of ancillary equipment for large and medium-sized machines (in the textile, plastics, materials processing sectors, etc.)
- automation systems for agricultural machinery (irrigation, pumping, greenhouses, etc.)

■ **For the commercial/building sectors:**
- automation of barriers, roller shutters, access control
- automation of lighting systems
- automation of compressors and air conditioning systems
- etc.

Their compact size and ease of setup make them a competitive alternative to solutions based on cabled logic or specific cards.

■ **Programming**
Simple programming, backed up by the universal nature of the languages, meets the requirements of automation specialists and the needs of electricians.
Programming can be performed:
- locally, using the buttons on the Zelio Logic smart relay (ladder language)
- on a PC using “Zelio Soft 2” software

When using a PC, programming can be performed either in ladder language or in function block diagram (FBD) language (see page 10).

The LCD display unit backlight *(1)* is activated by pressing one of the six programming buttons on the Zelio Logic smart relay or by programming with “Zelio Soft 2” software (e.g. flashing when diagnosing a malfunction).

The clock has a lithium battery, which gives it an independent operating time of 10 years. Data backup (preset values and current values) is provided by an EEPROM Flash memory (with the same lifetime as the smart relay).

Compact smart relays

Compact smart relays meet requirements for simple automation systems.
The number of I/O can be:
- 12 or 20 I/O, supplied with 24 V ∿ or 12 V ⎓ power
- 20 I/O, supplied with 48 V ∿ power
- 10, 12, or 20 I/O, supplied with 100…240 V ∿, or 24 V ⎓ power

Modular smart relays and extension modules

The number of I/O for modular smart relays can be:
- 26 I/O, supplied with 12 V ⎓ power
- 10 or 26 I/O, supplied with 24 V ∿, 100…240 V ∿, or 24 V ⎓ power

To improve performance and flexibility, Zelio Logic modular smart relays can take extension modules to obtain a maximum of 40 I/O.
- Modbus serial link or Ethernet Modbus/TCP network communication extension modules, supplied with 24 V ⎓ power via the Zelio Logic smart relay at the same voltage
- Analog I/O extension module with 4 I/O, supplied with 24 V ⎓ power via the Zelio Logic smart relay at the same voltage
- Discrete I/O extension modules with 6, 10, or 14 I/O, supplied with power via the Zelio Logic smart relay at the same voltage

HMISTO705 Small Panel

Zelio Logic compact smart relay + SR2CBL09 cable

Communication

Cabled and wireless programming tools

■ These programming tools allow the Zelio Logic smart relay to be connected to a PC running “Zelio Soft 2” software:

□ Cable connection:
- SR2USB01 cable to USB port

or
- SR2CBL01 cable to 9-way serial port

□ Wireless connection:
- SR2BTC01 Bluetooth interface

■ Memory cartridge

The Zelio Logic smart relay can take a backup memory cartridge that allows the application program to be copied to another Zelio Logic smart relay (it is only possible to load and update the firmware with the SR2MEM02 memory cartridge).
- The memory cartridge also enables a backup copy of the program to be saved prior to replacing the product.
- When used with a smart relay without display or buttons, the copy of the program contained in the cartridge is automatically transferred to the Zelio Logic smart relay on power-up.

Modbus serial link and Ethernet Modbus/TCP communication extension modules

The Modbus serial link and Ethernet Modbus/TCP network communication extension modules allow connection to automation system equipment such as display units or PLCs (see page 22).

Modem communication interface

The “modem communication interface” offer in the Zelio Logic range includes:
- an SR2COM01 modem communication interface connected between a Zelio Logic smart relay and a modem
- an SR2MOD02 GSM/UMTS *(1)* modem
- “Zelio Logic Alarm” software

This offer is designed for monitoring or remote control of machines or installations that operate without personnel.

The Modem communication interface, supplied with 12…24 V ⎓ power, enables messages, phone numbers, and calling conditions to be stored (see page 32).

HMI terminal

The Harmony HMISTO Small Panel offers added value to the equipment by enabling the creation of eye-catching dialog screens.

□ It has a color screen.

□ It connects directly to the front panel of the smart relay in the memory cartridge slot via a special cable (SR2CBL09).

□ It is configured using EcoStruxure Operator Terminal Expert software *(2)*. Exchanges with the smart relay are simplified using the SL In and SL Out data exchange blocks in “Zelio Soft 2” software (FBD language only). 24 words can be exchanged in each direction.

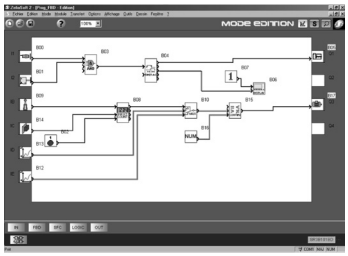
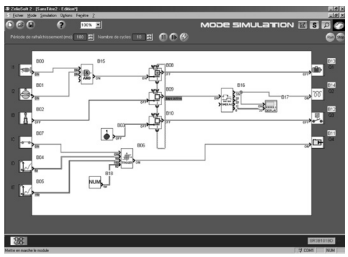
(2) Visit EcoStruxure Operator Terminal Expert on our website.

Zelio Logic

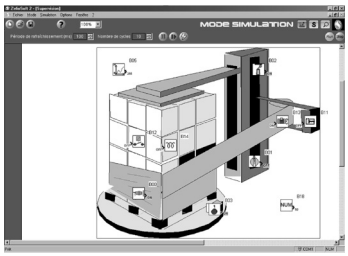
Compact and modular smart relays
"Zelio Soft 2" programming software



Programming in FBD language



Simulation mode



Supervision window

"Zelio Soft 2" for PC – version 5.1 *(1)*

"Zelio Soft 2" software enables:

- programming in ladder language or function block diagram (FBD) language (see page 12)
- simulation, monitoring, and supervision
- uploading and downloading of programs
- print-out of customized files
- automatic program compilation
- online help

Consistency checks and application languages

"Zelio Soft 2" monitors applications by means of its consistency check function.
An indicator turns red at the slightest input error (ladder language). The problem can be located by simply clicking the mouse.
"Zelio Soft 2" software allows users to switch between the six available languages (English, French, German, Italian, Portuguese, and Spanish) at any time and edit the application file in the selected language.

Inputting messages for display on Zelio Logic

"Zelio Soft 2" software allows text function blocks to be configured, which can then be displayed on Zelio Logic smart relays that have a display.

Program testing

Two test modes are provided:

- **Simulation** mode in "Zelio Soft 2" is used to test a program without a Zelio Logic smart relay, i.e. to:
  - enable discrete inputs
  - display output status
  - vary the voltage of the analog inputs
  - enable the programming buttons
  - simulate the application program in real time or in accelerated time
  - display the different active program elements dynamically in red

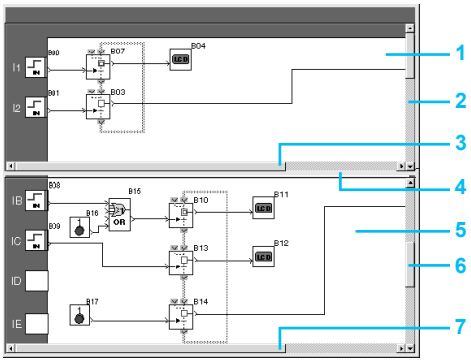
- **Monitoring** mode is used to test the program executed by the smart relay, i.e. to:
  - display the program "online"
  - force inputs, outputs, auxiliary relays, and current function block values
  - adjust the date and time
  - switch from STOP mode to RUN mode and vice versa

In simulation or monitoring mode, the supervision window allows users to view the status of the smart relay I/O within the application environment (diagram or image).

(1) These functions exist for versions ≥ V 5.1.

Zelio Logic

Compact and modular smart relays
"Zelio Soft 2" programming software



Structure of a split wiring sheet

User interfaces

"Zelio Soft 2" software (versions ≥ 4.1) improves the ease of use of user interfaces for the following functions:

"Split wiring sheet" function (ladder and FBD language)

The wiring sheet can be split into two to allow two separate parts of the wiring sheet to be displayed on the same screen.
This can be used to:

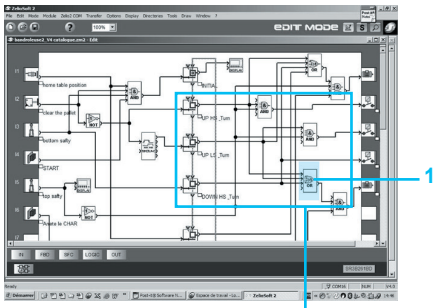
- Display the required function blocks in the top and bottom parts of the screen
- Move the split bar as required
- Connect the function blocks between the two parts of the wiring sheet

The split wiring sheet is structured as follows:

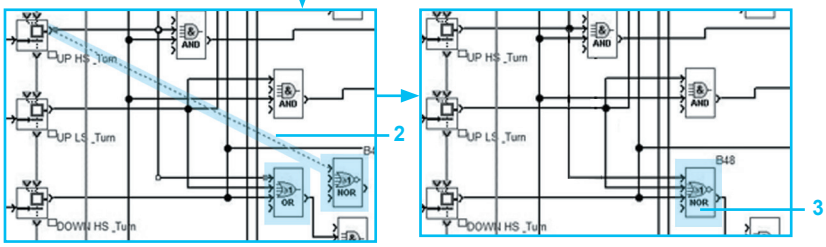
1 View of top part
2 Top window vertical scroll bar
3 Top window horizontal scroll bar
4 Split bar
5 View of bottom part
6 Bottom window vertical scroll bar
7 Bottom window horizontal scroll bar

"Replace function block" function (FBD language)

This function allows a block to be replaced without losing the input and output connections.
E.g. replacing an "OR" block with a "NOR" block



1 "OR" block to be replaced



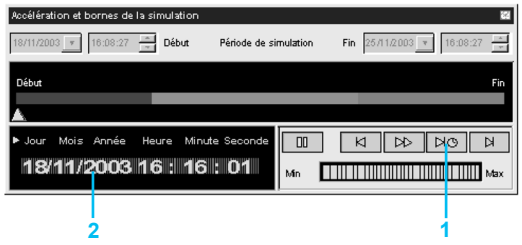
2 Move the links to the new "NOR" block

3 Delete the "OR" block and position the "NOR" block in its place

"Time Prog simulation" (ladder and FBD languages)

Ladder or FBD program simulation mode allows the program to be debugged by simulating it on the software workshop host computer.
A function allows the time on the simulator clock to be modified by setting it to 3 s before the start of the next event.

The "Next event" button 1 is used to modify the simulator clock 2.



"Acceleration and simulation terminals" window

Ladder language

Definitions

Text function block

Timer

Up/down counter

Fast counter

Analog comparator

Clock

Auxiliary relay

Counter comparator

LCD backlight

Daylight saving time change

Output coil

Message

Ladder language enables a ladder program to be written with elementary functions, elementary function blocks, and derived function blocks, as well as with contacts, coils, and variables.
The contacts and coils can be annotated. Text can be placed freely within the graphic.

■ **Ladder diagram input modes**

"Zelio input" mode allows users who have programmed the Zelio Logic smart relay directly on the device to achieve the same ease of use, even when using the software for the first time.
"Ladder input" mode, which is more intuitive, is very user-friendly and incorporates many additional features.
Two types of symbol can be used in ladder programming language:
- ladder symbols
- electrical symbols

"Ladder input" mode also allows the creation of mnemonics and comments associated with each program line.
Instant switching from one input mode to the other is possible at any time, simply by clicking the mouse.
Up to 240 *(1)* ladder diagram lines can be programmed, with 5 contacts and 1 coil per program line.

■ **Functions**

- 16 text function blocks
- 28 *(1)* timers, each of which can be configured from among 11 different types (1/10 second to 9,999 hours)
- 28 *(1)* up/down counters from 0 to 32,767
- 1 fast counter (1 kHz)
- 16 analog comparators
- 8 clocks, each with 4 channels
- 56 *(1)* auxiliary relays
- 8 counter comparators
- LCD screen with programmable backlight
- automatic daylight saving time changeover
- variety of functions: coil latching (Set/Reset), impulse relay, contactor
- 28 message blocks (with modem communication interface, see page 32)

Functions

Position	Electrical diagram	Ladder language	Comment
Contact			I corresponds to the real state of the contact wired to the smart relay input. i corresponds to the inverse state of the contact wired to the smart relay input.
Standard coil			The coil is energized when the contacts to which it is connected are closed.
Latch coil (Set)			The coil is energized (set) when the contacts to which it is connected are closed. It remains energized even if the contacts are no longer closed.
Unlatch coil (Reset)			The coil is de-energized (reset) when the contacts to which it is connected are closed. It remains de-energized even if the contacts are no longer closed.

(1) Possible using version V5.0 and above of "Zelio Soft 2" provided that the SR2COM01 communication module is not used. If this module is used, 16 timers, 16 counters, and 32 auxiliary relays are available and the program is limited to 120 ladder diagram lines.

Zelio Logic
Compact and modular smart relays
"Zelio Soft 2" programming software

Function block language (FBD/Grafcet SFC/logic functions) *(1)*

Definition:

FBD language allows graphical programming based on the use of predefined function blocks. It provides the use of 36 pre-programmed functions for counting, time delay, timing, switching threshold definition (e.g. temperature regulation), pulse generation, time programming, multiplexing, and display. There are also 7 SFC functions and 6 logic functions.

Pre-programmed functions

Zelio Logic smart relays provide a high processing capacity, up to 500 *(2)* function blocks, including 36 pre-programmed functions:

TIMER AC
Timer. Function A/C (ON-delay and OFF-delay)

TIMER BH
Timer. Function BH (adjustable pulsed signal)

TIMER Li
Pulse generator (ON-delay, OFF-delay)

TIMER BW
Timer. Function BW (pulse on rising/falling edge)

TIMER AC
Timer. Function A/C with external preset adjustment (ON-delay and OFF-delay)

TIMER BH
Timer. Function BH with external preset adjustment (adjustable pulsed signal)

TIMER Li
Pulse generator with external preset adjustment (ON-delay, OFF-delay)

BISTABLE
Impulse relay function

SET–RESET
Bistable latching – Priority assigned to either SET or RESET function

BOOLEAN
Allows logic equations to be created between connected inputs

CAM
Cam programmer

PRESET COUNT
Up/down counter

UP DOWN COUNT
Up/down counter with external preset

PRESET H-METER
Hour counter (hour, minute preset)

TIME PROG
Time programmer, weekly and annual

GAIN
Allows conversion of an analog value by change of scale and offset

TRIGGER
Defines an activation zone with hysteresis

MUX
Multiplexing functions on 2 analog values

COMP IN ZONE
Zone comparison (Min. ≤ Value ≤ Max.)

ADD/SUB
Add and/or subtract function

MUL/DIV
Multiply and/or divide function

TEXT
Display of 4 digital and analog data, date, time, messages for Human-Machine interface

DISPLAY
Display of digital and analog data, date, time, messages for Human-Machine interface

COM
Sending of messages with communication interface (see page 32)

COMPARE
Comparison of 2 analog values using the operands =, >, <, ≤, ≥, ≠

STATUS
Access to smart relay status

ARCHIVE
Storage of 2 values simultaneously

SPEED COUNT
Fast counting up to 1 kHz

CAN
Analog-to-digital converter

CNA
Digital-to-analog converter

SL In
Input of a word via serial link

SL Out
Output of a word via serial link

SUNTRACK
Tracks the sun's position

SUNRISE/SUNSET
Outputs the sunrise and sunset times

PID
Temperature, level, flow rate, or pressure control functions

THERMISTOR
NTC temperature probe input

SFC functions (GRAFCET)

RESET-INIT
Reset initial step

INIT STEP
Initial step

STEP
SFC step

DIV-OR 2
Divergence to OR

CONV-OR 2
Convergence to OR

DIV-AND 2
Divergence to AND

CONV-AND 2
Convergence to AND

Logic functions

AND
AND function

OR
OR function

NAND
NOT AND function

NOR
NOT OR function

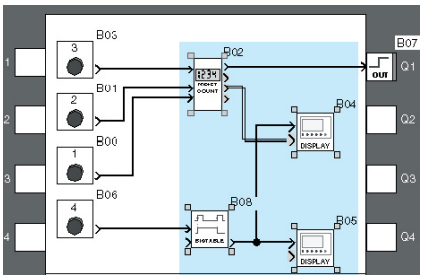
XOR
Exclusive OR function

NOT
NOT function

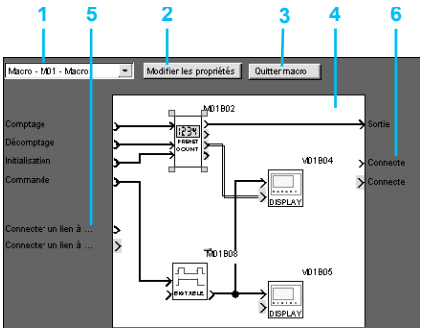
(1) FBD: Function block diagram. SFC: Sequential function chart
(2) Possible in version V5.0 or above of "Zelio Soft 2"

Function block language (FBD/Grafcet SFC/logic functions) (continued)

Macro function

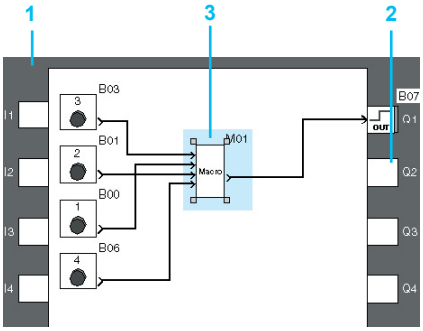


Creating a macro



Inside a macro

1 Select macro
2 Edit properties
3 Return to external view of a macro
4 Internal function block in the macro
5 Non-connected inputs
6 Non-connected outputs



External view of a macro

1 Input connections
2 Output connection
3 Macro function block

A macro is a group of function blocks. It is characterized by its number, name, links, internal function blocks (255 max.) and its I/O connections.

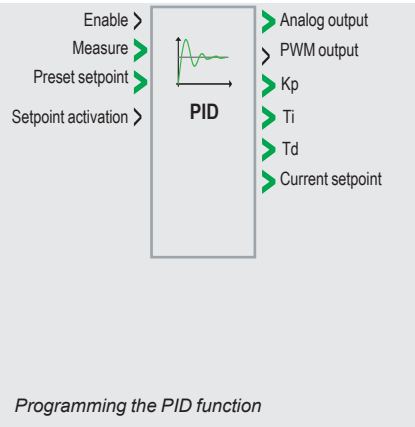
Seen from the outside, a macro behaves like a function block with inputs and/or outputs likely to be connected to links.
Once created, a macro can be manipulated like a function block:

■ Macro characteristics:
□ The maximum number of macros is 64.
□ A dedicated macro password can be used to protect their content.
□ A macro can be edited/duplicated.
□ A macro's comments can be edited.

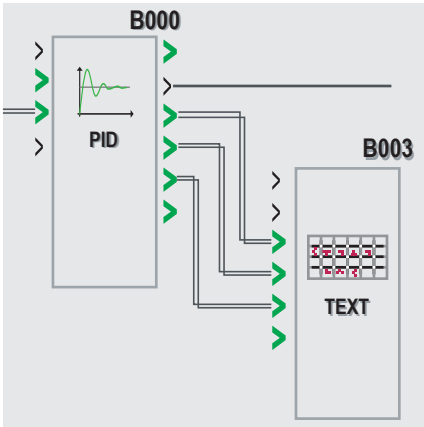
■ Macro properties:
A "Macro Properties" dialog box is used to enter or modify the properties of a macro.
The properties of a macro are as follows:
□ Macro name (optional)
□ Block symbol, which may be:
- an identifier
- an image

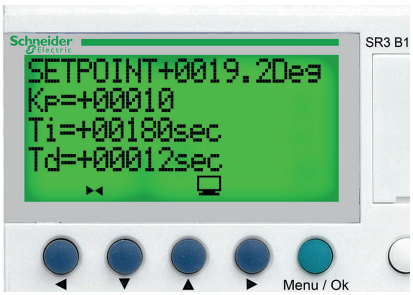
□ Name of inputs
□ Name of outputs

PID function



Programming the PID function





Modifying parameters (Kp, Ti, Td) using the programming and parameter setting buttons

Presentation
The PID function block is used to program simple temperature, level, or pressure control functions. Two types of output enable adaptation to the most common actuators available on the market:
□ Analog output, requiring the use of a modular smart relay and an analog I/O extension module
□ PWM output, enabling the integrated outputs in any smart relay to be used. Depending on the period set for PWM, and to help extend service life, a smart relay equipped with transistor outputs is recommended.

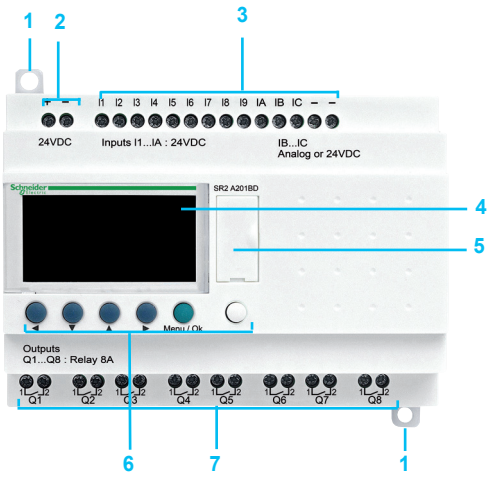
Programming
PID function blocks are available in FBD language. To help with tuning, default parameters are available for several typical applications (flow, level, pressure, temperature). These parameters can be modified.

Tuning
The TEXT and DISPLAY function blocks are used to help tune the control parameters (Kp, Ti, Td) without using Zelio Soft 2: the parameters can be modified directly using the buttons on the front of the smart relay and the display.

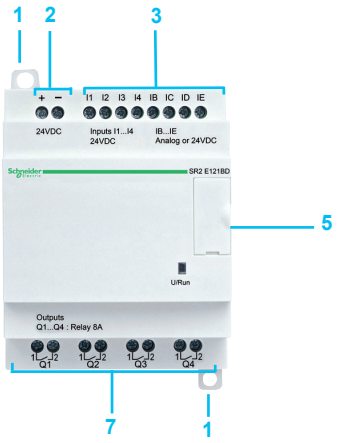
Zelio Logic
Compact and modular smart relays

Compact smart relays

With display – 10, 12, and 20 I/O



Without display – 10, 12, and 20 I/O

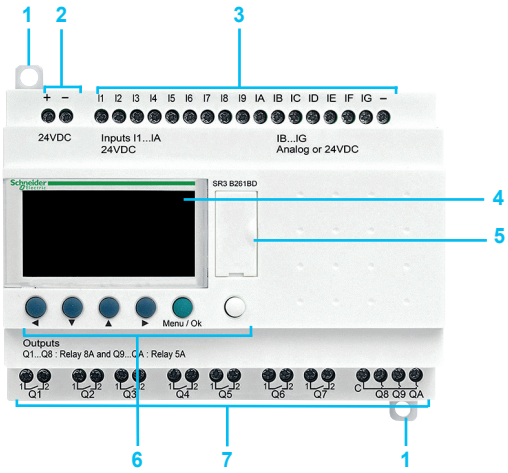


Zelio Logic compact smart relay front panels comprise:

1 Two retractable mounting lugs
2 Two power supply terminals
3 Terminals for connecting the inputs
4 Backlit LCD display with 4 lines of 18 characters
5 Slot for memory cartridge or connection to PC, modem communication interface, HMI terminal (Harmony Small Panel), or Bluetooth interface
6 6 buttons for programming and parameter entry
7 Terminals for connecting the outputs

Modular smart relays

With display – 10 and 26 I/O

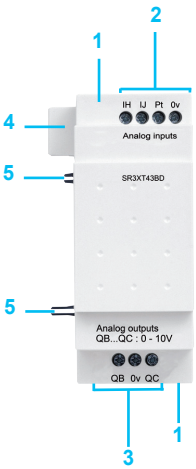


Zelio Logic modular smart relay front panels comprise:

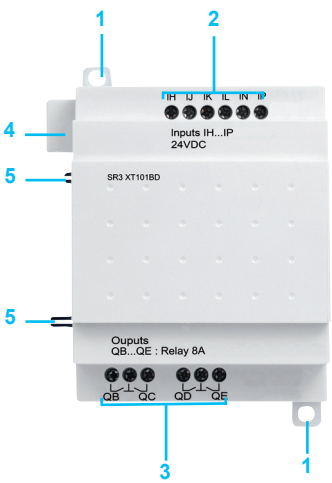
1 Two retractable mounting lugs
2 Two power supply terminals
3 Terminals for connecting the inputs
4 Backlit LCD display with 4 lines of 18 characters
5 Slot for memory cartridge or connection to PC, modem communication interface, HMI terminal (Harmony Small Panel), or Bluetooth interface
6 6 buttons for programming and parameter entry
7 Terminals for connecting the outputs

Discrete I/O extension modules

6 discrete I/O



10 and 14 discrete I/O



Discrete I/O extension module front panels comprise:

1 Two retractable mounting lugs
2 Terminals for connecting the inputs
3 Terminals for connecting the outputs

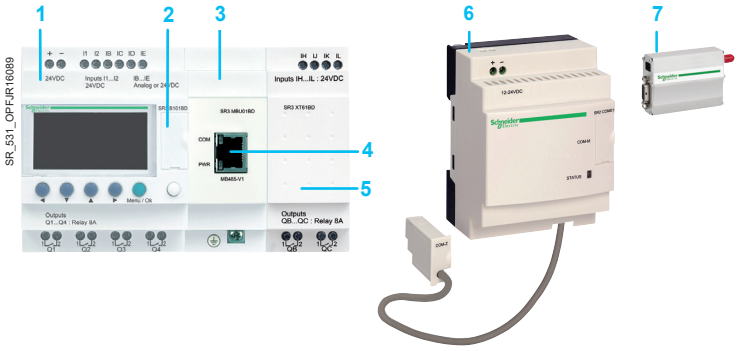
(2) The value indicated is the number of products supplied when ordering a reference.

Zelio Logic
Communication

Presentation

In order to communicate with their environment, Zelio Logic compact and modular smart relays and their extension modules are equipped with various types of communication port.

- Compact and modular smart relays feature a serial link port for connecting a PC, the modem communication interface, a memory cartridge slot, or an HMI terminal. This port uses a dedicated Zelio Logic communication protocol.
- Zelio Logic modular smart relay extension modules feature:
  - 1 RS 485 serial link port using the Modbus protocol on the **SR3MBU01BD** extension module
  - 1 Ethernet Modbus/TCP 10/100 base T port on the **SR3NET01BD** extension module



1 Modular smart relay (10 or 26 I/O)
2 Serial link port, Zelio Logic connector
3 Modbus server or Ethernet server communication extension module
4 RJ45 connector for Modbus serial link or Ethernet Modbus/TCP network connection
5 Discrete (6, 10, or 14 I/O) or analog (4 I/O) I/O extension module
6 Modem communication interface
7 GSM/UMTS modem

⚠ *Observe the order of assembly above when using a Modbus serial link (server) or Ethernet Modbus/TCP (server) network communication extension module and a discrete or analog I/O extension module.*
An I/O extension module cannot be inserted before the Modbus serial link (server) or Ethernet Modbus/TCP (server) network communication extension module.

Zelio Logic
Communication
Modbus serial link communication protocol

SR_531_CPF_JR16052

Modbus serial link network communication extension module

Presentation

The Modbus communication protocol is the client/server type.
Two exchange methods are possible:

- Request/response:
  - The client sends a request to a specific server.
  - The server waits for a response from the polled client.
- Broadcast:
  - The Client broadcasts a request to all server stations on the bus. These stations execute the command without transmitting a response.

Zelio Logic modular smart relays are connected to the Modbus network via the Modbus server network communication extension module. This extension module is a server that is not electrically isolated.
The Modbus server network communication extension module must be connected to an SR3B●●●BD modular smart relay with a 24 V ⎓ power supply.

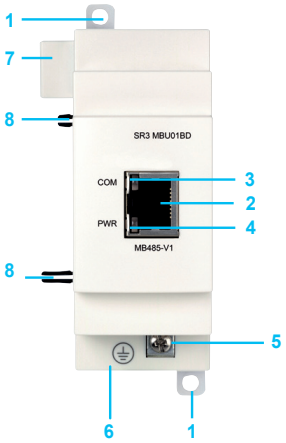
Configuration

The Modbus server network communication extension module can be configured:

- locally, using the buttons on the smart relay *(1)*
- on a PC using “Zelio Soft 2” software (see page 10)

When using a PC, programming can be performed either in ladder language or in function block diagram (FBD) language (see page 12).

Description



The Modbus server network communication extension module **SR3MBU01BD** comprises:

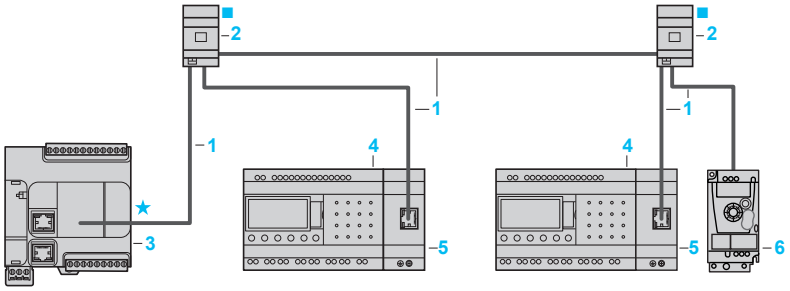
1 Two retractable mounting lugs
2 A Modbus network connection (RJ45 shielded female connector)
3 A communication LED (COM)
4 A power LED (PWR)
5 A screw terminal block for the protective ground connection
6 Spring for clip-on mounting on 35 mm/*1.38 in.* rail
7 Connector for connection to the Zelio Logic smart relay (powered via the Zelio Logic smart relay)
8 Locating pegs

(1) Programming via the buttons on the front panel of the smart relay is only possible in ladder language.

Zelio Logic
Communication
Modbus serial link communication protocol

Connection examples

Example 1

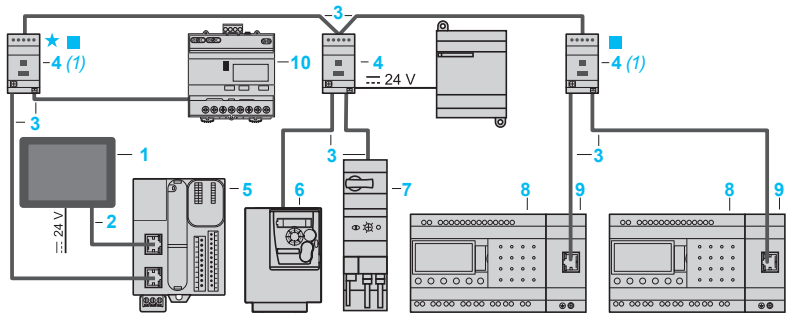


- Total length of cables between M221 and Altivar 12: ⩽ 30 m (98 ft)
- Length of cable 3: ⩽ 10 m (33 ft)
★ Line polarization active ■ Line terminator

1 Modbus RS485 cordsets (**VW3A8306R●●** extension cables)
2 Junction box **TWDXCAT3RJ** (1x RJ45 for trunk cable, 2x RJ45 for drop)
3 Client Modicon logic controller **TM221C●●●** equipped with communication cartridge **TMC2SL1** *(1)*
4 Modular smart relay **SR3B●●●BD**
5 Modbus communication extension module **SR3MBU01BD**
6 Altivar 12 drive

(1) Polarization must be enabled in the Client Modicon M221.

Example 2



- Total length of cables between isolation boxes 4: ⩽ 1,000 m (3,281 ft)
- Length of drop cables 3: ⩽ 10 m (33 ft)
★ Line polarization active ■ Line terminator

1 Client display unit **HMISCU**
2 Controller to Harmony HMI cordsets
3 Modbus RS485 cordsets (**VW3A8306R●●** extension cables)
4 Serial link tap isolation box **TWDXCAISO** (1x RJ45 for trunk cable, 2x RJ45 for drop) **5** Client Modicon logic controller **TM221M●●●** *(Network server connected to serial link port SERIAL1)*
6 Altivar 312 drive
7 TeSys U motor starter controller
8 Modular smart relay **SR3B●●●BD**
9 Modbus communication extension module **SR3MBU01BD**
10 Power meter **IEM31**

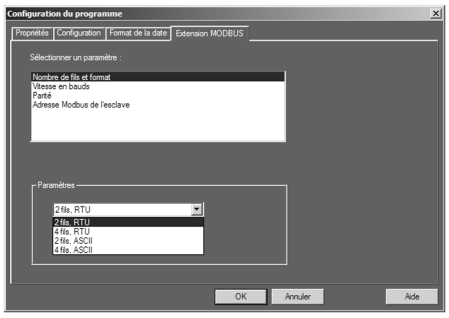
(1) Box powered by the logic controller

Function description

- The Modbus server network communication extension module is connected to a 2-wire or 4-wire Modbus network *(1)*.
- The maximum length between two **TWDXCAISO** taps configured as line terminators is 1,000 m/*3,281 ft* (9600 baud max., AWG 26).
- A maximum of 32 servers can be connected to the Modbus network, or a maximum of 247 servers with repeaters.
- The connection cable and its RJ45 male connectors must be shielded.
- The module ⏚ terminal must be connected directly to the protective ground.

(1) Refer to the Quick Reference Guide supplied with the product.

Zelio Logic
Communication
Modbus serial link communication protocol



Software workshop parameter entry window

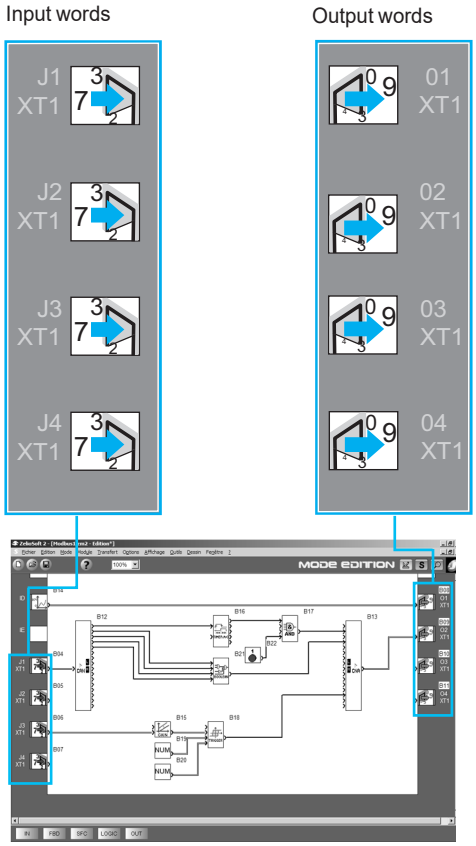
Parameter entry

Parameters can be entered either using “Zelio Soft 2” software, or directly using the buttons on the Zelio Logic smart relay *(1)*.
When the “RUN” command is issued, the Zelio Logic smart relay initializes the Modbus server network communication extension module in a configuration previously defined in the basic program.

The Modbus server network communication extension module has 4 parameters:
- number of UART wires and Modbus frame format
- transmission speed
- parity
- Modbus extension module network address

The default parameter settings are as follows: 2-wire, RTU, 19,200 baud, even parity, address 1.

Parameters	Options
Number of wires	2 or 4
Frame format	RTU or ASCII
Transmission speed (baud)	1200, 2400, 4800, 9600, 19,200, 28,800, 38,400, 57,600
Parity	None, even, odd
Network address	1 to 247



FBD program editing window

Addressing Modbus exchanges

Ladder programming

In ladder mode, the 4 data words (16 bits) to be exchanged cannot be accessed by the application. Transfers with the Client are implicit and are carried out in a way that is totally transparent.

Modbus exchanges	Code	Number of words
Image of smart relay I/O	Read 03	4
Clock words	Read/Write 16, 06, or 03	4
Status words	Read 03	1

Function block diagram (FBD) programming

In FBD mode, the 4 input data words (16 bits) (J1XT1 to J4XT1) and the 4 output data words (O1XT1 to O4XT1) can be accessed by the application. Conversion function blocks are used to:
- break down a word type input (16 bits) into 16 separate “bit” type outputs using the CAN (analog-to-digital conversion) function e.g. to break down a J1XT1 to J4XT1 type input and copy these status values to discrete outputs
- compose a word type output (16 bits) from 16 separate “bit” type outputs using the CNA (digital-to-analog conversion) function e.g. to transfer the status value of discrete inputs or the status of a function to an O1XT1 to O4XT1 type output

Modbus exchanges	Code	Number of words
Input words	Read/Write 16, 06, or 03	4
Output words	Read 03	4
Clock words	Read/Write 16, 06, or 03	4
Status words	Read 03	1

(1) Programming via the buttons on the front panel of the smart relay is only possible in ladder language.

Ethernet (server) network communication extension module

Presentation

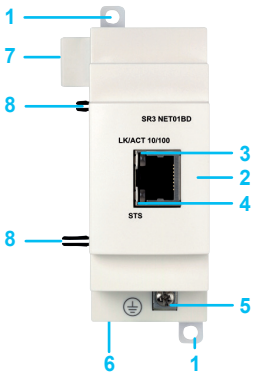
The **SR3NET01BD** extension module is used to communicate over Ethernet via the Modbus/TCP protocol in server mode. It must be connected to an **SR3B●●●BD** smart relay with a 24 V ⎓ power supply.

Configuration

This extension module is configured on a PC using “Zelio Soft 2” software (see page 10).
Programming on the PC is performed in function block diagram (FBD) language (see page 12).

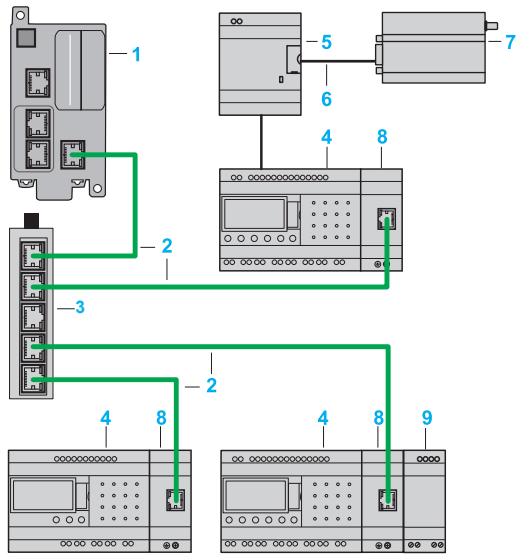
Description

The Ethernet Modbus/TCP network communication extension module **SR3NET01BD** comprises:



1 Two retractable mounting lugs
2 An Ethernet network connection (RJ45 shielded female connector)
3 A communication LED (LK/ACT 10/100)
4 A status LED (STS)
5 A screw terminal block for the protective ground connection
6 Spring for clip-on mounting on 35 mm/*1.38 in.* rail
7 Connector for connection to the Zelio Logic smart relay (powered via the Zelio Logic smart relay)
8 Locating pegs

Connection example

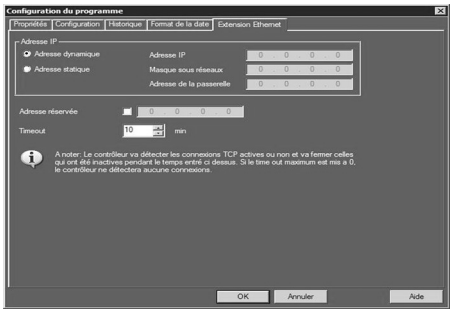


1 Modicon logic controller **TM251MESE**
2 Ethernet network (**490NTW000●●** cordsets)
3 Modicon switch **MCSESU●●●**
4 Zelio Logic modular smart relay **SR3B●●●BD**
5 Communication interface **SR2COM01**
6 Connecting cable **SR2CBL07** (included with modem communication interface)
7 GSM modem
8 Ethernet server network communication extension module **SR3NET01BD**
9 Analog I/O extension module **SR3XT43BD**

Function description

- The Ethernet Modbus/TCP network communication extension module is connected to a LAN.
- The maximum length between two devices is 100 m/*328 ft.*
- The connection cable must be at least category 5, and its RJ45 male connectors must be shielded.
- The ⏚ terminal must be connected directly to the protective ground.

Zelio Logic
Communication
Ethernet Modbus/TCP network



Ethernet extension module configuration window

Parameter entry

Parameters can be entered using “Zelio Soft 2” software.
When the “RUN” command is issued, the Zelio Logic smart relay initializes the Ethernet Modbus/TCP network communication extension module in a configuration previously defined in the basic program.

The Ethernet Modbus/TCP network communication extension module has 6 parameters:
- type of addressing (dynamic or static)
- IP address
- subnet mask
- gateway address
- reserved address
- time out

Addressing Ethernet exchanges

Function block diagram (FBD) programming

In FBD mode, the 4 input data words (16 bits) (J1XT1 to J4XT1) and the 4 output data words (O1XT1 to O4XT1) can be accessed by the application.
Conversion function blocks are used to:

Zelio Logic
Analog I/O extension module

Analog I/O extension module for modular smart relays

Presentation

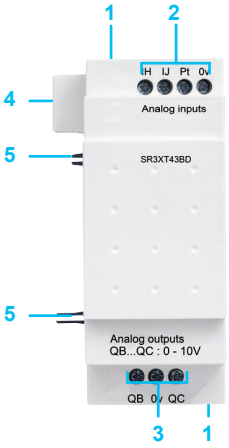
Modular smart relays and analog I/O extension modules

To improve performance and flexibility, Zelio Logic modular smart relays can take analog I/O extension modules with 10-bit resolution.
The inputs accept 0-10 V, 0-20 mA, and Pt100 signals.

Using a Zelio Logic modular smart relay with a 24 V ⎓ power supply in conjunction with an analog I/O extension module with 4 I/O makes it possible to obtain up to 30 I/O, including 8 analog inputs and 2 analog outputs.

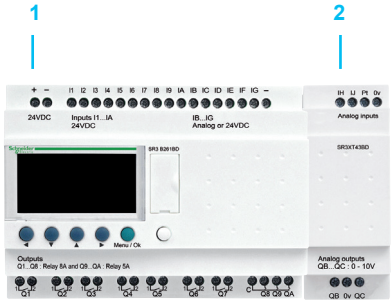
The analog I/O extension module works with SR3●●●BD smart relays with a 24 V ⎓ power supply.

Description

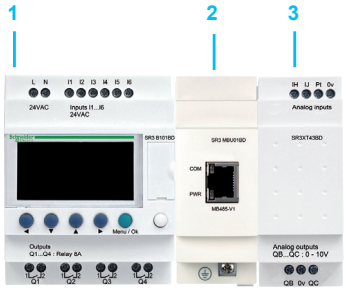


The analog I/O extension module front panel comprises:
1 Two retractable mounting lugs
2 Terminals for connecting the inputs
3 Terminals for connecting the outputs
4 Connector for connection to the smart relay (powered via the smart relay)
5 Locating pegs

Combination of modular smart relays and extension modules



1 Modular smart relay (10 or 26 I/O)
2 Analog I/O extension module (4 I/O)



1 Modular smart relay (10 or 26 I/O)
2 Modbus serial link or Ethernet Modbus/TCP network communication extension modules
3 Analog I/O extension module (4 I/O)

⚠ Observe the order of assembly above when using a network communication extension module and an analog I/O extension module.
An I/O extension module cannot be inserted before a network communication extension module.

Zelio Logic
Modem communication interface

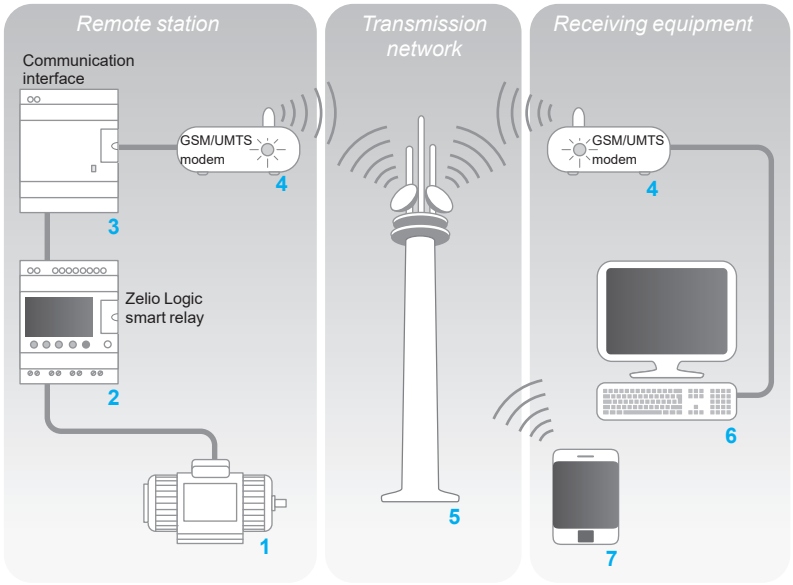
Modem communication interface

GSM/UMTS modem (1)

Presentation

The communication products in the Zelio Logic range are primarily designed for monitoring or remote control of machines or installations that operate without personnel.
Examples:
- monitoring of lift pumps, livestock buildings (ventilation, feed level, etc.), refrigeration units, car washes
- alarm in the event of failure of industrial or domestic heating boilers
- remote control of lighting: parking lots, warehouses
- remote control and monitoring of escalators, public transport
- refuse compactor full alert

The communication range comprises:
- a communication interface connected between a smart relay and a modem
- A GSM/UMTS modem *(1)*
- "Zelio Logic Alarm" software



The system comprises:
- A *remote station*, machine, or installation to be monitored **1**: control is achieved using a Zelio Logic smart relay with clock from the SR●B●●●●● or SR2E●●●●● range **2** via its inputs and outputs. The smart relay is connected via a communication interface **3** to a GSM/UMTS modem *(1)* **4**.
- The GSM/UMTS telephone *transmission network* **5** provided by different telecommunications operators
- A monitoring or control *receiver device*, which may be either of the following:
  - A PC **6** equipped with a GSM/UMTS modem
  - A GSM/UMTS phone **7**

Note: *The majority of modems built into PCs can be used.*

Various combinations are possible between the types of modem used on the *remote station*, the type of *receiver device* (PC + modems or phone), and the type of GSM/UMTS network available.
The type of architecture selected will therefore mainly depend on whether there is a need to send SMS messages or not (see page 35).

(1) GSM = Global System Mobile (2G). UMTS = Universal Mobile Telecommunications System (3G). The versions of modem communicating on the UMTS network (3G) are reserved for certain countries. Please contact our Customer Care Center.

Presentation (continued)

Smart relay (*remote station*)

As on an independent machine or installation, the smart relay is used for control *(1)*.
It contains the application program created using “Zelio Soft 2”.
The smart relay can be selected from the various models in the Zelio Logic range:
- according to the supply voltage
- with 10, 12, 20, or 26 I/O (up to 40 I/O with discrete extension module)
- with or without display
- with clock

Modem communication interface (*remote station*)

The modem communication interface allows messages, phone numbers, and calling conditions to be stored.
When the calling conditions are met, the messages, as well as any values to be sent, are date-stamped and stored in the interface.
The modem communication interface scales analog values to the physical values (degrees, bar, Pascal, etc.) required by the user.

GSM/UMTS modem

GSM/UMTS modems can be used on both the *remote station* and PC-type *receiver devices* (if the PC is not equipped with an internal modem). This modem automatically adapts to the available network by prioritizing the GSM network, which offers the greatest functionality. If there is only a UMTS network available, there will be reduced functionality (see the table on page 35).

In order to exploit the capabilities associated with the the communication modem, the modems are equipped with data SIM cards. Voice SIM cards may also be used but some functions will not be available (see the table on page 35).

“Zelio Logic Alarm” alarm management software *(PC type receiver device)*

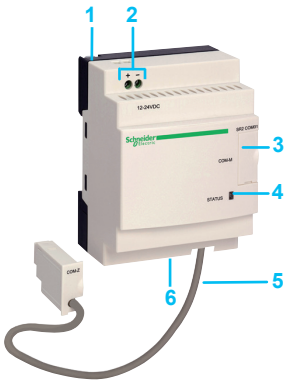
This software is used to:
- receive, classify, and export diagnostic alarm messages
- read or remotely force the status of program elements (inputs, outputs, auxiliary relays, timer or counter values, etc.)
- send control instructions (RUN, STOP, setting the time of the smart relay, etc.)
- send specific instructions (modifying access rights, recipients, etc.)

Note: This software can only be used on GSM networks (2G).

(1) Zelio Logic smart relays (see page 8)

Description

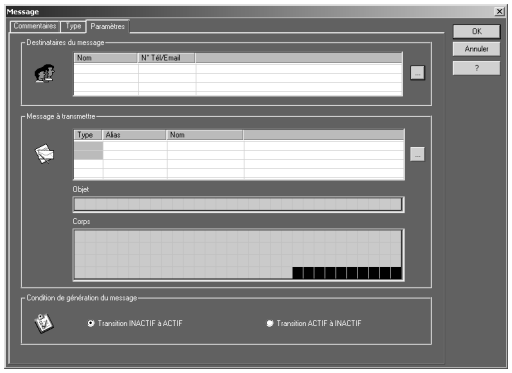
The SR2COM01 modem communication interface comprises:



1 Retractable mounting lugs
2 12…24 V ⎓ power supply terminal block
3 Slot for connection to modem or PC
4 Interface status LED indicator
5 Cable for connecting to the smart relay
6 Spring clip for clip-on mounting on a 35 mm *(1.38 in.)* rail

Zelio Logic
Modem communication interface

Functions



Message parameter entry window

Sending alarms

This function is used to send an alarm message to a *receiver device*.
When the calling condition is met, a message is sent to one or several phone numbers or e-mail addresses.
Types of message:
- alarm message on a PC with modem and "Zelio Logic Alarm" software
- SMS message *(1)* on a GSM/UMTS phone
- e-mail via SMS *(1) (2)*

One or all of these solutions can be selected simultaneously.
The *remote station* to be monitored initiates the call.
The phone line is only used while the alarm message is being transmitted.
Up to 28 messages can be used.
These messages consist of:
- a 160-character text, which may contain discrete and/or analog values (counter values, analog input voltages that can be scaled, etc.)
- 1 to 10 recipient phone numbers/e-mail addresses

Receiving commands

This function allows the status or the value of a program element to be modified from the *receiver device*.
The operator initiates the call using the *receiver device* (PC or phone). It is then possible to force the status of the discrete and/or analog value of each of the 28 messages.

Remote dialog using "Zelio Soft 2"

This function enables use of the Transfer, Monitoring, and Diagnostics modes available in "Zelio Soft 2" via the *transmission network* instead of via the physical link (SR2USB01 or SR2CBL01 cable) between the device (*remote station*) and the PC (*receiver device*).
It is then possible to:
- transfer a program created on a PC to the *remote station*
- transfer a program installed on the *remote station* to the PC
- modify the receiver device phone numbers/e-mail addresses and the alarm sending conditions from the PC
- update the firmware of the smart relay and the modem communication interface
- display and modify discrete and analog values
- perform diagnostics on the smart relay and modem communication interface

(1) Requires the use of a GSM/UMTS modem on the remote station side.
(2) Check with the transmission network operator that the e-mail by SMS service is available.

Functions available depending on the hardware architecture and/or type of SIM card

Function	Remote station device				
	GSM network (2G)				UMTS network (3G)
	Type of SIM card				
	Data	Data and voice		Voice	
		Data number	Voice number		
Send alarm/receive command with GSM/UMTS phone	■	■	■	■	■
Send alarm/receive command with PC equipped with "Zelio Logic Alarm" software *(1)*	■	■			
Transfer program, update firmware, monitoring *(1)*	■	■			
Send alarm via e-mail	■	■	■	■	

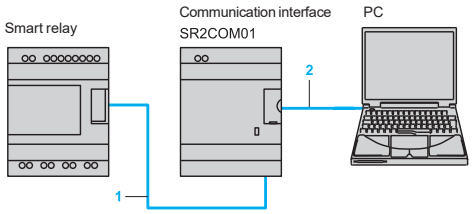
■ Functions available
Functions not available

Note: *Commands cannot be sent by e-mail.*

(1) When using a GSM/UMTS modem on the PC side, it is essential that the SIM card has a data number.

Zelio Logic
Modem communication interface

Installation setup



There are two steps involved in setting up the installation or machine to be monitored:

Connection for programming the smart relay and interface

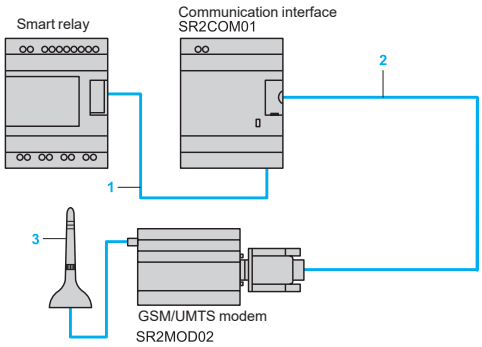
1 Interface cable marked COM-Z
2 SR2USB01 or SR2CBL01 cable

After having powered-up the smart relay and the interface, the application program can be transferred in order to simultaneously:

- load the automation system program into the smart relay
- load the alarm conditions, messages, and phone numbers into the interface

This operation can also be carried out remotely using “Transfer” mode, after having established the connections described below.

⚠ *The use of memory cartridge SR2MEM01 or SR2MEM02 to load the program is not compatible with the SR2COM01 modem communication interface.*



Connections for operation

1 Interface cable marked COM-Z
2 SR2CBL07 cable supplied with the interface
3 Antenna included with modem
