

Choice Wireless Thermostats

A government study recently discovered that over 8 million homes in the UK do not have a room thermostat, despite one being part of the minimum level of controls specified in the 2010 Building Regulations. Having just those minimum level of controls can reduce energy used for heating and hot water by as much as 30%.

Sangamo Choice RF Wireless Thermostats help make the installation of a thermostat as simple as possible, with no drilling wires through walls leading to redecoration. It also massively reduces installation time of a thermostat. We offer a simple dial thermostat and a programmable version for even more control.

CHOICE RSTAT3 RF

A basic dial thermostat with LCD display of the current temperature. Simple to control with no menus or complicated options. A comfort/economy switch allows you to lower the setting when a cooler temperature is required without touching the dial.

CHOICE RSTAT9 RF

For those who want more control, the programmable Choice RSTAT9 RF offers 24 hour or 7 day programming with up to 6 timed temperature changes per day to create the perfect schedule for you.

Auto GMT/BST time change and advanced features like holiday mode and temperature hold give you precise control that you can depend on to provide the temperature you want when you want it.

The RSTAT9 RF is free-standing, sitting in the included cradle, allowing your thermostat to move round the home with you.

Choice Room Thermostats

Space heating is responsible for about 60% of domestic energy consumption, an average cost of over £800 per year. Turning the thermostat down just one degree can save as much as 10% off your heating bill!

Our range of Choice wired room thermostats help you stop wasting energy when it's not needed while giving control to make sure it's warm when you need it to be.

CHOICE RSTAT1

A simple 2-wire mechanical 10A thermostat with bi-metallic sensing element. An audible click gives a clear signal when the current temperature has been passed. Set temperature range of 10 to 30°C. A third terminal also allows the option of adding a cooling load.

CHOICE RSTAT1t

As above but contains a tamper proof cover to stop unwanted changes to the setting of the dial.

CHOICE RSTAT3

A digital 3A thermostat with electronic sensing element. The clear LCD display shows the current temperature. Includes a comfort/economy switch to lower the temperature without moving the dial. Set temperature range of 5 to 30°C.

CHOICE FSTAT

A tamper proof frost thermostat designed to protect the heating system and pipework from freezing temperatures. Set temperature range of -5 to 25°C.
