Anti-glare

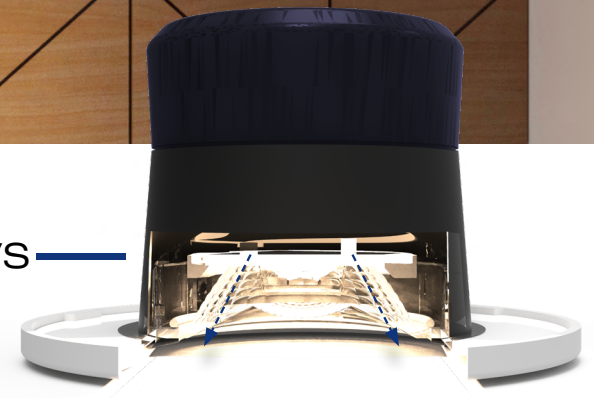

Specifically designed to be anti-glare, the downlight creates a more visually comforting experience for those working in that particular space or for those using computer screens for long period of time. This low glare rating reduces the problems caused by reflections of traditional light fittings or non anti-glare luminaires.

Anti-glare design

Specifically designed baffle construction with recessed LED module and diffuser provide a steep cut-off angle ensuring maximum glare control and visual comfort.

— vs —

Traditional design

Shallow cut-off angle provides much less glare control and reduced visual comfort

Patented Intumescent Disc

Ansell's Fire Rated downlights are fitted with a patented intumescent 'pad' which, when there is a fire, the heat causes the 'pad' to swell and expand within the fixture and creates an intumescent fire barrier preventing the spread of fire between floors.

Fire Rated Downlight

The Prism Pro Anti-Glare, forms part of our fire rated downlight range. This along with the rest of the Prism Pro range is fully fire tested for 30, 60 and 90 minute ceiling types (solid timber, i-joist and metal web) to meet Part B of Building Regulations as well as Part C (moisture), Part E (acoustic) and Part L (energy efficiency).
