B.E.G.

Smart emergency lights –

safety using LED technology

New technology with familiar quality

The B.E.G. emergency lights are available with DALI interface and are equipped with energy-saving LEDs. This ensures a good illumination of the escape route signal. Integrated in the lights is an automatic test function for checking the battery condition and the illumination function. It is also possible to start the test function manually via remote control, DALI or using the respective button on the light itself. The integrated LED states shows any dysfunctions. Test results and disfunctions are stored and can be read out. This significantly simplifies maintenance of the emergency light.

Of course, European standards and regulations are consistently observed.

Thanks to the bidirectional IR equipment settings can be easily made using the B.E.G. remote control App and the IR-Adapter for Smartphones. Furthermore, it is possible to read out the settings.

The B.E.G. emergency light Diamant DT32 has a streamlined aluminium profile. The illumination of the pictogram is particularly homogeneous and effective. This emergency light meets the highest demands.

Technical data

- Power supply: 230 V AC, 50/60 Hz
- Lighting components: permanently mounted LED board with 12 x 0.5 W LEDs
- Light colour: 6500 K daylight white
- Battery: NiMh 3,6V 800mAh (3h)/1600mAh (8h)
- Power failure buffering time: 3 hours / 8 hours
- Ambient temperature: -5 °C to +35°C
- Operating mode: Continuous/standby operation
- Monitoring: automatic self check (SC) central monitoring via DALI bus
- Bi-directional remote control (programming and readout via B.E.G. app and IR-Adapter for smartphones)

The new world of DALI products from B.E.G. –
DALI Compact – DALI System

DALI - cost-efficient solutions for all sizes of buildings

Originally designed for switching and dimming lights, DALI is providing an increasing number of smart and comprehensive building automation features. Inexpensive components can be used to create compact or extendible solutions.

B.E.G.'s DALI product range is divided into "DALI Compact" products for standalone applications with group or broadcast control and "DALI System" for building, multi-room and single-room solutions.

DALI Compact

With single-master versions and isolated solutions, DALI Compact includes products that combine everything in a single housing. The DALI power supply, push button control, relay and application controller are all installed directly in the detector housing. The broadcast method and the factory presets allow the devices to be put into operation quickly.

The area to be monitored can subsequently be enlarged economically using conventional slave devices that are compatible with the DALI master devices. All settings and configurations can be made comfortably using the remote control or the B.E.G. app in conjunction with the IR-adapter for smartphones.

DALI System

The "DALI System" product group, on the other hand, provides many individual components which can provide a wealth of features depending on individual requirements. In addition to its extremely flat PD11 detectors, B.E.G. provides all devices required for an effective lighting system including a DALI power supply unit, DALI router, DALI relay and a DALI push button interface.

In addition to the addressability and the "multi-master principle", in which components can be both transmitters and receivers, a tremendous advantage of this product line is the scalability of the system from individual rooms to controlling an entire building via DALI bus. Numerous features and settings via USB, Ethernet, LAN, Wi-Fi or Bluetooth (interface depends on the desired solution package) provide planners with increased efficiency in the planning process and reduces costs for installers during the installation process.

B.E.G. DALI functions

Occupancy-dependant switching (Auto-On / Auto-Off)
Daylight-dependant regulation (Auto-Dim)
Toggle between full and semi-automatic mode
Manual operation by conventional pushbuttons (switching or dimming)
Orientation light (dim light after main light cycle) adjustable in %
Burn-in function (100h)
Soft start (light is dimmed up „soft“, instead of switched on „abrupt“)
INI light (lighting ON or OFF during self-test cycle of the detector/multisensor - approx. 1 minute)
Different relay operation modes available, e.g. HVAC, cut-off, alarm, pulse
Factory setting/Reset function
Basic settings possible via potentiometer and DIP switches

DALI Compact

B.E.G.'s DALI Compact occupancy detectors combine the DALI power supply, push button control, relay and application controller in their detector housing.

Description	
PD2-M-DALI/DSI-SM Part no. 92280	PD2-M-DALI/DSI-FC Part no. 92258
PD4-M-DALI/DSI-SM Part no. 92279	PD4-M-DALI/DSI-FC Part no. 92275

DALI System

Lighting control in all sizes of buildings, from single offices to entire building complexes, can be optimized using the DALI system. DALI occupancy detectors, DALI routers, DALI power supply unit, DALI push button and DALI relay are combined and aligned with one another to meet the requirements of each area.

The free B.E.G. remote control app for iOS and Android can be used in combination with the B.E.G. IR adapter for smartphones to easily make required changes.

Special DALI Compact function

Stand-alone / Single-Master / central intelligence (in housing)
„All-in-One-detector - solely ceiling mounting“
Broadcast
For small to medium size projects with simple requirements
Efficient commissioning process
Conventional slave devices can be used
DALI power supply is built in detector's housing
Push button inputs are built in detector's housing
Relay is built in detector's housing
Parametrization via IR-Adapter for smartphones and app (Android/iOS)

Special DALI System function

Cross-linked / scalable / Multi-Master / dispersed intelligence
„Modular system - also DIN-rail mounting“
addressable
For projects of any size with simple to complex requirements
Efficient planning process
Detector named „Multisensor“ is Master and Slave in one housing
Power supply of control units via DALI bus
DALI wiring is independent of grouping
Detectors have a short address and group ID
Parameterisation via USB/PC tool or LAN/DALI router or Bluetooth/app
Soft-Start + (see above + adjustable or calculated switch-on value)
Guided Light (intergroup light control adapted to synchronisation)
Guided Light + (see above + DALI line crossed)
Scene control (with special Bluetooth app as operation for end user)
Staircase function
Automatic mode additionally adjustable as regulating or switching output
Automatic mode additionally adjustable as movement-independent mode
Calendar function, e.g. „300Lux from 6.00 PM“
Notification services, e.g. lamp fault e-mailing
Central emergency lights management
Energy consumption analysis

<ul style="list-style-type: none"> ■ DALI power supply unit with integrated USB interface for DIN-rail mounting ■ Integrated application controller for addressing up to 64 DALI subscribers 	<ul style="list-style-type: none"> ■ DALI router with an integrated web server for DIN-rail mounting ■ 1 to 4 DALI lines (via USB and B.E.G LUXOMAT®net PS-DALISYS-USB-REG) 	<ul style="list-style-type: none"> ■ Especially flat DALI multi-sensor with only 0.85 mm of visible thickness ■ Detection range: Ø 9 m across, Ø 6 m frontal, Ø 3 m seated 	<ul style="list-style-type: none"> ■ DALI relay module with a switching channel for DIN-rail mounting ■ Powerful potential-free relay (dry contact) with high inrush current resistance (800A/200µs) 	<ul style="list-style-type: none"> ■ Binary DALI input device for use in 60 mm flush-mounted boxes ■ 4 freely configurable inputs for potential-free push button and switch contacts

Guided light feature

Application example: stairwell with guided light feature

Tip: Do not define short addresses when planning a DALI-multi-master solution, but create placeholders in the plan if needed, where short addresses can be entered subsequently. This allows for allocation by the integrators/installers or a software using automatic addressing. Groups, however, should already be defined in the majority of cases during lighting design. The advantages of this are explained in the next section.

Networked DALI lighting control –

The ultra slim PD11-DALISYS

Powerful in a modern design

The LUXOMAT®net PD11-DALISYS-FLAT is an especially flat, addressable, multi-master DALI occupancy detector for unobtrusive use in false ceilings or ceiling outlet / flush-mounted boxes.

The occupancy detector is integrated smoothly in the scalable B.E.G. LUXOMAT®net DALI System and can act as a master or slave as needed. Up to eight PD11-DALISYS-FLAT detectors can be connected on a single DALI line.

Motion detection signals and/or light values are transmitted via a data protocol, which can be processed either using other devices of the same model or higher-level controls such as KNX and BAC-NET. In addition to this, the full automatic, semi-automatic or

dimmer switch operation can be activated either with or without daylight-dependent control.

The control circuit for the daylight-dependent control can be connected with a further DALI group using the offset procedure. In addition to this, it is possible to connect the detector's main or guide lighting depending on motion detection in other groups.

A multi-master capable DALI push button module (PBM-DALISYS-4W) is available for manual control using conventional wall switches, the direct commands of which are automatically detected and carried out by the lighting components.

Technical data

- Power supply: 10 - 22 V vom DALI-Bus
- Current consumption: ca. 7mA
- 360° detection area
- Protection degree: IP20 / Class II / CE
- Dimensions: ∅ 52 x H 43 mm
- Factory setting: 500 Lux; 10 min follow-up time
- Settings of basic functionality via dip switch and HEX potentiometer
- All settings can be made using the free PC tool or Bluetooth smartphone app

PD11-DALISYS-FLAT-FC
Part no. 92731

Flush-mounted adapter set for PD11 - Part no. 92833

- For flush-mounted installation of PD11 in concrete ceilings
- Suitable for all standard cavity wall and ceiling outlet boxes (45-88 mm hole distance)
- Fast and safe insertion of the PD11 occupancy detector without spring terminals

B.E.G. LUXOMAT® net

New
KNX 6.0

▪ www.beg-luxomat.com ▪

Functionally revised hardware and software 6.0

The new generation of KNX occupancy detectors

Even more features

The new KNX detector generation 6.0 is equipped with entirely revised hardware and software and can thus be used to meet a wider range of individual requirements. The new hardware allows for a significantly reduced installation depth, which is extremely helpful when installation space is restricted, as is the case in false ceilings for example. In addition to this, the B.E.G. KNX 6.0 detectors can optionally be provided with an integrated microphone, a temperature sensor and, for the indoor 140-L wall switch, with LEDs for orientation and nightlight function.

New hardware

- Optimized lighting control with internal and external light sensors*
- Acoustic sensor*
- Temperature measurement*
- Significantly reduced installation depth
- Programming and readout of parameters using the bi-directional smartphone app*

*depending on version

B.E.G.'s KNX detectors have a rich feature set that is unique on the market. Brand new functions in version 6.0 include software control of the individual motion sensors, integrated offset control for different levels of brightness in a room and the fully integrated logic module for complex connections. The detectors can be programmed and read out using the appropriate remote control and the buttons for special functions can be programmed as needed.

New software

- Sensor sensitivity individually adjustable
- Logic module
- Presence simulation
- Night light function*
- Offset switching and control mode

Multifunctional
LON technology

▪ www.beg-luxomat.com ▪

Reliable and simple system integration

The new LON occupancy detectors

Reliable detection using LON technology

The new B.E.G. LON occupancy detectors with an integrated light sensor for daylight-dependent lighting control has been designed for use with the future-proof and established LON bus building technology. In addition to the sensor component, these remote-controlled occupancy detectors include the FT5000 LON transceiver and the FT-X3 LON transformer. The required easy-to-integrate software is available for download on the B.E.G. homepage.

The optional IR-PD-LON remote control unit can be used to set dimmable brightness values, HVAC configurations and save up to three scenes for reuse. Furthermore, it is possible to remotely control up to three distal actuators, e.g. roller shutter actuators. The detectors can also be remotely controlled using the B.E.G. app and the IR-Adapter for Smartphones. Both detectors are multifunctional and can be integrated individually in LON-systems.

PD4N-LON-FC
Part no. 92831

PD4N-LON-SM
Part no. 92834

PD2N-LON-FC
Part no. 92736

PD2N-LON-SM
Part no. 92734

The future-oriented PD4N-LON with its wide detection range of \varnothing 24 m is designed especially for monitoring large spaces, such as underground car parks, athletic facilities, warehouses, business and meeting rooms, training rooms or halls

The office specialist PD2N-LON with its coverage of \varnothing 10 m is ideal for universal use in smaller spaces such as offices, restrooms or individual workstations.

Technical data

- Power supply: 24 V AC / DC +/- 20 %
- 360° detection area
- Protection degree: IP20 / Class II
- Ambient temperature: +5 °C - +50 °C
- Easy interface to HVAC systems
- Full- or semi-automatic mode
- Switching or constant lighting control
- All configuration properties can be set using network variables
- Remote control-capable

B.E.G. LUXOMAT®

New microwave
detector with external
light sensor

(HF) microwave detector

▪ www.beg-luxomat.com ▪

Invisible and temperature-independent

The new (HF) microwave detector generation

HF microwave motion detector with light sensor

HF radar motion detectors can detect motion through many materials such as wood, lightweight walls or glass, and can therefore be concealed in lighting fixtures or behind wall surfaces. In order to achieve daylight-dependent lighting control, B.E.G. has equipped the new HF-MD3 and HF-MD4 microwave detectors with lighting sensors.

The external light sensors (optional with HF-MD3) can be placed in the appropriate locations (e.g. at the workstation, where the most light is needed), while the power element is placed close to the lights, for example. In addition to the external light sensor, the HF-MD4 has an external HF microwave sensor, which can be concealed in the switch box near the door, for example.

HF-MD3

- Light sensor integrated in the housing
- Adjustable via potentiometer on the device
- External light sensor sold separately
- With optional light sensor, also remote-controlled using the B.E.G. smartphone app

Technical data

- Power supply: 110-240 V AC, 50/60 Hz
- 360° detection area
- Protection degree: IP20 / Class II
- Ambient temperature: +5°C – +50°C
- Dimensions: 121 x 40 x 60 mm

HF-MD3
Part no. 94437

HF-MD4

- Optimum and individual alignment using external light sensor and external HF microwave sensor
- Fast connection of power element with light sensor and radar sensor using plug contacts
- Convenient programming using the B.E.G. smartphone app

Technical data

- Power supply: 110-240 V AC, 50/60 Hz
- 360° detection area
- Protection degree: IP20 / Class II
- Ambient temperature: +5°C – +50°C
- Dimensions: 121 x 40 x 60 mm

HF-MD4
Part no. 94438

B.E.G. LUXOMAT®

*The luminous
occupancy
detector*

▪ www.beg-luxomat.com ▪

*The occupancy detector that not only switches and dims lighting,
but also provides light itself.*

Motion detection combined with orientation lighting

For the first time, the functionality of a ceiling occupancy detector is being combined with LED orientation lighting in a single housing with this new development. The LED orientation lighting is designed here as an illuminated ring around the sensor lens. After automatic switch-off of the main light, the orientation light is activated for an adjustable time or even permanently.

The occupancy detector with a detection range of 10 m provides a variety of options for individual adaptation to the local conditions in addition to the integrated daylight control.

All parameters can be set to values suitable to individual needs and read out via smartphone using the B.E.G. remote control app in combination with the IR adapter.

To extend the occupancy detector's range,

it can simply be connected to additional slave devices. The combination of guide lighting and automatic lighting control provides a considerable increase in comfort and energy savings.

PD2N-LED-M-1C
Part no. 94055

Technical data

- Power supply: 110 - 240 V AC, 50/60 Hz
- 360° detection area
- Protection degree: IP20 / Class II
- Ambient temperature: +5 °C - +50 °C
- Remote control-capable

Application example

If the light is switched on in a dark room, your eyes have to suddenly get accustomed to the light. It is much more pleasant, if the orientation light is already active in the room. The energy-saving LEDs provide for soft light in this regard.

The PD2N-LED-M-1C detector provides two ways to activate the main light: it is either activated when motion is detected (fully automated mode) or it has to be consciously activated using a wall switch when entering the room (semi-automatic mode).

B.E.G. LUXOMATIC®

IP65 LED
technology

▪ www.beg-luxomat.com ▪

Energy-efficient, stable and powerful

Moisture-proof LED linear luminaire

High protection rating - reliable detection

The sturdy IP65 housing of B.E.G.'s new moisture-proof LED luminaires is equipped with stainless steel caps and an opal cover. The cover prevents glare from the powerful LEDs. With power consumption of only 35 W, LEDs provide a luminous flux of 4400 lm and thus provide an alternative to fluorescent lamps up to 58 W.

High-quality LEDs and drivers, as well as the solid mounting plate, which prevents overheating of the LEDs, ensure extreme durability.

AL60-LEDN

- Can be connected to lights with occupancy detectors
- Up to 10 lights per one light with sensor

AL60-LEDN
Part no. 91746

AL60-LEDN-PD9/M

- incl. either mini occupancy detector PD9-M or motion detector PD9
- IP65 due to innovative special cover
- large detection range
- Programming with required remote control

AL60-LEDN-PD9M
Part no. 91751

AL60-LEDN-PD9
Part no. 91748

AL60-LEDN-HF

- incl. (HF) radar detector
- temperature-independent detection
- Large-scale detection

AL60-LEDN-HF
Part no. 91747

Technical data

- Power supply: 230 V AC +/- 10 % 50 / 60 Hz
- Light colour: ~4000 K neutral white
Lighting current LED: 4400 lm
Lighting current lamp: 3900 lm
- Housing: impact-resistant polycarbonate, LED board on aluminium mounting plate
- Protection class / degree: IP65 / I / CE
- Dimensions: 356 x 281 x 50 mm
- Ambient temperature: -20 °C to +40°C
- Lighting components: permanently mounted LED board
