Simply Smart !

telemecanique.com

This international site allows you to access all the Telemecanique products in just 2 clicks via comprehensive range data-sheets, with direct links to:

- Complete library: technical documents, catalogs, certificates, FAQs, brochures...
- Selection guides from the e-catalog.
- Product discovery sites and their Flash animations.

You will also find illustrated overviews, news to which you can subscribe, a discussion forum, the list of country contacts...

To live automation solutions every day!

Flexibility

- Interchangeable modular functions, to better meet the requirements for extensions
- Software and accessories common to multiple product families

Ingenuity

- Auto-adapts to its environment, "plug & play"
- Application functions, control, communication and diagnostics embedded in the products
- User-friendly operation either directly on the product or remotely

Simplicity

- Cost effective "optimum" offers that make selection easy for most typical applications
- Products that are easy to understand for users, electricians and automation specialists
- User-friendly intuitive programming

Compactness

- High functionality in a minimum of space
- Freedom in implementation

Openness

- Compliance with field bus, connection, and software standards
- Enabling decentralised or remote surveillance via the web with Transparent Ready products

Hoisting application

Applications

With its different types of motor control and numerous integrated functions, the Altivar 71 range of variable speed drives meets the most stringent requirements. It is suitable for the most demanding drive systems:

- Torque and speed accuracy at very low speed, high dynamic performance with sensor/sensorless flux vector control
- Extended frequency range for high-speed motors
- Parallel connection of motors and special drives using the voltage/frequency ratio
- Static speed accuracy and energy saving for open-loop synchronous motors
- Smooth flexibility for unbalanced machines with the ENA (ENergy Adaptation) System

In conjunction with the wide voltage range for a 690 V ~ line supply, the functions provided by the Altivar 71 drive boost performance levels and make machines more flexible to use for a large number of applications.

Hoisting

- Brake control tailored for translational, hoisting and slewing movements
- Load measurement using weight sensor
- High-speed hoisting
- Brake feedback management
- Limit switch management
- Slack sling

Handling

- Very quick response times on transmission of a command: 2 ms (\pm 0.5 ms)
- Reference via pulse train or differential analog input
- Control via the principal communication networks
- Position control via limit switches with time optimization at low speed
- Multiple parameter settings via parameter set switching

Packing

- Up to 50 Hz of the bandwidth
- Very quick response times on change of reference: 2 ms (\pm 0.5 ms)
- Control via integrated CANopen machine bus
- Position control via limit switches

Textile machines

- High-resolution digital speed reference (1/32000)
- Speed accuracy ensured on the basis of a synchronous motor, irrespective of load
- High bandwidth
- Spooling function
- Connection to common DC bus
- Control of both asynchronous and synchronous motors supported
- High-performance speed loop

Wood-working machines

- Operation up to 1600 Hz
- Fastest possible controlled stop on loss of line supply
- Control via integrated CANopen machine bus
- Protection of motor against overvoltages

Process machines

- PID regulator
- High-resolution references
- Speed or torque control
- Connection to the principal communication networks
- Separate control section power supply
- Braking unit via re-injection to the line supply
- Connection to common DC bus

Lifts

- Brake control tailored for passenger comfort
- Processing of load measurement by weight sensor
- Conformity of relays to lift safety standard EN 81-13-2-2-3
- Connection to CANopen machine bus
- Control and integrity check of output contactor
- Lift car clearance function
- Control of both asynchronous and synchronous motors supported
- Lift macro-configuration

Comprehensive offer

The Altivar 71 range of variable speed drives covers various motor power ratings from 0.37 kW to 630 kW with three types of power supply:

- 200...240 V single-phase, 0.37 kW to 5.5 kW, UL Type 1/IP 20, (ATV 71H●●●M3)
- 200...240 V three-phase, 0.37 kW to 75 kW, UL Type 1/IP 20, (ATV 71H●●●M3 and ATV 71H●●●M3X)
- 380...480 V three-phase, 0.75 kW to 500 kW, UL Type 1/IP 20, (ATV 71H●●●N4)
- 500...690 V three-phase, 1.5 kW to 630 kW, UL Type 1/IP 20, (ATV 71H●●●Y)

This range can be used for controlling asynchronous motors in sensor/sensorless flux vector control mode as well as synchronous motors with sinusoidal electromotive force when there is no speed feedback.

At 200...240 V ~ and 380...480 V ~, there is a special version available that can be used for controlling synchronous motors with sinusoidal electromotive force when there is speed feedback.

Control of the motors referred to above is still supported (see pages 22, 23 and 110). All the options supported by the Altivar 71 range of variable speed drives are also available with this version when an identical rating is used.

The Altivar 71 drive integrates the Modbus and CANopen protocols as standard, as well as numerous functions. These functions can be extended using communication option cards, I/O extension cards, a "Controller Inside" programmable card or an encoder interface option card, see page 9.

External options such as braking resistors, resistance braking units and filters complete the offer, see page 9.

The entire range conforms to international standards IEC/EN 61800-5-1, IEC/EN 61800-2, IEC/EN 61800-3, is UL, CSA, DNV, C-Tick, NOM 117 and GOST certified and has been developed to meet the requirements of directives regarding the protection of the environment (RoHS, WEEE, etc.) as well as those of European Directives (CE marking).

Functional safety and ATEX applications (1)

The Altivar 71 variable speed drive features a safety function that is designed to ensure a motor stop and prevent accidental restarts.

This Power Removal safety function means that the drive can be installed as part of the safety system for an electrical/electronic/programmable electronic control system in order to ensure the safety of a machine or industrial process.

This function meets the requirements of category 3 of the EN 954-1 machine safety standard, SIL 2 of IEC/EN 61508 and the standard dealing with the functional safety requirements of power drive products: IEC/EN 61800-5-2.

The Power Removal function also enables the Altivar 71 variable speed drive to offer protection for motors that are installed in explosive atmospheres (ATEX), see pages 220 and 221.

Electromagnetic compatibility

Reducing harmonics and observing requirements in respect of electromagnetic compatibility were considered right from the design stage.

The incorporation of EMC filters in **ATV 71H●●●M3**, **ATV 71●●●●N4**, **ATV 71H●●●Y**, **ATV 71P●●●N4Z** drives and the recognition of EMC requirements facilitates installation and provides an economical means of ensuring machines meet CE marking requirements.

The **ATV 71H●●●M3X** drives have been designed without an EMC filter. Filters are available as an option and can be installed by the user to reduce emission levels, see pages 166 to 169.

(1) Please refer to the ATEX guide available on our website at "www.telemecanique.com".

Standard versions

The Altivar 71 UL Type 1/IP 20 range of variable speed drives offers various standard versions.

Versions with IP 54 degree of protection for difficult environments

To meet the requirements of applications in difficult environments (dusty, humid, etc.), drives can be supplied individually or inside a floor-standing enclosure:

- A drive version with UL Type 12/IP 54 degree of protection (see page 24):
 - 380...480 V ~ , 0.75 kW to 75 kW (ATV 71W●●●N4)
- A drive version with UL Type 12/IP 54 degree of protection and featuring a Vario switch disconnecter (see pages 76 to 79):
 - 380...480 V ~ , 0.75 to 75 kW (ATV 71E5●●●N4)

- A drive version ready-assembled in an IP 54 floor-standing enclosure (see pages 80 to 93):

- 380...415 V ~ , 90 kW to 500 kW (ATV 71EXS5●●●N4)
- 500 V and 600...690 V ~ , 90 kW to 630 kW (ATV 71EXS5●●●N and ATV 71EXS5●●●Y)

The ATV 71EXS5●●●N4, ATV 71EXS5●●●N and ATV 71EXS5●●●Y products have been designed for easy set-up in highly polluted environments and, in particular, to ensure optimum enclosure ventilation by keeping the control and power air circuits separate.

- A preassembled kit for creating an IP 54-certified floor-standing enclosure (see pages 36 to 45):

This straightforward and cost-effective solution, which is available by quoting a single reference, provides you with all the mechanical components you need to create an IP 54 floor-standing enclosure (VW3 A9 541...VW3 A9 551).

This product has been designed for compatibility with Altivar 71 UL Type 1/IP 20 drives, 90 kW to 500 kW at 380...480 V ~ (ATV 71HD90N4...HC50N4).

Compact floor-standing enclosure versions for industrial environments and infrastructure contexts

The following product is available to facilitate set-up in industrial environments and infrastructure contexts (tunnels, treatment plants, etc.):

- A drive version ready-assembled in an IP 23 or IP 54 compact floor-standing enclosure (see pages 46 to 59):
 - 380...415 V ~ , 90 kW to 500 kW (ATV 71EXC●●●●N4)
 - 500 V ~ , 90 kW to 630 kW (ATV 71EXC●●●●N)
 - 600...690 V ~ , 90 kW to 630 kW (ATV 71EXC●●●●Y)

Version for environments where no ventilation is permitted

The following product is available to meet the requirements of applications where the necessary degree of protection rules out the possibility of ventilation:

- A drive on base plate version:
 - 380...480 V ~ , 0.75 to 11 kW (ATV 71P●●●N4Z), see page 24

As the drive is not equipped with a fan as standard, a DC choke (see page 155) must be added in order to prevent overheating during operation.

In environments supporting the use of ventilation, the DC choke (see page 155) must be replaced by a fan (see page 31).

ATV 71HU75N4 flush-mounted

Mounting options

The Altivar 71 drive can be mounted in a variety of ways for integration into machines.

Mounting outside enclosure

The standard version of the Altivar 71 (on heatsink) or the base plate version can be mounted directly on a wall without having to be installed inside an enclosure. UL Type 1 conformity can be achieved using kit **VW3 A9 2●●**, and IP 21 or IP 31 using kit **VW3 A9 1●●** (see pages 32 and 33).

Flush-mounting in a dust-proof and damp-proof enclosure

The Altivar 71 drive has been designed to optimize the size of enclosures (floor-standing, wall-mounted, etc).

This type of flush-mounting can be used to reduce the size of enclosure required and to limit the temperature rise inside the enclosure:

- The power section, with IP 54 degree of protection, can be easily mounted outside the enclosure using kit **VW3 A9 5●●** for flush-mounting in a dust-proof and damp-proof enclosure, see page 30.
- This type of mounting can lead to ambient temperatures of up to 60°C inside the enclosure without derating.

It may be necessary to use a control card fan kit **VW3 A9 4●●** appropriate for the drive rating in order to avoid hot spots, see page 27

- This option permits mounting side-by-side, see pages 250 and 253.

Mounting in a dust-proof and damp-proof enclosure or on machine frame

The Altivar 71 drive on base plate supports two mounting options:

- In a dust-proof and damp-proof enclosure, using kit **VW3 A9 80●** for dust-proof and damp-proof mounting (see page 31), which has been designed to dissipate heat via a heatsink mounted outside the enclosure
- On a machine frame, where this frame's earth allows the heat to be dissipated

ATV 71PU75N4Z in dust and damp proof enclosure

Dialogue tools

The Altivar 71 1 is supplied with a remote graphic display terminal 2:

- The navigation button can be used to access the drop-down menus quickly and easily.
- The graphic screen displays 8 lines of 24 characters of plain text.
- The advanced functions on the display unit can be used to access the more complex drive functions with ease.
- The display screens, menus and parameters can all be customized for the user or the machine.
- Online help screens are available.
- Configurations can be stored and downloaded (four configuration files can be stored).
- The drive can be connected to several other drives via a multidrop link.
- It can be located remotely on a floor-standing enclosure door with IP 54 or IP 65 degree of protection (UL Type 1/IP 20 drives) or built in (UL Type 12/IP 54 drives).
- It is supplied with six languages installed as standard (Chinese, English, French, German, Italian and Spanish). Other languages can be loaded to the flash memory.

Up to 15 kW at 200...240 V ~ and 75 kW at 380...480 V ~, the Altivar 71 can be controlled using an integrated 7-segment display terminal, see pages 22 and 23. At all ratings from 500...690 V ~, the drive is supplied with an integrated 7-segment display terminal and a remote graphic display terminal.

The PowerSuite software workshop 3 can be used to configure, adjust, test and maintain the Altivar 71 in the same way as for all other Telemecanique variable speed drives and starters. It can be used via a direct connection, Ethernet, modem or a Bluetooth® wireless connection.

Quick programming

Macro-configuration

The Altivar 71 offers quick and easy programming using macro-configurations corresponding to different applications or uses: start-stop, handling, hoisting, general use, connection to communication networks, PID regulator, master/slave and lift applications (for synchronous motors with speed feedback). Each of these configurations is still fully modifiable.

Simply Start menu

The Simply start menu can be used to ensure that the application is working correctly, maximize motor performance and ensure motor protection.

The architecture, the hierarchical parameter structure and the direct access functions all serve to make programming quick and easy, even for the more complex functions.

Services

The Altivar 71 has numerous built-in maintenance, monitoring and diagnostic functions:

- Built-in drive test functions with diagnostic screen on the remote graphic display terminal
- I/O maps
- Communication maps for the different ports
- Oscilloscope function that can be viewed using the PowerSuite software workshop
- Management of the drive installed base via microprocessors with flash memory
- Remote use of these functions by connecting the drive to a modem via the Modbus port
- Identification of all the drive's component parts as well as the software versions
- Fault logs that can display the values for up to 16 variables in the event of a fault
- Display terminal languages loaded in the flash memory
- A message of up to 5 lines of 24 characters can be stored in the drive.

Options

The Altivar 71 drive **1** can accommodate a maximum of three option cards simultaneously, comprising:

- **2** from the following list (1):
 - I/O extension cards **2**, see pages 114 and 115
 - Communication cards **2** (Modbus TCP, Fipio, Modbus/Uni-Telway, Modbus Plus, EtherNet/IP, DeviceNet, PROFIBUS DP, etc.), see pages 124 to 133
 - "Controller Inside" programmable card **2** This is used to adapt the drive to specific applications quickly and progressively, by decentralizing the control system functions (programming in IEC/EN 61131-3 languages), see pages 116 to 123
- **1** encoder interface card **3** (with RS 422-compatible differential outputs; with open collector outputs (NPN); with push-pull outputs; resolver; with SinCos, SinCos Hiperface®, EnDat®, or SSI universal outputs; with RS 422-compatible differential outputs plus encoder emulation (RS 422 ESIM)), see pages 110 to 113

Various external options can be combined with the Altivar 71:

- Braking units and resistors (standard or hoist-specific), see pages 134 to 147
- Network braking units, see pages 148 to 151
- DC chokes, line chokes and passive filters (to reduce harmonic currents), see pages 152 to 165
- Additional EMC input filters, see pages 166 to 169
- Motor chokes and sinus filters for long cable runs or to remove the need for shielding, see pages 170 to 175

Note: Please refer to the compatibility summary tables to determine which options are available for individual drives, see pages 176 to 187.

Integration into control systems

The Altivar 71 features a combined Modbus or CANopen port for quick, accurate motion control, adjustment, monitoring and configuration. A second port is available for connecting a Magelis terminal for machine dialogue.

The Altivar 71 can also be connected to other communication networks using the communication option cards. The following communication protocols are supported: Modbus TCP, Fipio, Modbus, Uni-Telway, Modbus Plus, EtherNet/IP, DeviceNet, PROFIBUS DP, INTERBUS and CC-Link (see pages 124 to 133).

The fact that the control section can be powered separately means that communication (monitoring, diagnostics) can be maintained even if there is no power supply to the control section.

The "Controller Inside" programmable card transforms the drive into an automation island:

- The card features its own I/O; it can also manage those of the drive and an I/O extension card.
- It contains onboard application programs developed in IEC/EN 61131-3 languages, which reduce the control system response time.
- Its CANopen master port enables control of other drives and dialogue with I/O modules and sensors.

Example of a drive equipped with a communication card and a "Controller Inside" programmable card

(1) The Altivar 71 cannot support more than one option card with the same reference.

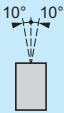

Environmental characteristics

Conformity to standards		Altivar 71 drives have been developed to conform to the strictest international standards and the recommendations relating to electrical industrial control devices (IEC, EN), in particular: low voltage, IEC/EN 61800-5-1, IEC/EN 61800-3 (conducted and radiated EMC immunity and emissions).
EMC immunity		IEC/EN 61800-3, environments 1 and 2 IEC/EN 61000-4-2 level 3; IEC/EN 61000-4-3 level 3 IEC/EN 61000-4-4 level 4; IEC/EN 61000-4-5 level 3 IEC/EN 61000-4-6 level 3; IEC/EN 61000-4-11 (1)

Description file	A single eds file is supplied for the whole range on the CD-ROM containing the documentation or can be downloaded from the Internet at www.telemecanique.com . It contains the description of the drive parameters.		

Torque characteristics (typical curves)

The curves opposite define the available continuous torque and transient overtorque for both force-cooled and self-cooled motors. The only difference is in the ability of the motor to provide a high continuous torque at less than half the nominal speed.

Open loop applications

Closed loop applications

Open loop applications

- 1 Self-cooled motor: continuous useful torque (1)
- 2 Force-cooled motor: continuous useful torque
- 3 Overtorque for 60 s maximum
- 4 Transient overtorque for 2 s maximum
- 5 Torque in overspeed at constant power (2)

Closed loop applications

- 1 Self-cooled motor: continuous useful torque (1)
- 2 Force-cooled motor: continuous useful torque
- 3 Overtorque for 60 s maximum
- 4 Transient overtorque for 2 s maximum
- 5 Torque in overspeed at constant power (2)

Altivar 71 drives are capable of supplying nominal torque continuously at zero speed.

Motor thermal protection

Altivar 71 drives feature thermal protection designed specifically for self-cooled or force-cooled variable speed motors. The drive calculates the thermal state of the motor even when it is switched off.

This motor thermal protection is designed for a maximum ambient temperature of 40°C around the motor. If the temperature around the motor exceeds 40°C, thermal protection should be provided directly by thermistor probes (PTC) integrated in the motor. The probes are managed directly by the drive.

(1) For power ratings ≤ 250 W, derating is 20% instead of 50% at very low frequencies.

(2) The motor nominal frequency and the maximum output frequency can be adjusted from 10 to 500 Hz or 1600 Hz depending on the supply voltage and the rating.

The mechanical overspeed characteristics of the selected motor must be checked with the manufacturer.

Special uses

Using Altivar 71 drives with synchronous motors

Altivar 71 drives are also suitable for powering synchronous motors with sinusoidal electromotive force. This drive/motor combination makes it possible to obtain remarkable accuracy and maximum torque even at zero speed.

The design and construction of synchronous motors are such that they offer enhanced power density and high-speed performance in a compact unit. Drive control for synchronous motors does not cause stalling.

Driving a synchronous motor with sinusoidal electromotive force without speed feedback.

The entire range of Altivar 71 variable speed drives can drive a synchronous motor with sinusoidal electromotive force without speed feedback. The performance level achieved is then comparable to that obtained with an asynchronous motor in sensorless flux vector control.

Driving a synchronous motor with sinusoidal electromotive force with or without speed feedback.

Using 200...240 V ~ and 380...480 V ~, a functional variant is available for Altivar 71 drives for driving a synchronous motor with sinusoidal electromotive force with or without speed feedback. The performance level achieved is then comparable to that obtained with an asynchronous motor in flux vector control with or without sensor.

Using special motors at high-speed

These motors are designed for constant torque applications with high frequency ranges. The Altivar 71 drive supports operating frequencies of up to 1600 Hz, depending on the supply voltage and the rating. Through their design, this type of motor is more sensitive to overvoltages than a standard motor.

Various solutions are available:

- Overvoltage limitation function
- Output filters

The drive's 5-point voltage/frequency control ratio is particularly well-suited as it avoids resonance.

Using a motor at overspeed

The maximum output frequency of the drive can be adjusted from:

- 10 to 1600 Hz for drives rated less than or equal to 37 kW in 200... 240 V ~ and 380...480 V ~

- 10 to 500 Hz for all other Altivar 71 drives whatever the type of power supply

When using a standardized asynchronous motor at overspeed, check the mechanical overspeed characteristics of the selected motor with the manufacturer. Above its nominal speed corresponding to a frequency of 50/60 Hz, the motor operates with a decreasing flux, and its torque decreases significantly (see curve opposite). The application must be able to permit this type of low-torque, high-speed operation.

- 1 Machine torque (degressive torque)
- 2 Machine torque (low motor torque)
- 3 Continuous motor torque

Typical applications: wood-working machinery, broaching machines, high-speed hoisting, etc.

Using a motor at overspeed

Special uses (continued)

Motor power less than drive power

The Altivar 71 can power any motor which has a rating lower than that for which the drive was designed. This motor/drive combination makes it suitable for applications requiring high, intermittent overtorque.

Typical applications: machines with very high starting torque, grinders, kneaders, etc.

Note: In this case, it is advisable to over-rate the drive to the next standard power rating immediately above that of the motor.

Example: Use an 11 kW motor with a 15 kW drive.

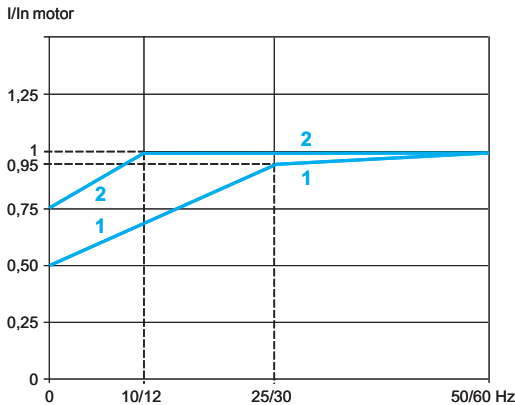

Power of self-cooled motor greater than the drive power

This motor-drive combination makes it possible to use a self-cooled motor for a greater speed range in continuous operation. The use of a motor with a higher power rating than that of the drive is only possible if the current drawn by this motor is less than or equal to the nominal drive current.

Note: Limit the motor power to the standard rating immediately above that of the drive.

Example: On a single machine, the use of a 2.2 kW drive combined with a 3 kW motor means that the machine can operate at its nominal power (2.2 kW) at low speed.

- 1 Motor power = drive power = 2.2 kW
- 2 2.2 kW drive combined with a 3 kW motor: greater speed range at 2.2 kW

Power of a self-cooled motor greater than the drive power

$I_n \text{ drive} > I_{n1} + I_{n2} + \dots + I_{nx}$

Connecting motors in parallel

Using a motor at constant torque up to 87/104 Hz

Connecting motors in parallel

The nominal current of the drive must be greater than or equal to the sum of the currents of the motors to be controlled.

In this case, provide external thermal protection for each motor using probes or thermal overload relays. For cable runs over a certain length, taking account of all the tap links, it is advisable either to install an output filter between the drive and the motors or to use the overvoltage limitation function.

If several motors are used in parallel, there are two possible scenarios:

- The motors have equal power ratings, in which case the torque characteristics will remain optimized after the drive has been configured
- The motors have different power ratings, in which case the torque characteristics will not be optimized for all the motors

Using a motor at constant torque up to 87/104 Hz

A 400 V, 50 Hz motor in Δ connection can be used at constant torque up to 87 Hz if it is in Δ connection.

In this particular case, the initial motor power and the power of the first associated drive are multiplied by $\sqrt{3}$ (it is therefore important to select a drive with a suitable rating).

Example: A 2.2 kW 50 Hz motor in Δ connection supplies 3.8 kW at 87 Hz with a Δ connection.

Note: Check the overspeed operating characteristics of the motor.

Special uses (continued)

Using special motors

Special brake motors: tapered rotor or flux bypass

The magnetic field releases the brake. This type of operation with the Altivar 71 drive requires application of the voltage/frequency ratio.

Note: The no-load current may be high, and operation at low speed can only be intermittent.

ATEX motors in an explosive atmosphere explosive (1)

Use of the "Power Removal" safety function enables the variable speed drive to provide thermal protection in the event of excessive temperature rise of the ATEX motor, but it does not enable it to safely control and regulate the temperature of the ATEX motor.

All motor types ATEX certified for use in zones 1, 21, 2 or 22, which are equipped with ATEX thermal sensors, can be protected by the Altivar 71 variable speed drive.

Resistive rotor asynchronous motors

Different motor control ratios available on the Altivar 71 drive make it possible to apply specific settings when using high-slip motors.

Switching the motor at the drive output

The drive can be switched when locked or unlocked. If the drive is switched on-the-fly (drive unlocked), the motor is controlled and accelerates until it reaches the reference speed smoothly following the acceleration ramp. This use requires configuration of the automatic catching a spinning load ("catch on the fly") and the motor phase loss on output cut functions.

Typical applications: loss of safety circuit at drive output, bypass function, switching of motors connected in parallel. On new installations, it is recommended that the Power Removal safety function is used.

t1: deceleration without ramp (freewheel)
t2: acceleration with ramp
N: motor speed

Example of loss of output contactor

Test on a low power motor or without a motor

In a test or maintenance environment, the drive can be tested without having to use a motor with the same rating as the drive (particularly useful in the case of high power drives). This use requires deactivation of the output phase loss function.

- (1) These values are given for a nominal switching frequency of 4 kHz up to ATV 71HD15M3X or 2.5 kHz for ATV 71HD18M3X...HD75M3X drives for use in continuous operation. The switching frequency is adjustable from 1...16 kHz up to ATV 71HD45M3X and from 1...8 kHz for ATV 71HD55M3X and ATV 71HD75M3X drives. Above 2.5 or 4 kHz, depending on the rating, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on pages 251 and 254).
- (2) Typical value for the indicated motor power and for the maximum prospective line Isc.
- (3) Drives supplied as standard with or without sensor feedback for asynchronous motors, and without speed feedback for synchronous motors with sinusoidal electromotive force. It is possible to order a drive that can control not only those motors included in the standard offer, but also synchronous motors with sinusoidal electromotive force with speed feedback, by adding 383 at the end of the reference. For example: ATV 71H037M3 becomes **ATV 71H037M3383**. See pages 110 to 113 for the available encoder interface cards. This offer is not available for ATV 71H●●●M3S337, ATV 71HD11M3X337...HD45M3X337 (4) and ATV 71HD55M3XD, HD75M3XD drives (8).
- (4) ATV 71HD55M3X, HD75M3X drives are supplied as standard in a reinforced version for operation in specific environmental conditions (see the environmental conditions on page 11). To order ATV 71H●●●M3 and ATV 71HD11M3X...HD45M3X drives in a reinforced version for specific environmental conditions, add the following at the end of the reference:
 - S337 for ATV 71H●●●M3. For example: ATV 71H037M3 becomes **ATV 71H037M3S337**
 - 337 for ATV 71H●●●M3X. For example: ATV 71HD11M3X becomes **ATV 71HD11M3X337**
 In the reinforced version, the drive is supplied with a remote graphic display terminal.
- (5) All the drives are supplied with a remote graphic display terminal. To order an ATV 71H●●●M3, ATV 71HD11M3X, HD15M3X drive without a graphic display terminal, add a Z at the end of the reference. The drive will then come equipped with an integrated 7-segment display terminal. For example: ATV 71H037M3 becomes **ATV 71H037M3Z**. To order ATV 71H●●●M3383 and ATV 71HD11M3X383, HD15M3X383 drives without a graphic display terminal, please contact your Regional Sales Office.
- (6) A line choke must be used, see page 160.
- (7) Drive supplied without EMC filter. EMC filters are available as an option, see page 168.
- (8) Drive supplied as standard with a DC choke, which must be used when connecting the drive to the three-phase supply. For connections to the DC bus, the drive can be ordered without a DC choke by adding a D at the end of the reference. For example: ATV 71HD55M3X becomes **ATV 71HD55M3XD**.
- (9) Drive supplied without plate for EMC mounting. It is included in the kit for UL Type 1 or IP 31 conformity, which must be ordered separately, see pages 32 and 33.

Note: Consult the summary tables of possible drive, option and accessory combinations, see pages 176 and 177.

500	700	876	699	576.6	50	941	941	1411	1552	ATV 71HC50N4 (6) (7)	300.000

(1) These values are given for a nominal switching frequency of 4 kHz up to ATV 71HD30N4 or 2.5 kHz for ATV 71HD37N4...HC50N4 drives for use in continuous operation.
The switching frequency is adjustable from 1...16 kHz up to ATV 71HD75N4 and from 2.5...8 kHz for ATV 71HD90N4...ATV 71HC50N4 drives.

Above 2.5 or 4 kHz, depending on the rating, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on pages 251 and 254 to 256).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Drives supplied as standard with or without sensor feedback for asynchronous motors, and without speed feedback for synchronous motors with sinusoidal electromotive force. It is possible to order a drive that can control not only those motors included in the standard offer, but also synchronous motors with sinusoidal electromotive force with speed feedback, by adding 383 at the end of the reference. For example: ATV 71H075N4 becomes **ATV 71H075N4383**.
See pages 110 to 113 for the available encoder interface cards.

This offer is not available for ATV 71H075N4S337...HD75N4S337 (4) and ATV 71HD90N4D...HC50N4D (6) drives.

(4) ATV 71HD90N4...HC50N4 drives are supplied as standard in a reinforced version for operation in specific environmental conditions (see the environmental conditions on page 11).

To order ATV 71H075N4...HD75N4 drives in a reinforced version, add **S337** at the end of the reference. For example: ATV 71H075N4 becomes **ATV 71H075N4S337**.

In the reinforced version, the drive is supplied with a remote graphic display terminal.

(5) All the drives are supplied with a remote graphic display terminal. To order an ATV 71H075N4...ATV 71HD75N4 drive without a graphic display terminal, add a **Z** at the end of the reference. The drive will then come equipped with an integrated 7-segment display terminal.

For example: ATV 71H075N4 without a graphic display terminal becomes **ATV 71H075N4Z**.

To order ATV 71H075N4383...HD75N4383 drives without a graphic display terminal, please contact your Regional Sales Office.

(6) Drive supplied as standard with a DC choke, which must be used when connecting the drive to the three-phase supply.

For connections to the DC bus, the drive can be ordered without a DC choke by adding a **D** at the end of the reference.

For example: ATV 71HD90N4 becomes **ATV 71HD90N4D**.

(7) Drive supplied without plate for EMC mounting. It is included in the UL Type 1 or IP 31 kit, which must be ordered separately, see pages 32 and 33.

Note: Consult the summary tables of possible drive, option and accessory combinations, see pages 178 and 179.

11	15	36.6	30	24.1	22	27.7	21	41.6	45.7	ATV 71PD11N4Z	7.000

(1) These values are given for a nominal switching frequency in continuous operation of:
 - 4 kHz for ATV 71W075N4...WD30N4 and ATV 71P●●●N4Z drives
 - 2.5 kHz for ATV 71WD37N4...WD75N4 drives.
 The switching frequency is adjustable from 1 to 16 kHz for all ratings.
 Above 2.5 (ATV 71WD37N4...WD75N4) or 4 kHz (ATV 71W075N4...WD30N4 and ATV 71P●●●N4Z), the drive will reduce the switching frequency automatically in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current, see derating curves on pages 265 (ATV 71W●●●N4) and 251 (ATV 71P●●●N4Z).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) ATV 71W●●●N4 drives can be ordered with a 24 V DC power supply, thus allowing an additional consumption of 250 mA. In this case, add **A24** at the end of the reference.
 For example: ATV 71W075N4 becomes **ATV 71W075N4A24**.
 These ATV 71W●●●N4A24 drives:
 - Also have the reinforced version treatment for operation in specific environmental conditions (see the environmental conditions on page 11).
 - Incorporate a DC choke to reduce the current harmonics.

(4) All ATV 71W●●●N4 drives are supplied with a plate for EMC mounting.

(5) All ATV 71P●●●N4Z drives are equipped with an integrated 7-segment display terminal.

(6) A DC choke must be used, see page 155.

(7) All ATV 71P●●●N4Z drives are supplied with a plate for EMC mounting and a thermal liner for mounting on the machine frame, see page 31.

Note:
 - Consult the summary tables of possible combinations of ATV 71W●●●N4 drives, options and accessories, pages 180 and 181
 - Consult the summary tables of possible combinations of ATV 71P●●●N4Z drives, options and accessories, pages 182 and 183.

500	700	630	673	613	616	42	740	672	675	ATV 71HC63Y (5) (6)	435.000

(1) These values are given for a nominal switching frequency of 4 kHz up to ATV 71HD30Y or 2.5 kHz for ATV 71HD37Y...HC63Y drives for use in continuous operation.

The switching frequency is adjustable from 2.5...6 kHz up to ATV 71HD30Y and from 2.5...4.9 kHz for ATV 71HD37Y...ATV 71HC63Y drives.

Above 2.5 kHz or 4 kHz, depending on the rating, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on pages 252, 257 and 258).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) The maximum transient current for:

- 60 seconds is equal to 150% of the maximum continuous current
- 2 seconds is equal to 165% of the maximum continuous current

(4) Drives supplied as standard:

- With or without sensor feedback for asynchronous motors, and without speed feedback for synchronous motors with sinusoidal electromotive force.
- In a reinforced version for operation in specific environmental conditions (see the environmental conditions on page 11).
- With a remote graphic display terminal and an integrated 7-segment display terminal

(5) Line choke mandatory for ATV 71HC11Y...HC63Y drives, unless a special transformer is used (12-pulse). The line choke must be ordered separately, see page 160.

(6) Drive supplied without plate for EMC mounting. It is included in the UL Type 1 or IP 31 kit, which must be ordered separately, see pages 32 and 33.

Note: Consult the summary tables of possible drive, option and accessory combinations, see pages 184 and 185.

Variable speed drives

Altivar 71

Options: accessories

Adapter for 115 V ~ logic inputs

This adapter is used to connect 115 V ~ logic signals to the logic inputs on the drive or an I/O extension card.

7 logic inputs with capacitive impedance at 60 Hz of 0.22 μ F are available for connecting the logic signals:

- Maximum current: 200 mA
- Response time: 5 ms to change from state 0 to state 1, 20 ms to change from state 1 to state 0
- Logic state 0 for a voltage below 20 V, logic state 1 for a voltage between 70 V and 132 V.

The power supply must be provided by a 115 V external power supply (min. 70 V, max. 132 V).

Reference

Description	Reference	Weight kg
Adapter for 115 V ~ logic inputs	VW3 A3 101	—

Ready-assembled IP 54 base plate (for ATV 71W●●●N4 drives)

This plate can be used to increase the number of cable connections supported by the drive as standard from 3 to 11.

It is supplied with:

- A metal cable gland for the motor cable
- A special plastic cable gland for the network cable
- Plastic cable glands for the connection of the control cable or options such as communication cards, etc.

Ready-assembled IP 54 base plate

Control card fan kit

Control card fan kit

(for ATV 71H●●●● drives on heatsink)

This kit is required for ATV 71HD18M3X...HD45M3X, ATV 71HD22N4...HD75N4 and ATV 71HU22Y...HD90Y drives in order that they can operate at ambient temperatures between 50°C and 60°C, for example if they are mounted in an IP54 enclosure. The circulation of the air around the electronic cards prevents the formation of hot spots.

Check the derating to be applied to the drive nominal current (see the derating curves on pages 251 and 252).

The kit 1 is mounted on the upper part of the drive. It is powered by the drive.

It consists of:

- A fan subassembly
- Fixing accessories
- A manual

DNV kit

This kit enables Altivar 71 variable speed drives to satisfy the requirements of the DNV certification body.

For the following variable speed drives:

- ATV 71H●●●M3
- ATV 71HD11M3X...HD45M3X
- ATV 71H075N4...HD75N4.

The kit consists of:

- Shock-absorbing mounts **1**
- An additional EMC input filter **2**
- EMC filter supports **3**
- Fixing accessories.

It is mounted on the back of the variable speed drive on the additional EMC filter supplied with the DNV kit as standard.

(1) A line choke must be used. It must be ordered separately (dimensions, see page 209).

(2) An EMC filter must be used. It must be ordered separately (dimensions, see page 213 or consult your Regional Sales Office).

(3) When using a DNV kit, the variable speed drive and the transformer for the fan are mounted separately (dimensions, see page 189).

536946

ATV 71HU75N4 flush-mounted drive

536947

ATV 71HC28N4 flush-mounted drive

Kit for flush-mounting in a dust and damp proof enclosure (for ATV 71H●●●● drives on heatsink)

This kit can be used to mount the power section of the drive outside the enclosure (IP 54 degree of protection), which reduces the power dissipated into the enclosure, see page 259.

It is available for ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71HD55M3XD, HD75M3XD, ATV 71H075N4...HC28N4, ATV 71HD90N4D...HC28N4D and ATV 71HU22Y...HC31Y drives.

With this type of mounting, the maximum internal temperature in the enclosure can then reach 60°C without it being necessary to derate the drive current. Between 50°C and 60°C, a control card fan kit must be used for ATV 71HD18M3X...HD45M3X, ATV 71HD22N4...HD75N4 and ATV 71HU22Y...HD90Y drives to prevent hot spots, see page 27.

The back of the enclosure must be drilled and cut out for this type of mounting.

The kit consists of:

- A metal frame of the right size for the drive rating
- Corner pieces
- Seals
- A fan support. (this can be used to move the fans so that they can be accessed from the front of the enclosure).
- Fixing accessories
- A cutting and drilling template
- A manual.

(1) Drives supplied as standard with a DC choke. In this case, cut out and drill the enclosure for the choke. See pages 200 and 201.

(2) Drives supplied without DC choke.

(3) Drives supplied as standard with a transformer for the fan. In this case, cut out and drill the enclosure for the transformer. See page 201.

ATV 71PU22N4Z drive in a dust and damp proof enclosure

Kits for mounting in a dust and damp proof enclosure

(for ATV 71P●●●N4Z drives on base plate)

This kit can be used to mount a drive "on base plate" inside a dust and damp proof enclosure (IP 54 degree of protection). Heat is dissipated via a heatsink mounted outside the enclosure.

This type of mounting simply requires that a hole be drilled in the enclosure at the same level as the drive fixing holes used to mount the heatsink.

The kit consists of:

- A heatsink **1**
- A thermal liner **2**
- Hinged mechanical adapters
- A manual.

Enclosure characteristics

The steel used for the floor-standing or wall-mounted enclosure which is to house the drive must meet the following requirements:

- Thickness 1.5 to 3 mm
- Steel: stainless or paint-finished smooth steel
- Heat-treated epoxy paintwork (lacquer finish not permitted), max. thickness 70 µm, fine or medium texture

Kit for IP 21 conformity

Kit for IP 31 conformity

Kit for IP 21 or IP 31 conformity (mounting outside the enclosure)

When the drive is mounted directly on a wall outside the enclosure, this kit can be used to ensure IP 21 or IP 31 degree of protection when connecting the cables with a cable gland.

The shielding is connected inside the kit.

For ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4, ATV 71P●●●N4Z and ATV 71HU22Y...HD90Y drives, the kit conforms to IP 21 degree of protection. It consists of:

- All the mechanical fittings **1** including a drilled plate **2** for fixing the cable glands **3**
- Fixing accessories
- A manual.

For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 and ATV 71HC11Y...HC63Y drives, the kit conforms to IP 31 degree of protection. It consists of:

- An IP 54 casing **4** used to maintain the IP 54 degree of protection for the power section
- An EMC plate with cable clamps **5**
- An IP 31 cover **6**
- Fixing accessories
- A manual.

Variable speed drive

Altivar 71

Pre-equipped IP 54 floor-standing enclosure kit

Variable speed drive

Altivar 71

Pre-equipped IP 54 floor-standing enclosure kit

Presentation

The pre-equipped kit solution is used to create an IP 54 certified floor-standing enclosure for 90 kW to 500 kW UL Type 1/IP 20 Altivar 71 variable speed drives for a 380...480 V three-phase power supply.

This kit has been designed to:

- Reduce the implementation time with:
 - Simplified assembly
 - Optimized thermal and mechanical dimensioning

The cooling systems used enable the equipment to be installed in difficult and dusty environments.

There are two types of cooling:

- Kits **VW3 A9 541** and **VW3 A9 542** with a single air circuit for the power section
- Kits **VW3 A9 543...548** with two separate air circuits:
 - One for the power section
 - One for the control section

So that the air circuit for the control section is not contaminated, an air/air heat exchanger is incorporated in the enclosure door (see page 38).

Description

The kit consists of:

- Air/air heat exchanger (except for enclosure kits **VW3 A9 541** and **VW3 A9 542**) **1**
- IP 65 graphic display terminal remote mounting kit **2**
- Handle with a pushbutton-operated opening mechanism **3**
- Document holder **4**
- Plinth **5**
- Lower air duct **6**
- EMC plate **7**
- Drive support **8**
- Roof extension **9**
- Upper air duct
- Altivar 71 and 61 identification labels
- 24 V $\overline{\text{---}}$, 600 mA supplementary power supply
- Fixing accessories
- Seals
- Technical documentation containing all the:
 - Parts lists
 - Electrical diagrams
 - Mechanical assembly drawings

Options

For adding accessories or options, there are two additional 600 and 800 mm empty enclosure kits supplied in kit form.

The additional empty enclosure kit must be installed on the left side of the pre-equipped IP 54 enclosure kit. In this case, the left-hand panel of the pre-equipped IP 54 enclosure kit is mounted on the left side of the additional empty enclosure kit which is supplied without side panels.

Variable speed drive

Ventilation

VW3 A9 541, VW3 A9 542

The enclosure ventilation is optimized using a single air circuit cooling the power section.

Power section:

- 1 Air inlet via the plinth
- 2 Air outlet located on the enclosure roof

VW3 A9 543...A9 548

The enclosure ventilation is optimized using two separate air circuits cooling the power section and the control section.

The air circulating in the power section is isolated from the control section thereby ensuring better protection against the entry of contaminants (in hostile and dusty environments).

Power section:

- 1 Air inlet via the plinth
- 2 Air outlet located on the enclosure roof

Control section:

Cooling system using an air/air exchanger:

- 3 External air circuit for cooling the exchanger 5
- 4 Internal air circuit cooled by the exchanger 5

Characteristics

Maximum temperature	<ul style="list-style-type: none"> ■ + 45°C outside the enclosure ■ + 50°C inside the enclosure (internal temperature monitored by a thermostat which stops the equipment)
Colour of SAREL Spacial 6000 Cell Enclosure	<ul style="list-style-type: none"> RAL 7032 for case RAL 7022 for plinth
Connections	Cable entries via the enclosure bottom or from the left
Available internal supplies	<ul style="list-style-type: none"> ■ 1 x 24 V $\overline{\text{---}}$ drive supply (min. 21 V, max. 27 V), maximum current 200 mA ■ 1 x 24 V $\overline{\text{---}}$ additional supply, maximum current 600 mA

Variable speed drives

Altivar 71

IP 23 or IP 54 floor-standing enclosure compact version

Presentation

Altivar 71 variable speed drives can be supplied ready-assembled in an IP 23 or IP 54 floor-standing enclosure to facilitate installation and setup and, in particular, to ensure optimum ventilation.

The ATV 71EXC●●●●● offer consists of a compact floor-standing enclosure providing IP 23 or IP 54 protection with common cooling circuit for industrial environments and infrastructures.

The enclosure is supplied ready to connect.

The ATV 71EXC●●●●● offer covers motor power ratings from 90 kW to 630 kW with three types of power supply:

- 380...415 V three-phase, 90 kW to 500 kW (ATV 71EXC●●●●●N4)
- 500 V three-phase, 90 kW to 500 kW (ATV 71EXC●●●●●N)
- 600...690 V three-phase, 110 kW to 630 kW (ATV 71EXC●●●●●Y)

The ATV 71EXC●●●●● offer includes the choice of:

- A standard compact offer
- A modular offer in which a wide selection of options can be incorporated according to the rating of the drive.

The standard compact offer

It consists of:

- A wired, ready-assembled Sarel "Spacial 6000" enclosure 1
- A drive on heatsink, ATV 71HD90N4D...HC50N4D or ATV 71HC11Y...HC63Y 3
- An IP 65 remote mounting kit for graphic display terminal 2
- A switch and fast-acting semi-conductor fuses 4
- Motor terminals 5
- A line choke 6

See pages 52 and 53.

Modular offer

It consists of:

- The standard compact offer
- One or more options (see pages 54 to 59)

As well as these specific options, all the options available for Altivar 71 drives can be used at the same rating with the enclosed drives offer (see pages 178, 179 and 184 to 187).

For any configuration other than those shown on pages 54 to 59, please consult your Regional Sales Office.

Common options (modular offer only)

- Adapter for 115 V ~ logic inputs
- Encoder interface cards
- I/O extension cards
- "Controller Inside" programmable card
- Modbus TCP, Fipio, Modbus/Uni-Telway, Modbus Plus, EtherNet/IP, DeviceNet, PROFIBUS DP, INTERBUS and CC-Link communication cards
- PT100 relays
- Motor heater
- Additional 24 V $\overline{\text{---}}$ power supply
- Emergency stop button
- Enclosure lighting
- Key switch (Local Remote)
- Power supply circuit for external fan

See pages 54 and 55.

Options dependent on the drive rating (modular offer only)

- Braking unit
- Isolating handle for switch
- Circuit-breaker
- Line contactor
- Control transformer
- Ammeter
- Enclosure heater
- Motor choke
- Sinus filter
- Cable entry via the top
- Plinth
- Etc.

See pages 56 to 59.

Ventilation

IP 23 compact version

One common air circuit provides optimum enclosure ventilation, cooling the power section and the control section.

- 1 Air entry via an intake grille (without filter) located on the enclosure door
- 2 Line choke
- 3 Fan integrated in the drive for ventilating the power section
- 4 Separating plate to prevent internal turbulence.
- 5 Air outlet via a metal cover with protection against water splashes, on the enclosure roof

IP 54 compact version

One common air circuit provides optimum enclosure ventilation, cooling the power section and the control section.

- 1 Air entry via an intake grille (with protective filter) located on the enclosure door
- 2 Line choke
- 3 Fan integrated in the drive for ventilating the power section
- 4 Air outlet via a fan with filter, on the enclosure roof

Common options

Common options without modification of the enclosure (1)		
Description	Reference	Weight kg
Adapter for 115 V ~ logic inputs	VW3 A3E 101 (2)	0.200
Encoder interface cards with RS 422, 5 V compatible differential outputs	VW3 A3E 401 (3)	0.200
Encoder interface cards with RS 422, 15 V compatible differential outputs	VW3 A3E 402 (3)	0.200
Encoder interface card with 12 V open collector outputs	VW3 A3E 403 (3)	0.200
Encoder interface card with 15 V open collector outputs	VW3 A3E 404 (3)	0.200
Encoder interface card with 12 V push-pull outputs	VW3 A3E 405 (3)	0.200
Encoder interface card with 15 V push-pull outputs	VW3 A3E 406 (3)	0.200
Encoder interface card with 24 V push-pull outputs	VW3 A3E 407 (3)	0.200
Resolver encoder interface card 1.25...5.6 V	VW3 A3E 408 (3)	0.200
Universal encoder interface card with SinCos, SinCos Hiperface®, EnDat® or SSI 5, 8 or 12 V output	VW3 A3E 409 (3)	0.200
Encoder interface card with RS 422 compatible differential outputs with encoder emulation (RS 422 ESIM)	VW3 A3E 411 (3)	0.200
Logic I/O extension card	VW3 A3E 201 (4)	0.320
Extended I/O extension card	VW3 A3E 202 (4)	0.300
“Controller Inside” programmable card equipped with a 9-way male SUB-D connector	VW3 A3E 501 (5) (6)	0.300
Modbus TCP communication card	VW3 A3E 310 (7)	0.300
EtherNet/IP communication card	VW3 A3E 316 (7)	0.300
Modbus/Uni-Telway communication card	VW3 A3E 303 (7)	0.300
Standard Fipio communication card	VW3 A3E 311 (7)	0.300
Substitution Fipio communication card	VW3 A3E 301 (7)	0.300
Modbus Plus communication card	VW3 A3E 302 (7)	0.300
PROFIBUS DP communication card	VW3 A3E 307 (7)	0.300
DeviceNet communication card	VW3 A3E 309 (7)	0.300
INTERBUS communication card	VW3 A3E 304 (7)	0.300
CC-Link communication card	VW3 A3E 317 (7)	0.320

(1) For any other configuration, please consult your Regional Sales Office.

(2) The technical characteristics of the VW3 A3E 101 adapter are identical to those of the VW3 A3 101 adapter, see page 26.

(3) The technical characteristics of the VW3 A3E 401...409 and 411 encoder interface cards are identical to those of the VW3 A3 401...409 and 411 encoder interface cards, see pages 111 to 113.

(4) The technical characteristics of the VW3 A3E 201 and VW3 A3E 202 I/O extension cards are identical to those of the VW3 A3 201 and VW3 A3 202 I/O extension cards, see pages 114 and 115.

(5) The technical characteristics of the VW3 A3E 501 “Controller Inside” programmable card are identical to those of the VW3 A3 501 “Controller Inside” programmable card, see page 118.

(6) If the power consumption table does not exceed 200 mA, the “Controller Inside” programmable card can be powered by Altivar 71 drives. Above 200 mA, the VW3 AE 1401 additional 24 V ~ power supply option must be ordered, see page 55.

(7) The technical characteristics of the VW3 A3E 301...304, 307, 309...311, 316 and 317 communication cards are identical to those of the VW3 A3 301...304, 307, 309...311, 316 and 317 communication cards, see pages 126 to 131.

Common options

Common options without modification of the floor-standing enclosure (1)		
Description	Reference	Weight kg
Remote control terminals X12	VW3 AE 1201	0.700
Remote option card terminals X13 For I/O extension cards VW3 A3E 201 and 202	VW3 AE 1202 (2)	0.900
External source terminals 230 V ~	VW3 AE 1301	0.100
Additional 24 V ~ power supply, nominal current 2 A (3)	VW3 AE 1401	2.200
External source terminals 24 V ~	VW3 AE 1402	0.100
Emergency stop button	VW3 AE 1501	0.100
"Preventa type AC" fault relay	VW3 AE 1502	0.100
"Preventa type ATE" fault relay	VW3 AE 1503	0.100
Enclosure lighting	VW3 AE 1601	1.500
Key switch (Local Remote)	VW3 AE 1801	0.200
Additional electrical input isolation	VW3 AE 1901	0.100
Additional electrical output isolation	VW3 AE 1902	0.100
PTC relay	VW3 AE 2001	0.100
PTC relay with PTB (ATEX) certification (4)	VW3 AE 2002	0.100
PT100 relay for motor winding	VW3 AE 2003	0.300
PT100 relay for motor bearings	VW3 AE 2004	0.300
Motor heater 200 W, 230 V	VW3 AE 2101	0.200
Power supply circuit with 400 V protection for 1000 W external fan	VW3 AE 2102	0.200
Relay for logic output	VW3 AE 2201	0.100
Voltmeter three-phase supply voltage 380...415 V	VW3 AE 2301	0.400
Voltmeter three-phase supply voltage 500 V	VW3 AE 2302	0.400
Voltmeter three-phase supply voltage 600...690 V	VW3 AE 2303	0.400

(1) For any other configuration, please consult your Regional Sales Office.

(2) The X13 terminals, reference VW3 AE 1202, include the X12 terminals, reference VW3 AE 1201.

(3) Mandatory when the power consumption table for the option cards exceeds 200 mA.

(4) ATEX: see pages 220 and 221.

Installation recommendations

The derating curves for the drive nominal current (I_n) are dependent on the temperature and switching frequency. For intermediate temperatures, interpolate between 2 curves.

Note: The drive will reduce the switching frequency automatically in the event of excessive temperature rise.

S3	Emergency stop button with 2 contacts, mounted on enclosure door

- (1) Power supply: 24 V $\overline{\text{---}}$, 230 V \sim .
- (2) Requests freewheel stopping of the movement and activates the “Power Removal” safety function.
- (3) S2: resets the XPS AC module on power-up or after an Emergency stop. ESC can be used to set external starting conditions.
- (4) The logic output can be used to indicate that the machine is in a safe stop state.
- (5) Fault relay contacts. For remote signalling of drive status.
- (6) Connection of the common for the logic inputs depends on the positioning of the SW1 switch: see schemes on page 227.
- (7) Standardized coaxial cable, type RG174/U according to MIL-C17 or KX3B according to NF C 93-550, external diameter 2.54 mm, maximum length 15 m. The cable shielding must be earthed.

Options common to all drives (continued)

“Preventa type ATE” fault relay - VW3 AE 1503

Scheme conforming to standards EN 954-1 category 3, IEC/EN 61508 capacity SIL 2, stopping category 1 in accordance with IEC/EN 60204-1

Reference	Description
A1	ATV 71 drive, see pages 23 and 25
A2	ATV 71EXC compact version floor-standing enclosure, see pages 52 and 53
A3	Preventa XPS ATE safety module for monitoring emergency stops and switches. One safety module can manage the “Power Removal” safety function for several drives on the same machine. In this case the time delay must be adjusted on the drive controlling the motor that requires the longest stopping time. In addition, the PWR terminal on each drive must be connected to the + 24 V via the safety contacts on the XPS ATE module. These contacts are independent for each drive.
F1	Fast-acting semi-conductor fuse
F2	Fuse
IL1	Line choke
Q1	Switch
S1	Emergency stop button with 2 contacts
S2	Run button
S3	Emergency stop button with 2 contacts, mounted on enclosure door

(1) Power supply: 24 V $\overline{\text{---}}$, 230 V \sim .

(2) Requests controlled stopping of the movement and activates the “Power Removal” safety function.

(3) S2: resets the XPS ATE module on power-up or after an Emergency stop. ESC can be used to set external starting conditions.

(4) For stopping times requiring more than 30 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds.

(5) The logic output can be used to indicate that the machine is in a safe state.

(6) Fault relay contacts. For remote signalling of drive status.

(7) Connection of the common for the logic inputs depends on the positioning of the SW1 switch: see schemes on page 227.

(8) Standardized coaxial cable, type RG174/U according to MIL-C17 or KX3B according to NF C 93-550, external diameter 2.54 mm, maximum length 15 m. The cable shielding must be earthed.

(9) Logic inputs LI1 and LI2 must be assigned to the direction of rotation: LI1 to forward direction and LI2 to reverse direction.

Options common to all drives (continued)

Variable speed drives

Altivar 71

UL Type 12/IP 54 drives with Vario

ATV 71E5...N4

Presentation

Altivar 71 UL Type 12/IP 54 variable speed drives can be supplied equipped with a Vario switch disconnector.

This ready-assembled offer, ATV 71E5...N4, is particularly designed for applications that require an accessible drive as close as possible to the motor (conveyor chain, etc.).

It covers motor power ratings between 0.75 kW and 75 kW, with a three-phase supply voltage of between 380 and 480 V.

Description

The **ATV 71E5...N4** ready-assembled Altivar 71 offer consists of:

- An **ATV 71W...N4** drive **1**
- A Vario switch disconnector **2**

One or two (maximum) control units (pushbutton, switch, etc.) and/or signalling units (LED) can be added on the front of the drive (1) (2).

Note: For the connection diagrams, see pages 218 to 241, and for the mounting and installation recommendations, see pages 264 and 265.

Options

The following options, available for ATV 71W...N4 drives, can be used at the same rating, with the ATV 71E5...N4 offer:

- Adapter for 115 V ~ logic inputs
- Ready-assembled IP 54 baseplate
- Option cards: encoder interface, I/O extension, programmable “Controller Inside” and communication
- Braking or hoisting resistors
- Network braking units
- DC chokes, line chokes and passive filters
- Additional EMC input filters
- Motor chokes and sinus filters
- PowerSuite software workshop

See the tables summarizing the possible combinations for

Altivar 71 UL Type 12/IP 54 drives to determine the options available for each drive (see pages 180, 181, 186 and 187).

Note: UL Type 1, IP 21 or IP 31 conformity kits are not necessary for this range.

(1) The customer is responsible for drilling the front panel and mounting the control or signalling units, see page 79.

(2) Please refer to the “Control and signalling components” catalogue

(1) These values are given for a nominal switching frequency of 4 kHz up to ATV 71E5D30N4, or 2.5 kHz for ATV 71E5D37N4...E5D75N4 used in continuous operation. The switching frequency is adjustable from 1...16 kHz for all ratings. Above 2.5 or 4 kHz, depending on the rating, the drive will reduce the switching frequency automatically in the event of excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on page 265).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) All drives are supplied with a plate for EMC mounting.

(1) The diameters and positions of the drill holes for mounting control and/or signalling units must be complied with. The customer is responsible for drilling and mounting units.

Variable speed drives

Altivar 71

IP 54 floor-standing enclosure with separate air flows

Presentation

Altivar 71 variable speed drives can be supplied ready-assembled in an IP 54 floor-standing enclosure to facilitate installation and setup and, in particular, to ensure optimum ventilation of the enclosure.

The ATV 71EXS5..... offer consists of a floor-standing enclosure providing IP 54 protection with separate cooling circuits, for harsh and highly polluted environments.

The enclosure is supplied ready to connect.

The ATV 71EXS5..... offer covers motor power ratings from 90 kW to 630 kW with three types of power supply:

- 380...415 V three-phase, 90 kW to 500 kW (ATV 71EXS5.....N4)
- 500 V three-phase, 90 kW to 500 kW (ATV 71EXS5.....N)
- 600...690 V three-phase, 110 kW to 630 kW (ATV 71EXS5.....Y)

The ATV 71EXS5..... offer includes the choice of:

- A standard separate air flow offer
- A modular offer in which a wide selection of options can be incorporated according to the rating of the drive.

Standard separate air flow offer

It consists of:

- A wired, ready-assembled Sarel "Spacial 6000" enclosure 1
- A drive on heatsink, ATV 71HD90N4...HC50N4 or ATV 71HC11Y...ATV 71HC63Y 3
- An IP 65 remote mounting kit for graphic display terminal 2
- A DC choke 4 (ATV 71EXS5.....N4) or a line choke in an additional enclosure (ATV 71EXS5.....N, ATV 71EXS5.....Y)
- A switch and fast-acting semi-conductor fuses 5
- Motor terminals 6
- A plinth 7

See page 86.

Modular offer

It consists of:

- The standard separate air flow offer
- One or more options (see pages 87 to 93)

As well as these specific options, all the options available for Altivar 71 drives can be used at the same rating with the enclosed drives offer (see pages 178, 179 and 184 to 187).

For any configurations other than those shown on pages 87 to 93, please consult your Regional Sales Office.

Common options (modular offer only)

- Adapter for 115 V ~ logic inputs
 - Encoder interface cards
 - I/O extension cards
 - "Controller Inside" programmable card
 - Modbus TCP, Fipio, Modbus/Uni-Telway, Modbus Plus, EtherNet/IP, DeviceNet, PROFIBUS DP, INTERBUS and CC-Link communication cards
 - PT100 relays
 - Motor heater
 - Additional 24 V ~ power supply
 - Emergency stop button
 - Enclosure lighting
 - Key switch (Local Remote)
 - Power supply circuit for external fan
- See pages 87 and 88.

Options dependent on the drive rating (modular offer only)

- Braking unit
 - Isolating handle for switch
 - Circuit-breaker
 - Line contactor
 - Control transformer
 - Ammeter
 - Enclosure heater
 - Motor choke
 - Sinus filter
 - Cable entry via the top
 - Air conditioning
- See pages 89 to 93.

Ventilation

Two separate air circuits ensure optimum enclosure ventilation, cooling the power section and the control section.

Power section:

- 1 Air intake via a grille on the plinth
- 2 DC choke
- 3 Air outlet via a metal cover with protection against water splashes, on the enclosure roof

Control section:

- 4 Air intake via a grille with IP 54 filter, on the lower part of the enclosure door
- 5 Air outlet via a grille with a fan equipped with an IP 54 filter, on the upper part of the enclosure door

Variable speed drives

Altivar 71

IP 54 floor-standing enclosure with separate air flows

Common options

Common options without modification of the enclosure ⁽¹⁾		
Description	Reference	Weight kg
Adapter for 115 V ~ logic inputs	VW3 A3E 101 ⁽²⁾	0.200
Encoder interface cards with RS 422, 5 V compatible differential outputs	VW3 A3E 401 ⁽³⁾	0.200
Encoder interface cards with RS 422, 15 V compatible differential outputs	VW3 A3E 402 ⁽³⁾	0.200
Encoder interface card with 12 V open collector outputs	VW3 A3E 403 ⁽³⁾	0.200
Encoder interface card with 15 V open collector outputs	VW3 A3E 404 ⁽³⁾	0.200
Encoder interface card with 12 V push-pull outputs	VW3 A3E 405 ⁽³⁾	0.200
Encoder interface card with 15 V push-pull outputs	VW3 A3E 406 ⁽³⁾	0.200
Encoder interface card with 24 V push-pull outputs	VW3 A3E 407 ⁽³⁾	0.200
Resolver encoder interface card 1.25...5.6 V	VW3 A3E 408 ⁽³⁾	0.200
Universal encoder interface card with SinCos, SinCos Hiperface®, EnDat® or SSI 5, 8 or 12 V output	VW3 A3E 409 ⁽³⁾	0.200
Encoder interface card with RS 422 compatible differential outputs with encoder emulation (RS 422 ESIM)	VW3 A3E 411 ⁽³⁾	0.200
Logic I/O extension card	VW3 A3E 201 ⁽⁴⁾	0.320
Extended I/O extension card	VW3 A3E 202 ⁽⁴⁾	0.300
“Controller Inside” programmable card equipped with a 9-way male SUB-D connector	VW3 A3E 501 ^{(5) (6)}	0.300
Modbus TCP communication card	VW3 A3E 310 ⁽⁷⁾	0.300
EtherNet/IP communication card	VW3 A3E 316 ⁽⁷⁾	0.300
Modbus/Uni-Telway communication card	VW3 A3E 303 ⁽⁷⁾	0.300
Standard Fipio communication card	VW3 A3E 311 ⁽⁷⁾	0.300
Substitution Fipio communication card	VW3 A3E 301 ⁽⁷⁾	0.300
Modbus Plus communication card	VW3 A3E 302 ⁽⁷⁾	0.300
PROFIBUS DP communication card	VW3 A3E 307 ⁽⁷⁾	0.300
DeviceNet communication card	VW3 A3E 309 ⁽⁷⁾	0.300
INTERBUS communication card	VW3 A3E 304 ⁽⁷⁾	0.300
CC-Link communication card	VW3 A3E 317 ⁽⁷⁾	0.320

(1) For any other configuration, please consult your Regional Sales Office.

(2) The technical characteristics of the VW3 A3E 101 adapter are identical to those of the VW3 A3 101 adapter, see page 26.

(3) The technical characteristics of the VW3 A3E 401...409 and 411 encoder interface cards are identical to those of the VW3 A3 401...409 and 411 encoder interface cards, see pages 111 to 113.

(4) The technical characteristics of the VW3 A3E 201 and VW3 A3E 202 I/O extension cards are identical to those of the VW3 A3 201 and VW3 A3 202 I/O extension cards, see pages 114 and 115.

(5) The technical characteristics of the VW3 A3E 501 “Controller Inside” programmable card are identical to those of the VW3 A3 501 “Controller Inside” programmable card, see page 118.

(6) If the power consumption table does not exceed 200 mA, the “Controller Inside” programmable card can be powered by Altivar 71 drives. Above 200 mA, the VW3 AE 1401 additional 24 V ~ power supply option must be ordered, see page 88.

(7) The technical characteristics of the VW3 A3E 301...304, 307, 309...311, 316 and 317 communication cards are identical to those of the VW3 A3 301...304, 307, 309...311, 316 and 317 communication cards, see pages 126 to 131.

Installation recommendations

The derating curves for the drive nominal current (I_n) are dependent on the temperature and switching frequency. For intermediate temperatures, interpolate between 2 curves.

Note: The drive will reduce the switching frequency automatically in the event of excessive temperature rise.

S1	Emergency stop button with 2 contacts
S2	XB4 B or XB5 A pushbutton
S3	Emergency stop button with 2 contacts, mounted on enclosure door

- (1) Power supply: 24 V $\overline{\text{---}}$, 230 V \sim .
- (2) Requests freewheel stopping of the movement and activates the “Power Removal” safety function.
- (3) S2: resets the XPS AC module on power-up or after an emergency stop. ESC can be used to set external starting conditions.
- (4) The logic output can be used to indicate that the machine is in a safe stop state.
- (5) Fault relay contacts. For remote signalling of drive status.
- (6) Connection of the common for the logic inputs depends on the positioning of the SW1 switch: see schemes on page 227.
- (7) Standardized coaxial cable, type RG174/U according to MIL-C17 or KX3B according to NF C 93-550, external diameter 2.54 mm, maximum length 15 m. The cable shielding must be earthed.

Options common to all drives (continued)

"Preventa type ATE" fault relay - VW3 AE 1503

Scheme conforming to standards EN 954-1 category 3, IEC/EN 61508 capacity SIL 2, stopping category 1 in accordance with IEC/EN 60204-1

Reference	Description
A1	ATV 71 drive, see pages 23 and 25
A2	IP 54 floor-standing enclosure with separate air flows ATV 71EXS5, see page 86
A3	Preventa XPS ATE safety module for monitoring emergency stops and switches. One safety module can manage the "Power Removal" safety function for several drives on the same machine. In this case the time delay must be adjusted on the drive controlling the motor that requires the longest stopping time. In addition, the PWR terminal on each drive must be connected to the + 24 V via the safety contacts on the XPSATE module. These contacts are independent for each drive.
F1	Fast-acting semi-conductor fuse
F2	Fuse
IL1	Line choke for ATV 71EXS5●●●N and ATV 71EXS5●●●Y
L1	DC choke for ATV 71EXS5●●●N4
Q1	Switch
S1	Emergency stop button with 2 contacts
S2	Run button
S3	Emergency stop button with 2 contacts, mounted on enclosure door

(1) Power supply: 24 V $\overline{\text{---}}$, 230 V \sim .

(2) Requests controlled stopping of the movement and activates the "Power Removal" safety function.

(3) S2: resets the XPS ATE module on power-up or after an Emergency stop. ESC can be used to set external starting conditions.

(4) For stopping times requiring more than 30 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds.

(5) The logic output can be used to indicate that the machine is in a safe state.

(6) Fault relay contacts. For remote signalling of drive status.

(7) Connection of the common for the logic inputs depends on the positioning of the SW1 switch: see schemes on page 227.

(8) Standardized coaxial cable, type RG174/U according to MIL-C17 or KX3B according to NF C 93-550, external diameter 2.54 mm, maximum length 15 m. The cable shielding must be earthed.

(9) Logic inputs L11 and L12 must be assigned to the direction of rotation: L11 to forward direction and L12 to reverse direction.

Remote graphic display terminal

(this terminal can be supplied with the drive or ordered separately)

This display terminal is attached to the front of the drive. It includes the integrated 7-segment display terminal for drives supplied without a graphic display terminal or for ATV 71HU22Y...HC63Y drives.

It can be:

- Used remotely in conjunction with the appropriate accessories (see below)
- Connected to several drives using multidrop link components (see page 109)

It is used:

- To control, adjust and configure the drive
 - To display the current values (motor, input/output values, etc.)
 - To save and download configurations; 4 configuration files can be saved
- The terminal's maximum operating temperature is 60°C and it features IP 54 protection.

Description

- 1 Graphic display:
 - 8 lines, 240 x 160 pixels
 - Large digits that can be read from 5 m away
 - Supports display of bar charts
- 2 Assignable function keys F1, F2, F3, F4:
 - Dialogue functions: direct access, help screens, navigation
 - Application functions: "Local Remote", preset speed
- 3 "STOP/RESET" key: local control of motor stop/fault reset
- 4 "RUN" key: local control of motor operation
- 5 Navigation button:
 - Press: saves the current value (ENT)
 - Turn ±: increases or decreases the value, or goes to the next or previous line.
- 6 "FWD/REV" key: reverses the direction of rotation of the motor
- 7 "ESC" key: aborts a value, a parameter or a menu to return to the previous selection

Note: Keys 3, 4 and 6 can be used to control the drive directly.

Reference

Remote graphic display terminal	1	VW3 A1 101	0.145

Remote graphic display terminal accessories

The following accessories are available:

- A remote mounting kit for mounting on an enclosure door with IP 54 degree of protection. It includes:
 - All the mechanical fittings
 - Fixing accessories
- A transparent door which attaches to the remote mounting mechanism to achieve IP 65 degree of protection
- A cable equipped with two RJ45 connectors so that the graphic display terminal can be connected to the Altivar 71 drive (1, 3, 5 or 10 m cable lengths available)
- An RJ45 female/female adapter for connecting the graphic display terminal VW3 A1 101 to the remote cable VW3 A1 104 R●●●

PowerSuite software workshop

The PowerSuite software workshop offers the following benefits:

- Messages can be displayed in plain text in several languages (English, French, German, Italian and Spanish)
- Work can be prepared in the design office without having to connect the drive to the PC
- Configurations and settings can be saved to floppy disk or hard disk and downloaded to the drive
- Print facility
- Altivar 58 or Altivar 58F files can be converted for transfer to an Altivar 71 drive
- Oscillograms can be displayed

See pages 302 to 305.

PowerSuite software workshop

Variable speed drives

Altivar 71

Option: Encoder interface cards

VW3 A3 401

Presentation

Encoder interface cards are used for Flux Vector Control operation with sensor (FVC mode) for asynchronous motors, or, for synchronous motors, Vector Control operation with speed feedback (FSY mode).

It therefore improves drive performance irrespective of the motor load state:

- Zero speed torque
- Accurate speed regulation
- Torque accuracy
- Shorter response times on a torque surge
- Improved dynamic performance in transient state

For asynchronous motors, in the other control modes (voltage vector control, voltage/frequency ratio), encoder interface cards improve static speed accuracy.

Depending on the model, encoder interface cards can also be used for machine safety, irrespective of the control type:

- Overspeed detection
- Load slipping detection

They can also transmit to the Altivar 71 a reference provided by the encoder input.

This use is specific to synchronizing the speed of several drives.

These two functions are available for encoder interface cards VW3 A3 401 to VW3 A3 407 and VW3 A3 411.

The Altivar 71 drive cannot support more than one encoder interface card. It is inserted into a dedicated slot.

Six types of card are available depending on the encoder technology (incremental or absolute):

- RS 422 compatible differential outputs
- Open collector outputs (NPN)
- Push-pull outputs
- Resolver
- SinCos, SinCos Hiperface®, EnDat® or SSI
- RS 422 compatible differential outputs with encoder emulation (RS 422 ESIM)

These last three cards are available only with the following variable speed drives:

- ATV 71H●●●M3383
- ATV 71H●●●M3X383
- ATV 71H●●●N4383

The RS 422 ESIM (Encoder SIMulation) encoder interface card is used to indicate the position and speed of the motor to a motion controller via the ESIM output of the RS 422 interface.

It is also used to establish a master/slave relationship between two Altivar 71 drives.

Characteristics

Encoder interface cards with RS422 compatible differential outputs

Type of card		VW3 A3 401	VW3 A3 402 (1)	
Power Supply (supplied by the card)	Voltage	5 V \pm (min. 5 V, max. 5.5 V)	15 V \pm (min. 15 V, max. 16 V)	
	Maximum current	200 mA	175 mA	
		Short-circuit and overload protection		
Maximum cable length		50 m	100 m	
Maximum operating frequency		300 kHz		
Input signals		A, \bar{A} , B, \bar{B}		
		440 Ω		
Number of pulses/encoder revolution	ATV 71H●●●M3, M3X, N4	5000 maximum		
	ATV 71H●●●●●383	10,000 maximum		
		The maximum high-speed frequency should not exceed 300 kHz.		
Encoder consumption		100 mA at 4.5 V	200 mA at 4.5 V	100 mA at 8 V 175 mA at 8 V
Minimum cross-section recommended for the conductors (2)	For a maximum cable length of 25 m	0.2 mm ² (AWG 24)	0.5 mm ² (AWG 20)	0.2 mm ² (AWG 24)
	For a maximum cable length of 50 m	0.5 mm ² (AWG 20)	0.75 mm ² (AWG 18)	0.2 mm ² (AWG 24)
	For a maximum cable length of 100 m	–	–	0.2 mm ² (AWG 24)
Type of encoder		XCC 1●●●●●●X, R, RN (3)		XCC 1●●●●●●X (3)

Encoder interface card with open collector outputs

Type of card		VW3 A3 403	VW3 A3 404	
Power Supply (supplied by the card)	Voltage	12 V \pm (min. 12 V, max. 13 V)	15 V \pm (min. 15 V, max. 16 V)	
	Maximum current	175 mA		
		Short-circuit and overload protection		
Maximum cable length		500 m		
Maximum operating frequency		300 kHz		
Input signals		A, \bar{A} , B, \bar{B} /AB/A		
		1 k Ω		
Number of pulses/encoder revolution	ATV 71H●●●M3, M3X, N4	5000 maximum		
	ATV 71H●●●●●383	10,000 maximum		
		The maximum high-speed frequency should not exceed 300 kHz.		
Encoder consumption		100 mA at 10 V	175 mA at 10 V	100 mA at 10 V 175 mA at 10 V
Minimum cross-section recommended for the conductors (2)	For a maximum cable length of 100 m	0.2 mm ² (AWG 24)	0.5 mm ² (AWG 20)	0.2 mm ² (AWG 24)
	For a maximum cable length of 200 m	0.5 mm ² (AWG 20)	0.75 mm ² (AWG 18)	0.2 mm ² (AWG 24)
	For a maximum cable length of 500 m	1 mm ² (AWG 17)	1.5 mm ² (AWG 15)	0.5 mm ² (AWG 20)

Encoder interface card with push-pull outputs

Type of card		VW3 A3 405	VW3 A3 406	VW3 A3 407	
Power Supply (supplied by the card)	Voltage	12 V \pm (min. 12 V, max. 13 V)	15 V \pm (min. 15 V, max. 16 V)	24 V \pm (min. 20 V, max. 30 V)	
	Maximum current	175 mA			
		Short-circuit and overload protection			
Maximum cable length		500 m			
Maximum operating frequency		300 kHz			
Input signals		A, \bar{A} , B, \bar{B} /AB/A			
		1 k Ω		1.6 k Ω	
		State 0 If < 1.5 V		State 1 If > 7.7 V and < 13 V If > 7.7 V and < 16 V If > 11.5 V and < 25 V	
Number of pulses/encoder revolution	ATV 71H●●●M3, M3X, N4	5000 maximum			
	ATV 71H●●●●●383	10,000 maximum			
		The maximum high-speed frequency should not exceed 300 kHz.			
Encoder consumption		100 mA at 10 V	175 mA at 10 V	100 mA at 10 V	175 mA at 10 V 100 mA at 14 V
Minimum cross-section recommended for the conductors (2)	For a maximum cable length of 100 m	0.2 mm ² (AWG 24)	0.5 mm ² (AWG 20)	0.2 mm ² (AWG 24)	
	For a maximum cable length of 200 m	0.5 mm ² (AWG 20)	0.75 mm ² (AWG 18)	0.2 mm ² (AWG 24)	
	For a maximum cable length of 500 m	1 mm ² (AWG 17)	1.5 mm ² (AWG 15)	0.5 mm ² (AWG 20)	0.2 mm ² (AWG 24)
Type of encoder		XCC 1●●●●●●Y, K, KN (3)			

(1) The VW3 A3 402 card ensures compatibility between Altivar 68F drive applications and Altivar 71 drive applications.

(2) Shielded cable containing 3 twisted pairs with a pitch of between 20 and 50 mm. Connect the shielding to earth at both ends. Minimum cross-section recommended for the conductors for a minimum encoder voltage in order to limit line voltage drops.

(3) To obtain the complete reference of the encoder, consult our "Global Detection" catalogue or our website "www.telemecanique.com".

Characteristics (continued)

Encoder interface card with RS 422 compatible differential outputs with encoder emulation (RS 422 ESIM) (for drives ATV 71H●●●M3383, ATV 71H●●●M3X383 and ATV 71H●●●N4383)

Type of card		VW3 A3 411		
Power Supply (supplied by the card)	Voltage	5 V (min. 5 V, max. 5.5 V)	15 V (min. 15 V, max. 16 V)	
	Maximum current	200 mA		
		Short-circuit and overload protection		
Maximum cable length		50 m	100 m	
Maximum operating frequency		300 kHz		
Input signals (RS 422)		A, \bar{A} , B, \bar{B} , Z, \bar{Z} , adjustable by switch		
Impedance		440 Ω		
Output signals		$A\bar{A}/A\bar{A} B\bar{B}/A\bar{A} B\bar{B} Z\bar{Z}$		
Ratio		1, 1/2, 1/4, 1/8, 1/16, 1/32 or 1/64, adjustable by switch		
Number of pulses/encoder revolution		10,000 maximum		
Consumption of the encoder with 5 V supply		50 mA at 4.75 V	100 mA at 4.75 V	200 mA at 4.75 V
Minimum cross-section recommended for the conductors (1)	For a maximum cable length of 25 m	0.2 mm ² (AWG 24)	0.5 mm ² (AWG 20)	1 mm ² (AWG 17)

(2) The Altivar 71 drive cannot support more than one encoder interface card. Consult the summary tables of possible drive, option and accessory combinations, see pages 176 to 187.

Presentation

VW3 A3 202

Altivar 71 drives can be specifically adapted to particular application areas by installing I/O extension cards.

Two models are available:

- Card with logic I/O featuring:
 - 1 relay logic output ("C/O" contact)
 - 4 x 24 V $\overline{\text{---}}$ positive or negative logic inputs
 - 2 x 24 V $\overline{\text{---}}$ open collector positive or negative logic outputs
 - 1 input for PTC probes

- Card with extended I/O featuring:
 - 1 differential current analog input 0...20 mA
 - 1 software-configurable voltage (0...10 V $\overline{\text{---}}$) or current (0...20 mA) analog input
 - 2 software-configurable voltage (± 10 V, 0...10 V $\overline{\text{---}}$) or current (0...20 mA) analog outputs
 - 1 relay logic output
 - 4 x 24 V $\overline{\text{---}}$ positive or negative logic inputs
 - 2 x 24 V $\overline{\text{---}}$ open collector positive or negative logic outputs
 - 1 input for PTC probes
 - 1 frequency control input

Characteristics

Logic I/O card VW3 A3 201

Available internal supplies		Short-circuit and overload protection: <ul style="list-style-type: none"> ■ 1 x 24 V $\overline{\text{---}}$ supply (min. 21 V, max. 27 V), maximum current 200 mA for the complete drive and I/O extension card assembly ■ 1 x 10.5 V $\overline{\text{---}}$ ($\pm 5\%$) supply for the reference potentiometer (1 to 10 kΩ), maximum current 10 mA
Configurable relay output	R3A, R3B, R3C	1 relay logic output, one "N/C" contact and one "N/O" contact with common point Minimum switching capacity: 3 mA for 24 V $\overline{\text{---}}$ Maximum switching capacity: <ul style="list-style-type: none"> ■ On resistive load ($\cos \varphi = 1$): 5 A for 250 V \sim or 30 V $\overline{\text{---}}$ ■ On inductive load ($\cos \varphi = 0.4$ and L/R = 7 ms): 2 A for 250 V \sim or 30 V $\overline{\text{---}}$ Electrical service life: 100,000 operations Maximum response time: 7 ms \pm 0.5 ms
Logic inputs	LI7...LI10	4 programmable logic inputs, 24 V $\overline{\text{---}}$, compatible with level 1 PLC, IEC/EN 61131-2 standard Impedance 3.5 k Ω Maximum voltage: 30 V Multiple assignment makes it possible to configure several functions on one input Maximum sampling time: 2 ms \pm 0.5 ms
	Positive logic (Source)	State 0 if ≤ 5 V or logic input not wired, state 1 if ≥ 11 V
	Negative logic (Sink)	State 0 if ≥ 16 V or logic input not wired, state 1 if ≤ 10 V
Logic outputs	LO1, LO2	2 x 24 V $\overline{\text{---}}$ logic outputs assignable as positive (Source) or negative (Sink) logic open collector type, compatible with level 1 PLC, standard IEC/EN 61131-2 24 V $\overline{\text{---}}$ internal or 24 V $\overline{\text{---}}$ external power supply (min. 12 V, max. 30 V) Maximum current: 200 mA Logic output common (CLO) isolated from other signals Maximum sampling time: 2 ms \pm 0.5 ms The active state is software-configurable as is a delay for each switching operation
Input for PTC probes	TH1+/TH1-	1 input for a maximum of 6 PTC probes mounted in series: <ul style="list-style-type: none"> ■ Nominal value < 1.5 kΩ ■ Trip resistance 3 kΩ, reset value 1.8 kΩ ■ Short-circuit protection < 50 Ω This PTC probe input must never be used for protection of an ATEX motor in applications in a potentially explosive atmosphere (1).
Maximum wire size and tightening torque for I/O		1.5 mm ² (AWG 16) 0.25 Nm

(1) Consult the ATEX manual, available on our website "www.telemecanique.com".

I/O extension cards (2)

Description	Reference	Weight kg
Logic I/O card	VW3 A3 201	0.300
Extended I/O card	VW3 A3 202	0.300

(1) Consult the ATEX manual, available on our website "www.telemecanique.com".

(2) The Altivar 71 cannot support more than one I/O card with the same reference.

Consult the summary tables of possible drive, option and accessory combinations, see pages 176 to 187.

Variable speed drives

Altivar 71

Option: "Controller Inside" programmable card

Presentation

The "Controller Inside" programmable card is used to adapt the variable speed drive to specific applications by integrating control system functions.

Various predefined, configurable applications are sold by Schneider Electric and its partners.

The PS 1131 software workshop for PC is used for programming and debugging new applications, quickly and in an open-ended manner (see page 119).

It is not possible to transfer the program from the card to the PC, as we need to protect our know-how.

A single "Controller Inside" programmable card can be fitted in the Altivar 71 drive. It can be combined with another option card (I/O extension or communication). Consult the summary tables of possible drive, option and accessory combinations, see pages 176 to 187.

The "Controller Inside" programmable card has:

- 10 logic inputs, 2 of which can be used for 2 counters or 4 of which can be used for 2 incremental encoders
- 2 analog inputs
- 6 logic outputs
- 2 analog outputs
- A master port for the CANopen machine bus
- A PC port for programming with the PS 1131 software workshop

If the power consumption table does not exceed 200 mA, the "Controller Inside" programmable card can be powered by Altivar 71 drives. Otherwise, an external 24 V DC power supply must be used.

The ATV 71W●●●N4A24 variable speed drives incorporate a 24 V DC power supply, allowing additional consumption of 250 mA.

The "Controller Inside" programmable card can also use:

- The drive I/O
- The I/O extension card I/O
- The encoder interface card points counter
- The drive parameters (speed, current, torque, etc.)

Description

- 1 RJ45 connector for connecting the PS 1131 software workshop via an RS 485 serial link.
Connection to the PC is via a cable and an RS 232/RS 485 converter included in the PowerSuite for PC connection kit, VW3 A8 106.
- 2 9-way male SUB-D connector for connection to the CANopen machine bus.
- 3 Connector with removable screw terminals, 6 contacts at intervals of 3.81 for the 24 V DC power supply and 4 logic inputs.
- 4 3 connectors with removable screw terminals, 6 contacts at intervals of 3.81 for 6 logic inputs, 6 logic outputs, 2 analog inputs, 2 analog outputs and 2 commons.
- 5 5 LEDs, comprising:
 - 1 to indicate the presence of the 24 V DC power supply
 - 1 to indicate a program execution fault
 - 2 to indicate the CANopen machine bus communication status
 - 1 controlled by the application program

Variable speed drives

Altivar 71

Option: "Controller Inside" programmable card

Independent machine with multiwire system

Independent machine with CANopen machine bus

Modular machine with Modbus TCP network

Dialogue

Human-machine dialogue with the application programmed in the "Controller Inside" programmable card is possible using:

- The Altivar 71 graphic display terminal
- A Magelis industrial HMI terminal connected to the drive Modbus port
- A Magelis industrial HMI terminal connected to the Modbus TCP network (if the drive is equipped with a Modbus TCP communication card)

There is a dedicated graphic terminal menu for the "Controller Inside" programmable card. This menu can be customized by the card program according to the application.

Any industrial HMI terminal which supports the Modbus protocol can be used to display and modify the "Controller Inside" programmable card parameters. The Modbus server provides access to 2 Kwords (% MW, etc.) in the card.

Master CANopen communication

The master CANopen port on the "Controller Inside" programmable card can be used to extend the I/O capacity and to control other CANopen slave devices.

Communication with a PLC

The Altivar 71 drive, which is equipped with a "Controller Inside" programmable card, fits easily into complex architectures.

Regardless of which bus, network or serial link is being used (Modbus TCP, Modbus/Uni-Telway, Fipio, Modbus Plus, PROFIBUS DP, INTERBUS, etc.), the PLC can communicate with the "Controller Inside" programmable card and the drive. The periodic variables can still be configured as required.

Clock

A clock backed up by a lithium battery makes it possible to keep a log of events that have occurred. When the "Controller Inside" programmable card is installed in the drive, drive faults are automatically time and date-stamped without the need for any special programming.

Electrical characteristics			
Power supply	Voltage	V	--- (min. 19, max. 30)
Current consumption	Maximum	A	2
	No-load	mA	80
	Per logic output	mA	200 maximum (1)
Analog inputs	AI51, AI52		2 current analog inputs 0...20 mA, impedance 250 Ω Resolution: 10 bits Accuracy: ± 1% for a temperature variation of 60°C Linearity: ± 0.2% of the maximum value Common point for all the card I/O (2)
Analog outputs	AO51, AO52		2 current analog outputs 0...20 mA, impedance 500 Ω Resolution: 10 bits Accuracy: ± 1% for a temperature variation of 60°C Linearity: ± 0.2% of the maximum value Common point for all the card I/O (2)
Logic inputs	LI51...LI60		Ten 24 V --- logic inputs, compatible with level 1 PLC, IEC/EN 61131-2 standard, 4 of which can be used for: ■ 1 counter and/or 1 incremental encoder ■ 2 counters Impedance 4.4 kΩ Maximum voltage: 30 V --- Switching thresholds: State 0 if ≤ 5 V or logic input not wired State 1 if ≥ 11 V Common point for all the card I/O (2)
Logic outputs	LO51...LO56		Six 24 V --- logic outputs, positive logic open collector type (source), compatible with level 1 PLC, IEC/EN 61131-2 standard Maximum switching voltage: 30 V Maximum current: 200 mA Common point for all the card I/O (2)

	Transmission speed		Configurable via the program: 50 kbps, 125 kbps, 250 kbps, 500 kbps or 1 Mbps
	Address (Node ID)		32 slaves maximum
Services	CANopen application layer		DS 301 V4.02
	Profile		DSP 405
	PDO		10 receive and transmit PDOs in total for each slave
	SDO		2 client SDOs per slave (1 read and 1 write). Block transfer.
	Error check		Node Guarding, producer and consumer Heartbeat
	Other services		Emergency, Boot-up, Sync
Diagnostics	Using LEDs		2 LEDs: "RU" and "ERROR", conforming to CIA DR303 version 1.0

(1) Otherwise, and external 24 V --- power supply must be used.

(2) This common point is also the drive 0 V.

PS 1131 software workshop

The PS 1131 software workshop conforms to international standard IEC 61131-3 and includes all the functions for programming and setting up the "Controller Inside" programmable card.

It includes the configurator for CANopen.

It is designed for Microsoft Windows® 98, Microsoft Windows® NT 4.0, Microsoft Windows® Millennium, Microsoft Windows® 2000 Professional and Microsoft Windows® XP operating systems.

It benefits from the user-friendly interface associated with these operating systems:

- Pop-up menus
- Function blocks
- Online help

The PS 1131 software workshop is available in both English and German.

The programming and debugging tools can be accessed via the application browser. This provides the user with an overview of the program and quick access to all application components:

- Program editor
- Function blocks editor
- Variables editor
- Animation tables editor
- Runtime screens editor

Modular structured programming

The PS 1131 software workshop is used to structure an application into function modules consisting of sections (program code), animation tables and runtime screens. Each program section has a name and is programmed in one of the six available languages. To protect know-how or prevent any accidental modification, each section can be write-protected or read/write-protected.

Exporting/Importing function modules

It is possible to export all or part of the tree structure in function modules.

Program structure and execution of an application

The program structure is single-task. It consists of several subroutines.

Exchanges with the drive are performed by a function block available in the standard library.

Cycle execution can be either cyclic or periodic. A software watchdog, which can be configured between 100 and 500 ms by the user, monitors the cycle time.

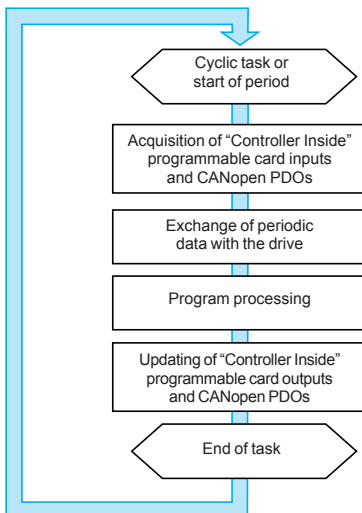

A task can be synchronized with the drive main task to improve repeat accuracy in motion control applications.

Cyclic execution

Once each cycle ends, execution of a new cycle begins. Cycle execution must last for at least 5 ms.

Periodic execution

The program is executed periodically, and the period can be set by the user between 5 and 100 ms. Cycle execution must last for less than the defined period. The drive response in the event of the cycle time being exceeded can be managed by the program.

Example of cycle execution for the "Controller Inside" programmable card connected on a CANopen machine bus

Variable speed drives

Altivar 71

Option: "Controller Inside" programmable card

Programming languages

6 programming languages are available:

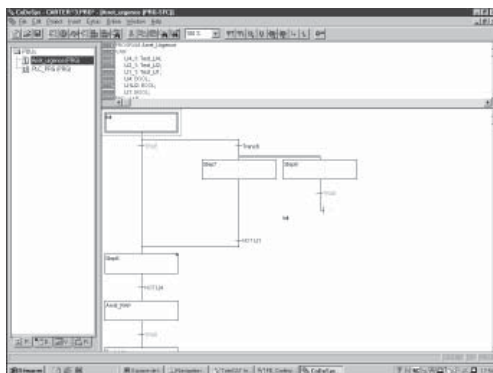

- Ladder Diagram (LD)
- Structured Text language (ST)
- Grafcet language (SFC)
- Instruction List language (IL)
- Function Block Diagram (FBD)
- Continuous Flow Chart (CFC)

Example of Ladder Diagram language programming

Example of Structured Text language programming

Example of Grafcet language programming

Ladder Diagram (LD)

A Ladder Diagram program consists of a set of rungs executed sequentially.

A rung consists of several lines.

A line consists of several contacts and a coil.

The language objects can be entered and displayed as symbols or tags as required.

The Ladder Diagram editor enables the immediate call of entry help functions such as access to function libraries and access to the variables editor

Structured Text (ST)

Structured Text language is a sophisticated algorithmic-type language which is particularly well suited to programming complex arithmetical functions, manipulating tables, message handling, etc.

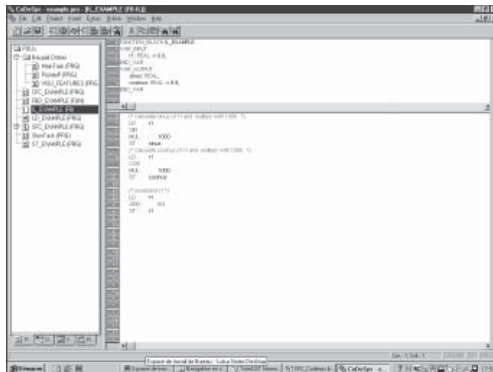

Structured Text language enables direct transcription of an analysis based on a flow chart, and is organized in statements.

Grafcet language (SFC)

Grafcet language is used to describe the sequential part of the control system in a simple, graphic way. It corresponds to the "Sequential Function Chart" (SFC) language described in standard IEC/EN 61131-3.

Programs written in Grafcet (SFC) language consist of:

- Macro-steps which are groups of steps and transitions
- Steps relating to the actions to be performed
- Transitions relating to the conditions (transition conditions)
- Directed links connecting the steps and transitions

Example of Instruction List language programming

Example of a function block:
Sending the speed reference to the drive.

Programming languages (continued)

Instruction List language (IL)

Instruction List language can be used to write Boolean equations and use all the functions available in the language. It can be used to represent the equivalent of a ladder diagram in text form.

Each instruction consists of an instruction code and a bit or word type operand.

As in Ladder Diagram language, instructions are organized in sequences of instructions called statements (equivalent to a rung).

Function Block Diagram (FBD)

FBD is a graphic language. It consists of function blocks connected by a rung. The program is executed sequentially.

Each block can be a logical or arithmetical expression, a call to another function block, a jump or a return instruction.

Continuous Flow Chart (CFC)

Continuous Flow Chart programming is a graphic language. The rung connecting the various function blocks on the page is not necessarily sequential. The output of a function block may be looped back on its input or on the input of a block already inserted in the rung.

Function blocks

The PS 1131 software workshop features pre-programmed function blocks (standard library) and offers users the option of creating their own function blocks (user library).

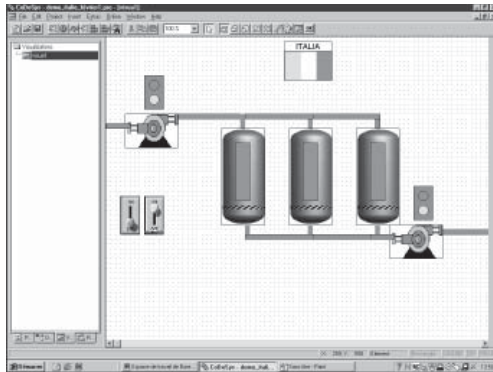

Standard library

The standard library contains:

- Logic functions (AND, OR, etc.)
- Mathematical functions (Cos, Sin, Exp, etc.)
- Function blocks dedicated to drives which facilitate data exchange between the drive and the "Controller Inside" programmable card (example: sending the speed reference)
- Function blocks for managing the CANopen machine bus
- Graphic terminal display function blocks

User library

Users have the option of creating their own function blocks to help them structure their applications. This also provides a means of protecting the know-how contained in the algorithms by locking access to the user function blocks program.

Example of runtime screen

Debugging

The PS 1131 software workshop offers a complete set of tools for debugging the application.

Program execution for debugging

The main debugging functions are:

- Use of breakpoints
- Step-by-step program execution
- Execution of a single cycle
- Direct access to the subroutines that have been called (call stack)

Realtime program animation

The main realtime program animation functions are as follows:

- Animation of part of the program in any language
- Automatic display of a variables window relating to this part of the program

Animation tables

Tables containing variables for the application to be monitored can be created and saved.

In both these tools, in addition to animating the data, it is possible to:

- Modify and force the value of any type of data
- Change the display format (binary, hexadecimal, etc.)

Oscilloscope

The PS 1131 software workshop Oscilloscope function can be used to monitor up to 20 variables in the form of curves.

Runtime screens

The PS 1131 software workshop has a built-in tool for designing and using application runtime screens. This includes:

- Creation of screen backgrounds
- Animation of graphic objects associated with variables
- Display of messages
- Etc.

Simulation

The PS 1131 software workshop Simulation function can be used to test the program without having to set up the drive.

Variable speed drives

Altivar 71

Communication buses and networks

Example of configuration on CANopen machine bus

Presentation

The Altivar 71 drive has been designed to meet all the configuration requirements encountered within the context of industrial communication installations.

It includes Modbus and CANopen communication protocols as standard.

The Modbus protocol can be accessed directly by means of 2 integrated communication ports (for characteristics, see page 17):

- One RJ45 Modbus terminal port **1**, located on the drive front panel. This is for connecting:
 - The remote graphic display terminal
 - A Magelis industrial HMI terminal
 - The PowerSuite software workshop
- One RJ45 Modbus network port **2**, located on the drive's control terminals. It is assigned to control and signalling by a PLC or by another type of controller. It can also be used to connect a terminal or the PowerSuite software workshop.

The CANopen protocol can be accessed from the Modbus network port via the CANopen adapter **3** (for characteristics, see page 17). In this case, terminal port **1** must be used to access the Modbus protocol.

The Altivar 71 drive can also be connected to other industrial communication buses and networks by adding one of the following communication cards:

- Modbus TCP
- Fipio
- Modbus/Uni-Telway. This card can offer functions in addition to those of the integrated ports: Modbus ASCII and 4-wire RS 485
- Modbus Plus
- EtherNet/IP
- DeviceNet
- PROFIBUS DP
- INTERBUS
- CC-Link

The possibility of powering the control section separately enables communication (monitoring, diagnostics) to be maintained even if the power section AC supply is absent.

The main communication functions of the Altivar 58 and Altivar 58F drives are compatible with the Altivar 71 drive (1):

- Connection
- Communication services
- Drive behaviour (profile)
- Control and monitoring parameters
- Standard adjustment parameters

The PowerSuite software workshop can be used to port configurations from Altivar 58 and Altivar 58F drives to the Altivar 71.

(1) Consult the ATV 58(F)/ATV 71 Substitution Guide supplied on the documentation CD-ROM.

Functions

All the drive functions can be accessed via the network:

- Control
- Monitoring
- Adjustment
- Configuration

When the drive is equipped with the “Controller Inside” programmable card, its variables (% MW, etc) can be accessed by Modbus messaging via the integrated communication ports or via the Modbus TCP communication card.

The speed or torque command and reference may come from different control sources:

- I/O terminals
- Communication network
- “Controller Inside” programmable card
- Remote graphic display terminal

The advanced functions of the Altivar 71 drive can be used to manage switching of these drive control sources according to the application requirements.

It is possible to choose the assignment of the communication I/O data by means of:

- The network configuration software (Sycon, etc)
- The Altivar 71’s communication scanner function

For the Modbus and CANopen ports and for the communication cards, the Altivar 71 drive can be controlled:

- According to the CiA 402 profile
- According to the I/O profile where control is as simple and adaptable as control via the I/O terminals

The DeviceNet card also supports the ODVAAC Drive and Allen-Bradley drive profiles.

Communication is monitored according to criteria specific to each protocol. However, regardless of the protocol, it is possible to configure how the drive responds to a communication fault:

- Freewheel stop, stop on ramp, fast stop or braked stop
- Maintain last command received
- Fallback position at a predefined speed
- Ignore the fault

A command from the CANopen machine bus is processed with the same priority as one of the drive terminal inputs. This results in excellent response times on the network port via the CANopen adapter.

Characteristics of the Modbus TCP card VW3 A3 310 (1)			
Structure	Connector	One RJ45 connector	
	Transmission speed	10/100 Mbps, half duplex and full duplex

Type of output	Standard Fipio card VW3 A3 311	Substitution Fipio card VW3 A3 301	
Structure	Connector	One 9-way male SUB-D connector	
	Transmission speed	1 Mbps	
	Addresses	1 to 62, configurable using switches on the card	
Services	Adjustment using PLC software (Unity, PL7)	No	Yes (limited to ATV 58 or ATV 58F compatibility parameters)
	Periodic variables	8 control parameters which can be assigned by communication scanner 8 monitoring parameters which can be assigned by communication scanner Indexed periodic variable (settings)	5 control parameters 8 monitoring parameters
	Communication profile	FED C 32	Specific to the Altivar 58 or Altivar 58F drive (FSD C 8P)
	Device profiles	CiA 402 profile: "Device Profile Drives and Motion Control" I/O profile	
	Communication monitoring	Can be inhibited Fixed "time out": 256 ms	
	Diagnostics	Using LEDs	4 LEDs on the card: "RUN" (status), "ERR" (fault), "COM" (data exchange) and "I/O" (minor internal fault)
Using the graphic display terminal		Control word received Reference received Periodic variables (communication scanner)	
Characteristics of the Modbus Plus card VW3 A3 302 (2)			
Structure	Connector	One 9-way female SUB-D connector	
	Transmission speed	1 Mbps	
	Addresses	1 to 64, configurable using switches on the card	
Services	Messaging	Yes (Modbus)	
	I/O data	"Peer Cop": 8 control parameters which can be assigned by communication scanner "Global data": 8 monitoring parameters which can be assigned by communication scanner	
	Device profiles	CiA 402 profile: "Device Profile Drives and Motion Control" I/O profile	
	Communication monitoring	Can be inhibited "Time out" can be set between 0.1 and 60 s via the terminal or the PowerSuite software workshop.	
Diagnostics	Using LEDs	1 LEDs on the card: "MB+" (status)	
	Using the graphic display terminal	Control word received Reference received I/O data (communication scanner)	

(1) For the Fipio bus, see pages 312 to 315.

(2) For the Modbus Plus network, see pages 320 to 323.

Characteristics of the DeviceNet card VW3 A3 309

Structure	Connector	One removable screw connector, 5 contacts at intervals of 5.08
	Transmission speed	125 kbps, 250 kbps or 500 kbps, configurable using switches on the card
	Addresses	1 to 63, configurable using switches on the card
Services	I/O data	<ul style="list-style-type: none"> ■ Speed CIP assemblies, type 20, 21, 70 and 71 (2 parameters) ■ Speed/torque CIP assemblies, type 22, 23, 72 and 73 (3 parameters) ■ Allen-Bradley assemblies, type 103, 104 (2 parameters) and 105 (4 parameters, of which 2 are assignable) ■ Communication scanner assemblies 100 and 101 (4 assignable parameters)
	Periodic exchange mode	Inputs: Polled, Change of state, Cyclic Outputs: Polled
	Device profiles	CIP AC Drive (02) profile Allen-Bradley drive profile CiA 402 profile: "Device Profile Drives and Motion Control" I/O profile
	Auto Device Replacement	No
	Communication monitoring	Can be inhibited "Time out" can be set via the DeviceNet network configurator
	Diagnostics	Using LEDs
	Using the graphic display terminal	Control word received Reference received
Description file		A single eds file is supplied for the whole range on the documentation CD-ROM or can be downloaded from the website "www.telemecanique.com". This file contains the description of the drive parameters.

Characteristics of the INTERBUS card VW3 A3 304

Structure	Connector	2 connectors: One 9-way male SUB-D and one 9-way female SUB-D
	Power Supply	The card is powered by the drive. To ensure that the INTERBUS subscriber continues to operate during line supply failures to the power section, fit a separate power supply for the drive control section.
Services	Messaging	PCP: <ul style="list-style-type: none"> ■ Read: read a parameter ■ Write: write a parameter ■ Initiate: initialize the communication relationship ■ Abort: abort the communication relationship ■ Status: communication and drive status ■ Get-OV: read an object description ■ Identify: identification of the card
	I/O data	2 control parameters (command and reference) 2 monitoring parameters (status and speed output)
	Device profile	Profile 21
	Communication monitoring	Can be inhibited Fixed "time out": 640 ms
Diagnostics	Using LEDs	5 LEDs on the card: "U" (power supply), "RC" (bus input), "Rd" (bus output), "BA" (periodic data) and "TR" (messaging)
	Using the graphic display terminal	Control word received Reference received

Characteristics of the CC-Link card VW3 A3 317

Structure	Connector	One removable screw connector, 5 contacts at intervals of 3.81
	Physical interface	2-wire RS 485
	Line matching	Switch-configurable line termination (110 Ω or 130 Ω)
	Transmission speed	156 kbps, 625 kbps, 2.5 Mbps, 5 Mbps, 10 Mbps Configurable using rotary switch on the card
	Addresses	1 to 64, configurable using 2 rotary switches on the card
Services	I/O data	Remote device station 32 remote digital inputs (RX) 32 remote digital outputs (RY) 4 remote input words (RWr) 4 remote output words (RWw)
	Device profile	Compatible with the CC-Link drive profile
	Adjustments	Access to the drive parameters via an indexing mechanism
	Communication monitoring	Can be inhibited "Time out" can be set between 0.1 s and 60 s
Diagnostics	Using LEDs	5 LEDs on the card: "Power", "L.RUN" (Running), "SD" (Send Data), "RD" (Receive Data), "L.ERR" (Error)
	Using the graphic display terminal or the PowerSuite software workshop	Transmission speed used Drive address

Characteristics of the Profibus DP card VW3 A3 307

Structure	Connector	One 9-way female SUB-D connector
	Transmission speed	9600 bps, 19.2 kbps, 93.75 kbps, 187.5 kbps, 500 kbps, 1.5 Mbps, 3 Mbps, 6 Mbps or 12 Mbps
	Addresses	1 to 126, configurable using switches on the card
Services	I/O data	PPO type 5 8 control parameters which can be assigned by communication scanner 8 monitoring parameters which can be assigned by communication scanner Indexed periodic variable (settings)
	Device profiles	CiA 402 profile: "Device Profile Drives and Motion Control" I/O profile
	Communication monitoring	Can be inhibited "Time out" can be set via the PROFIBUS DP network configurator
Diagnostics	Using LEDs	2 LEDs on the card: "ST" (status) and "DX" (data exchange)
	Using the graphic display terminal	Control word received Reference received I/O data (communication scanner)
Description file	A single gsd file is supplied for the whole range on the documentation CD-ROM or can be downloaded from the website "www.telemecanique.com". This file does not contain the description of the drive parameters.	

Characteristics of the Modbus/Uni-Telway card VW3 A3 303

Structure	Connector	One 9-way female SUB-D connector
	Transmission speed	Configurable via the display terminal or the PowerSuite software workshop: <ul style="list-style-type: none"> ■ 4800 bps ■ 9600 bps ■ 19200 bps
	Polarization	Type of polarization can be configured using switches on the card: <ul style="list-style-type: none"> ■ No polarization impedances (supplied by the wiring system, for example, in the master) ■ Two 4.7 kΩ polarization resistors
	Selection of the protocol	Via the display terminal or the PowerSuite software workshop: <ul style="list-style-type: none"> ■ Modbus RTU ■ Modbus ASCII ■ Uni-Telway
Services	Device profiles	CiA 402 profile: "Device Profile Drives and Motion Control" I/O profile
	Communication monitoring	Can be inhibited "Time out" fixed at 10 s
Diagnostics	Using LEDs	2 LEDs on the card: "RUN" (status) and "ERR" (fault)
	Using the graphic display terminal	Control word received Reference received

Characteristics of the Modbus protocol (1)

Structure	Physical interface	2-wire RS 485, 4-wire RS 485
	Transmission mode	RTU, ASCII
	Format	Configurable via the display terminal or the PowerSuite software workshop: In RTU mode only: <ul style="list-style-type: none"> ■ 8 data, odd parity, 1 stop ■ 8 data, no parity, 1 stop ■ 8 data, even parity, 1 stop ■ 8 data, no parity, 2 stop In RTU and ASCII modes: <ul style="list-style-type: none"> ■ 7 data, even parity, 1 stop ■ 7 data, odd parity, 1 stop ■ 7 data, even parity, 2 stop ■ 7 data, odd parity, 2 stop
	Addresses	1 to 247, configurable using switches on the card.
Service	Messaging	Read Holding Registers (03), 63 words maximum Read Input Registers (04), 63 words maximum Write Single Register (06) Write Multiple Registers (16), 61 words maximum Read/Write Multiple Registers (23) Read Device Identification (43) Diagnostics (08)

Characteristics of the Uni-Telway protocol (2)

Structure	Physical interface	2-wire RS 485
	Format	8 data, odd parity, 1 stop
	Addresses	1 to 147, configurable using switches on the card.
Service	Messaging	Read word (04h) Write word (14h) Read object (36h), 63 words maximum Write object (37h), 60 words maximum Identification (0Fh) Protocol version (30h) Mirror (FAh) Read error counters (A2h) Reset counters (A4h)

		300	TSX CAN CD 300	21.700

(1) Please consult our "Automation platform Modicon Premium and Unity - PL7 software" and "Automation platform Modicon TSX Micro - PL7 software" specialist catalogues.

(2) Cable dependent on the type of controller or PLC.

(3) Sold in lots of 2.

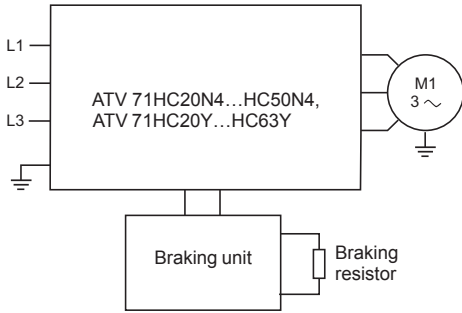

(4) Please consult our "Machines and installations with CANopen" catalogue.

(5) For drives ATV 71H●●●M3, ATV 71H●●●M3383, ATV 71HD11M3X, HD15M3X, ATV 71HD11M3X383, HD15M3X383, ATV 71H075N4...HD18N4, ATV 71H075N4383...HD18N4383 and ATV 71HU22Y...HC63Y, this connector can be replaced by connector TSX CAN KCDF 180T.

(6) Harsh environment:

- Resistance to hydrocarbons, industrial oils, detergents, solder splashes
- Relative humidity up to 100%
- Saline atmosphere
- Significant temperature variations
- Operating temperature between -10°C and +70°C

Presentation

Resistance braking enables the Altivar 71 drive to operate while braking to a standstill or during "generator" operation, by dissipating the energy in the braking resistor.

ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71H075N4...HC16N4, ATV 71W●●●N4, ATV 71P●●●N4Z and ATV 71HU22Y...HC16Y drives have a built-in dynamic brake transistor.

For ATV 71HC20N4...HC50N4 and ATV 71HC20Y...HC63Y drives, a braking unit must be used. This is controlled by the drive:

- For ATV 71HC20N4...HC28N4 drives, the braking unit is mounted directly on the left-hand side of the drive, see dimensions on page 189.
- For ATV 71HC40N4, HC50N4 and ATV 71HC20Y...HC63Y drives, the braking unit is an external module, see dimensions on page 204.

Applications

High-inertia machines, machines with cycles and fast cycles, high-power machines performing vertical movements.

Characteristics

Type of braking unit		VW3 A7 101	VW3 A7 102	VW3 A7 103	VW3 A7 104
Ambient air temperature around the device	Operation	°C - 10...+ 50			
	Storage	°C - 25...+ 70			
Degree of protection of the casing		IP 20			
Degree of pollution		2 according to standard EN 50178			
Relative humidity		Class 3K3 without condensation			
Maximum operating altitude		m 2000		1000. 1000...2260 by derating the continuous power of the braking unit by 1% per additional 100 m.	
Vibration resistance		0.2 gn			
Nominal line supply voltage and drive supply voltage (rms value)		V 380 - 15%...480 + 10% ~		V 500 - 15%...690 + 10% ~	
Engage threshold		V 785 ± 1% ---		V 1075 ± 1% ---	
Maximum DC bus voltage		V 850		V 1100	
Maximum line supply braking power	400V ~ line supply (785 V --- (1))	kW 420 750		-	
	690V ~ line supply (1075 V --- (1))	-		kW 450 900	
Percentage of time of conduction	at constant power at 785 V ---	5 % at 420 kW 15 % at 320 kW 50% at 250 kW		5 % at 750 kW 15 % at 550 kW 50% at 440 kW	
	at constant power at 1075 V ---	-		5 % at 450 kW 15 % at 400 kW 50% at 350 kW	
Cycle time		s ≤ 240		s ≤ 140	
Maximum continuous power		kW 200 400		kW 300 400	
Braking power on a vertical movement (2)					
Thermal protection		Integrated, via thermal probe			
Forced ventilation		m³/h 100 600			
Mounting		Vertical			
Minimum value of the resistor to be associated with the braking unit		Ω 1.05 0.7		Ω 2 1	

(1) Braking unit engage threshold

(2) Values given for a cycle time of:

- 240 s for VW3 A7 101, 102

- 140 s for VW3 A7 103, 104

Variable speed drives

Altivar 71

Option: resistance braking units

Braking units									
For drives	Power		Loss	Cable (drive-braking unit)		Cable (braking unit-resistors)		Reference	Weight
	Contin.	Max.	Con- tinuous power	Cross- section	Max. length	Cross- section	Max. length		
	kW	kW							
Supply voltage: 380...480 V 50/60 Hz									
ATV 71HC20N4... HC28N4	200	420	550	–	–	2 x 95	50	VW3 A7 101	30.000
				Internal connections					
ATV 71HC31N4... HC50N4	400	750	1050	2 x 150	1	2 x 150	50	VW3 A7 102	80.000
Supply voltage: 500...690 V 50/60 Hz									
ATV 71HC20Y... HC31Y	300	450	650	2 x 150	1	2 x 150	50	VW3 A7 103	80.000
ATV 71HC40Y... HC63Y	400	900	1150	2 x 150	1	2 x 150	50	VW3 A7 104	80.000

Note: To increase the braking power, several braking resistors can be mounted in parallel on the same braking unit. In this case, do not forget to take account of the minimum resistance value on each unit, see characteristics page 134.

Presentation

The braking resistor enables the Altivar 71 drive to operate while braking to a standstill or during slowdown braking, by dissipating the braking energy. It enables maximum transient braking torque.

The resistors are designed to be mounted on the outside of the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed in any way. The air must be free of dust, corrosive gas and condensation.

Applications

Inertia machines, machines with cycles

General characteristics

Type of braking resistor		VW3 A7 701...709	VW3 A7 710...718
Ambient air temperature around the device	Operation	°C 0... + 50

(1) Load factor for resistors: the value of the average power that can be dissipated at 50°C from the resistor into the casing is determined for a load factor during braking that corresponds to the majority of normal applications.

For VW3 A7 701...709:

- 2 s braking with a 0.6 T_n braking torque for a 40 s cycle
- 0.8 s braking with a 1.5 T_n braking torque for a 40 s cycle

For VW3 A7 710...718:

- 10 s braking with a 2 T_n braking torque for a 30 s cycle

Presentation

The hoist resistor is a braking resistor which enables the Altivar 71 drive to operate while braking to a standstill or during slowdown braking, by dissipating the braking energy.

It enables maximum transient braking torque.

The resistors are designed to be mounted on the outside of the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed in any way. The air must be free of dust, corrosive gas and condensation.

Applications

Machines performing vertical movements, machines with fast cycles, high-inertia machines.

(1) Operating factor for hoist resistors: the value of the average power that can be dissipated at 50°C from the resistor is determined by an operating factor during braking.

For VW3 A7 801...808 and VW3 A7 818:

- 100 s braking with 1 T_n braking torque for a 200 s cycle.
- 20 s braking with 1.6 T_n braking torque for a 200 s cycle.

For VW3 A7 809...817:

- 10 s braking with 2 T_n braking torque for a 240 s cycle.
- 110 s braking with 1.25 T_n braking torque for a 240 s cycle.

(2) To connect in parallel, add the necessary space, see page 206.

(3) To connect in series, add the necessary space, see page 206.

(4) Characteristics, see page 136.

Determining the braking unit and resistor

Calculating the various braking powers makes it possible to determine the braking unit and the braking resistor.

Presentation of the two main types of operation: A and B

A The braking power during deceleration is characterized by a peak power \hat{P}_b obtained at the start of deceleration, which decreases to 0 in proportion with the speed.

Example: Stopping centrifuges, translational movement, change of direction, etc

B Braking power at constant speed n_2 .

Example: Vertical downward movement, motor/generator test bench, gravity conveyors, etc.

- n_1 Motor speed [rpm]
- n_2 Motor speed during deceleration [rpm]
- T_l Load torque [Nm]
- T_b Braking torque [Nm]
- \hat{P}_b Maximum braking power [W]
- \bar{P}_b Average braking power during time t_b [W]
- t_b Braking time [s]

Note: These two types of operation can be combined.

Type A operation

Calculating the braking time from the inertia.

$t_b = \frac{J \cdot \omega}{T_b + T_r}$	$\omega = \frac{2\pi \cdot n}{60}$	$T_b = \frac{\Sigma J \cdot (n_3 - n_4)}{9.55 \cdot t_b}$	$\hat{P}_b = \frac{T_b \cdot n_3}{9.55}$
			$\bar{P}_b = \frac{\hat{P}_b}{2}$

- T_b Motor braking torque [Nm]
- ΣJ Total inertia applied to the motor [kgm²]
- n Motor speed [rpm]
- n_3 Motor speed ahead of gearbox [rpm]
- n_4 Motor speed after gearbox [rpm]
- t_b Braking time [s]
- \hat{P}_b Peak braking power [W]
- \bar{P}_b Average braking power during time t_b [W]
- T_r Resistive torque [Nm]

W	Kinetic energy	[Joule]
m	Weight	[kg]
v	Speed	[m/s]
t_b	Braking time	[s]
\hat{P}_b	Peak braking power	[W]
\bar{P}_b	Average braking power during time t_b	[W]
T_b	Braking torque	[Nm]
n	Motor speed	[rpm]
g	Acceleration	9.81 m/s ²
a	Deceleration	[m/s ²]
v	Linear downward speed	[m/s]
J	Moment of inertia	[kgms ²]
ω	Angular speed	[rad/s]
t_b	Downward stopping time	[s]

Type B operation

1 Braking power of a load moving horizontally with constant deceleration (e.g.: carriage)

$$W = \frac{m \cdot v^2}{2} \quad \bar{P}_b = \frac{W}{t_b} \quad \hat{P}_b = \bar{P}_b \cdot 2$$

2 Braking power for an active load (e.g.: test bench)

$$\bar{P}_b = \frac{T_b \cdot n}{9.55}$$

3 Braking power for a downward vertical movement

$$\bar{P}_b = m \cdot g \cdot v \quad \hat{P}_b = m \cdot (g + a) \cdot v + \frac{J \cdot \omega^2}{t_f} \quad \omega = \frac{2\pi \cdot n}{60}$$

All the braking power calculations are only true if it is assumed that there are no losses ($\eta = 1$) and that there is no resistive torque.

To be even more precise, the following must be considered:

- the losses and the resistive torque of the system, which reduce the necessary braking power
- the driving torque (the wind, for example) which increases the braking power

The required braking power is calculated as follows:

$$\hat{P}_{bR} = (\hat{P}_b - P_{load}) \times \eta_{total} \quad \bar{P}_{bR} = (\bar{P}_b - P_{load}) \times \eta_{total}$$

$$\eta_{total} = \eta_{mec} \times \eta_{mot} \times 0.98$$

For braking, the value of the braking resistor is selected to match the required power and the braking cycle.

In general:

$$\hat{P}_{bR} = \frac{U_{dc}^2}{R} \Rightarrow R = \frac{U_{dc}^2}{\hat{P}_{bR}}$$

Continuous power is obtained by taking the operating cycle into account.

The braking unit is selected taking the following into account:

- the continuous power \bar{P}_{b1}
- the average braking power during downward movement \bar{P}_{b2}
- the peak power \hat{P}_b

Depending on these elements, select the braking unit according to the characteristics on page 134.

The braking resistor is selected taking account of the same elements listed above, but with the addition of a check to ensure that the resistance value will allow the peak power to be exceeded. ($R = \frac{U_{dc}^2}{\hat{P}_f}$)

Note: The resistance value must always be greater than or equal to the values given in the tables on pages 136 and 138.

\hat{P}_{bR}	Maximum actual braking power	[W]
\bar{P}_{bR}	Continuous actual braking power	[W]
η_{total}	Total efficiency	
P_{load}	Braking power connected with the resistive or driving torque (not taken into account in the calculation). P_{load} can be positive or negative.	[W]
η_{drive}	Drive efficiency = 0.98	
η_{mec}	Mechanical efficiency	
η_{mot}	Motor efficiency	

U_{dc}	Braking unit engage threshold	[V]
----------	-------------------------------	-----

t_c	Cycle time	[s]
\bar{P}_{b0}	Upward braking power, therefore zero	[W]
t_0	Rise time	[s]
\bar{P}_{b1}	Average braking power during downward movement	[W]
t_1	Downward movement time	[1]
\hat{P}_b	Peak braking power	[W]
\bar{P}_{b2}	Average power during braking to a standstill	[W]
t_2	Standstill braking time	[s]

$$P_{continuous} = \frac{\bar{P}_{b0} \times t_0 + \bar{P}_{b1} \times t_1 + \bar{P}_{b2} \times t_2}{t_c} \quad [W]$$

Example of using characteristic curves

VW3 A7 710 (P continuous = 25 kW) for 2.75 Ω at 20°C

Example of using the curves:

Point A For a 200 s cycle, the resistance of 2.75 Ω accepts an overload of 7 x 25 kW (continuous power) for 24 s, i.e. braking 175 kW every 200 s.

Point B For a 120 s cycle, the resistance of 2.75 Ω accepts an overload of 5 x 25 kW (continuous power) for 20 s, i.e. braking 125 kW every 120 s.

Point C For a 60 s cycle, the resistance of 2.75 Ω accepts an overload of 5 x 25 kW (continuous power) for 10 s, i.e. braking 125 kW every 60 s.

Presentation

The network braking unit can be used to restore the following to the line supply:

- The energy from the motor
- The energy from motors controlled by several drives connected on the same DC bus.

It is available for **ATV 71●●●●N4** and **ATV 71P●●●●N4Z** drives.

Applications

Braking on a driving load:

- Vertical movements
- Escalators
- Etc.

General characteristics

Example of using characteristic curves

VW3 A7 204, A7 232 (Continuous braking power = 21.5 kW) (1)

Example of using the curves:

Required braking power of 27 kW.
The intersection point between the braking time and the time between 2 braking operations must be on or below the relevant curve.

Point A For a braking time of 2 minutes, there must be at least 50 seconds between 2 braking operations.

Network braking units

VW3 A7 204, A7 232 (Continuous braking power = 21.5 kW) (1)

VW3 A7 205, A7 233 (Continuous braking power = 26 kW) (1)

VW3 A7 206, A7 234 (Continuous braking power = 32 kW) (1)

VW3 A7 207, A7 235 (Continuous braking power = 38 kW) (1)

(1) Power indicated for a temperature of 35°C.

VW3 A7 208 (Continuous braking power = 38 kW) (1)

VW3 A7 209, A7 239 (Continuous braking power = 86 kW) (1)

VW3 A7 210, A7 240 (Continuous braking power = 120 kW) (1)

VW3 A7 211 (Continuous braking power = 135 kW) (1)

VW3 A7 212 (Continuous braking power = 200 kW) (1)

VW3 A7 241 (Continuous braking power = 240 kW) (1)

(1) Power indicated for a temperature of 35°C.

Variable speed drives

Altivar 71: reduction of current harmonics

Option: DC chokes

Depending on the line supply, the main solutions for reducing current harmonics are as follows:

- DC chokes, see below
- Line chokes (1), see page 156
- 16% and 10% passive filters, see page 161
- Use of passive filters with a DC choke, see page 161

These 4 solutions can be used on the same installation (1).

It is always easier and less expensive to deal with current harmonics at installation level as a whole rather than at the level of each individual unit, particularly when using passive filters and active compensators.

DC chokes

DC chokes are used to reduce current harmonics in order to comply with standard IEC 61000-3-12 for drives in which the line current is more than 16 A and less than 75 A.

Using a DC choke with the drive complies with standard IEC 61000-3-12 provided that the RSCE ≥ 120 (2) at the point of connection to the public network.

120 represents the minimum value of RSCE (2) for which the values in table 4 of standard IEC 61000-3-12 are not exceeded.

It is the responsibility of the installer or the user to ensure that the device is connected correctly to a connection point with an RSCE ≥ 120 .

The choke is connected to the drive power terminals.

The DC choke is supplied as standard with ATV71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives.

It is compulsory for ATV 71P...N4Z drives if they do not have a fan (see page 31).

Applications

Reduction of current harmonics.

Reduction of the THD to 5% or 10% when used with passive filters, see pages 161 to 165.

Maintaining the motor torque in relation to the line choke.

(1) For ATV 71HU22Y...HD90Y drives, only line chokes are recommended.

For ATV 71HC11Y...HC63Y drives, a line choke is mandatory, see page 156.

(2) Short-circuit ratio.

Variable speed drives

(1) For ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives, the DC choke is supplied with the drive.

Variable speed drives

Altivar 71: reduction of current harmonics

Option: line chokes

Line chokes

A line choke can be used to provide improved protection against overvoltages on the line supply and to reduce harmonic distortion of the current produced by the drive.

They are recommended for ATV 71HU22Y...HD90Y drives. Line chokes are mandatory for:

- ATV 71HU40M3...HU75M3 drives powered by a 200...240 V 50/60 Hz single-phase supply voltage
- ATV 71HC11Y...HC63Y drives

For ATV 71H●●●M3 drives powered by a 200...240 V 50/60 Hz three-phase supply voltage, ATV 71H●●●M3X, ATV 71●●●●N4 and ATV 71P●●●N4Z, line chokes can be used instead of a DC choke.

In this case, to obtain an ATV 71HD55M3X, HD75M3X or ATV 71HD90N4...HC50N4 drive without a DC choke, add the letter D at the end of the drive reference, see pages 22 and 23.

The recommended chokes limit the line current.

They have been developed in line with standard EN 50178 (VDE 0160 level 1 high energy overvoltages on the line supply).

The choke values are defined for a voltage drop between phases of between 3% and 5% of the nominal supply voltage. Values higher than this will cause loss of torque.

These chokes should be installed upstream of the drive.

Applications

The use of line chokes is recommended in particular under the following circumstances:

- Close connection of several drives in parallel
- Line supply with significant disturbance from other equipment (interference, overvoltages)
- Line supply with voltage imbalance between phases above 1.8% of the nominal voltage
- Drive supplied by a line with very low impedance (in the vicinity of a power transformer 10 times more powerful than the drive rating)
- Installation of a large number of frequency inverters on the same line
- Reducing overloads on the $\cos\phi$ correction capacitors, if the installation includes a power factor correction unit.

Variable speed drives

Altivar 71: reduction of current harmonics

Option: line chokes

Example of current harmonic levels for ATV 71H●●●Y drives (1)

(1) Example of current harmonic levels up to harmonic order 49 for a 500 V 50 Hz or 600 V 60 Hz line supply for ATV 71H●●●Y drives, with line chokes.

(2) The line Isc values are given for the current harmonic levels stated in the table.

(3) Total harmonic distortion in accordance with IEC 61000-3-12.

(4) Use of a line choke is recommended.

(5) Use of a line choke is mandatory.

Variable speed drives

Altivar 71: reduction of current harmonics

Option: line chokes

Example of current harmonic levels for ATV 71H●●●Y drives (1) (continued)

Three-phase supply voltage: 690 V 50 Hz, with optional line choke

(1) Example of current harmonic levels up to harmonic order 49 for a 690 V 50 Hz line supply for ATV 71H●●●Y drives, with line chokes.

(2) The line Isc values are given for the current harmonic levels stated in the table.

(3) Total harmonic distortion in accordance with IEC 61000-3-12.

(4) Use of a line choke is recommended.

(5) Use of a line choke is mandatory.

General characteristics		VW3 A58501, A58502	VW3 A4 551... A4 553	VW3 A4 554, A4 555	VW3 A4 556... A4 560	VW3 A4 561... A4 565, A4 568...572
Type of choke						
Conformity to standards		EN 50178 (VDE 0160 level 1 high energy overvoltages on the line supply), IEC 60076 (with HD 398)				
Degree of protection	Choke	IP 00				
	Terminals	IP 20		IP 10	IP 00	
Atmospheric pollution		3 C2, 3B1, 3S1 conforming to IEC 721.3.3				
Degree of pollution		2 conforming to EN 50178				
Vibration resistance		1.5 mm from 3...13 Hz, 1 gn from 13...200 Hz, conforming to IEC 60068-2				
Shock resistance		15 gn for 11 ms conforming to IEC 60068-2-27				
Maximum relative humidity		95 %				
Ambient air temperature around the device	Operation	°C 0... + 45 without derating Up to + 55°C with current derating of 2% per °C above 45°C				
	Storage	°C - 25...+ 70				
Isolation class		F				
Clearance distance in air		mm 5.5 conforming to IEC 60664				
Leakage distance in air		mm 11.5 conforming to IEC 60664				
Maximum operating altitude		m 1000 without derating 1000...3000 with current derating of 1% per additional 100 m				
Voltage drop		Between 3% and 5% of the nominal supply voltage. Values higher than this will cause loss of torque.				
Maximum current		1.65 x nominal current for 60 seconds				

Connection characteristics		
Maximum wire size and tightening torque	VW3 A58501	16 mm ² , (AWG 4) 1.2...1.4 Nm
	VW3 A58502	6 mm ² , (AWG 8) 0.8...1 Nm

(1) Use of a line choke is mandatory, to be ordered separately.

(2) Use of a line choke is recommended, to be ordered separately.

Passive filters

A passive filter is used to reduce current harmonics with total harmonic distortion factors of less than 16% or 10%. These ratios may be reduced to 10% or 5% if the filter is used with a DC choke, see pages 152 to 155.

The reactive power increases at no load or low load. To eliminate this reactive power, the filter capacitors can be disconnected via the drive, see page 233. To do this, the contactor must be controlled by one of the relay outputs on the drive, at a value lower than 10% of the nominal drive current (I_n) (please refer to the programming manual).

For ATV 71H●●●Y drives, use of a line choke is recommended or mandatory, depending on the rating.

Application

Reduction of current harmonics in order to use drives in the first environment.

General characteristics

Degree of protection		IP 20
Maximum relative humidity		Class F humidity without condensation 5%...85%
Ambient air temperature around the device	Operation	°C 5...+ 40 without derating
	Storage	°C - 25...+ 55
Maximum operating altitude	m	1000 without derating

Electrical characteristics

Range		400 V	460 V
Nominal voltage $\pm 10\%$	V	380...415 ~	440...480 ~
Operating frequency		50 \pm 5 %	60 \pm 5 %
Overload capacity		1.5 x I_n (A)	
Efficiency		98% (2% thermal losses)	
THDI (1)	%	≤ 16	
Cos φ		At 75 % of the line current: 0.85 At 100 % of the line current: 0.99 At 150% of the line current: 1

(1) The total current harmonic distortion (THDI) is indicated for a total voltage harmonic distortion (THDU) < 2% and a short-circuit ratio (RSCE) > 66%, and only for the nominal current of the passive filter. If these conditions are not adhered to, the total current harmonics will be reduced without any guarantee of level.

(1) By adding a DC choke (see page 152) to ATV 71●075N4...●D75N4 and ATV 71P●●●N4Z drives, a THD ≤ 10% is obtained. This DC choke is supplied as standard with ATV 71HD90N4...HC50N4 drives.

These reduced current harmonics are obtained, only for the nominal filter current, on condition that the THDU is < 2% and the RSCE > 66%.

(2) In: nominal filter current.

(1) By adding a DC choke (see page 152) to ATV 71●075N4...●D75N4 and ATV 71P●●●N4Z drives, a THD ≤ 5% is obtained. This DC choke is supplied as standard with ATV 71HD90N4...HC50N4 drives.

These reduced current harmonics are obtained, only for the nominal filter current, on condition that the THDU is < 2% and the RSCE > 66%.

(2) In: nominal filter current.

Variable speed drives

Altivar 71: EMC filters

Integrated filters and optional additional filters

Integrated EMC filters

Altivar 71 drives, except for the ATV 71H●●●M3X, have built-in radio interference input filters to meet the EMC standard for variable speed electrical power drive “products” IEC/EN 61800-3, edition 2, category C2 or C3 in environment 1 or 2 and to comply with the European directive on EMC (electromagnetic compatibility).

Additional EMC input filters

Applications

When used with ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71●●●N4 and ATV 71P●●●N4Z drives, additional EMC input filters can be used to meet more stringent requirements and are designed to reduce conducted emissions on the line supply below the limits of standards EN 55011 group 1, class A or B and IEC/EN 61800/3 category C2 or C3 (see page 10).

For ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4 and ATV 71P075N4Z...PD11N4Z drives, the additional EMC filters can be mounted beside or under the device. They act as a support for the drives and are attached to them via tapped holes.

For ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives, the additional EMC filters can only be mounted beside the drive.

Use according to the type of line supply

Use of these additional filters is only possible on TN (connected to neutral) and TT (neutral to earth) type networks.

Standard IEC/EN 61800-3, appendix D2.1, states that on IT networks (isolated or impedance earthed neutral), filters can cause permanent insulation monitors to operate in a random manner.

In addition, the effectiveness of additional filters on this type of network depends on the type of impedance between neutral and earth, and therefore cannot be predicted.

In the case of a machine which needs to be installed on an IT network, the solution would be to insert an isolation transformer and place the machine locally on a TN or TT network.

(1) Maximum lengths for shielded cables connecting motors to drives, for a factory-set switching frequency of 2.5 or 4 kHz depending on the rating see page 12. If motors are connected in parallel, it is the sum of the cable lengths that should be taken into account.

(2) See page 10.

(3) LF: low switching frequency. HF: high switching frequency. These frequencies depend on the drive rating:

For drives	Switching frequency	
	LF kHz	HF kHz

(1) The filter selection tables give the maximum lengths for shielded cables connecting motors to drives for a switching frequency of 1 to 16 kHz (see page 12). These limits are given as examples only as they vary depending on the stray capacitance of the motors and the cables used. If motors are connected in parallel, it is the sum of the cable lengths that should be taken into account.

(2) Filter nominal current.

(3) Maximum earth leakage current at 230 V and at 400 V 50 Hz on a TT network.

(4) Via thermal dissipation.

(5) See page 10.

(6) LF: low switching frequency. HF: high switching frequency. These frequencies depend on the drive rating:

For drives	Switching frequency	
	LF kHz	HF kHz
ATV 71H●●●M3 ATV 71H075N4...HD11N4 ATV 71W075N4...WD11N4 ATV 71P075N4Z...PD11N4Z	4	4.1...16
ATV 71HD11M3X, HD15M3X ATV 71HD15N4...HD30N4 ATV 71WD15N4...WD30N4	3.5...4	4.1...12

Variable speed drives

Altivar 71: output filters

The Altivar 71 drive includes as standard a software function used to limit overvoltages at the motor terminals.
Depending on the cable lengths or the type of application, it may be necessary to use output filters:

- Motor chokes used to limit the dv/dt
- Sinus filters that are particularly effective for long cable runs

Cable length (2) (3)	10...50 m	50...100 m	100...150 m	150...300 m	300...600 m	600...1000 m

ATV 71HU40M3...HU75M3 ATV 71HU75N4...HD15N4 ATV 71WU75N4...WD15N4 ATV 71PU75N4Z	Software function (1)	Motor choke		Sinus filter		
ATV 71HD11M3X...HD45M3X ATV 71HD18N4...HD75N4 ATV 71WD18N4...WD75N4	Software function (1)			Motor choke	Sinus filter	
ATV 71HD55M3X...HD75M3X ATV 71HD90N4...HC50N4	Software function (1)			Motor choke	2 motor chokes in series	–

- (1) The software function limits the overvoltage at the motor terminals to twice the DC bus voltage.
For any application with braking cycles, the DC bus voltage rises to more than the supply voltage multiplied by $\sqrt{2}$.
You must check the electrical characteristics of the motor before using this function.
- (2) The cable length varies depending on the combination of variable speed drive/motor choke or sinus filter, see pages 172, 173 and 175.
For an application with several motors connected in parallel, the cable length must include all cabling.
Recommended cable types:
■ Shielded cables: "GORSE" cable, type GUOSTV-LS/LH; "PROTOFLEX" cable, type EMV2YSL CY,
■ Unshielded cables: "GORSE" cable, type H07 RN-F4GXX; "BELDEN" cable, type 2950X.
- (3) ATV 71H●●●Y drives:
■ In combination with motor choke, see page 173,
■ In combination with sinus filter or if software function used, please consult your Regional Sales Office.

Motor chokes

Altivar 71 drives have been developed to operate with the following maximum motor cable lengths:

For drives	Maximum length of motor cable (1)	
	Shielded cable	Unshielded cable
	m	m
ATV 71H●●●M3	50	100
ATV 71HD11M3X, HD15M3X		
ATV 71H075N4...HD18N4		
ATV 71W075N4...WD18N4		
ATV 71P075N4Z...PU75N4Z		
ATV 71HD18M3X...HD75M3X	100	200
ATV 71HD22N4...HC50N4		
ATV 71WD22N4...WD75N4		
ATV 71HU22Y...HD90Y	10	10
ATV 71HC11Y...HC63Y	15	30

The motor choke enables operation with motor cables above these maximum lengths and/or limits the dv/dt at the motor terminals to:

- 500 V/μs, for three-phase line supplies of 200...400 V and 380...480 V,
- 1000 V/μs, for three-phase line supplies of 500...690 V.

It is also used to:

- Limit overvoltages on the motor terminals to:
 - 1000 V at 400 V ~ (rms value),
 - 1150 V at 460 V ~ (rms value),
 - 1800 V at 690 V ~ (rms value),
- Filter interference caused by opening a contactor placed between the filter and the motor,
- Reduce the motor earth leakage current.

General characteristics (2)

Temperature controlled switch (3)	Activation temperature	°C	125
	Maximum voltage	V	250~
	Maximum current	A	0.5
Ambient air temperature around the device	Operation	°C	- 10...+ 50
	Storage	°C	- 25...+ 70

Connection characteristics

Maximum wire size and tightening torque	VW3 A5 101, 102		10 mm ² (AWG 6) 1.5 Nm
	VW3 A5 103		Connected on a bar, Ø 9 mm -
	VW3 A5 104, 105		Connected on a tag connector, M10 -
	VW3 A5 106, 107		Connected on a tag connector, 2 x M12 -
	VW3 A5 108		Connected on a tag connector, 3 x M12 -

(1) These values are given for a switching frequency of 2.5 or 4 kHz depending on the rating.

(2) Choke performance is ensured by not exceeding the above cable lengths. For an application with several motors connected in parallel, the cable length must include all cabling. If a cable longer than that recommended is used, the motor chokes may overheat.

(3) The contact should be connected in the sequence (use for signalling or controlling the line contactor).

IP 20 protection kits							
Description	For chokes					Reference	Weight kg
Mechanical kit including an IP 20 cover and cable clamps	VW3 A5 104, 105					VW3 A9 612	–
	VW3 A5 106...108					VW3 A9 613	–

(1) Maximum length given for:

- A switching frequency of 2.5 or 4 kHz depending on the drive rating, see characteristics on page 171
- A three-phase 690 V 50 Hz line supply voltage.

Sinus filters

Sinus filters allow Altivar 71 drives to operate with longer motor cables (up to 1000 m).

For ATV 71H075M3...HD45M3X, ATV 71●U15N4...●D75N4 and ATV 71P●●●N4Z drives, they also allow the use of unshielded cables while still complying with the standards on radiated EMC emissions (EN55011 class A Gr1 and IEC/EN 61800-3 category C2).

For ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives, the sinus filter only operates with a voltage/frequency drive ratio.

The sinus filter is never compatible with the current Flux Vector Control with sensor ratio.

Note: The Programming Manual must be referred to when setting up the sinus filter.

Applications

For ATV 71H075M3...HD45M3X, ATV 71●U15N4... ●D75N4 and ATV 71P●●●N4Z drives, applications requiring:

- Long cable runs
- Mechanical restrictions preventing the use of shielded cables
- An intermediate transformer between the drive and the motor
- Motors connected in parallel.

For ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives, applications requiring:

- An intermediate transformer between the drive and the motor.

General characteristics

Type of choke		VW3 A5 201...206	VW3 A5 207...211
Degree of protection		IP 20	IP 00
Atmospheric pollution		3C2, 3B1, 3S1 conforming to IEC 721.3.3	
Degree of pollution		2 conforming to standard EN 50178	
Vibration resistance		1.5 mm from 3...13 Hz, 1 gn from 13...200 Hz, conforming to IEC 60068-2	
Shock resistance		15 gn for 11 ms conforming to IEC 60068-2-27	
Maximum relative humidity		95 %	
Ambient air temperature around the device	Operation	°C - 10...+ 40 without derating From 40...50°C with current derating of 1.5% per additional °C	
	Storage	°C - 40...+ 65	
Maximum operating altitude		m 1000 without derating From 1000...3000 with current derating of 1% per additional 100 m	
Switching frequency		kHz 4...8	
Output frequency		Hz 0...100	
Voltage drop		< 10 %	
Maximum voltage		V 500~	
Maximum current		1.5 x nominal current for 60 s	
Maximum length of motor cable	Unshielded cable	m	600 or 1000 depending on the drive rating, see page 170

Connection characteristics

Maximum wire size and tightening torque	Model	Wire size (mm²)	Tightening torque (Nm)	
	VW3 A5 201	4 mm² (AWG 10)	0.6 Nm	
	VW3 A5 202	6 mm² (AWG 8)	1.5 Nm	
	VW3 A5 203	10 mm² (AWG 6)	1.5 Nm	
	VW3 A5 204	25 mm² (AWG 2)	4 Nm	
	VW3 A5 205	50 mm² (AWG 0)	6 Nm	
	VW3 A5 206, 207	95 mm² (AWG 4/0)	20 Nm	
	VW3 A5 208, 209	Connected on a bar, Ø 11 mm		-
	VW3 A5 210	Connected on a bar, Ø 14 mm		-
	VW3 A5 211	Connected on a bar, 4 x Ø 11 mm		-

(1) For the DNV VW3 A9 629...641 kits, it is necessary to order a variable speed drive without DC choke, by adding D at the end of the reference.
Example : ATV 71HD90N4 becomes ATV 71HD90N4D, see page 23.

List of options common to Altivar 71 drives

Description	Reference	Page
Logic input adapter		
115 V ~ logic input adapter	VW3 A3 101	26
HMI terminal		
Remote graphic display terminal	VW3 A1 101	108
Encoder interface cards		
With RS 422 compatible differential outputs	VW3 A3 401, 402	113
With open collector outputs	VW3 A3 403, 404	113
With push-pull outputs	VW3 A3 405...407	113
I/O extension cards (1)		
Logic	VW3 A3 201	115
Extended	VW3 A3 202	115
Programmable card (1)		
"Controller Inside" programmable card	VW3 A3 501	123
PowerSuite software workshop		
PowerSuite software workshop for PC	VW3 A8 104, 105	304

List of options specific to Altivar 71H●●●M3383, M3X383 and N4383 drives

Description	Reference	Page
Encoder interface cards		
Resolver	VW3 A3 408	113
Universal with SinCos, SinCos Hiperface®, EnDat® or SSI output	VW3 A3 409	113
With RS 422 compatible differential outputs with encoder emulation	VW3 A3 411	113

List of communication cards (1)

Description	Reference	Page
Modbus TCP	VW3 A3 310	126 and 310
EtherNet/IP	VW3 A3 316	127
Standard Fipio	VW3 A3 311	128 and 314
Substitution Fipio	VW3 A3 301	128 and 314
Modbus Plus	VW3 A3 302	128 and 322
DeviceNet	VW3 A3 309	129
INTERBUS	VW3 A3 304	129
CC-Link	VW3 A3 317	129
Modbus/Uni-Telway	VW3 A3 303	131, 317 and 325
PROFIBUS DP	VW3 A3 307	130

(1) Sinus filters emit considerable heat and must not be placed underneath the drive.
 (2) Length of the cable integrated in the sinus filter.

“Power Removal” safety function

The Altivar 71 drive integrates the “Power Removal” safety function which prohibits unintended equipment operation. The motor no longer produces torque.

This safety function:

- Complies with the standard for safety of machinery EN 954-1, category 3
- Complies with operational safety standard IEC/EN 61508, SIL2 capability (safety control-signalling applied to processes and systems)

The SIL (Safety Integrity Level) capability depends on the connection scheme for the drive and for the safety function. Failure to observe the setup recommendations could inhibit the SIL capability of the “Power Removal” safety function.

- Complies with draft product standard IEC/EN 61800-5-2 for the two stop functions:
 - Safe Torque Off (“STO”): response time ≤ 100 ms
 - Safe Stop 1 (“SS1”)

The “Power Removal” safety function has a redundant electronic architecture ⁽¹⁾ which is monitored continuously by a diagnostics function.

This level SIL2 and category 3 safety function is certified as conforming to these standards by the INERIS certification body under a program of voluntary certification.

Categories relating to safety according to EN 954-1

Category	Basic safety principle	Control system requirements	Behaviour in the event of a fault
B	Selection of components that comply with the relevant standards	Control in accordance with good engineering practice	Possible loss of the safety function
1	Selection of components and safety principles	Use of tried and tested components and proven safety principles	Possible loss of the safety function with a lower probability than in B
2	Selection of components and safety principles	Cyclic testing. The test intervals must be appropriate to both the machine and its application	Fault detected at each test
3	Structure of the safety circuits	A single fault must not result in loss of the safety function. This single fault must be detected, if reasonably practicable	Safety function ensured, except in the event of an accumulation of faults
4	Structure of the safety circuits	A single fault must not result in loss of the safety function. This fault must be detected when or before the safety function is next invoked. An accumulation of faults must not result in loss of the safety function.	Safety function always ensured

The machinery manufacturer is responsible for selecting the safety category. The category depends of the level of risk factors given in standard EN 954-1.

Note: The Altivar 71 drive can be used up to category 3

Safety Integrity Levels (SIL) according to standard IEC/EN 61508

SIL1 according to standard IEC/EN 61508 is comparable with category 1 according to EN 954-1 (SIL1: mean probability of undetected hazardous failure per hour between 10^{-5} and 10^{-6}).

SIL2 according to standard IEC/EN 61508 is comparable with category 3 according to EN 954-1 (SIL2: mean probability of undetected hazardous failure per hour between 10^{-6} and 10^{-7}).

⁽¹⁾ Redundant: consists of mitigating the effects of failure of one component by means of the correct operation of another, assuming that faults do not occur simultaneously on both.

“Power Removal” safety function considerations

The “Power Removal” safety function cannot be considered as a means of electrical disconnection of the motor (no electrical isolation); if necessary, a Vario switch disconnecter must be used.

The “Power Removal” safety function is not designed to overcome any malfunction in the drive process control or application functions.

The output signals available on the drive must not be considered as safety signals (e.g. “Power Removal” active); these are Preventa-type safety module outputs which must be integrated into a safety control-signalling circuit.

The schemes on the following pages take into account conformity to standard IEC/EN 60204-1 which defines three stopping categories:

- Category 0: Stopping by immediate removal of the power from the actuators (e.g. uncontrolled stop)
- Category 1: Controlled stop maintaining the power on the actuators until the machine stops, then removal of the power when the actuators stop when stop is achieved
- Category 2: Controlled stop maintaining the power on the actuators

Connection schemes and applications**Conforming to category 1 of standard EN 954-1 and level SIL1 according to standard IEC/EN 61508**

Use of the connection schemes on pages 222 and 223 which use a line contactor or a Vario switch disconnecter between the drive and the motor.

In this case, the “Power Removal” safety function is not used and the motor stops in accordance with category 0 of standard IEC/EN 60204-1.

Conforming to category 3 of standard EN 954-1 and level SIL2 according to standard IEC/EN 61508

The connection schemes use the “Power Removal” safety function of the Altivar 71 drive combined with a Preventa safety module to monitor the emergency stop circuits.

Machines with short freewheel stopping times (low inertia or high resistive torque, see page 224).

When the activation command is given on the PWR input with the controlled motor, the motor power supply is immediately switched off and the motor stops according to category 0 of standard IEC/EN 60204-1.

Restarting is not permitted even when the activation command is given after the motor has come to a complete stop (“STO”).

This safe stop is maintained while the PWR input remains activated.

This scheme must also be used for hoisting applications.

On a “Power Removal” command, the drive requires the brake to be engaged, but a Preventa safety module contact must be inserted in series in the brake control circuit to engage it safely when a request is made to activate the “Power Removal” safety function.

Machines with long freewheel stopping times (high inertia or low resistive torque, see page 225).

When the activation command is given, deceleration of the motor controlled by the drive is first requested, then, following a time delay controlled by a Preventa-type fault relay (1) which corresponds to the deceleration time, the “Power Removal” safety function is activated by the PWR input. The motor stops according to category 1 of standard IEC/EN 60204-1 (“SS1”).

Periodic test

The “Power Removal” safety input must be activated at least once a year for preventive maintenance purposes. The drive must be switched off before preventive maintenance takes place, and then powered up again. If the power supply to the motor is not switched off during testing, safety integrity is no longer assured for the “Power Removal” safety function. The drive must therefore be replaced to ensure the operational safety of the machine or of the system process.

(1) Please refer to the “Safety solutions using Preventa” catalogue.

Applications in a potentially explosive atmosphere (ATEX)**Classification of zones**

European directive 1999/92/EC (referred to as the ATEX 137 directive, or worker protection directive) classifies the ATEX zones and compatible product types. It is the user's responsibility to define the ATEX zone where the ATEX motor controlled by the Altivar 71 variable speed drive will be installed.

The Altivar 71 variable speed drive must always be installed outside the hazardous ATEX zone. The various installation schemes proposed in the ATEX guide (1) are compatible with operation of the ATEX motor in zone 1, 21, 2 or 22. The table below summarizes the characteristics relating to each ATEX zone.

Atmosphere	Zone	Definition	Time and presence of explosive atmosphere Hours/year
Gas	0	The potentially explosive atmosphere is present permanently, or over long periods, or frequently owing to malfunctions	> 1000 hr
Dust	20		
Gas	1	The potentially explosive atmosphere can be present owing to probable malfunctions	10...1000 hr
Dust	21		
Gas	2	The presence of a potentially explosive atmosphere is unlikely, and if it occurs it is for a short duration and not during normal operation	< 10 hr
Dust	22		

Note: Installation of electrical equipment and motors is prohibited in ATEX zone 0 or 20.

General considerations

European directive 94/9/EC (also referred to as directive ATEX 95, or product directive) defines the constraints applicable to ATEX products and the associated certification requirements.

The OEM, the installer and the user are responsible for the selection and operation of the components they use to provide ATEX protection of the systems they design or operate:

- The motor must be ATEX certified and compatible with use in zone 1, 21, 2 or 22
 - The motor must be equipped with ATEX certified thermal sensor switch(es), or ATEX certified thermal sensor(s), associated with a control unit, itself ATEX certified.
- Caution:** In general the control units are designed to operate outside the hazardous ATEX zone. It is then possible to place these control units close to the variable speed drive, in the protected zone.

Thermal protection of the ATEX motor

Use of the "Power Removal" safety function enables the variable speed drive to provide thermal protection in the event of excessive temperature rise of the ATEX motor, but it does not enable it to safely control and regulate the temperature of the ATEX motor.

All motor types ATEX certified for use in zone 1, 21, 2 or 22, which are equipped with ATEX thermal sensors, can be protected by the Altivar 71 variable speed drive.

The switching device, integrated with the thermal sensor or integrated with the thermal protection control unit of the ATEX motor, must be connected to the PWR safety input of the Altivar 71 variable speed drive. When the excessive temperature of the ATEX motor is reached, the control device automatically triggers the "Power Removal" safety function. The electrical power supply of the motor is then switched off in order to ensure a temperature of the motor casing lower than the temperature that is dangerous for the gas or dust mixture in which the ATEX motor is installed. When the ATEX application requires the use of the "Power Removal" safety function, the safety module (of Preventa type) (2) must be used. The schemes proposed in the ATEX guide (1) show how the switching devices, integrated with the thermal sensor or with the thermal protection control unit, are connected to the safety module. The output of the safety module must be connected to the PWR safety input of the Altivar 71 variable speed drive.

(1) Please consult the ATEX guide, available on our website "www.telemecanique.com"

(2) Please refer to the "Safety solutions using Preventa" catalogue.

**ATEX marking identification**

ATEX certified Altivar 71 variable speed drives can be identified by the marking corresponding to all the applications covered by the drive's ATEX certification.

- 1 0080** corresponds to the identification number of the INERIS notified body that issued the notifications for the quality assurance systems for the drive production units in compliance with EN 50980.
- 2 INERIS 07ATEX0004X** corresponds to the identification of the certification report issued by the INERIS notified body for conformity of the variable speed drive with the requirements of ATEX directive 94/9/EC.
- 3**  The logo corresponds to the identification of an ATEX product
- 4 II** allows the equipment to be used in ATEX surface applications (use prohibited for mining applications).
- 5 (2)** The brackets “()” identify the Altivar 71 variable speed drive as being equipment associated with the control and signalling of an ATEX motor installed in a hazardous zone. The figure 2 corresponds to identification of the ATEX motor as category 2 equipment, for use in ATEX zone 1 or 21.
Note: Category 3 motors for use in ATEX zone 2 or 22 are also covered by this marking.
- 6 G** for Gas, corresponds to ATEX applications for explosive gas atmospheres.
D for Dust, corresponds to ATEX applications for atmospheres containing an explosive dust mixture.

General

Operation of the equipment and the cable connection method must comply with the local regulations in the installation location. The rules given by ATEX installation standards, when applicable, should also be observed:

- IEC 60079-14 for applications in an explosive gas atmosphere
 - IEC 61241-14 for applications in a combustible dust atmosphere
- In zone 1 or 2, for applications in an explosive gas atmosphere, the requirements of IEC 60079-14 apply to the installation:

- **IEC 60079-14:** Electrical apparatus for explosive gas atmospheres
- **Part 14:** Electrical installations in hazardous areas (other than mines).

In zone 21 or 22, for applications in a combustible dust atmosphere, the requirements of IEC 61241-14 apply to the installation:

- **IEC 61241-14:** Electrical apparatus for use in the presence of combustible dust
- **Part 14:** Selection and installation.

The schemes proposed in the ATEX guide (1) for the use of Altivar 71 variable speed drives in ATEX applications take account of the nature of the thermal sensors mounted in the ATEX motor.

Note: Motor stopping categories according to standard IEC/EN 60204-1

The installation schemes proposed in the ATEX guide (1) show the use of the Preventa XPS-AC safety module (2) in combination with an ATEX application for implementing the safety function in stopping category 0 according to standard IEC/EN 60204-1.

The user should make sure that use of the delayed activation fault relay (Preventa XPS-ATE module) (2) is compatible in combination with its ATEX application, for stopping category 1 according to standard IEC/EN 60204-1.

Periodic ATEX test

For preventive maintenance, the complete safety loop (starting from the thermal sensors of the ATEX motor up to the “Power Removal” safety function incorporated in the drive) must be tested at least once a year, in order to verify that, in the event of excessive temperature rise, the electrical power supply of the ATEX motor is always cut off automatically.

(1) Please consult the ATEX guide, available on our website “www.telemecanique.com”

(2) Please refer to the “Safety solutions using Preventa” catalogue.

Schemes conforming to standards EN 954-1 category 1, IEC/EN 61508 capacity SIL1, in stopping category 0 according to IEC/EN 60204-1

ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71●●●N4, ATV 71H●●●Y, ATV 71P●●●N4Z

Three-phase power supply with upstream breaking via contactor

ATV 71H075M3...HU75M3

Power section for single-phase power supply

Note: All terminals are located at the bottom of the drive. Fit interference suppressors on all inductive circuits near the drive or connected on the same circuit, such as relays, contactors, solenoid valves, fluorescent lighting, etc.

Components for use with the Altivar (for a complete list of references, see our catalogue "Motor starter solutions. Control and protection components").

Item	Description
A1	ATV 71 drive, see pages 22 to 25
KM1	Contactors, see motor starters pages 242 to 249
L1	DC choke, see page 155
Q1	Circuit-breaker, see motor starters pages 242 to 249
Q2	GV2 L rated at twice the nominal primary current of T1
Q3	GB2 CB05
S1, S2	XB4 B or XB5A pushbuttons
T1	100 VA transformer 220 V secondary

(1) Line choke (single phase or three-phase); mandatory for ATV 71HU40M3...HU75M3 drives with a 200...240 V 50/60 Hz single-phase power supply and ATV 71HC11Y...HC63Y (except when a special transformer is used (12-pulse)). See page 160.

(2) For ATV 71HC40N4 drives combined with a 400 kW motor, ATV 71HC50N4 and ATV 71HC40Y...HC63Y, see page 226.

(3) Fault relay contacts. Used for remote signalling of the drive status.

(4) Connection of the common for the logic inputs depends on the positioning of the SW1 switch: see schemes on page 227.

(5) There is no PO terminal on ATV 71HC11Y...HC63Y drives.

(6) Optional DC choke for ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71●075N4...D75N4 and ATV 71P●●●N4Z. Connected in place of the strap between the PO and PA/+ terminals. For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 drives, the choke is supplied with the drive; the customer is responsible for connecting it.

(7) Software-configurable current (0...20 mA) or voltage (0...10 V) analog input.

Schemes conforming to standards EN 954-1 category 1, IEC/EN 61508 capacity SIL1, in stopping category 0 according to IEC/EN 60204-1 (continued)

ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71●●●●N4, ATV 71H●●●Y, ATV 71P●●●N4Z

ATV 71H075M3...HU75M3

Three-phase power supply with downstream breaking via switch disconnecter

Power section for single-phase power supply

Note: All terminals are located at the bottom of the drive. Fit interference suppressors on all inductive circuits near the drive or connected on the same circuit, such as relays, contactors, solenoid valves, fluorescent lighting, etc.

Components for use with the Altivar (for a complete list of references, see our catalogue "Motor starter solutions. Control and protection components").

For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 drives, the choke is supplied with the drive; the customer is responsible for connecting it.
- (7) Software-configurable current (0...20 mA) or voltage (0...10 V) analog input.

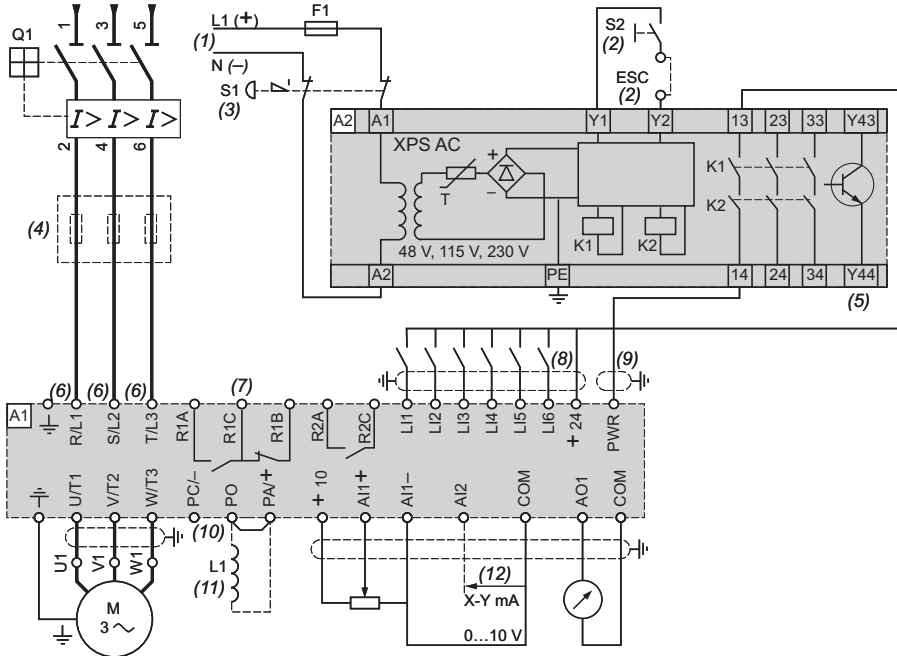

Schemes conforming to standards EN 954-1 category 3, IEC/EN 61508 capacity SIL2, in stopping category 0 according to IEC/EN 60204-1

ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71●●●N4, ATV 71H●●●Y, ATV 71P●●●N4Z

Three-phase power supply, low inertia machine, vertical movement

ATV 71H075M3...HU75M3

Power section for single-phase power supply

Note: All terminals are located at the bottom of the drive. Fit interference suppressors on all inductive circuits near the drive or connected on the same circuit, such as relays, contactors, solenoid valves, fluorescent lighting, etc.

Components for use with the Altivar (for a complete list of references, see our catalogues "Motor starter solutions. Control and protection components" and "Safety solutions using Preventa").

Item	Description
A1	ATV 71 drive, see pages 22 to 25
A2	Preventa XPS AC safety module for monitoring emergency stops and switches. One safety module can manage the "Power Removal" function for several drives on the same machine. In this case, each drive must connect its PWR terminal to its + 24 V via the safety contacts on the XPS AC module. These contacts are independent for each drive.
F1	Fuse W
L1	DC choke, see page 155
Q1	Circuit-breaker, see motor starters pages 242 to 249
S1	Emergency stop button with 2 contacts
S2	XB4 B or XB5 A pushbutton

- (1) Power supply: 24 V $\overline{\text{---}}$ or \sim , 48 V \sim , 115 V \sim , 230 V \sim .
- (2) S2: resets XPS AC module on power-up or after an emergency stop. ESC can be used to set external starting conditions.
- (3) Requests freewheel stopping of the movement and activates the "Power Removal" safety function.
- (4) Line choke (single phase or three-phase), mandatory for ATV 71HU40M3...HU75M3 drives with a 200...240 V 50/60 Hz single-phase power supply and ATV 71HC11Y...HC63Y (except when a special transformer is used (12-pulse)). See page 160.
- (5) The logic output can be used to signal that the machine is in a safe stop state.
- (6) For ATV 71HC40N4 drives combined with a 400 kW motor, ATV 71HC50N4 and ATV 71HC40Y...HC63Y, see page 226.
- (7) Fault relay contacts. Used for remote signalling of the drive status.
- (8) Connection of the common for the logic inputs depends on the positioning of the SW1 switch: see schemes on page 227.
- (9) Standardized coaxial cable, type RG174/U according to MIL-C17 or KX3B according to NF C 93-550, external diameter 2.54 mm, maximum length 15 m. The cable shielding must be earthed.
- (10) There is no PO terminal on ATV 71HC11Y...HC63Y drives.
- (11) Optional DC choke for ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71●075N4...●D75N4 and ATV 71P●●●N4Z. Connected in place of the strap between the PO and PA+ terminals. For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 drives, the choke is supplied with the drive; the customer is responsible for connecting it.
- (12) Software-configurable current (0...20 mA) or voltage (0...10 V) analog input.

Schemes conforming to standards EN 954-1 category 3, IEC/EN 61508 capacity SIL2, in stopping category 1 according to IEC/EN 60204-1

ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71H●●●N4, ATV 71H●●●Y, ATV 71P●●●N4Z

Three-phase power supply, high inertia machine

ATV 71H075M3...HU75M3

Power section for single-phase power supply

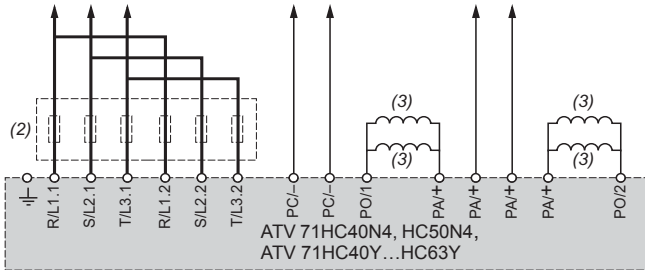

Note: All terminals are located at the bottom of the drive. Fit interference suppressors on all inductive circuits near the drive or connected on the same circuit, such as relays, contactors, solenoid valves, fluorescent lighting, etc.

Components for use with the Altivar (for a complete list of references, see our catalogues "Motor starter solutions. Control and protection components" and "Safety solutions using Preventa").

Item	Description
A1	ATV 71 drive, see pages 22 to 25
A2 (5)	Preventa XPS ATE safety module for monitoring emergency stops and switches. One safety module can manage the "Power Removal" safety function for several drives on the same machine. In this case the time delay must be adjusted on the drive controlling the motor that requires the longest stopping time. In addition, each drive must connect its PWR terminal to its + 24 V via the safety contacts on the XPS ATE module. These contacts are independent for each drive.
F1	Fuse
L1	DC choke, see page 155
Q1	Circuit-breaker, see motor starters pages 242 to 249
S1	Emergency stop button with 2 N/C contacts
S2	Run button

- (1) Power supply: 24 V $\overline{\text{---}}$ or \sim , 115 V \sim , 230 V \sim .
- (2) Requests controlled stopping of the movement and activates the "Power Removal" safety function.
- (3) Line choke (single phase or three-phase), mandatory for ATV 71HU40M3...HU75M3 drives with a 200...240 V 50/60 Hz single-phase power supply and ATV 71HC11Y...HC63Y (except when a special transformer is used (12-pulse)). See page 160.
- (4) S2: resets XPSATE module on power-up or after an emergency stop. ESC can be used to set external starting conditions.
- (5) For stopping times requiring more than 30 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds.
- (6) The logic output can be used to signal that the machine is in a safe state.
- (7) For ATV 71HC40N4 drives combined with a 400 kW motor, ATV 71HC50N4 and ATV 71HC40Y...HC63Y, see page 226.
- (8) Fault relay contacts. Used for remote signalling of the drive status.
- (9) Connection of the common for the logic inputs depends on the positioning of the SW1 switch: see schemes on page 227.
- (10) Standardized coaxial cable, type RG174/U according to MIL-C17 or KX3B according to NF C 93-550, external diameter 2.54 mm, maximum length 15 m. The cable shielding must be earthed.
- (11) Logic inputs LI1 and LI2 must be assigned to the direction of rotation: LI1 in the forward direction and LI2 in the reverse direction.
- (12) There is no PO terminal on ATV 71HC11Y...HC63Y drives.
- (13) Optional DC choke for ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71●075N4...●D75N4 and ATV 71P●●●N4Z. Connected in place of the strap between the PO and PA/+ terminals. For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 drives, the choke is supplied with the drive; the customer is responsible for connecting it.
- (14) Software-configurable current (0...20 mA) or voltage (0...10 V) analog input.

Power terminal connections for ATV 71HC40N4 combined with a 400 kW motor, ATV 71HC50N4, ATV 71HC40Y... HC63Y

- (1) For control section connections, see pages 222 to 225
- (2) Line chokes, see page 160 ; these are mandatory for ATV 71HC40Y...HC63Y, to be ordered separately.
- (3) DC chokes supplied as standard with ATV 71HC40N4, HC50N4 drives. Not available for ATV 71HC40Y...HC63Y.

VW3 A7 7●● braking resistors or VW3 A7 8●● hoist resistors, VW3 A7 1●● braking units

ATV 71H●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4, ATV 71HU22Y...HD90Y, ATV 71W●●N4, ATV 71P●●N4Z

ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC16N4, ATV 71HC11Y...HC16Y

ATV 71HC20N4...HC50N4, ATV 71HC20Y...HC63Y

Components for use with the Altivar

Item	Description
A1	ATV 71 drive, see pages 22 to 25
A2	Braking unit, if using a braking resistor or a hoist resistor, for ATV 71HC20N4...HC50N4, and ATV 71HC20Y...HC63Y. See pages 134 and 135
Braking resistor	See pages 136 and 138

(1) A thermal overload relay can be added; its contact must then be integrated into the control circuit.

Examples of recommended schemes

Logic inputs

The SW1 switch is used to adapt operation of the logic inputs (LI) to the PLC output technology:

- Set the switch to Source (factory setting) if using PLC outputs with PNP transistors
- Set the switch to Sink Int. or Sink Ext. if using PLC outputs with NPN transistors

Internal power supply

Switch in "Source" position

Switch in "Sink Int" position

External power supply

Switch in "Source" position

Switch in "Sink Ext" position

Input for PTC probes

The SW2 switch is used to operate the LI6 input:

- As a logic input by setting the SW2 switch to LI (factory setting)
- Or for protecting the motor via PTC probes by setting the SW2 switch to PTC

2-wire control and jog operation (JOG)

3-wire control and jog operation (JOG)

Examples of recommended schemes (continued)

Unipolar speed reference

Bipolar speed reference

Requires a VW3 A3 201 or VW3 A3 202 I/O extension card

Speed reference using axis control

Separate control power supply

The separate control card can be powered by an external 24 V $\overline{\text{---}}$ supply

Analog input configured for voltage

External 0...10 V

External +10 V

Analog input configured for current

0-20 mA, 4-20 mA, X-Y mA

VW3 A3 201 and VW3 A3 202 I/O extension cards

Logic I/O

The SW3 or SW4 switch is used to adapt operation of the logic inputs (LI) to the PLC output technology:

- Set the switch to Source (factory setting) if using PLC outputs with PNP transistors
- Set the switch to Sink Int. or Sink Ext. if using PLC outputs with NPN transistors

Internal power supply

Switch in "Source" position

Switch in "Sink Int" position

External power supply

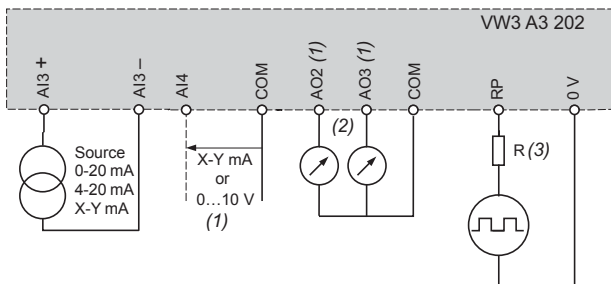

Switch in "Source" position

Switch in "Sink Ext" position

Analog I/O (only on VW3 A3 202 extended I/O card)

(1) Software-configurable current (0-20 mA) or voltage (0...10 V) analog input.

(2) Software-configurable current (0-20 mA) or voltage (± 10 V or 0...10 V) analog outputs, independent selection possible for each output via switch.

(3) R: add a resistor if the input voltage of the pulse train is greater than 5 V.

Recommended values:

Input voltage V	Resistance Ω
12	510
15	910
24	1300

VW3 A3 401 to VW3 A3 411 encoder interface cards

Closed loop control

Wiring of encoders VW3 A3 401...407 A, A, B, B signals

Wiring of encoders VW3 A3 403...407 AB signals

Wiring of encoders VW3 A3 403...407 A signal

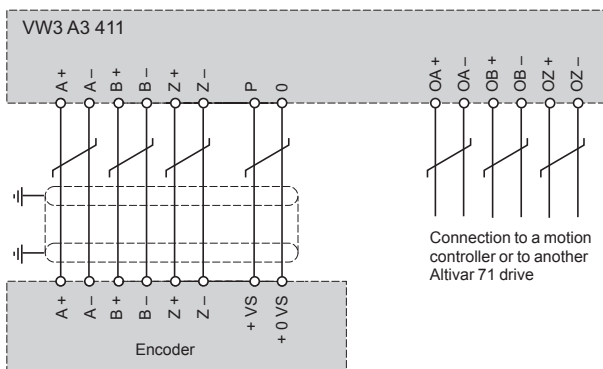

Wiring of encoder VW3 A3 408 Resolver signals

Wiring of encoder VW3 A3 409 EnDat or SSI signals

Wiring of encoder VW3 A3 411 AA/AABB/AABBZ signals A

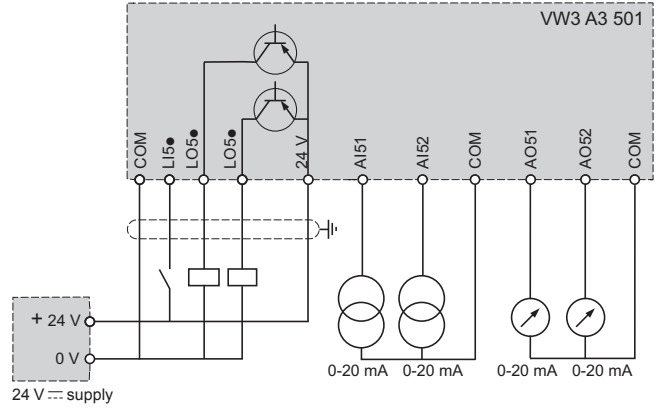

VW3 A3 501 "Controller Inside" programmable card

Card powered by the drive (1)

Card powered by external power supply

(1) Only if the power consumption is less than 200 mA; otherwise use an external power supply.

VW3 A4 4●● additional EMC input filters

Three-phase power supply, three-phase filter

Single-phase power supply, three-phase filter

(1) Line choke mandatory for ATV 71HU40M3...HU75M3, see page 160

Output filters

VW3 A5 1●● motor chokes

VW3 A5 2●● sinus filters

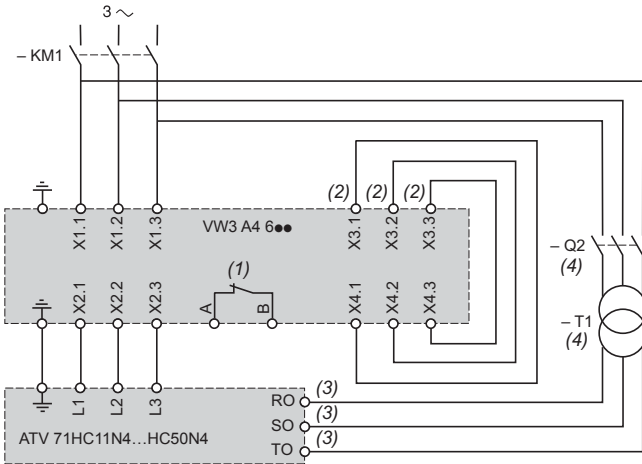

VW3 A4 6●● passive filters

Scheme with 1 passive filter for ATV 71H075N4...HD90N4 and ATV 71P●●●N4Z drives

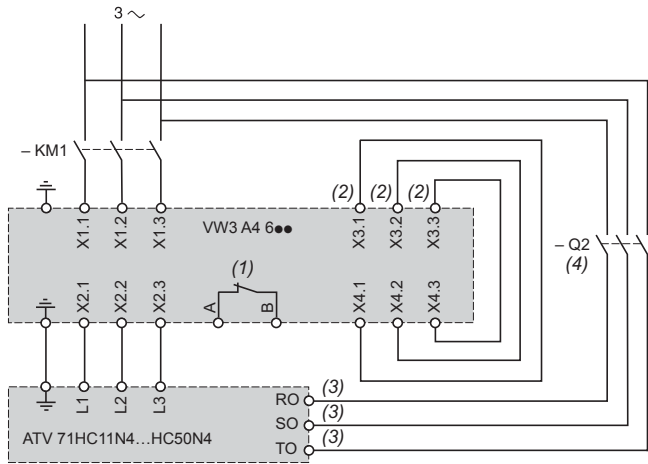

Scheme with 1 passive filter for ATV 71HC11N4...HC50N4 drives

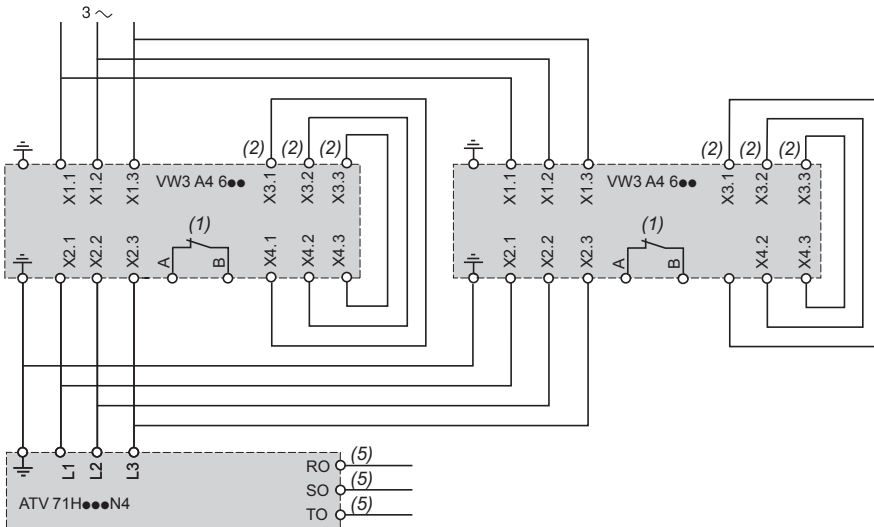

Connection downstream of the line contactor

Connection upstream of the line contactor

Scheme with 2 passive filters for ATV 71H075N4...HD90N4 drives

(1) Contact for indicating the thermal state of the passive filter, to be connected in the safety circuit of the installation.

(2) Delivered wired.

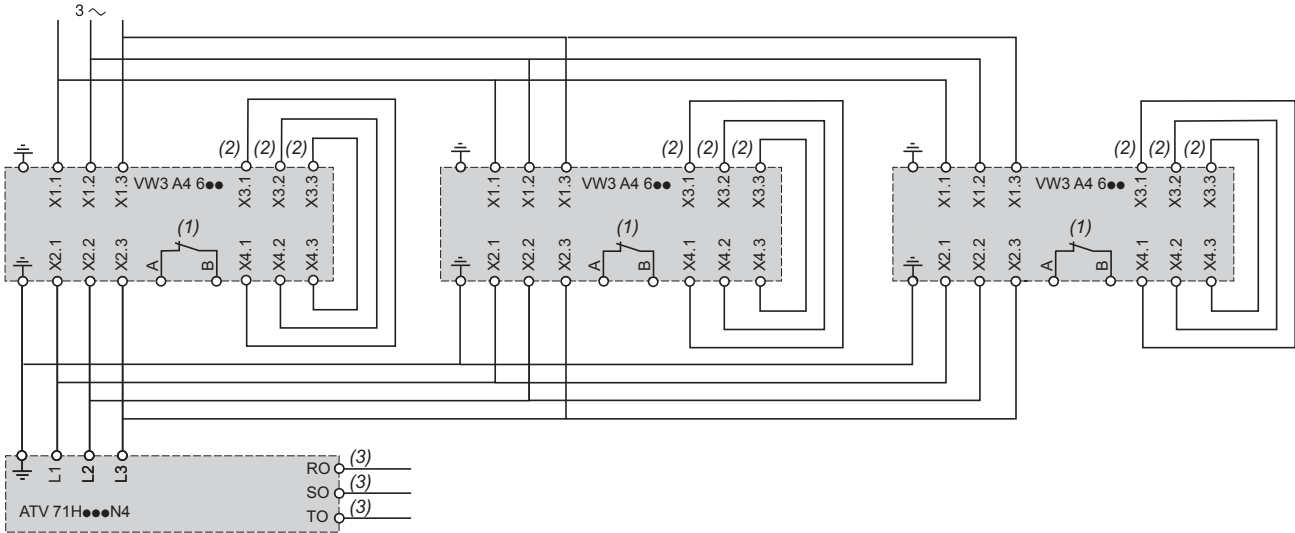

(3) Fan external power supply.

(4) Q2: GV2 RT10 thermal magnetic motor circuit-breaker. T1: 400/400 V or 460/460 V transformer.

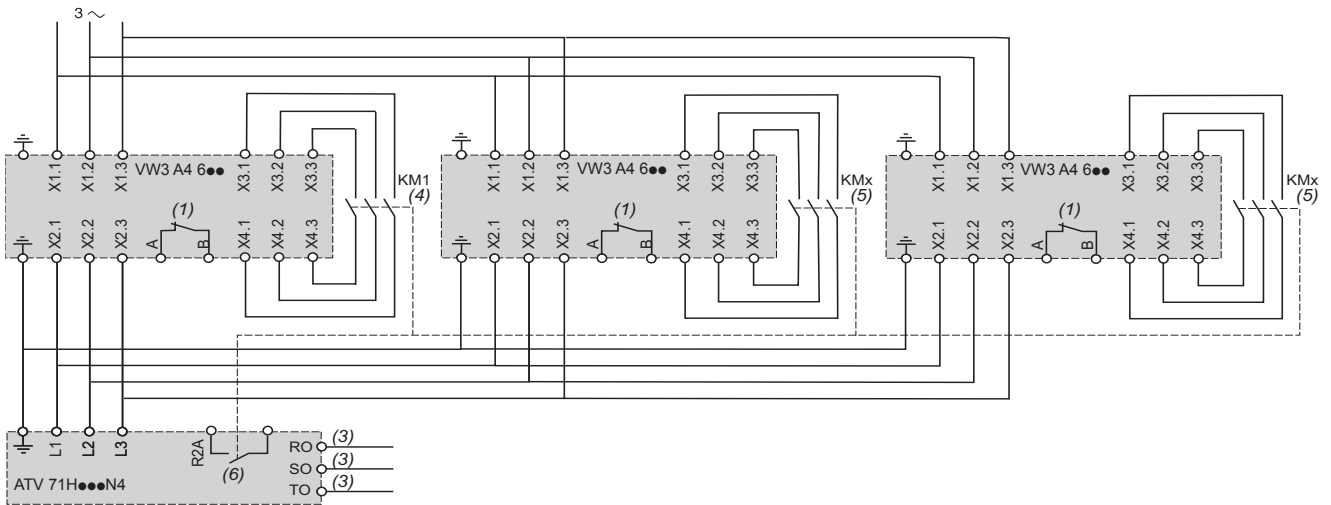

(5) For ATV 71HC11N4...HC50N4 drives, the external power supply for the fan is mandatory, see scheme above with one passive filter.

VW3 A4 6●● passive filters (continued)

Scheme with 3 passive filters for ATV 71H075N4...HD90N4 drives

Scheme for controlling the filter via the drive according to the load

(1) Contact for indicating the thermal state of the passive filter, to be connected in the safety circuit of the installation.

(2) Delivered wired.

(3) For ATV 71HC11N4...HC50N4 drives, the external power supply for the fan is mandatory, see scheme on opposite page with one passive filter.

(4) KM1: category AC1 contactor sized at 50% of the drive nominal current (I_n).

(5) KMx: contactor type and sizing identical to KM1. It may be necessary to provide an intermediate relay to control the KMx contactors.

(6) The logic output at relay R2A must be assigned to the "Current threshold reached" (CtA) parameter.

Network braking unit

Components for use with the Altivar (for a complete list of references, see our catalogue "Motor starter solutions. Control and protection components").

Item	Description
A1	ATV 71 drive, see pages 23 and 24
A2	Network braking unit, see page 149
F1	2 A fuse, 230 V ~
F2...F4	For fuses, see reference tables on page 149.
Q1	300 mA earth fault circuit-breaker. Provides protection against earth leakage faults. Rating: see motor starters on pages 244 to 247

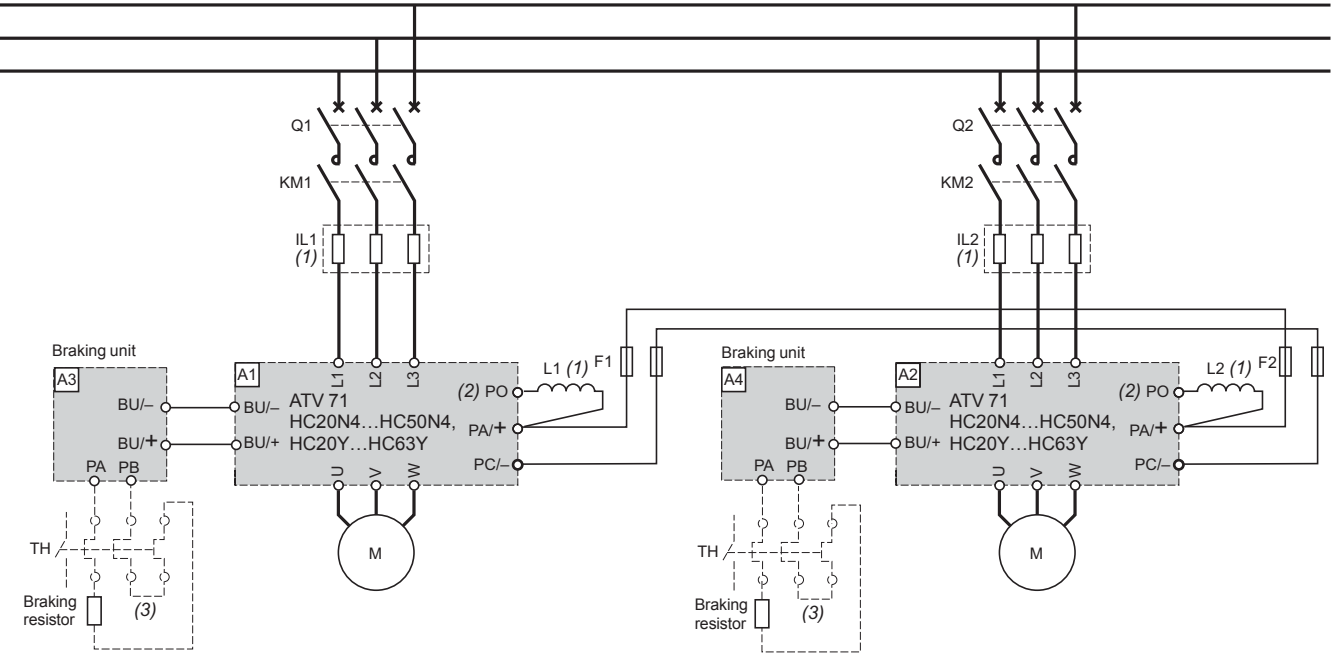

(1) Additional EMC input filter if necessary, see page 168.

(2) Line choke recommended, see page 160.

(3) For ATV 71HC40N4 drives combined with a 400 kW motor and ATV 71HC50N4, see page 226.

Drives combined with a braking unit and wired onto the same DC bus

ATV 71HC20N4...HC50N4, ATV 71 HC20Y...HC63Y

Item	Description
A1, A2	ATV 71 drives, see pages 23 and 25.
A3, A4	Braking units, see pages 134 and 135.
F1, F2, F3	Fast-acting semi-conductor fuses, see page 239. The function of the fuses is to protect the DC bus wiring in the event of a drive short-circuit.
IL1, IL2 (1)	Mandatory line chokes for ATV 71HC20Y...HC63Y drives; to be ordered separately, see page 160.
KM1, KM2	Line contactors. Rating: see motor starters on pages 244 to 249.
L1, L2 (1)	Mandatory DC chokes for ATV 71HC20N4...HC63N4 drives; supplied as standard with these drives. Not used for ATV 71HC20Y...HC63Y drives. These drives require the presence of line chokes (IL●)
Q1, Q2	Circuit-breakers. Rating: see motor starters on pages 244 to 249.

(1) The use of line chokes or DC chokes depends on the drive type, see table above.

(2) There is no PO terminal on ATV 71HC20Y...HC63Y drives.

(3) A thermal overload relay can be added; its contact must then be integrated into the control circuit.

Drives powered by external DC power supply

(1) DC power supply not included.

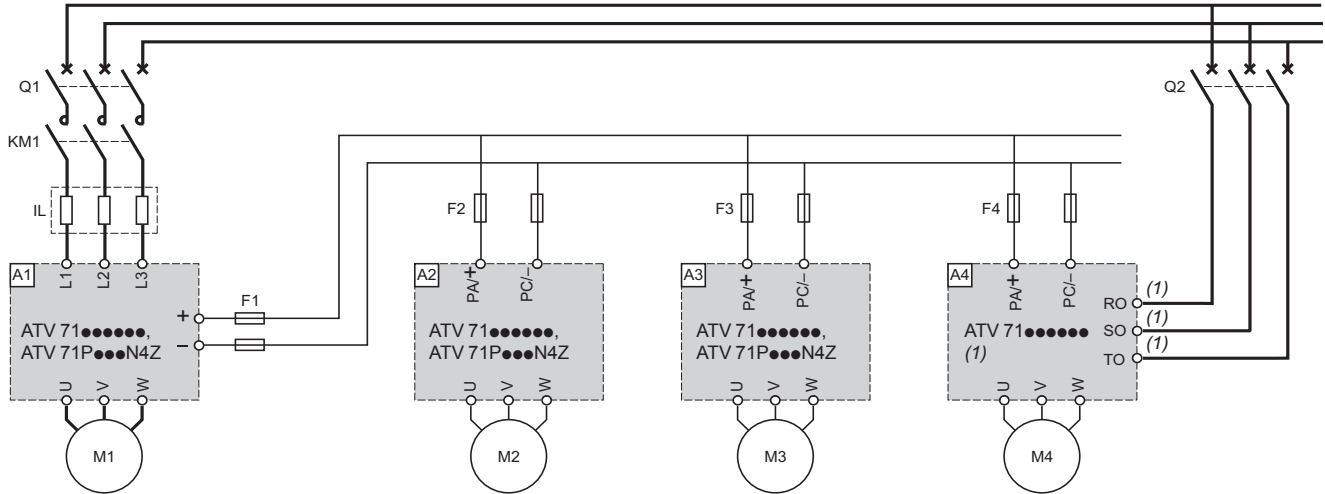

(2) Fast-acting semi-conductor fuses, see page 239. The function of the fuses is to protect the DC bus wiring in the event of a drive short-circuit.

(3) See our catalogue "Motor starter solutions. Control and protection components".

Note: ATV 71H●●●M3, ATV 71HD11M3X, HD15M3X, ATV 71●075N4...●D18N4 and ATV 71P●●●N4Z drives have an integrated pre-charge circuit. This is used to connect the DC power supply directly to the drive without the need for an external pre-charge circuit.

Connection schemes for several drives in parallel on the DC bus

Drives with different ratings

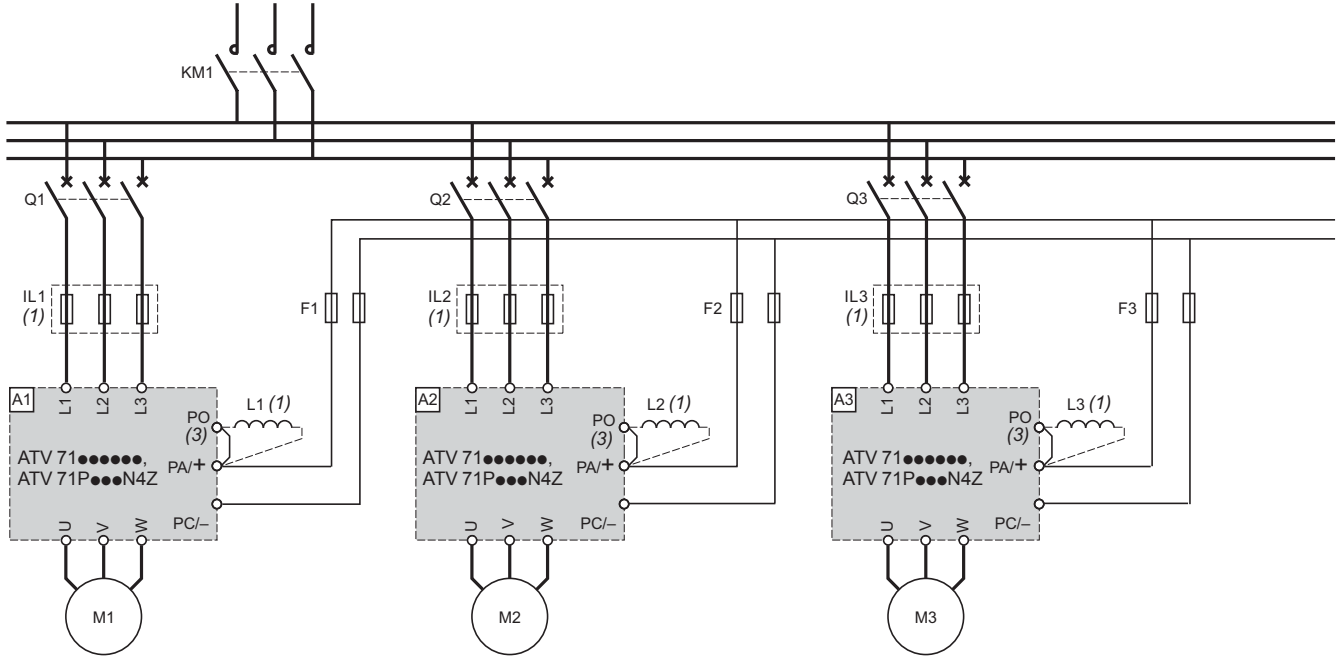

Item	Description
A1	ATV 71 drive, see pages 22 to 25. Drive power = \sum motor power ratings M1 + M2 + M3 + M4 + ...
A2, A3, A4	ATV 71 drives powered by the DC bus. They must be protected using fast-acting semi-conductor fuses. Contactors on the DC circuit are ineffective as the switching action may cause the fuses to blow owing to the high load current.
F1	Fast-acting semi-conductor fuses, see page 239. Drive A1 powered by the AC supply with an output bus. The function of the fuses is to protect the internal diode bridge in the event of a short-circuit on the external DC bus.
F2, F3, F4	Fast-acting semi-conductor fuses, see page 239. Drives A2, A3 and A4 are powered by their DC bus and are not connected to the AC input. The function of the fuses is to protect the DC bus wiring in the event of a drive short-circuit.
IL	Mandatory line chokes for ATV 71HC20Y...HC63Y drives; to be ordered separately, see page 160.
KM1	Line contactors. Rating: see motor starters on pages 243 to 249.
Q1	Circuit-breakers. Rating: see motor starters on pages 243 to 249.

(1) For ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives, provide the fan power supply connection.

Connection schemes for several drives in parallel on the DC bus (continued)

Drives with equivalent ratings

Item	Description
A1, A2, A3	ATV 71 drives, see pages 22 to 25. The power difference between the drives connected in parallel must not exceed one rating.
F1, F2, F3	Fast-acting semi-conductor fuses, see page 239. Drives A1, A2 and A3 powered by the AC supply with an output bus. The function of the fuses is to protect the internal diode bridge in the event of a short-circuit on the external DC bus.
IL1, IL2, IL3 (1)	Mandatory line chokes for ATV 71H●●●Y drives; to be ordered separately, see page 160.
KM1	When using a common line contactor, all the Altivar 71 drive load circuits operate in parallel and cannot therefore be overloaded.
L1, L2, L3 (1)	Mandatory DC chokes for ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71●●●N4 and ATV 71P●●●N4Z drives; to be ordered separately (see page 155) except for drives ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 which are supplied as standard with a DC choke. Not used for ATV 71H●●●Y drives. These drives require the presence of line chokes (IL●).
Q1, Q2, Q3	Circuit-breakers on the line supply side to protect drives against overloads. Use trip contacts on the "external fault" logic input or the line contactor. The line contactor must only be activated if all three circuit-breakers are closed, as otherwise there is a risk of damage to the drives.

(1) The use of line chokes or DC chokes depends on the drive type, see table above.

(2) There is no PO terminal on ATV 71HC11Y...HC63Y drives.

Connections for ensuring conformity to EMC standards

Principle

- Earths between drive, motor and cable shielding must have “high frequency” equipotentiality.
- Use shielded cables with shielding connected to earth over 360° at both ends for the motor cable, the braking resistor cable and the control-signalling cables. Conduit or metal ducting can be used for part of the shielding length provided that there is no break in the continuity of the earth connections.
- Ensure maximum separation between the power supply cable (line supply) and the motor cable.

Installation diagram for ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71H●●●N4, ATV 71H●●●Y and ATV 71P●●●N4Z drives

- 1 Steel plate (1), to be mounted on the drive (earthed casing).
- 2 Altivar 71 UL Type 1/IP 20 drive.
- 3 Unshielded power supply wires or cable.
- 4 Unshielded wires for the output of the fault relay contacts.
- 5 Attach and earth the shielding of cables 6, 7 and 8 as close as possible to the drive:
 - Strip the cable to expose the shielding
 - Attach the cable to the plate 1 by tightening the clamp on the stripped part of the shielding
 The shielding must be clamped tightly enough to the metal sheet to ensure good contact.
- 6 Shielded cable for connecting the motor
- 7 Shielded cable for connecting the control-signal section.
 - For applications requiring several conductors, use cables with a small cross-section (0.5 mm²).
- 8 Shielded cable for connecting the braking resistor.
 - 6, 7, 8, the shielding must be connected to earth at both ends.
 - The shielding must be continuous, and if intermediate terminals are used, they must be placed in EMC shielded metal boxes.
- 9 Earth screw.

Note: The HF equipotential earth connection between the drive, motor and cable shielding does not remove the need to connect the PE conductors (green-yellow) to the appropriate terminals on each unit.

If using an additional EMC input filter, it should be mounted beside or beneath the drive, depending on the rating, and connected directly to the line supply via an unshielded cable. Link 3 on the drive is then made by the filter output cable.

(1) Plate supplied for ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4, ATV 71HU22Y...HD90Y and ATV 71P075N4Z...PD11N4Z drives.
For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC28N4 and ATV 71HC11Y...HC31Y drives, the plate is supplied with the UL Type 1 conformity kit or the IP 31 conformity kit.
For ATV 71HC31N4...HC50N4 and ATV 71HC40Y...HC63Y drives, the plate is supplied with the IP 31 conformity kit.
These kits must be ordered separately, see pages 32 and 33.

ATV 71W075N4...WD22N4

ATV 71WD30N4...WD75N4

Connections for ensuring conformity to EMC standards (continued)

Installation diagram for ATV 71W●●●N4 drives

- 1 Steel plate mounted on the drive (earthed casing).
- 2 Altivar 71 UL Type 12/IP 54 drive.
- 3 Unshielded power supply wires or cable.
- 4 Unshielded wires for the output of the fault relay contacts.
- 5 Attach and earth the shielding of cables 6, 7 and 8 as close as possible to the drive:
 - Strip the cable to expose the shielding
 - Fit the shielded cable in the cable gland 9 ensuring it is fully in contact through 360°
 - Fold back the shielding and clamp it between the ring and body of the cable gland.
 Depending on the rating, the shielding of the cable 7 can be earthed using a cable gland 9, a clamp 5 or a cable clip 5.
 The shielding must be clamped tightly enough to the metal sheet to ensure good contact.
- 6 Shielded cable for connecting the motor
- 7 Shielded cable for connecting the control-signal section.
 For applications requiring several conductors, use cables with a small cross-section (0.5 mm²).
- 8 Shielded cable for connecting the braking resistor.
 6, 7, 8, the shielding must be connected to earth at both ends.
 The shielding must be continuous, and if intermediate terminals are used, they must be placed in EMC shielded metal boxes.
- 9 Metal cable gland (not supplied) for cables 6, 7 and 8.
 Standard cable gland (not supplied) for cables 3 and 4.

Note: The HF equipotential earth connection between the drive, motor and cable shielding does not remove the need to connect the PE conductors (green-yellow) to the appropriate terminals on each unit.

If using an additional EMC input filter, it should be mounted beside the drive and connected directly to the line supply via an unshielded cable. Link 3 on the drive is then made by the filter output cable.

Applications

Circuit-breaker/contactor/drive combinations can be used to ensure continuous service of the installation with optimum safety.

The type of circuit-breaker/contactor coordination selected can reduce maintenance costs in the event of a motor short-circuit by minimizing the time required to make the necessary repairs and the cost of replacement equipment. The suggested combinations provide type 1 or type 2 coordination depending on the drive rating.

Type 2 coordination: A motor short-circuit will not damage the device or affect its settings. The motor starter should be able to operate once the electrical fault has been removed. The electrical isolation provided by the circuit-breaker will not be affected by the short-circuit. Welding of the contactor contacts is permissible if they can be separated easily.

Type 1 coordination: The electrical isolation provided by the circuit-breaker will not be affected by the incident and no other elements apart from the contactor are damaged as a result of the motor short-circuit.

The drive controls the motor, provides protection against short-circuits between the drive and the motor and protects the motor cable against overloads. The overload protection is provided by the drive's motor thermal protection. If this protection is removed, external thermal protection should be provided. Before restarting the installation, the cause of the trip must be removed.

Mounting recommendations

Depending on the conditions in which the drive is to be used, its installation will require certain precautions and the use of appropriate accessories.

Install the unit vertically:

- Avoid placing it close to heating elements
- Leave sufficient free space to ensure that the air required for cooling purposes can circulate from the bottom to the top of the unit.

ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4,

ATV 71H075N4...HD18N4,
ATV 71P075N4Z...PD11N4Z

564510

Removing the protective blanking cover for:
ATV 71HD18M3X...HD45M3X,
ATV 71HD22N4...HD75N4,
ATV 71HU22Y...HD90Y

Mounting types

■ Type A mounting

■ Type B mounting

■ Type C mounting

By removing the protective blanking cover from the top of the drive, the degree of protection for the drive becomes IP 20.

The protective blanking cover may vary according to the drive model, see drawings opposite.

Note: The protective blanking cover must be removed from ATV 71P●●●N4Z drives when they are mounted in a dust and damp proof enclosure.

Mounting recommendations (continued)

Derating curves for ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4, ATV 71P075N4Z...PD11N4Z

The derating curves for the drive nominal current (In) depend on the temperature, the switching frequency and the mounting type.

For intermediate temperatures (e.g. 55°C), interpolate between 2 curves.

C31N4, C40N4	250	300
C50N4, C40Y...C63Y	250	400

These drives can be mounted side by side, observing the following mounting recommendations:

Mounting recommendations (continued)

Derating curves for ATV 71HD55MX, HD75MX, ATV 71HD90N4...HC13N4

The derating curves for the drive nominal current (I_n) depend on the temperature, the switching frequency and the mounting type.

For intermediate temperatures (e.g. 55°C), interpolate between 2 curves.

Specific recommendations for mounting ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71H●●●N4 and ATV 71H●●●Y drives in enclosures

Follow the mounting recommendations described on pages 250 to 258.

To ensure proper air circulation in the drive:

- Fit ventilation grilles
- Ensure that there is sufficient ventilation. If there is not, install a forced ventilation unit with a filter. The openings and/or fans must provide a flow rate at least equal to that of the drive fans, see page 261)
- Use special filters with IP 54 protection
- Remove the blanking cover from the top of the drive, see page 250

Power dissipated inside the enclosure

For drives	Dissipated power (1)	
	Mounted in the enclosure (power section inside the enclosure) W	Dust and damp proof flush-mounted (power section outside the enclosure) W
Three-phase supply voltage: 200...240 V 50/60 Hz

Dust and damp proof metal enclosure (IP 54 degree of protection)

The drive must be mounted in a dust and damp proof enclosure in certain environmental conditions: dust, corrosive gases, high humidity with risk of condensation and dripping water, splashing liquid, etc.

This enables the drive to be used in an enclosure where the maximum internal temperature reaches 50°C.

Calculating the dimensions of the enclosure

Maximum thermal resistance R_{th} (°C/W)

$$R_{th} = \frac{\theta - \theta_e}{P}$$

θ = maximum temperature inside enclosure in °C
 θ_e = maximum external temperature in °C
 P = total power dissipated in the enclosure in W

Power dissipated by drive: see page 259 (mounting in an enclosure or flush-mounting in an enclosure).

Add the power dissipated by the other equipment components.

Useful heat dissipation surface of enclosure S (m²)

(sides + top + front panel if wall-mounted)

$$S = \frac{K}{R_{th}}$$

K = thermal resistance per m² of the enclosure

For a metal enclosure:

- K = 0.12 with internal fan
- K = 0.15 without fan

Note: Do not use insulated enclosures, as they have a poor level of conductivity.

Specific recommendations for mounting drives on base plates in a dust and damp proof enclosure or on a machine frame

Follow the mounting recommendations described on pages 250 and 251.

Power dissipated inside the enclosure

For drives	Dissipated power (1)	
	Mounted in the enclosure with no fan (2)	Mounted in the enclosure with a fan
	W	W
Three-phase supply voltage: 380...480 V 50/60 Hz		
ATV 71P075N4Z	26	39
ATV 71PU15N4Z	28	41
ATV 71PU22N4Z	30	43
ATV 71PU30N4Z	35	65
ATV 71PU40N4Z	37	67
ATV 71PU55N4Z	40	95
ATV 71PU75N4Z	40	95
ATV 71PD11N4Z	50	115

Specific recommendations for mounting in a dust and damp proof enclosure (3)

Drives on base plates can be mounted in a dust and damp proof enclosure in accordance with the following specific recommendations:

- External ambient temperature (heatsink side, see page 31): - 10...+ 40°C
- Temperature inside the enclosure: + 50°C for a switching frequency of 4 kHz, or + 40°C for a switching frequency of 12 kHz
- Remove the blanking cover from the top of the drive, see page 250.

Specific recommendations for mounting on a machine frame (3)

Drives on base plates can also be mounted on a machine frame in accordance with the following specific recommendations:

- Ambient temperature: - 10...+ 40°C
- Thermal resistance (Rth) of the frame less than or equal to the thermal resistance of the kit for mounting in a dust and damp proof enclosure VW3 A9 80●, see page 31
- Aluminium machine frame; mounting on iron frame not recommended
- Support area machined on the frame, to give a surface smoothness of 100 µm and unevenness of 3.2 µm maximum
- Drive mounted in the centre of the support with a minimum thickness and a minimum cooling area, exposed to the open air (see table below)

For drives	Switching frequency	Minimum area		Minimum thickness
		With DC choke	With fan	
		m ²	m ²	mm
ATV 71P075N4Z	4 kHz	–	–	20
...PU22N4Z	12 kHz	0.60	0.70	20
ATV 71PU30N4Z,	4 kHz	1.50	–	20
PU40N4Z	12 kHz	2.00	1.50	20
ATV 71PU55N4Z,	4 kHz	3.50	3.00	20
PU75N4Z	12 kHz	5.40	5.00	20

(1) This value is given for operation at nominal load and for a switching frequency of 4 Hz.

Add 7 W to this value for each additional option card.

(2) Add the dissipation of the DC choke, see page 155.

(3) For ATV 71PD11N4Z drive, please contact your Regional Sales Office.

Definition of thermal resistance

Thermal resistance Rth of the frame or the cold plate (°C/W)

For drives	Maximum Rth (°C/W)
ATV 71P075N4Z	0.65
ATV 71PU15N4Z	0.36
ATV 71PU22N4Z	0.24
ATV 71PU30N4Z	0.21
ATV 71PU40N4Z	0.15
ATV 71PU55N4Z	0.03
ATV 71PU75N4Z	0.02
ATV 71PD11N4Z	0.015

Mounting several drives on the same frame or the same cold plate

Determine the equivalent thermal resistance (Rthe) for all the drives:

$$\frac{1}{R_{the}} = \frac{1}{R_{th1}} + \frac{1}{R_{th2}} + \frac{1}{R_{th3}} + \dots + \frac{1}{R_{thn}}$$

Calculation example with three drives of 0.75 kW, 1.5 kW and 2.2 kW

$$\frac{1}{R_{th}} = \frac{1}{0.65} + \frac{1}{0.36} + \frac{1}{0.24} \quad \text{i.e. } R_{th} = 0.12^{\circ}\text{C/W}$$

Mounting recommendations

Depending on the conditions in which the drive is to be used, its installation will require certain precautions and the use of appropriate accessories.

Install the unit vertically:

- Avoid placing it close to heating elements
- Leave sufficient free space to ensure that the air required for cooling purposes can circulate from the bottom to the top of the unit.

Remote graphic display terminal functions

This display terminal is attached to the front of the drive. It includes the integrated 7-segment display terminal for drives supplied without a graphic display terminal or for ATV 71HU22Y...HC63Y drives.

Description

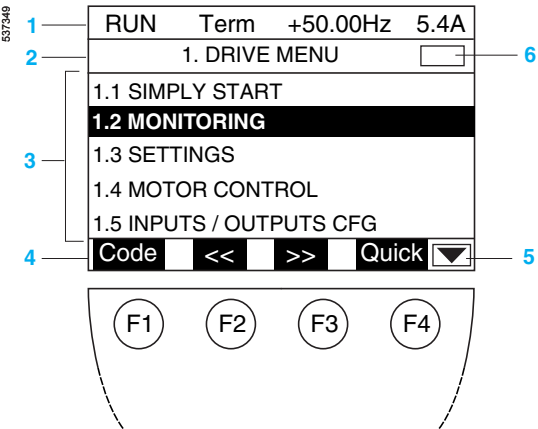

Description of graphic display terminal

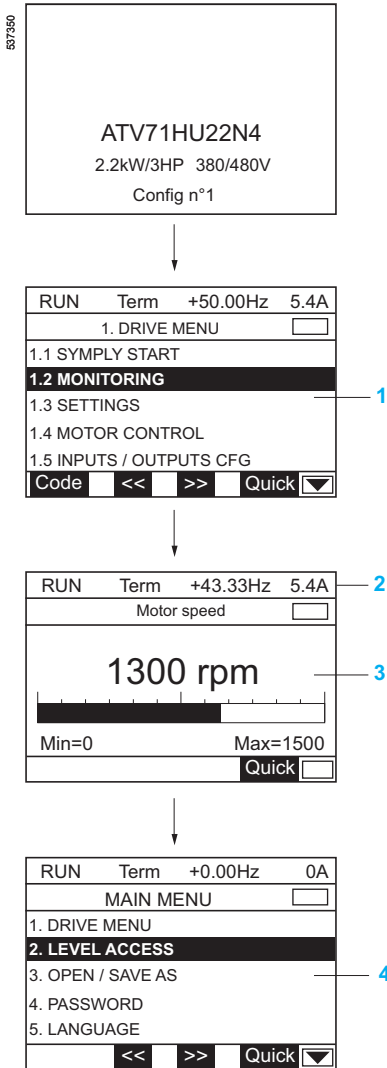

- 1 Graphic display unit:
 - 8 lines, 240 x 160 pixels
 - large digit display that can be read from 5 m away
 - bar chart display
- 2 Assignable function keys F1, F2, F3, F4:
 - dialogue functions: direct access, help screens, navigation
 - application functions: Local/Remote, preset speed
- 3 STOP/RESET key: local control of motor stopping/fault clearing
- 4 RUN key: local control of motor operation
- 5 Navigation button:
 - Press to save the current value (ENT)
 - Turn ± to increase or decrease the value, go to the next or previous line
- 6 FWD/REV key: reverses the direction of rotation of the motor
- 7 ESC key: aborts a value, parameter or menu to return to the previous option

Note: keys 3, 4 and 6 can be used to control the drive directly.

Description of graphic display unit

- 1 Display line. Its content can be configured; the factory settings show:
 - the drive status (e.g. RUN)
 - the active control channel (e.g. "Term": terminals)
 - the frequency reference
 - the current in the motor
- 2 Menu line. Indicates the current menu or submenu.
- 3 Area displaying menus, submenus, parameters, values, bar charts, in the form of a scrolling window, with a maximum of 5 lines.
 - The line or value selected using the navigation button is displayed in reverse video (see example opposite).
- 4 Section displaying the functions assigned to the F1 to F4 keys and aligned with them, for example:
 - >>: Horizontal scrolling to the right, or proceeding to the next menu or submenu, or, in the case of a value, decreasing the value, displayed in reverse video (see example opposite).
 - <<: Horizontal scrolling to the left, or proceeding to the next menu or submenu, or, in the case of a value, increasing the value, displayed in reverse video
 - Quick: Rapid access to a parameter from any screen when the Quick function is displayed above the F4 key
 - HELP: Contextual help
 - Code: Displays the selected parameter code
 - Other functions (application functions) can be assigned to these keys via the
- 1.6 COMMAND menu.
 - 5 : Means that this display window does not scroll further down.
 - : Means that this display window can scroll further down.
 - 6 : Means that this display window can scroll further up.
 - : Means that this display window does not scroll further up.

Remote graphic display terminal functions (continued)

■ Navigation: accessing menus and parameters

Structure of main menus:

1 Drive menu:

Menu type	Function
1.1 SIMPLY START	Simplified menu for a quick start
1.2 MONITORING	Displays current values for motor, inputs/outputs and communication (command words, status words, etc.)
1.3 SETTINGS	Accesses the adjustment parameters, which can be modified during operation
1.4 MOTOR CONTROL	Accesses the motor parameters, including adjustment of motor control profiles
1.5 INPUTS/OUTPUTS CFG	Configures the I/O and transforms signals
1.6 COMMAND	Configures the command and reference channels
1.7 APPLICATION FUNCT.	Configures the application functions (preset speeds, PID regulator, etc.)
1.8 FAULT MANAGEMENT	Configures the fault management process
1.9 COMMUNICATION	Configures the communication networks
1.10 DIAGNOSTICS	Provides diagnostics for motor and drive, integrated test procedures, fault log
1.11 IDENTIFICATION	Identifies the drive and the internal options
1.12 FACTORY SETTINGS	Restores factory settings (completely or by parameter group)
1.13 USER MENU	Accesses the parameters selected by the user
1.14 PROGRAMMABLE CARD	Accesses the parameters for the Controller Inside programmable card

2 Display line

3 Display screen: Displays values in the form of bar charts or digital values, depending on the extent of customization.

4 Main menu:

Menu type	Function
1. DRIVE MENU	See above (1 Drive menu)
2. ACCESS LEVEL	4 access levels: basic, limited, advanced, expert
3. OPEN/SAVE AS	Transfers files between the graphic display terminal and the drive
4. PASSWORD	Provides password protection for the configuration
5. LANGUAGE	Choice of 6 languages available (English, German, Spanish, French, Italian and Chinese)
6. MONITORING CONFIG.	Customizes the display line 2 and the display screen 3 (bar charts, digital values)
7. DISPLAY CONFIG.	Configures how parameters are displayed: customization, selection for User menu, visibility, accessibility

■ Password

Altivar 71 drives allow individual parameters to be selected for password protection. Rights can be set for save operations and for loading the configuration.

Integrated 7-segment display terminal

ATV 71●●●M3, ATV 71HD11M3X, HD15M3X, ATV 71H075N4...HD75N4 drives can be supplied without a graphic display terminal. In this case, they are equipped with an integrated 7-segment display terminal.

ATV 71P●●●N4Z drives are equipped as standard with an integrated 7-segment display terminal.

ATV 71HU22Y...HC63Y drives are equipped as standard with an integrated 7-segment display terminal as well as the remote graphic display terminal.

The integrated 7-segment display terminal can be used to:

- Display status and faults
- Access and modify parameters

Start-up

The Altivar 71 drive is supplied ready for use for most applications. When the drive is switched on, the menus for setting the language and access level appear automatically.

■ Simply Start menu

By accessing the Simply Start menu directly it is possible to:

- Pre-program the drive for an application:
 - Select the relevant macro-configuration
 - 2-wire/3-wire control
- Benefit from optimum motor performance:
 - Enter data from the motor rating plate
 - Auto-tuning
- Protect the motor by setting the drive's integrated electronic thermal overload relay

Simply Start menu

Start-up (continued)

■ Programming using macro-configurations

Programming using macro-configurations offers the choice of seven options corresponding to the various business areas and applications:

- Start/stop
- Material handling
- General use
- Hoisting
- Lift
- PID regulation
- Communication network connectivity
- Master/slave applications

Choosing one of these macro-configurations automatically assigns the functions, parameters and I/O, even in the case of option cards. Although the configuration is preset, it can still be modified, if necessary.

The Start/stop macro-configuration is set as the factory configuration.

The preset functions for each macro-configuration are given in the table below.

Type of macro-configuration	Start/stop	Material handling	General use	Hoisting	Lift (1)	PID regulation	Communication network connectivity	Master/slave application	
Altivar 71 drive I/O									
A11	Ref. channel 1	Ref. channel 1	Ref. channel 1	Ref. channel 1	Ref. channel 1	PID reference	Ref. channel 2 Ref. channel 1 by bus	Ref. channel 1	
A12	Not assigned	Ref. sum 2	Ref. sum 2	Not assigned	Not assigned	PID feedback	Not assigned	Ref. channel torque	
AO1	Motor freq.	Motor freq.	Motor freq.	Motor freq.	Not assigned	Motor freq.	Motor freq.	Signed torque	
2-wire	LI1	Forward	Forward	Forward	Forward	Forward	Forward	Forward	
	LI2	Reverse	Reverse	Reverse	Reverse	Reverse	Reverse	Reverse	
	LI3	Not assigned	2 speeds preset	JOG	Fault reset	2 speeds preset	Integral reset PID	Switching ref.2	Switching torque/speed
	LI4	Not assigned	4 speeds preset	Fault reset	Fault assign. ext.	4 speeds preset	Ref. 2 PID preset	Fault reset	Fault reset
	LI5	Not assigned	8 speeds preset	Limit torque	Not assigned	Fault reset	Ref. 4 PID preset	Not assigned	Not assigned
	LI6	Not assigned	Fault reset	Not assigned	Not assigned	Not assigned	Not assigned	Not assigned	Not assigned

Fault log

Troubleshooting screen

Identification screen

Example of a customized message

Maintenance, diagnostics

New functions have been added to the Altivar 71 drive to enable it to provide quick and simple maintenance, ultimately boosting productivity:

■ Response to faults or alarms

It is possible to use the alarm management or drive operation configuration functions to take corrective actions before stopping the machine.

■ Fault log and help

When a fault occurs, a help screen is available to quickly identify the cause of the fault.

When a fault occurs, values such as speed, current, thermal state and timer are saved and restored in the fault log.

The last 8 faults are stored.

■ IDENTIFICATION menu

The IDENTIFICATION menu can be used to display the relevant serial numbers and software versions, thereby helping to manage the equipment base. This information, also available with the PowerSuite software workshop, can be exported to other database-type software applications.

■ Test functions

The Altivar 71 drive includes the following test functions:

- Identifying any motor short-circuit before start-up
- Running, via the graphic display terminal or PowerSuite software workshop, automatic procedures during maintenance operations to test:
 - the motor
 - the drive power components

The test results are shown on the graphic display terminal or using the PowerSuite software workshop.

It is also possible to write and read messages in the drive using the graphic display terminal or the PowerSuite software workshop.

■ Oscilloscope function

The Altivar 71 drive has an oscilloscope function, which produces traces that can be viewed using the PowerSuite software workshop.

The PowerSuite software workshop can also be used to carry out remote diagnostics via modem.

Controlling the drive

■ Via the drive I/O

Control signals are transmitted via cable to the I/O. Functions are assigned to logic inputs, analog inputs, etc.

A logic input can be assigned to more than one function. This means that two functions can be controlled using a single signal, thereby limiting the number of inputs required.

The Altivar 71 drive I/O can be configured independently from each other. For instance,

- A time delay can be applied when it comes to reading the logic inputs, so as to avoid any bounce-back from certain switches.
- Transforming incoming signals on the analog inputs can help the drive fully adapt to the control devices and applications:
 - Minimum and maximum values for the input signal
 - Input filtering in order to eliminate unwanted interference from the signals received
 - Magnifying glass effect through delinearizing the input signal in order to increase the precision with small amplitude signals
 - "Pedestal" and "Deadband" functions for signals in order to prevent low speed operations which can have an adverse effect on the application
 - "Mid-point" function, which can be used from a unipolar input signal to obtain a bipolar output signal to control the speed and direction of rotation
- Transforming analog outputs which transfer information sent by the drive to other devices (display units, drives, PLCs, etc.):
 - voltage or current output signal
 - minimum and maximum values for the output signal
 - output signal filtering

Logic outputs can be delayed on activation and deactivation.

The output state can also be configured when the signal is active.

The frequency control signals are also transformed by the drive:

- signal frequency minimum and maximum values (30 kHz on the extended I/O card's RP input, 300 kHz maximum on the encoder interface card input).

■ Via the remote graphic display terminal

The rotation commands and references (torque, speed or PID) can be controlled via the graphic display terminal. Some application functions can also be assigned to the function keys F1, F2, F3 and F4 on the graphic display terminal. It is possible to manage a change in command and/or reference source (bumpless function) in different ways.

For example: two options are offered when switching from control via the terminals to control via the graphic display terminal:

- stop the Altivar 71 drive, or
- continue operation with a copy of the direction of rotation and reference

Controlling the drive (continued)

■ Via a communication network

□ I/O profile

The I/O profile, which is quick and easy to use, can be used to control the Altivar 71 drive via the communication network, in the same way as via the I/O terminals. When commands are sent via a network they are written in a command word. This word behaves like virtual terminals containing logic inputs. Application functions can be assigned to the bits of this word. More than one function can be assigned to the same bit.

The commands and references can come from different sources, such as the terminals, graphic display terminal or communication networks. Each source can be set or switched individually using logic inputs or command word bits.

The I/O profile is supported by all integrated communication ports (Modbus, CANopen machine bus), as well as by all the communication cards available (Modbus TCP, Fipio, PROFIBUS DP, etc.).

□ CiA 402 profile (“Device Profile Drives and Motion Control”)

This profile, from the CiA (CAN in Automation) organization, describes standard functions, parameters and operation for variable speed drives. This standard is an extension of the Drivecom profile. The Altivar 71 drive complies with the CiA 402 profile which supports the following 2 modes: separate and not separate.

Separate mode

The Start/Stop commands and references can come from different sources. E.g. the speed reference is transmitted by the Modbus TCP network and the Start/Stop commands by the logic signals wired on the terminals.

Each source can be set or switched individually using logic inputs or command word bits.

Not separate mode

The Start/Stop commands and references (speed, torque, PID, etc.) come from the same source (e.g. CANopen machine bus).

It is possible to replace this source by another one, using a logic input or command word bit.

The CiA 402 profile is supported by all integrated communication ports (Modbus, CANopen machine bus), as well as by all the communication cards available (Modbus TCP, Fipio, PROFIBUS DP, etc.).

□ CIP profile

The CIP profile is supported by the DeviceNet communication card.

Application functions

■ 2-wire control

This function is used to control the direction of operation by means of a stay-put contact.

It is enabled by means of 1 or 2 logic inputs (non-reversing or reversing).

This function is suitable for all non-reversing and reversing applications.

3 operating modes are possible:

- Detection of the state of the logic inputs
- Detection of a change in state of the logic inputs
- Detection of the state of the logic inputs with forward operation always having priority over reverse

Wiring diagram for 2-wire control

■ 3-wire control

This function is used to control the operating and stopping direction by means of pulsed contacts.

It is enabled by means of 2 or 3 logic inputs (non-reversing or reversing).

This function is suitable for all non-reversing and reversing applications.

Wiring diagram for 3-wire control

Example of 3-wire control operation

■ Phase rotation

This function can be used to reverse the direction of rotation without modifying the drive wiring.

■ Ramps

□ Acceleration and deceleration ramp times

This function is used to define acceleration and deceleration ramp times according to the application and the machine dynamics.

Linear acceleration ramp

Linear deceleration ramp

FrS: Nominal motor frequency

t1: Acceleration time

t2: Deceleration time

t1 and t2 can be set independently from 0.01 to 9999 s

(according to one of the following ramp increments: 0.01 s, 0.1 s or 1 s)

Factory setting: 3 s.

RDY	Term	+0.00Hz	0.0A
RAMP <input type="checkbox"/>			
Ramp shape	:	Linear	
Ramp increment	:	0.01	
Acceleration	:	3.92 s	
Deceleration	:	0.54 s	
Ramp 2 threshold	:	0.0 Hz	
Code		Quick	<input type="button" value="v"/>

Ramp settings

Acceleration and deceleration ramp profile

Used to gradually increase the output frequency starting from a speed reference, following a linear profile or a preset profile.

In the case of applications involving handling, packaging and passenger transport, the use of S ramps takes up mechanical play and eliminates jolts, and also limits “non-following” of speed during rapid transient operation of high-inertia machines. Selecting “linear”, “S”, “U” or customized profiles assigns both the acceleration and deceleration ramps.

S ramps

FrS: Nominal motor frequency
t1: Ramp time set
t2 = 0.6 x t1
The curve coefficient is fixed.

U ramps

FrS: Nominal motor frequency
t1: Ramp time set
t2 = 0.5 x t1
The curve coefficient is fixed.

Customized ramps

FrS: Nominal motor frequency
tA1: Adjustable between 0 and 100% (of ACC or AC2)
tA2: Adjustable between 0 and (100% - tA1) (of ACC or AC2)
tA3: Adjustable between 0 and 100% (of dEC or dE2)
tA4: Adjustable between 0 and (100% - tA3) (of dEC or dE2)
ACC: Acceleration ramp 1 time
AC2: Acceleration ramp 2 time
dEC: Deceleration ramp 1 time
dE2: Deceleration ramp 2 time

Example of switching using logic input LI4

Acceleration 1 (ACC) and deceleration 1 (dEC):
- Adjustment 0.01 to 9999 s
- Factory setting 3 s
Acceleration 2 (AC2) and deceleration 2 (dE2):
- Adjustment 0.01 to 9999 s
- Factory setting 5 s
HSP: High speed.

Ramp switching

This function is used to switch two acceleration and deceleration ramp times, which can be adjusted separately.

Ramp switching can be enabled by:

- a logic input
- a frequency threshold
- a combination of the logic input (or a command word bit) and the frequency threshold
- a command word bit

This function is suitable for:

- material handling with smooth starting and approach
- machines with fast steady state speed correction

Automatic adaptation of deceleration ramp

Used to automatically adapt the deceleration ramp if the initial setting is too low when the load inertia is taken into account. This function prevents the drive from locking in the event of an overbraking fault.

When this function is active and a short deceleration time has been set, the drive optimizes the motor power supply in order to achieve a high braking torque.

This function is suitable for all applications not requiring precise stopping and not using braking resistors.

Automatic adaption must be disabled for machines with a stop position on a ramp and using a braking resistor. This function is automatically disabled if the brake sequence is configured.

RDY	Term	+0.00Hz	0.0A
PRESET SPEEDS			<input type="checkbox"/>
2 preset speeds	:	LI3	
4 preset speeds	:	LI4	
8 preset speeds	:	LI5	
16 preset speeds	:	NO	
Preset speed 2	:	10.0 Hz	
Code	<<	>>	Quick <input type="checkbox"/>

Preset speed settings

■ Preset speeds

This can be used to switch preset speed references.

Choose between 2, 4, 8 or 16 preset speeds.

It is enabled by means of 1, 2, 3 or 4 logic inputs.

Preset speeds can be set in increments of 0.1 Hz, from 0 Hz to 500 Hz or 1000 Hz, depending on the rating.

This function is suitable for material handling and machines with several operating speeds.

Example of operation with 4 preset speeds and 2 logic inputs

■ Jog operation

This can be used for pulse operation with minimum ramp times (0.1 s), limited speed reference and minimum time between 2 pulses.

It is enabled by 1 logic input and pulses given by the operating direction command.

This function is suitable for machines with product insertion in manual mode (e.g. gradual movement of the mechanism during maintenance operations).

Example of jog operation

■ Limiting low speed operating time

The motor is stopped automatically after a period of operation at low speed (LSP) with a zero reference and a run command present.

This time can be set between 0.1 and 999.9 seconds (0 corresponds to an unlimited time). Factory setting 0 s. The motor restarts automatically on the ramp when the reference reappears or if the run command is interrupted and then re-established.

Function suitable for automatic Stops/Starts.

■ Motor control types

□ Flux vector control with sensor (FVC)

In current mode, this control type can be used to obtain the best static and dynamic torque performance.

□ Sensorless flux vector control

In voltage mode, this control type can be used with a single motor or motors connected in parallel.

In current mode, this profile performs better than the previous type, but it cannot supply power to motors connected in parallel.

□ 2-point vector control

The zone for operating at constant power can be optimized by defining an additional point in the control profile.

This function should be used with motors offering a two-part defluxing zone.

It can be used to limit the voltage at the motor terminals when the motor is being powered by a high line supply.

□ Voltage/frequency ratio

This control type is particularly suitable for special motors (high-speed motors, synchronized asynchronous motors, etc.). The ratio can be adjusted by 2 or 5 points and used to achieve output frequencies of up to 1000 Hz.

□ ENA system

This profile is reserved for unbalanced machines (presses, etc.). It can be used to reduce mechanical stress, power consumption and avoid the use of braking resistors.

□ Synchronous motor

This control type is exclusively reserved for controlling open loop synchronous permanent magnet motors with sinusoidal electromotive force (EMF).

■ Using an incremental encoder

The Altivar 71 drive uses encoder feedback to:

- Operate in FVC closed loop control mode. In addition to the torque performance and speed accuracy it provides, the speed feedback can also be used to manage overspeed and slipping protection.
- Improve the steady state speed accuracy and/or manage overspeed and slipping protection in the other control types (FVC open loop control mode and U/f ratio)
- Manage only overspeed and slipping protection

■ Encoder tests

The Altivar 71 drive can detect encoder signal loss, as well as a mechanical break in the coupling between encoder and motor.

■ Limiting motor overvoltage

The Altivar 71 drive inverter bridge control can be used to limit overvoltage in the motor terminals, which is double the voltage level in the DC bus (Stressless PWM). This function is useful in cases where long lengths of cabling, rewound motors or motors in a low isolation class are involved.

■ Auto tune

Auto-tuning can be performed:

- using a dialogue tool (graphical display terminal, PowerSuite software workshop, integrated 7-segment display terminal)
- via a communication network
- automatically every time the drive is switched on
- by enabling a logic input

Auto-tuning is used to optimize application performance.

In Flux Vector Control mode (FVC closed loop and FVC open loop with current control), certain parameters are measured periodically.

Saving the motor thermal state can help to compensate exactly for the motor resistors, even after the drive has been switched off.

■ Switching frequency, noise reduction

The switching frequency setting permits a reduction in the noise generated by the motor for any application requiring a low level of noise.

The switching frequency is modulated randomly in order to avoid resonance.

This function can be disabled if it causes instability.

High frequency switching of the intermediate DC voltage can be used to supply the motor with a current wave that has little harmonic distortion.

The switching frequency can be adjusted during operation to reduce the noise generated by the motor.

Value: 1 to 16 kHz; factory setting 2.5 or 4 kHz, depending on the rating.

■ Motor fluxing

This can be used to obtain rapid high torque on start-up; magnetic flux needs to be already established in the motor.

There is a choice between open loop or closed loop operation.

In continuous mode, the drive automatically establishes the flux when it is powered up.

In non-continuous mode:

- If a logic input or command word bit is assigned to the motor fluxing command, flux is established when the command is confirmed.
- If neither a logic input nor a command word bit has been assigned, or if the latter are not active when a run command is given, fluxing occurs when the motor starts.

Fluxing is accelerated if a current higher than the nominal motor current is applied, then it is set to the value of the motor magnetizing current.

Open loop vertical movement

- bEn: Brake engage frequency
- bEt: Brake engage time
- blr: Initialization of ramp once the "brake release" time (brt) has expired
- brt: Brake release time
- lbr: Brake release current
- JdC: Reverse jump
- tbE: Brake engage time
- ttr: Restart time

Note: In open loop mode, feedback from an incremental encoder can be connected to the drive in order to directly detect overspeed and slipping.

■ Brake control

This can be used to manage control of an electromagnetic brake in synchronization with starting and stopping the motor to avoid jolts and load slipping. The brake control sequence is managed by the drive.

□ Movement type

The Altivar 71 drive adapts the brake control operation to the type of movement, whether vertical or horizontal, in order to achieve maximum torque performance and eliminate jolts.

□ Brake feedback via contact

By connecting a brake contact to the drive, it is possible to detect brake faults. If the brake status does not match the relevant control (the contact must be open for a released brake), the drive locks when a fault occurs.

□ Brake release pulse

This can be used to set the torque for brake release when ascending (forward) or two release thresholds (one for ascending and the other for descending).

This function is only available for vertical movements.

□ Brake engage on reversal of operating direction

To prevent the speed from passing through zero when reversing the direction of rotation, the drive firstly requires the brake to be engaged at the end of deceleration and then for it to be released before accelerating in the other direction of rotation.

□ Brake engage request time delay

In the case of slewing movements, this function can be used, at the end of deceleration, to control how the brake is engaged when the torsional stress being exerted on the machine structure is zero.

□ Automatic DC injection

In the case of a horizontal movement, the DC injection at the end of deceleration can be used to prevent jolting when the brake is being engaged.

This function is only available for horizontal movements.

■ Limit switch management

This can be used to manage the operation of one or two limit switches (with 1 or 2 operating directions).

Each limit (forward, reverse) is associated with a logic input. The type of stop that occurs on detection of a limit can be configured as a stop on ramp, freewheel or fast stop.

Following a stop, the motor can restart in the opposite direction only.

■ Slack sling

This is used to adapt the motor speed to the load depending on the minimum configured torque, either in speed reference mode or in current limiting mode.

A logic output can be assigned to this function to indicate the load value in relation to the configured torque value.

■ High-speed hoisting

This can be used to optimize cycle times for hoisting movements when the load is zero or small.

It allows operation at constant power (motor defluxing beyond the nominal motor frequency) in order to achieve a higher speed than the nominal speed, without exceeding the nominal motor current and thereby preventing the motor from overheating.

There are 2 possible operating modes:

- Speed reference mode: The maximum permitted speed is calculated by the drive at an imposed speed step so that the drive can measure the load.

Speed reference mode

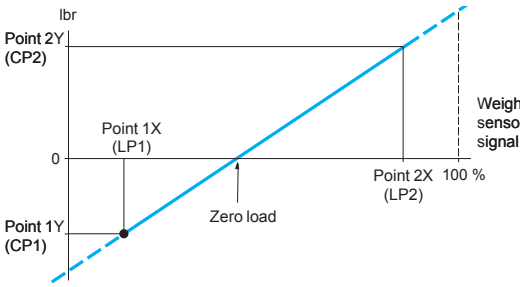

FrS: Nominal motor frequency
 HSP: High speed parameter
 OSP: Adjustable speed step for load measurement
 tOS: Load measuring time
 Two parameters can be used to reduce the speed calculated by the drive, for ascending and descending.

- Current limiting mode: The maximum permitted speed is the speed at which the current is limited in the motor quadrant, ascending only. For descending, operation is always based on speed reference mode.

Current limiting mode

CLO: Current limitation for high speed-function
 FrS: Nominal motor frequency
 HSP: High speed parameter
 SCL: Adjustable speed threshold above which current limitation is active

CP1, CP2, LP1, LP2: weight sensor calibration points

This curve can represent a weight sensor on a lift winch, where a zero load is exerted on the motor when the load in the cabin is not zero.

LbC: Load correction (Hz)

Load sharing

■ **External weight measurement**

This function uses the information supplied by a weight sensor via an analog input (usually a 4-20 mA signal) to adapt the current (I_{br}) of the Brake logic control function.

Function suitable for applications involved in:

- measuring the total weight of a hoisting winch and its load
- measuring the total weight of a lift winch, the cabin and counterweight.

The current (I_{br}) is adapted according to the curve opposite.

■ **Load sharing**

This function can be used for applications where several motors are mechanically linked in order to balance the loads of the different motors by adjusting the speed according to the torque on each motor.

■ **Output contactor control and integrity check**

□ **Control**

This allows the drive to control a contactor located between the drive and the motor. The request to close the contactor is made when a run command appears. The request to open the contactor is made when there is no current in the motor.

Note: If a DC injection braking function has been configured it should not be left operating too long in stop mode, as the contactor only opens at the end of braking.

□ **Integrity check**

This check is carried out by connecting a volt-free contact on each contactor to one of the drive's logic inputs.

The corresponding logic input should be at 1 when there is no run command and at 0 during operation.

When there is any inconsistency, the drive locks in fault mode if the output contactor does not close ($Lx = 1$) or gets stuck ($Lx = 0$). The time delay for when the drive locks in fault mode can be adjusted.

These sequences are commonly used in lift applications.

In order to increase the safety level and reduce the amount of maintenance work, it is recommended that the Altivar 71 drive's integrated "Power Removal" safety function is used.

■ **Stop on thermal alarm**

This can be used to:

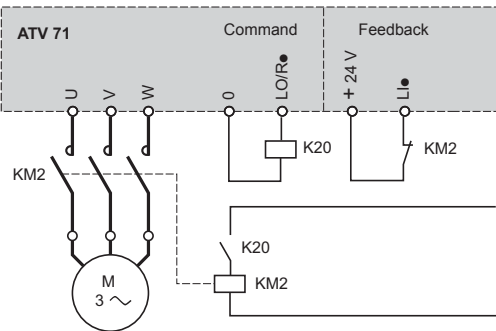

- Allow a movement to end before examining a thermal fault. There are two adjustable thresholds used to define the thermal state level which, when exceeded, makes a machine stop.
- Prevent a new run command from being accepted as long as the drive and motor temperatures are not less than 100%.

Function suitable for lift applications: it can prevent people getting trapped if a lift gets stuck between two floors.

■ **Evacuation following power failure**

This can be used to control the reduced speed engine with a reduced voltage supply (220 V \sim , for example: uninterruptible power supply (UPS)), by preserving torque performance.

Function suitable for lift applications: When there is a power failure, it facilitates the evacuation of people trapped in a lift stuck between two floors.

Output contactor control and integrity check

+/- speed function settings

■ Uncontrolled output cut

It is possible to configure output phase loss protection, which will allow the drive or motor circuit to be broken without the drive becoming locked in fault mode and facilitate a smooth restart after the motor has been reconnected. The output phase loss may also lock the drive, depending on the configuration.

■ +/- speed

Used to increase or decrease a speed reference by means of 1 or 2 logic inputs, with or without the last reference being saved (motorized potentiometer function). This function is suitable for centralized control of a machine with several sections operating in one direction or for control by a handling crane pendant control station with two operating directions.

Two types of operation are available:

- Use of single action buttons: 2 logic inputs are required in addition to the operating direction(s).
- Use of double action buttons: only 1 logic input assigned to + speed is required.

Use of single action buttons: 2 logic inputs are required in addition to the operating direction(s).

PV : low speed, HSP: high speed
Example of "+/- speed" with 2 logic inputs, single action buttons and reference saving

Use of double action buttons: only 1 logic input assigned to + speed is required.

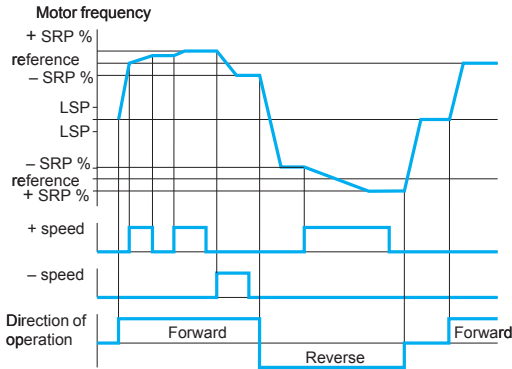

Logic inputs:

	Released (- speed)	1 st press (speed maintained)	2 nd press (+ speed)
Forward button	-	a	a and b
Reverse button	-	c	c and d

PV : low speed, HSP: high speed
Example with double action buttons and 1 logic input
Note: This type of +/- speed control is incompatible with 3-wire control.

Example of +/- speed around a 2-wire control reference

Reference saving

This function is associated with “+/- speed” control.

This can be used for reading and saving the last speed reference prior to the loss of the run command or line supply. The saved reference is applied the next time a run command is received.

+/- speed around a reference

The reference is given by Fr1 or Fr1b, including, if relevant, the summing, subtraction and multiplication functions, as well as the preset speeds.

During the run command the drive goes to the reference, following the acceleration and deceleration ramps (pressing +/- speed makes the speed vary around this reference according to acceleration ramp 2 and deceleration ramp 2).

+ or – speed variation around the reference is limited to a percentage of the reference (SRP parameter). When operation has stopped, the amended reference is not saved.

The maximum total reference is always limited by high speed (HSP parameter) and the minimum reference (LSP parameter).

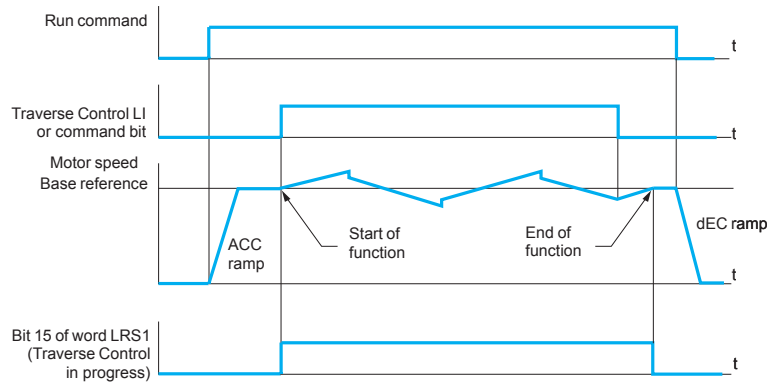

Spooling

Traverse control

Function for winding reels of thread (in textile applications)

The cam rotation speed must follow a precise profile to ensure a steady, compact, linear reel is obtained.

A function can also be used to reduce the base reference as the reel gets larger.

□ Counter Wobble

The Counter Wobble function is used in certain applications to obtain a constant thread tension when the Traverse Control function is producing considerable variations in speed on the thread guide motor.

The master drive controls the speed of the thread guide, while the slave drive controls the winding speed. The function assigns the slave a speed profile, which is in antiphase to that of the master. This means that synchronization is required, using one of the master's logic outputs and one of the slave's logic inputs.

■ Automatic catching of a spinning load with speed detection (“catch on the fly”)

This function is used to restart the motor smoothly after one of the following events, provided the run command is still present:

- loss of line supply or power off
- fault reset or automatic restart
- freewheel stop

On disappearance of the event, the effective speed of the motor is detected in order to restart on a ramp at this speed and return to the reference speed. The speed detection time can reach 0.5 s.

This function is automatically disabled if the brake sequence is configured.

This function is suitable for machines for which the motor speed loss is negligible during a power failure (high-inertia machines such as centrifuges, etc.).

■ Undervoltage management

Depending on the application, it is possible to configure the Altivar 71's response to undervoltages or power failures.

If undervoltage occurs:

- The Altivar 71 drive can continue operating with undervoltage levels up to -50% (adjustable threshold)
- If the drive locks as a result, management of the fault relay can be configured (open or not). If the fault relay does not open an alarm is shown.

The Altivar 71 drive can also be configured to prevent the drive locking (using an alarm):

- Controlled stop according to the type of stop configured
- Deceleration based on a ramp which it automatically adapts to maintain the DC bus voltage, thereby preventing the drive from locking in fault mode
- Instant IGBT (inverter bridge) loss followed by power supplied to the motor as soon as the line voltage has reappeared. This function can be used to prevent the Altivar 71 drive being reinitialized.

■ Braking balance

When several drives are connected on a common DC bus, this function can be used to adjust the braking thresholds in order to balance the braking powers between the various drives or braking units.

■ Braking resistor thermal protection

The Altivar 71 drive incorporates thermal protection for the braking resistor if it is not equipped with a thermal switch. If the resistor thermal state is too high an alarm can be assigned to the logic output or the drive may lock in fault mode, depending on how the function is programmed.

■ Parameter set switching (multi-parameter)

This can be used to switch 3 sets of 15 parameters maximum when the motor is running.

Each set can contain a different value for each of the parameters.

The sets are switched using 1 or 2 logic inputs or command word bits.

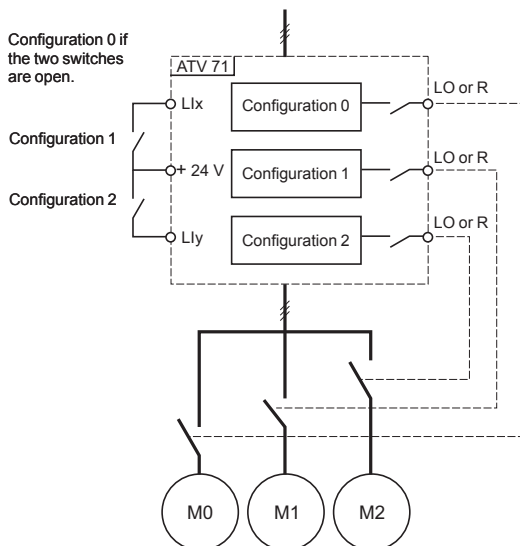

Function suitable for machines involving 2 or 3 manufacturing processes.

■ Motor or configuration switching (multi-motor or multi-configuration)

The Altivar 71 drive can have 3 configurations, which can be activated remotely, allowing it to adapt to:

- 2 or 3 different motors or mechanisms in multi-motor mode. In this instance, the thermal state for all the motors is calculated and saved. This means that each motor is protected thermally.
 - 2 or 3 configurations for the same motor in multi-configuration mode. This function can also be used to save the current configuration in another memory zone, from which it can be retrieved.
- Switching is carried out using 1 or 2 logic inputs, depending on the number of motors or configurations chosen (2 or 3).

Multi-motor and multi-configuration modes cannot be used together.

Schematic diagram for multi-motor mode

Example 1: limit switch positioning

Slowdown and stopping occur when the sensor changes state (open contact). It is possible to assign a command word bit or a logic input to disable the function in order to be able restart or not stop on the position.

Example 2: positioning on a target zone

The disable contact can be used to restart in order to get past the target.

■ **Positioning on limit switches or position sensors**

This can be used to manage positioning based on limit switches or position sensors.

Activating the slowdown contact or stop contact allows the device to start in the other direction, even at high speed.

Slowdown mode can be configured:

- The drive uses the validated ramp time
- The drive calculates a ramp time according to the actual speed when the request to slow down is made. This calculation can be used to optimize the cycle time by limiting the time spent operating at low speed.

The stop type can also be configured:

- stop on ramp
- freewheel stop
- fast stop

■ **Short and long cam operation**

□ **Short cams**

In this instance, when operating for the first time or after restoring the factory settings, the drive must initially be started outside the slowdown and stop zones in order to initialize the function.

□ **Long cams**

In this instance, there is no restriction, which means that the function is initialized across the whole trajectory.

Example of reference switching

■ Reference switching

Switching between two references (speed, torque, PID, etc.) can be enabled by:

- a logic input
- a command word bit

Reference 1 (Fr1) is active if the logic input (or command word bit) is at 0; reference 2 (Fr1b) is active if the logic input (or command word bit) is at 1. References can be switched with the motor running.

Reference Fr1b, like Fr1, can originate from:

- an analog input (AI)
- a frequency control input (RP)
- the graphic display terminal
- the Modbus serial link or the CANopen machine bus
- a communication card
- the Controller Inside programmable card

■ Operations on references (summing, subtraction, multiplication)

Summing, subtraction and multiplication inputs can be activated simultaneously.

The drive reference is thus:

- reference of drive A = $(Fr1 \text{ or } Fr1b + SA2 + SA3 - dA2 - dA3) \times MA2 \times MA3$

Summing inputs

These can be used to add 2 to 3 references from different sources to Fr1 or Fr1b (see "Reference switching").

The references to be added together are selected from all the possible types of reference.

For example:

- Reference Fr1 or Fr1b from AI1
- Reference SA2 from CANopen
- Reference SA3 from a communication card
- Reference of drive A = $Fr1 \text{ or } Fr1b + SA2 + SA3$.

Subtraction inputs

These can be used to subtract 2 to 3 references from different sources from Fr1 or Fr1b (see "Reference switching").

The references to be subtracted are selected from all the possible types of reference.

For example:

- Reference Fr1 or Fr1b from AI1
- Reference dA2 from CANopen
- Reference dA3 from a communication card
- Reference of drive A = $Fr1 \text{ or } Fr1b - dA2 - dA3$.

Multiplication inputs

These can be used to multiply 2 to 3 references from different sources by Fr1 or Fr1b (see "Reference switching").

The references to be multiplied are selected from all the possible types of reference.

For example:

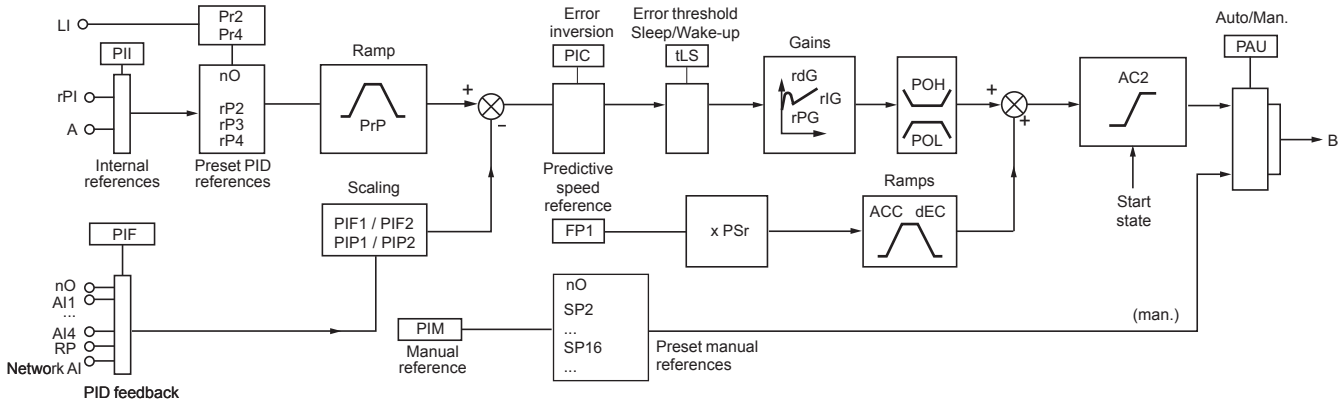

- Reference Fr1 or Fr1b from AI1
- Reference MA2 from CANopen
- Reference MA3 from a communication card
- Reference of drive A = $Fr1 \text{ or } Fr1b \times MA2 \times MA3$.

A: drive reference
SA2, SA3: summed inputs
dA2, dA3: subtraction inputs
MA2, MA3: multiplication inputs.

■ PID regulator

This can be used to regulate a process with a reference and feedback given by a sensor.
Function suitable for controlling traction on a winder.

ACC: Acceleration, DEC: Deceleration, LI: Logic inputs, B: Speed reference

□ Internal references

- rPI: reference transmitted by the graphic display terminal or a communication network.
 - A: reference given by Fr1 or Fr1b with the summing, subtraction and multiplication functions, as appropriate.
- The "PII" parameter is used to choose between these two references.

□ Preset PID references

2 or 4 PID references are available. Table showing combinations of selected PID references:

Llx (Pr4)	Lly (Pr2)	Reference
0	0	rPI or A
0	1	rP2
1	0	rP3
1	1	rP4

□ PID feedback

PID feedback can be assigned to one of the analog inputs (AI1 to AI4), the frequency control input (RP) or the encoder, depending on the option cards present. It can also be transmitted by a communication network (AI network).

□ Predictive speed reference

This reference can come from the terminals (analog inputs, encoders, etc.), the graphic display terminal or a communication network.
This speed input gives an initial reference for starting.

□ Auto/Man.

This can be used to switch from speed regulation mode (Man.) to PID regulation mode (Auto). A logic input or command word bit is used for switching.

Speed regulation mode (Man.)

The manual reference is transmitted via the terminals (analog inputs, encoder, preset speeds, etc.).
With manual switching, the speed reference changes according to the ACC and dEC ramp times.

PID regulation mode (Auto)

In automatic mode it is possible to:

- adapt the references and feedback to the process (transformation)
- correct a PID inversion
- adjust the proportional, integral and derivative gains (Kp, Ki and Kd)
- shunt the integral
- use the "alarm" on the logic output or display it on the graphic display terminal, if the threshold is exceeded (Max. feedback, Min. feedback and PID error)
- display the PID reference, PID feedback, PID error and PID output on the graphic display terminal and assign them to an analog output
- apply a ramp (time = PrP) to the PID reference

The motor speed is limited to between LSP and HSP. It is displayed as process values.

■ Torque control

This supports torque control or speed regulation mode.

These two types of mode can be switched using a logic input or command word bit.

Function suitable for applications requiring traction control.

The torque reference is signed and has its own ramp. A torque ratio can be used to scale the reference. It can be transmitted via an analog input, frequency control input (RP input or encoder) or communication network.

The torque sign and value can be output to a logic output and an analog output.

In torque control mode the speed may vary within an adjustable dead band. When it has reached the lower or upper limit, the drive automatically switches to speed regulation mode (fallback position).

The regulated torque is no longer maintained, in which case two scenarios can occur:

- The speed falls within the dead band; the torque takes the required value.
- The torque does not return to the required value at the end of an adjustable time; the drive switches to fault or alarm mode, depending on the configuration.

The stop in torque control mode can be configured:

- automatic switch to speed regulation mode
- freewheel stop
- stop at zero torque but still maintaining the flux in the motor for an adjustable period of time.

■ Torque limit

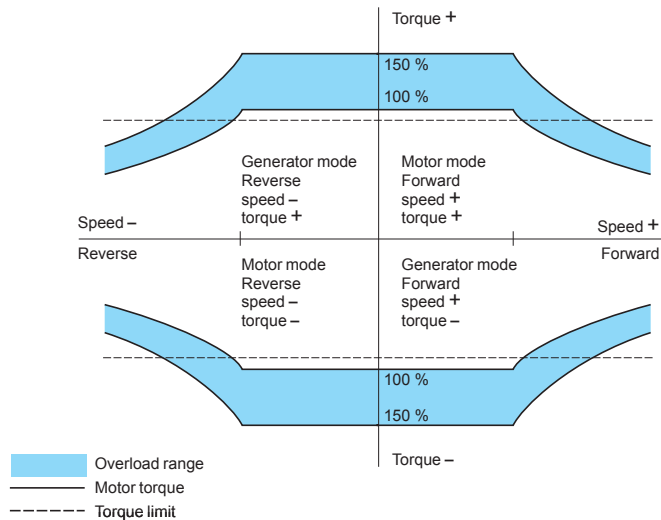

This can be used to limit the torque in the motor and generator quadrants using separate settings.

There are two types of torque limit:

- one with a value set by a parameter
- the other with a value given by an analog input, frequency control input or encoder.

When both torque limit types are enabled it is the lowest value which is read. They can be switched using a logic input or command word bit.

This function is not available for voltage/frequency ratio.

The torque limit operates in both directions of rotation in motor or generator mode.

■ Torque or current limit detection

This function can be used to detect when the current or torque limit has been reached. Depending on the configuration, it is possible to:

- use an alarm to signal this
- lock the drive after an adjustable period of time.

■ Current limit

A 2nd current limit can be configured between 0 and 1.65 times the drive nominal current and it can be used to limit the rise in motor temperature and the torque. Switching between the two current limits can be enabled via:

- a logic input
- a command word bit

RDY	Term	+0.00Hz	0.0A

Type of stop :		Ramp stop	
Freewheel assign. :		NO	
Fast stop assign. :		LI4	
Ramp divider :		0	
DC inject. assign. :		NO	
Code		Quick	<input type="button" value="v"/>

Configuring stop types

■ Reference saving

This can be used to:

- Read and save a speed reference level on the reference input using a command lasting longer than 0.1 s on a logic input
- Control the speed of several drives alternately via a single analog reference and a logic input for each drive
- Enable a line reference (serial link) on several drives via a logic input in order to synchronize movements by eliminating variations when the reference is sent. The reference is acquired 100 ms after the rising edge of the request. A new reference is not then acquired until a new request is made.

■ Stop types

Freewheel stop

This stops the motor by resistive torque if the motor power supply is cut.

A freewheel stop is achieved:

- by configuring a normal stop command as a freewheel stop (on disappearance of a run command or appearance of a stop command)
- by enabling a logic input
- by activating a command word bit

Fast stop

This can be used to achieve a braked stop with an acceptable deceleration ramp time (divided by an adjustable coefficient from 0 to 10) for the drive/motor unit to avoid locking in the event of an overbraking fault. If the coefficient is equal to 0 the motor decelerates as fast as possible.

Used for conveyors with emergency stop electrical braking.

A fast stop is achieved:

- by configuring a normal stop as a fast stop (on disappearance of a run command or appearance of a stop command)
- by enabling a logic input
- by activating a command word bit

Fastest possible stop

If the ramp divider coefficient is equal to 0 the motor decelerates as fast as possible.

DC injection stop

This can be used to brake high-inertia machines at low speed or maintain torque on stopping.

A DC injection stop is achieved:

- by configuring a normal stop as a DC injection stop (on disappearance of a run command or appearance of a stop command)
- by enabling a logic input
- by activating a command word bit

The DC value and the standstill braking time are adjustable.

■ Motor thermal protection

Motor thermal protection is provided by the drive:

- directly, through PTC probes located in the motor windings
- indirectly, via the integrated thermal relay. Indirect thermal protection is implemented via continuous calculation of its theoretical temperature rise.

The microprocessor calculates the theoretical temperature rise of the motor based on various elements:

- the operating frequency
- the current taken by the motor
- the operating time
- the maximum ambient temperature around the motor (40°C)
- the type of motor ventilation (self-cooled or force-cooled)

Thermal protection can be adjusted from 0.2 to 1.5 times the nominal drive current. It must be adjusted to the nominal current indicated on the motor rating plate.

Note: The motor thermal state memory returns to zero when the drive control section is switched off.

Motor thermal protection curves

- Self-cooled motors:
The tripping curves vary with the motor frequency.
- Force-cooled motors:
Only the 50 Hz tripping curve should be considered, whatever the motor frequency.

■ Drive thermal protection

The drive thermal protection is provided by a PTC probe mounted on the heatsink or integrated in the power module.

■ IGBT thermal protection

The drive manages the switching frequency intelligently according to the IGBT temperature.

If the drive's current rating is exceeded (e.g.: current higher than the nominal drive current for a zero stator frequency), an alarm is displayed and a timer increases for as long the alarm is present.

Configuration of the drive's fault response

■ Configuring the drive's fault response (fault management)

Different responses can be configured for the drive in the event of a resettable fault occurring:

- freewheel stop
- drive switches to the fallback speed
- drive maintains the speed at which it was operating when the fault occurred until the fault disappears
- stop on ramp
- fast stop
- DC injection stop
- no stop (alarm activated)

List of resettable faults:

- external fault
- speed feedback loss
- overspeed
- slipping
- output phase loss
- auto-tuning fault
- brake contactor feedback fault
- encoder coupling
- loss of 4-20mA
- PTC probe
- drive overheating
- motor overload if the thermal state is less than 100%
- line overvoltage
- overbraking
- current/torque limit
- IGBT overheating
- communication faults (Modbus, CANopen machine bus and other communication networks).

■ Resetting resettable faults

This can be used to remove the last fault using a logic input, command word bit or the STOP/RESET key on the graphic display terminal.

The restart conditions after a reset to zero are the same as those of a normal power-up.

List of resettable faults, see "Configuring the drive's fault response".

Line supply undervoltage and input phase loss faults are reset automatically when the line supply is restored.

Function suitable for applications where drives are difficult to access, such as when a drive is placed on a moving part.

■ General reset (disables all faults)

This function inhibits all faults, including thermal protection (forced operation), which can destroy the drive.

This function is suitable for applications where restarting may be crucial (conveyor in an oven, smoke extraction system, machines with solidifying products that need to be removed).

The function is enabled by a logic input.

Fault monitoring is active if the logic input is at state 1.

All faults are reset on a change of state \uparrow the logic input.

Note: Use of this function invalidates the guarantee.

■ Automatic restart

This function enables the drive to be restarted automatically after it has locked in fault mode, provided the relevant fault has disappeared and the other operating conditions permit a restart.

This restart is performed by a series of automatic attempts separated by increasingly longer waiting periods of 1 s, 5 s, 10 s then 1 minute for the rest.

The options for the restart process's duration are 5, 10 and 30 min., 1, 2, 3 hours and an unlimited time.

If the drive has not restarted after the configured time, it will lock and the procedure is abandoned until it has been powered off and on again.

The faults which permit this type of restart are:

- line overvoltage
- motor thermal overload
- drive thermal overload
- DC bus overvoltage
- line phase failure
- external fault
- loss of 4-20mA
- PTC probe
- serial link
- current or torque limit
- output phase loss
- line voltage too low. For this fault, the function is always active, even if it is not configured.
- fault caused by CANopen machine bus, Modbus serial link or other communication networks. These faults are reset automatically as soon as the command word or frequency reference is sent to the drive.

For these types of fault, the relay configured as a fault relay remains activated if the function is configured. The speed reference and direction of operation must be maintained for this function.

This function is suitable for machines or installations which are in continuous operation or are not monitored, and where a restart will not endanger equipment or personnel in any way.

■ PTC probe protection

The probes can be connected directly to the drive control card or to the I/O option cards.

The way in which a temperature fault is recorded by the drive can be configured:

- permanent record
- only recorded when the drive's power section is switched on
- only recorded when the motor is running

■ IGBT testing

When enabled, this function tests every IGBT and the motor connections in order to detect a short-circuit or an open circuit. This test is run every time the drive is powered on and before each motor start.

This function must not be enabled with machines with fast cycles in order to preserve the time for recording run commands.

■ Resetting operating time to zero

The drive operating and power-up time can be reset.

■ External fault

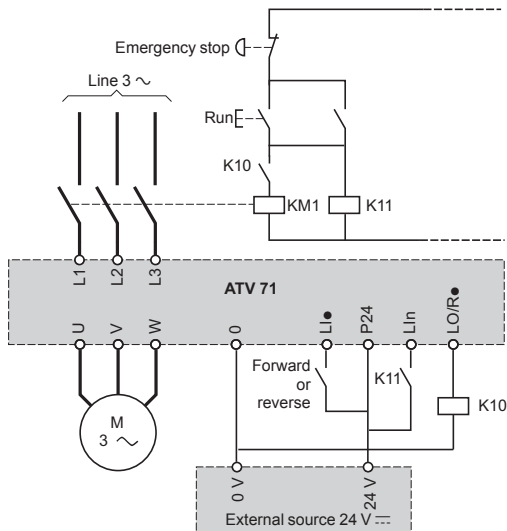

This function can lead to the drive locking if a fault occurs in the machine.

This fault is flagged on the drive display unit. The fault is flagged if the signal is at 1 or 0, according to the function configuration.

■ Line contactor control

This can be used on each run command to close the line contactor and open it when the motor is no longer on. The drive control section must be powered without fail by an external 24 V $\overline{\text{DC}}$ source.

This function must be used for simple sequences with a low number of Start/Stop operations (Start/Stop cycle longer than 60 seconds).

After a run command, if the line contactor is not closed the drive will lock after an adjustable period of time.

■ Forced local mode

Forced local mode imposes control via the terminals or graphic display terminal and disables all other control modes.

Switching to forced local mode may be activated via:

- a logic input
- a function key on the graphic display terminal

The following references and commands are available for forced local mode:

- references AI1, AI2, etc. and command via logic inputs
- reference and command via the graphic display terminal

Function compatibility table

■ Configurable I/O

Functions which are not listed in this table are fully compatible.

Stop functions have priority over run commands.

The selection of functions is limited:

- By the number of drive I/O which can be reassigned: if necessary, add an I/O extension card
- By the incompatibility of certain functions with one another

Functions	Operation on the references	+/- speed (3)	Management of limit switches	Preset speeds	PID regulator	Traverse control	Jog operation	Brake control

PowerSuite screen on PC

Presentation

The PowerSuite software workshop for PC is a user-friendly tool designed for setting up control devices for the following Telemecanique brand motors:

- TeSys U starter-controllers
- TeSys T motor management systems
- Altistart soft start/soft stop units
- Altivar variable speed drives
- Lexium 05 servo drives

It includes various functions designed for setup phases such as:

- Preparing configurations
- Start-up
- Maintenance

To facilitate start-up and maintenance, the PowerSuite software workshop is compatible with the Bluetooth® wireless link.

Functions (1)

Preparing configurations

The PowerSuite software workshop can be used on its own to generate the device configuration, which can be saved, printed and exported to office automation software.

The PowerSuite software workshop can also be used to convert an Altivar 58 or Altivar 58F drive configuration into one that is compatible with an Altivar 71.

Start-up

When the PC is connected to the device, the PowerSuite software workshop can be used to:

- Transfer the generated configuration
- Adjust
- Monitor. This option has been enhanced with new functions such as:
 - The oscilloscope
 - The high-speed oscilloscope (minimum time base: 2 ms)
 - The FFT (*Fast Fourier Transform*) oscilloscope
 - Display of communication parameters
- Control
- Save the final configuration

Maintenance

To facilitate maintenance operations, the PowerSuite software workshop can be used to:

- Compare the configuration of a device currently being used with a saved configuration
- Manage the user's installed equipment base, in particular:
 - Organize the installed base into folders (electrical equipment, machinery, workshops, etc.)
 - Store maintenance messages
 - Facilitate Modbus TCP connection by storing the IP address

User interface

The PowerSuite software workshop can be used to:

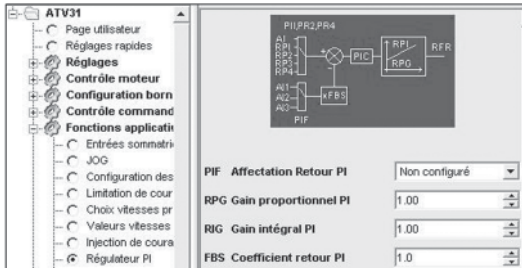

- Present the device parameters (arranged by function) in the form of illustrated views of diagrams or simple tables
- Customize the parameter names
- Create:
 - A user menu (choice of particular parameters)
 - Monitoring control panels with graphic elements (cursors, gauges, bar charts)
- Perform sort operations on the parameters
- Display text in five languages (English, French, German, Italian and Spanish). The language changes immediately and there is no need to restart the program.

It also features online contextual help:

- On the PowerSuite tool
- On the device functions by direct access to the user manuals

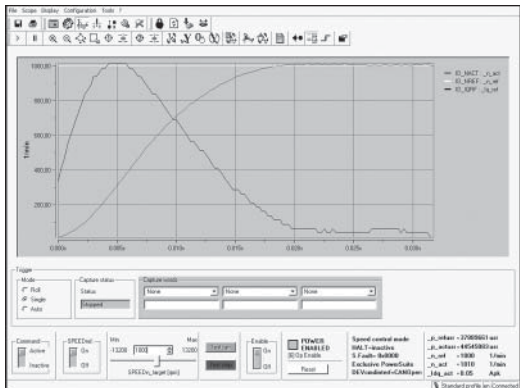

(1) Certain functions are not available for all devices. See the table of available functions, page 303.

Connections (1)

Modbus serial link

The PowerSuite software workshop can be connected directly to the device terminal port or Modbus network port via the serial port on the PC.

Two types of connection are possible:

- With a single device (point-to-point connection), use a VW3 A8 106 PC serial port connection kit.
- With a number of devices (multidrop connection), use the XGS Z24 interface.

Modbus TCP communication network

The PowerSuite software workshop can be connected to a Modbus TCP network. In this case, the devices can be accessed:

- Using a VW3 A3 310 communication card for the Altivar 61 and 71 drives
- Using a TSX ETG 100 Modbus TCP/Modbus gateway

Bluetooth® wireless link

The PowerSuite software workshop can communicate via a Bluetooth® radio link if the device is equipped with a Bluetooth® Modbus VW3 A8 114. The adapter plugs into the device connector terminal port or Modbus network port and has a range of 10 m (class 2).

If the PC does not feature Bluetooth® technology, use the VW3 A8 115 USB - Bluetooth® adapter.

Remote maintenance

A simple Modbus TCP connection is all that is required for the PowerSuite software workshop to support remote monitoring and diagnostics. When devices are not connected to the Modbus TCP network, or it is not directly accessible, various remote transmission solutions may be used instead (modem, teleprocessing gateway, etc.). Please consult your Regional Sales Office.

(1) Please refer to the compatibility table on page 305.

(2) Please refer to our specialist "Automation platform Modicon Premium and Unity - PL7 software" and "Automation platform Modicon TSX Micro - PL7 software" catalogues.

Compatible software versions
 Incompatible software versions

Hardware and software environments

The PowerSuite software workshop can operate in the following PC environments and configurations:

- Microsoft Windows® XP SP1, SP2,
- Pentium III, 800 MHz, hard disk with 300 MB available, 128 MB RAM
- SVGA or higher definition monitor

(1) Minimum software version

(2) TeSys U starter-controller without communication module or with Modbus LUL C031, C032 or C033 communication module

Starters, drives and communication

Modbus TCP network

Transparent Ready concept

Presentation

Introduced by Schneider Electric, the Transparent Ready concept enables transparent communication between control system devices, production and management. Network technologies and the associated new services are used to share and distribute data between sensors, PLCs, workstations and third-party devices in an increasingly efficient manner.

Web servers embedded in the network components and control system devices can be used to:

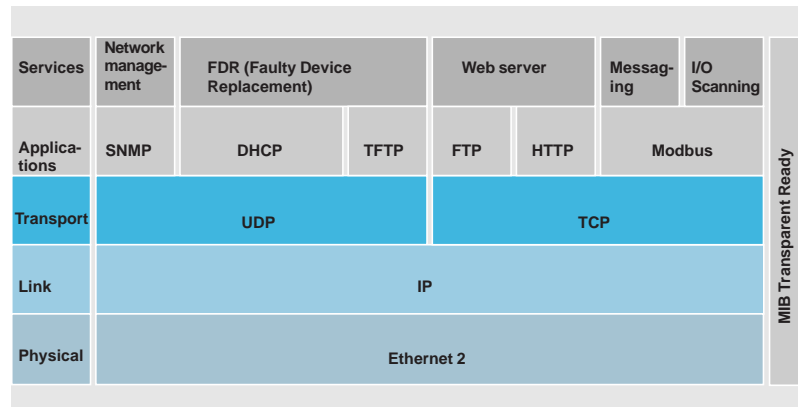

- Access configuration data transparently
- Perform remote diagnostics
- Incorporate simple human/machine interface functions

This concept is based on the Modbus TCP industrial standard which proposes a single network that meets most communication requirements from sensors/actuators through to production management systems.

Where a variety of communication systems are usually required, Transparent Ready standard technologies can result in significant cost savings in the areas of definition, installation, maintenance or training.

Transparent Ready is based on:

- Modbus TCP-based services meeting control system requirements in terms of functions, performance and quality of services
- Products including several ranges of PLC, distributed I/O, industrial terminals, variable speed drives, gateways and an increasing number of partner products
- The ConneXium range of cabling accessories: hubs, switches, cables adapted to the environment and to the requirements of industrial conditions.

Services supported by Altivar 61 and Altivar 71 drives

The Altistart 48 soft start/soft stop unit and the Altivar 31 variable speed drive are connected to the Modbus TCP network using a gateway TSX ETG 100 Ethernet/Modbus.

Altivar 61 and Altivar 71 variable speed drives are connected to the Modbus TCP network using a VW3 A3 310 communication card.

This card comes with a basic web server, which users can adapt completely according to the application (Java or FactoryCast development tool).

Characteristics		
Structure	Topology	Industrial local area network conforming to ANSI/IEEE 802.3 (4th edition 1993-07-08) Star network
	Transmission mode	Manchester baseband. Half-duplex or full-duplex
	Data rate	10/100 Mbps with automatic recognition
	Medium	STP double shielded twisted pair, impedance 100 W ± 15 W for 10 BASE-T or category 5 Ethernet cable, conforming to standard TIA/EIA-568A
	Length of network	100 m maximum between hub or switch and a station
Type of device	ATS 48, ATV 31	ATV 61, ATV 71
Type of interface	TSX ETG 100	VW3 A3 310
Universal services	SNMP	HTTP, BOOTP, DHCP, FTP, TFTP, SNMP
Transparent Ready services	Modbus Messaging	Modbus messaging, IO Scanning, FDR

Universal services

HTTP

HTTP, "Hypertext Transfer Protocol" (RFC 1945), is a protocol used to transmit web pages between a server and a browser. HTTP has been used on the Web since 1990.

Web servers embedded in control system devices are at the heart of the Transparent Ready concept and provide easy access to devices anywhere in the world using a standard web browser such as Internet Explorer or Netscape Navigator.

BOOTP/DHCP

BOOTP/DHCP (RFC 1531) is used to supply (client) devices automatically with IP addresses and parameters. This avoids having to manage the addresses of each device individually by transferring their management to a server.

BOOTP identifies the client device by its Ethernet MAC address. This address is unique to each device and must be entered in the server each time the device is changed.

DHCP "Dynamic Host Configuration Protocol" identifies the client device by a name in plain language ("Device Name") which is maintained throughout the application: e.g. "Conveyor 23".

Altivar 61 and Altivar 71 drives can be given a name ("Device Name") by the terminal or the PowerSuite software workshop.

The FDR ("Faulty Device Replacement") service uses the standard DHCP and TFTP protocols.

FTP/TFTP

FTP, "File Transfer Protocol" (RFCs 959, 2228 and 2640), and TFTP, "Trivial File Transfer Protocol" (RFC 1123), are used to exchange files with devices.

Transparent Ready devices implement FTP for downloading firmware or custom web pages.

The FDR ("Faulty Device Replacement") service uses the standard DHCP and TFTP protocols.

SNMP

The Internet community has developed the SNMP standard, "Simple Network Management Protocol" (RFCs 1155, 1156 and 1157), to support the management of the various network components by means of a single system. The network management system can exchange data with SNMP agent devices. This function allows the manager to view the status of the network and devices, to modify their configuration and to return alarms in the event of a fault.

Transparent Ready devices are compatible with SNMP and can be integrated naturally into a network administered via SNMP.

Starters, drives and communication

Modbus TCP network

Transparent Ready concept

Transparent Ready services

Modbus communication standard

Modbus, the industry communication standard since 1979, has been ported to Ethernet TCP/IP, the backbone of the Internet revolution, to create Modbus TCP, a totally open protocol on Ethernet. There is no need for any proprietary component, nor the purchase of a licence in order to develop a connection to Modbus TCP. This protocol can easily be ported to any device supporting a standard TCP/IP communication stack. The specifications can be obtained free of charge from the website: www.modbus.org.

Modbus TCP, simple and open

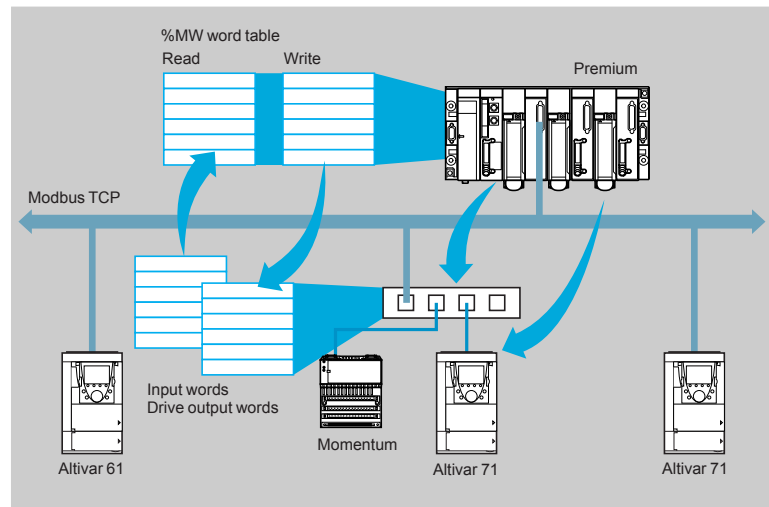

The Modbus application layer is very simple and universally known. Thousands of manufacturers are already implementing this protocol. Many have already developed a Modbus TCP connection and numerous products are currently available. The simplicity of Modbus TCP enables any small field device, such as an I/O module, to communicate on Ethernet without the need for a powerful microprocessor or a large amount of internal memory.

Modbus TCP, high performance

Thanks to the simplicity of its protocol and the fast Ethernet throughput data rate of 100 Mbps, Modbus TCP achieves excellent performance. This means that this type of network can be used in realtime applications such as I/O Scanning.

I/O Scanning service

Schematic diagram

Altivar 61 and Altivar 71 drives accept the I/O Scanning service generated by:

- The following automation platforms:
 - Premium equipped with a TSX ETY 410/5101 module
 - Quantum
 - Momentum M1E
- A PC equipped with Modbus communication software with the I/O scanner function. This service is used to manage the exchange of remote I/O on the Ethernet network after simple configuration and without the need for special programming.

The drive I/O are scanned transparently by means of read/write requests according to the Modbus Master/Slave protocol on the TCP/IP profile.

The I/O Scanning service can be configured, activated or deactivated by:

- The PowerSuite software workshop
- The standard web server.

Transparent Ready services (continued)

Faulty Device Replacement (FDR) service

The FDR service uses standard DHCP and TFTP technologies with the aim of simplifying the maintenance of Ethernet devices. It is used to replace a faulty device with a new product, ensuring its detection, reconfiguration and automatic restarting by the system, without the need for any tricky manual intervention.

The main steps are:

- A device using the FDR service becomes faulty
- A similar device is taken out of the maintenance reserve base, preconfigured with the "Device_name" of the faulty device, then reinstalled on the network.
- The FDR server (which can be a Quantum or Premium PLC Ethernet module) detects the new arrival, configures it with its IP address and transfers all its configuration parameters to it.
- The substituted device checks that the parameters are fully compatible with its own characteristics, then switches to operational mode.

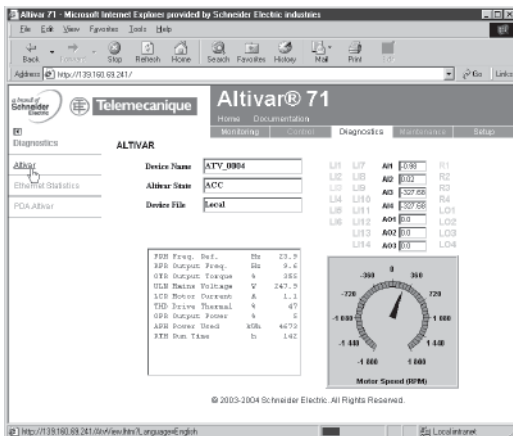

Web server

The Ethernet card in Altivar 61 and Altivar 71 drives incorporates a standard web server, in English. The functions provided by this web server require no special configuration or programming of the PC supporting the web browser. Using a password, two levels of access to the web server can be defined: read-only or modification.

The standard web server provides access to the following functions:

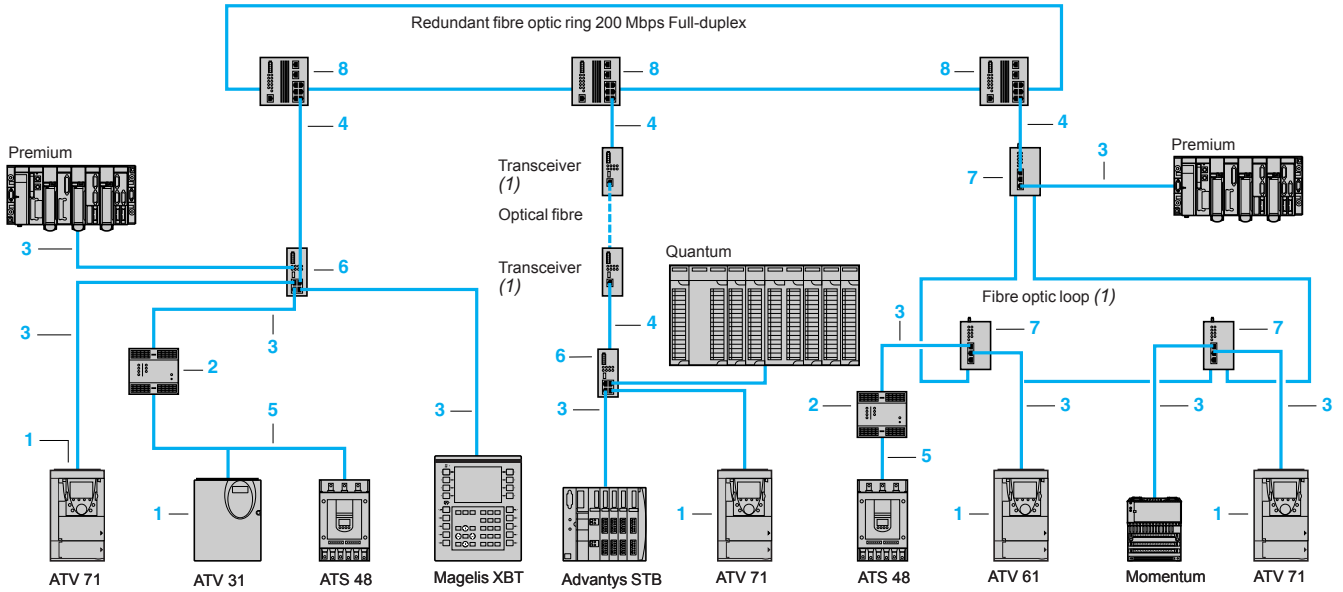

- Altivar Viewer
- Data Editor
- Ethernet Statistics
- Security
- Etc.

The standard web server can be adapted or replaced by a customized web server depending on the requirements of the application and downloaded via FTP. Knowledge of the HTTP protocol and Java technology are required to be able to create or modify a web server.

Starters, drives and communication

Communication via Fipio bus

Presentation

The Fipio fieldbus is a standard means of communication between control system components, and conforms to the World FIP standard.

A Premium PLC (bus manager) can control 127 devices (agents) over a maximum distance of 15 km.

The Fipio bus manager is integrated in the PLC processor.

The Altistart 48 soft start/soft stop unit and the Altivar 31 variable speed drive can be connected to the Fipio bus via an LUF P1 Fipio/Modbus gateway.

Altivar 61 and Altivar 71 drives can be connected to the Fipio bus via a communication card VW3 A3 311.

The following devices can also be connected to the Fipio bus:

- TSX Micro (2) or Premium Agent function (1) PLCs
- The CCX 17 operator panel (2)
- The Magelis XBT-F terminal with graphic screen (3)
- The Magelis iPC industrial PC (3)
- Advantys STB IP 20 distributed I/O (4)
- Discrete, analog or application-specific Momentum distributed I/O (5)
- Discrete or analog (IP 20) TBX distributed I/O (1)
- TBX discrete (IP 65) or TSX E●F (IP67) dust and damp proof distributed I/O (1)
- The TBX SAP 10 Fipio/AS-Interface gateway (1)
- The LUF P1 Fipio/Modbus gateway
- APC terminal
- Partner products in the Collaborative Automation programme

Documentation

The manuals and quick reference guides for starters and variable speed drives, as well as the user manuals for communication gateways, are available on the web site: www.telemecanique.com.

(1) To order other elements for connection to the Fipio bus, please consult our "Automation platform Modicon Premium – Unity & PL7 software" specialist catalogue.

(2) Please consult our "Power supplies, splitter blocks and interfaces" specialist catalogue.

(3) Sold in lots of 2.

(4) Standard environment:

- no particular environmental constraints
- operating temperature between +5°C and +60°C
- fixed installation

(5) Harsh environment:

- withstand to hydrocarbons, industrial oils, detergents, solder splashes
- relative humidity up to 100%
- saline atmosphere
- significant temperature variations
- operating temperature between -10°C and +70°C

(6) Mobile installation: cables in accordance with standard VDE 472 part 603/H:

- use on a cable-carrier chain with bending radius 75 mm minimum
- use on a gantry, provided that operating conditions such as acceleration, speed, length, etc, are adhered to: please consult your Regional Sales Office
- use not permitted on robots or multi-axis applications.

Presentation

Modbus is a master/slave protocol.

Two exchange mechanisms are possible:

- Request/response: The request from the master is addressed to a given slave. The master then waits for the response from the slave which has been interrogated.
- Broadcasting: The master broadcasts a request to all the slave stations on the serial link, which execute the command without transmitting a response.

The Altistart 48 soft start/soft stop units and the Altivar 21, Altivar 31, Altivar 61 and Altivar 71 variable speed drives have the Modbus protocol integrated as standard.

The Altistart 48 soft start/soft stop unit and the Altivar 21 and Altivar 31 variable speed drives are connected to the Modbus serial link via their terminal ports.

The Altivar 61 and Altivar 71 variable speed drives have 2 integrated communication ports:

- A terminal port for connecting the graphic display terminal or an industrial HMI terminal (Magelis type)
- A Modbus serial link port

As an option, they can also be equipped with a VW3A3 303 Modbus/Uni-Telway communication card which offers additional characteristics (4-wire RS 485, ASCII mode, etc.).

Characteristics

Type of device		ATS 48	ATV 21	ATV 31	ATV 61, ATV 71			
Type de connection		Terminal port				Modbus serial link port	Communication card	
Structure	Connector	RJ45	RJ45	RJ45	RJ45	RJ45	9-way female SUB-D	
	Topology	Serial link						
	Physical interface	2-wire RS 485						
	Access method	Master/slave						
	Transmission mode	RTU						
	Data rate	38.4 Kbps	–	–	–	–	•	–
		19.2 or 9.6 Kbps	•	•	•	•	•	•
		4.8 Kbps	•	–	•	–	•	•
	Medium	Double shielded twisted pair						
	Number of subscribers	18, 27 or 31 slaves, depending on polarization (1)						
	Type of polarization	4.7 kΩ pull-down resistors	No pull-down				Configurable. No pull-down or 4.7 kΩ pull-down resistors	
	Length of serial link	1000 or 1300 m excluding tap links, depending on polarization (1)						
	Tap link	3 or 20 m maximum, depending on polarization (1)						

(1) See the configuration table on page 317.

Configuration on the basis of polarization

The specification of the physical layer provided by standard RS 485 is incomplete. Various polarization diagrams can therefore be applied depending on the environment in which the equipment is to be used.

The Modbus standard specifies the polarization exactly (1).

		Master	
		With or without polarization 4.7 kΩ	With polarization 470 Ω
Slave	Without polarization	Configuration not recommended.	Modbus type configuration 31 slaves. Length of serial link: 1300 m Tap link: 3 m maximum RC line terminators (R = 120 Ω, C = 1 nF)
	With polarization 4.7 kΩ	Uni-Telway type configuration 27 slaves Length of serial link: 1000 m Tap link: 20 m maximum RC line terminators (R = 120 Ω, C = 1 nF)	Mixed configuration 18 slaves Length of serial link: 1000 m Tap link: 20 m maximum RC line terminators (R = 120 Ω, C = 1 nF)

The manuals and quick reference guides for starters and variable speed drives, as well as the user manuals for communication gateways, are available on the website: www.telemecanique.com.

Starters, drives and communication

Communication via Modbus Plus network

Presentation

The Modbus Plus network is a high-performance industrial local area network which can be used to meet the needs of client/server type extended architectures, combining a high data rate (1 Mbps), simple, low-cost transmission media and numerous messaging services.

The Altistart 48 soft start/soft stop unit and the Altivar 31 variable speed drive can be connected to the Modbus Plus network via an NW BM85000 gateway which has four RS 232 serial ports.

The Altivar 61 and Altivar 71 variable speed drives are connected to the Modbus Plus network via communication card VW3 A3 302.

Communication services

The main data exchange services between subscribers connected to the network are:

- The “Modbus messaging” service according to Modbus protocol
- The “Global Data” service: each subscriber makes available 32 words for each of the 63 other network subscribers
- The “Peer Cop” dialogue service: point-to-point transaction of 32 receive or transmit words

The “Global Data” and “Peer Cop” services are restricted to a Modbus Plus network with a maximum of 64 subscribers.

Altivar 61 and Altivar 71 drives are accessed by simple configuration in the PLC using “Peer Cop” and “Global Data” services.

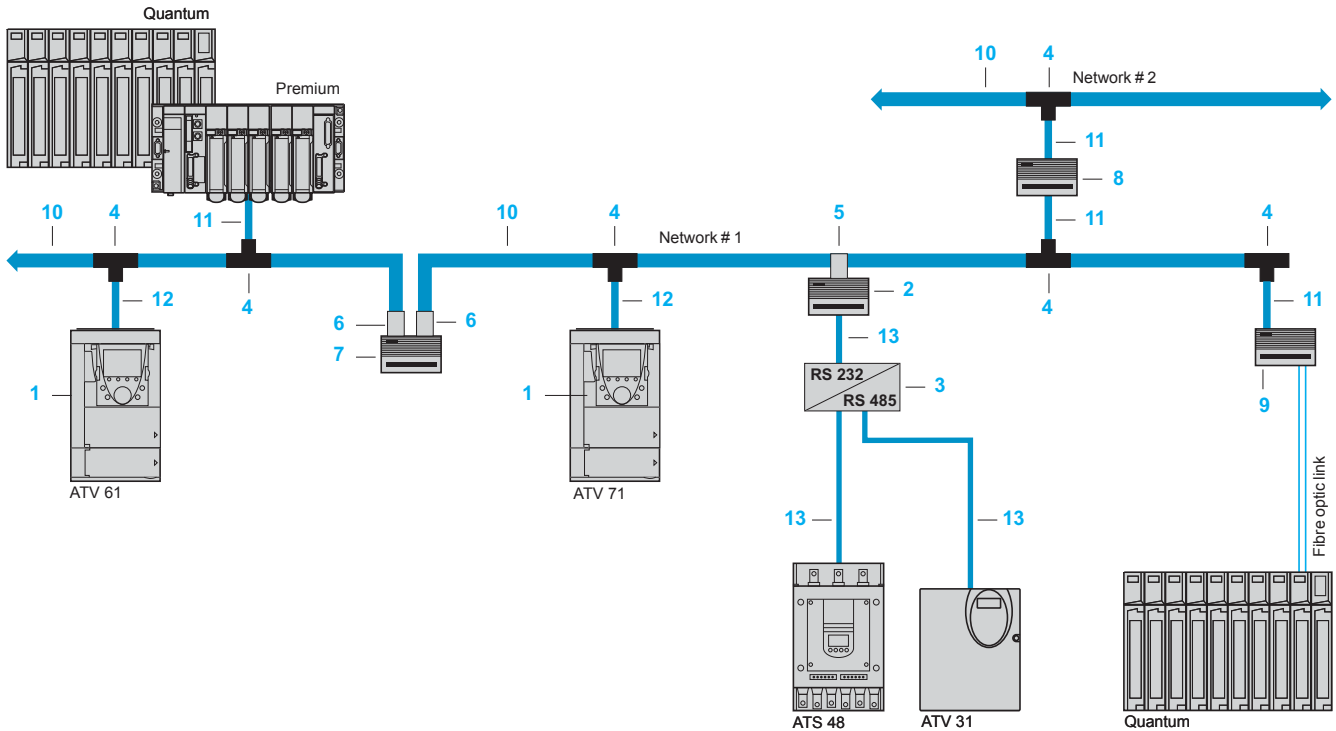

These services enable rapid exchange of the main drive parameters:

- The “Peer Cop” service for controlling and adjusting the drive
- The “Global data” service for monitoring the drive

Other parameters, which are used less frequently, can be accessed by the Modbus messaging service.

Characteristics		
Structure	Topology	Network
	Physical interface	RS 485
	Access method	Token network
	Transmission mode	HDLC synchronous
	Data rate	1 Mbps
	Medium	Shielded twisted pair 120 Ω Optical fibre
	Number of subscribers per network	32, without repeater 64, with one or more repeaters
	Number of networks	4, separated by a maximum of 3 bridges
	Length of network	450 m maximum without repeater 1800 m maximum with 3 electrical repeaters 3000 m between 2 fibre optic repeaters
	Services	Modbus messaging
"Global Data"		4096-byte shared database Cyclic exchange of 32 broadcast words Limited to one network This service does not cross bridges
"Peer Cop" dialogue		Point-to-point or broadcast message Limited to one network This service does not cross bridges
Type of device	ATS 48, ATV 31	ATV 61, ATV 71
Type of interface	NW BM85000	VW3 A3 302
Control	"Modbus messaging"	"Peer Cop" 8 configurable words maximum (communication scanner)
Monitoring	"Modbus messaging"	"Global Data" 8 configurable words maximum (communication scanner)
Configuration and adjustment	"Modbus messaging"	"Modbus messaging" Read/write access to all drive parameters

Presentation

The Uni-Telway bus is a standard means of communication between control system components (PLCs, HMI terminals, supervisors, variable speed drives, numerical controllers, etc).

The Uni-Telway bus requires a master station (Premium, TSX Micro PLCs) which manages the allocation of bus access rights to the various connected slave stations (HMI terminals, variable speed drives, etc). The slave stations can communicate with one another without programming the master station.

An industrial HMI terminal (Magelis type) can be connected directly to the bus and can be used to adjust drives without developing applications specific to the PLC.

The Altivar 61 and Altivar 71 variable speed drives can be connected to the Uni-Telway bus via a communication card VW3 A3 303.

Characteristics

Structure	Topology	Bus
	Physical interface	RS 485 isolated
	Link	Multidrop
	Access method	Master/slave type
	Transmission mode	Asynchronous transmission in baseband
	Data rate	4.8...19.2 Kbps
	Medium	Double shielded twisted pair
	Number of stations	28 maximum
	Length of bus	1000 m maximum excluding tap links
	Tap links	20 m maximum
Services	UNI-TE	Request/response of up to 240 bytes (1) initiated by any connected station. Unsolicited point-to-point data of up to 240 bytes (1) without confirmation report, initiated by any connected station. Broadcast messages of up to 240 bytes (1) initiated by the master station.
	Other functions	Transparent communication, via the master station, with any X-WAY architecture. Diagnostics, debugging, adjustment, programming of PLCs.
	Security	Check character on each frame, acknowledgement and, if required, repetition of messages ensure security of transmission.
	Monitoring	The bus status table, transmission error counters and station status can be accessed on each station.

Uni-Telway bus wiring system

(1) Limited to 128 bytes with the Premium and TSX Micro PLC terminal port.

TSX SCA 50

TSX P ACC 01

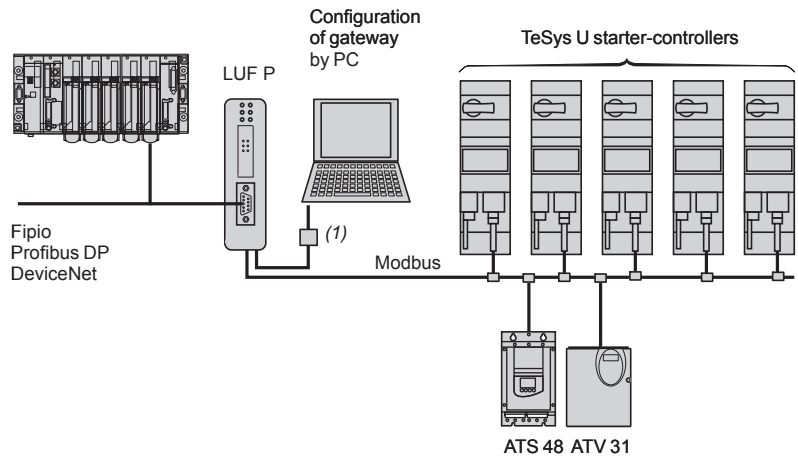

Presentation

Communication gateways LUF P allow connection between the Modbus serial link and Fipio, Profibus DP or DeviceNet field buses.

After configuration, these gateways manage information which can be accessed by the Modbus serial link and make this information available for read/write functions (command, monitoring, configuration and adjustment) on the field buses.

An LUF P communication gateway consists of a box which can be clipped onto a 35 mm omega rail, allowing connection of up to 8 Slaves connected on the Modbus serial link.

Example of architecture

Description

Front panel of the product

- 1 LED indicating :
 - communication status of the Modbus serial links,
 - gateway status,
 - communication status of the Fipio, Profibus DP or DeviceNet bus.
- 2 Connectors for connection to Fipio, Profibus DP or DeviceNet buses.

Underside of product

- 3 RJ45 connector for connection of the Modbus serial link
- 4 RJ45 connector for link to a PC
- 5 --- 24 V power supply

Software set-up

For the Fipio bus, software set-up of the gateway is performed using either PL7 Micro/Junior/Pro software or ABC Configurator software.

For the Profibus DP and DeviceNet buses, software set-up is performed using ABC Configurator.

This software is included in the TeSys U user's manual.

(1) Connection kit for PowerSuite software workshop (see page 304).

Characteristics		Fipio	Profibus DP	DeviceNet
Bus type				
Environment	Conforming to IEC 60664	Degree of pollution: 2		
Ambient air temperature	Around the device	°C	+ 5...+ 50	
Degree of protection		IP 20		
Electromagnetic compatibility	Emission	Conforming to IEC 50081-2: 1993		
	Immunity	Conforming to IEC 61000-6-2: 1999		
Number of Modbus slaves which can be connected		≤ 8		
Connection	Modbus	By RJ45 connector conforming to Schneider Electric RS485 standard		
	To a PC	By RJ45 connector, with PowerSuite connection kit		
	Field bus	By SUB D9 female connector	By SUB D9 female connector	By 5-way removable screw connector
Supply		V	External supply, $\pm 24 \pm 10 \%$	
Consumption	Max.	mA	280	
	Typical	mA	100	
Indication/diagnostics		By LED on front panel		
Services	Profile	FED C32 or FED C32P		–
	Command	26 configurable words (1)	122 configurable words	256 configurable words
	Monitoring	26 configurable words (1)	122 configurable words	256 configurable words
	Configuration and adjustment	By gateway mini messaging facility (PKW)

The efficiency of Telemecanique branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your **Automation** and **Control** applications requirements.

Simple machines

Altistart 01: 0.37 to 75 kW

Altivar 11: 0.18 to 2.2 kW

Altivar 31: 0.18 to 15 kW

Complex, high power machines

Altivar 71: 0.37 to 630 kW

Pumping and ventilation machines

Altistart 48: 4 to 1 200 kW

Altivar 11...347: 0.18 to 2.2 kW

Altivar 21: 0.75 to 75 kW

Altivar 61: 0.75 to 800 kW

A worldwide presence

Constantly available

- More than 5 000 points of sale in 190 countries.
- You can be sure to find the range of products that are right for you and which complies fully with the standards in the country where they are used.

Technical assistance wherever you are

- Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
- Schneider Electric provides you with all necessary technical assistance, throughout the world.
