

Choice Heating Programmers

Our range of programmers for timed heating and hot water control offer feature rich, adaptable programming options with a fresh modern design to suit any home. Each model can be selected between 24 hour, 5/2 day or 7 day programming, 3-in-1 options to adapt to each home. Automatic Summer/Winter time change, 1,2 & 3 hour boost periods and a Holiday Mode to save energy when heating isn't required give a product that you can depend on.

CHOICE PR1n - 1 CHANNEL

The single channel PR1n is designed primarily for timed, simultaneous control of heating and hot water. Ideal for use with a combination, or combi, boiler. The PR1n also has a Volt Free Contact.

CHOICE PR2n - 2 CHANNEL

The 2 channel PR2n is designed for separate control of heating and stored hot water. The programs are independent of one another giving the opportunity to control usage in the most energy efficient manner possible.

CHOICE PR3n - 3 CHANNEL

The 3 channel PR3n offers independent control of two separate heating zones as well as hot water storage. The multi-channel capabilities allow installers to comply with Part L of the building regulations (Part J in Scotland and Part F in N. Ireland) for dwellings over 150m².

Programmers with Service Interval Function

The Sangamo range of Choice Heating Programmers with Service Interval function are intended to act as a supplementary aid to assist landlords, local authorities and housing associations compliance with the Gas Safety (Installation and Use) Regulations 1998.

On installation the programmer can be set with a service date up to 400 days, visual warnings alert the tenant 28 days prior that their boiler service is due with a more prominent alert with 7 days to go. If the warnings are ignored and the safety check becomes overdue the programmer can be set to fully shut down or enter partial shutdown mode which allows the boiler to operate for a random 15 minutes each hour until serviced.

CHOICE PR1si - 1 CHANNEL

The single channel PR1si is designed primarily for timed, simultaneous control of heating and hot water. Ideal for use with a combination, or combi, boiler. The PR1si also has a Volt Free Contact.

CHOICE PR2si - 2 CHANNEL

The 2 channel PR2si is designed for separate control of heating and stored hot water. The programs are independent of one another giving the opportunity to control usage in the most energy efficient manner possible.

CHOICE PR3si - 3 CHANNEL

The 3 channel PR3si offers independent control of two separate heating zones as well as hot water storage. The multi-channel capabilities allow installers to comply with Part L of the building regulations (Part J in Scotland and Part F in N. Ireland) for dwellings over 150m².

These products can only be installed and serviced by an engineer currently on the Gas Safe Register (or RGI in Ireland).

To complete the set up they must provide their ID number which will be checked and an access code sent to the registered email address.
